"Why, mother, don't you *see?* I sit here all day and just watch these lilies and violets bud and bloom under my busy fingers, and the green leaves grow on the delicate stems, and know that *my* fancy has evoked all this beauty on the dead splendor of Miss HOWARD'S velvet; and then, once in a while, when the sunshine steals under the old willow tree, dropping in here upon my violets, I can almost fancy I *am* out in the fields."

Her mother smiled at the pretty conceit, even while a tear stood in her loving eye.

"And so you see, mother, I am quite happy after all; happier, may be, than Miss HOWARD with all her wealth; though," she continued, while somehow the glad look faded from her face, "it must be very sweet to be loved as she will be with a lifelong devotion."

"AMY," said her mother, after a long pause, "it *is* sweet to be loved; but are you sure that you, too, are not as much blessed as Miss HOWARD?"

She blushed, faintly at first; then, the crimson tide welled up over cheek and brow, until she bowed her face on her hands to hide the rich color from sight.

"My child, what does this mean? Does not HERBERT VAUGHN love you, and," she hesitated a moment in almost painful indecision, "do you not love him in return?"

"No, no, dear mother! do not speak thus! Mr. VAUGHN knows that I can never be his wife."

"He would surround you with comforts, my darling, and fill your young life with glad realizations. Think how you have longed to travel, dear; as his wife, you could see those far, pleasant lands which you have so longed to see, ever since your childhood."

"Hush, mother! Would you have me marry him for his money?"

"Not unless you can love him with it, but he is a kind and gentle friend, and I thought you had begun to care for him of late."

"I *do* care for him as a friend, but that is all," and she folded up her work, took down her simple straw hat from the closet, and tying it on, started to leave the room.

"Must you go out to night, AMY," said Mrs. LESTER, following her to the door.

"Only for a little while. I promised Miss HOWARD I would come for those handkerchiefs to-night, so as to finish one this week."

Long after she had gone Mrs. LESTER stood at the door looking down the path which her daughter had taken. Any one, watching her, might have thought that she was reading golden legends of the stars, or listening for the hushed songs of the robins in their nests. Her fingers were straying among the tiny clusters of purple blossoms that hung upon the creeping vine over their low doorway; but she was all unmindful of their fragrance, or of the shimmering starlight upon their leaves. She was thinking of AMY, her only daughter, the child of her old age, and the living picture of the husband she had mourned so long and truly. What wonder that all her tenderest thoughts were of her, or that she held her happiness closer to her heart even than her own life or comfort!

GOD wills it shall be so. Out of the depths of a mother's love spring holy impulses and strong self-denials that would shame many a brave manhood!

It was late, after all, before AMY returned, and when she came into the sitting-room, she startled her mother out of her calmness into a great fear, for surely something had happened to her darling to bring that strange look of unquiet into her eyes, and make her lip tremble so. For a moment she could only *look* her sympathy, then suddenly it all broke forth in a loving appeal. "AMY, AMY, what has happened to you! Who has been troubling my child's content?"

AMY'S face was very white as she told, between sobs and tears, how Miss HOWARD had insulted her; taunting her with her poverty, and desiring her not to force her unwelcome presence again where she had other company.

"But, child, what was the cause of all this; surely she has always treated you well before?"

"Yes—but to-night there was a gentleman with her, and I suppose she did not wish me to come in; though it was the room where I have always seen her, and the servant directed me there."

"Did she insult you thus before this stranger?"

"No! At least, she came out into the hall with me, but he must have heard part of what she said as the door was ajar;" and AMY shivered again at the remembrance of the unfeeling words.

"Never mind, darling; her words, though they may have been bitter and unwomanly, cannot hurt you." So she soothed her as she had done in years gone by, and, smoothing back the hair from her burning brow, laid her cool fingers upon it, until AMY, weary in body, and spent in the inward strength, slept. A sweet sleep it was, too. The same innocent light that shone upon her face when a little child, was there, only shining with a new glory born of an awakened womanhood. The sobs all ceased, and her breath came at length slowly and peacefully. Ah! thought the loving mother, bending over her, how like a tired child my AMY sleeps!

She *was* like a child still. Only seventeen fair summers had blown over her head, and as she had stood for a moment in Col. HOWARD'S parlor that evening, ELLIS GRANDON could not restrain a look of unfeigned pleasure at the sight. This new expression on his handsome face was what had annoyed Miss HOWARD beyond her self-control, and she had vented her displeasure on poor AMY. Yet her vexation was greatly increased when, upon AMY'S departure, her companion made minute inquiries concerning Miss LESTER; whether she had always lived in the village, and what was the name of her father. She answered his questions half petulantly, yet entirely to his satisfaction; and the next day ELLIS GRANDON walked over to Mrs. LESETR'S little cottage, and surprised both AMY and her mother sitting at the window.

Her mother was watching her with tender eyes, while she was coaxing redbreasts with sweet crumbs of bread, the dainty bit of blue velvet, with its pure lilies, its great royal violets, and its budding roses destined for Miss HOWARD, lying at her side in a low chair. He took in all the pretty picture at a glance, thinking over the words of that old poet, JODELLE, whose translation runs thus—

"I saw thee weave a web with care,
Where at thy touch fresh roses grew,
And marveled they were formed so fair,
And that thy heart such nature knew.
Alas, how idle my surprise,
Since naught so plain can be:
Thy cheek their richest hue supplies,
And in thy breath their perfume lies;
Their grace and beauty all are drawn from thee."

The sweet, young face, outlined against the dark, old-fashioned chair, looking, it seemed to him, a little sadder than it did the day before; with such a holy light in the shy, brown eyes, the summer sunshine drifting over the wavy hair, turning its soft luster to gold, and the delicate hand, just lifted above the window-ledge, dropping out the crumbs to the birds.

Mrs. LESTER was surprised and tempted to be a little angry at the intrusion, until he told his name: *then*, indeed, she knew him for the "grown-up boy" he said he was, whom her husband had in large measure befriended, years before, and from whom, after he had graduated and sailed for Germany, she had never heard. "But I have often wondered what had become of you," she said, when they had grown a little more familiar; "and you look almost as you *did*, only *grown up*, as you say."

"I am the same in *one* respect; in the never-ending gratitude I feel to you, and to him who is gone."

"Don't think of that hereafter. *He* felt more than repaid in what you came to be, and I——" Here she broke down; for her thoughts had wandered back, and it was AMY'S pleasant voice which came in as a sweet interlude to the broken conversation; and AMY said to herself, as he went away after an hour's talk, what she had said the night before, "It must be good to be loved by *such* a man."

Weeks passed away, and ELLIS GRANDON was still a dweller in their quiet village; often at the great house on the hill, and quite *as* often, to Miss HOWARD'S consternation, at the humble cottage where AMY LESTER lived; though she *did* suppose some show of respect was due from Mr. GRANDON toward Mrs. LESTER as "his early friend." It was not until a month had come and gone, that it became known that he was Mrs. HOWARD'S sister's child, or step-child—rumor could not decide which—neglected, while poor and unfortunate, by his wealthy relatives, but now courted publicly by them all.

How gay that summer was! June grew brighter and brighter until she was lost in the passionate days of midsummer, and September came, cool and pleasant; and then ELLIS GRANDON talked of going home.

Ah, how AMY'S heart sank. She knew in that moment that she loved him! *Loved* him, when she had known all along that he was the avowed lover of another. What tears of shame burned under her drooping eyelids no one but herself ever knew, for they burned there but did not fall.

It was the last evening but one of his stay—and he had come in with his old boyish freedom, throwing himself carelessly down upon the little sofa by the window. The conversation, after a while, began to grow dull somewhat, for Mrs. LESTER was nervous with watching her poor darling and trying not to *seem* as if she were watching her, while AMY herself sat silent, only occasionally uttering some low response to his lively sallies. By-and-by, however, he, too, sobered down, and said, turning round to AMY'S mother, "I came here to-day to ask you something."

"Yes"—she replied, interrogatively.

"I want to come back for my wife next month," he said, "and I havn't even asked *her* permission yet, until I know whether *you* would be satisfied or not."

"You surely needn't ask *me*," she answered, "you would only think of suiting yourself, I should suppose."

"Yes, but I *do* need to do it," heeding only one half of what she said;" why, I have not even dared to *speak* of my love yet; do not refuse me your sanction to do so to-night."

"AMY won't you bring me a glass of water," and AMY went out of the room as fast as her trembling but eager feet would carry her; and then her mother continued, "Of course, whoever you may choose as your wife, ELLIS, I should try to like for *your* sake, if for no other; and sincerely I hope Miss HOWARD may make you a good and true wife."

"Miss HOWARD!" Then, in a moment more he approached the dear little woman who sat there, listening so intently for AMY'S returning footsteps that she failed to note the tone of surprise in which those two words were uttered, and taking her hand in his, said, soberly, "The only woman on earth I would make my wife is AMY LESTER: now, if you say *no*, I must go."

"What! My little AMY!" And it was her turn to be surprised then.

"*Your* little AMY *now;* but I want her for mine, too;" then, while a sudden fear ran over his strong heart, he said, with a voice sadly unsteady, "Do you think she loves any one else?"

But AMY was there to answer for herself, and he repeated his question eagerly, looking into her brown eyes, and holding her hand tightly in his own.

"Mother," she whispered, "does he know what he is saying?" And she turned her white face around toward her; but her mother only smiled, and he urged again, "You love me a little, AMY, dear?"

Oh, was it *only* a little,—this love that burned in her cheek, throbbed in her pulses, and asserting itself to her own consciousness, looked at him out of her lifted eyes?

We will not say what ELLIS read there, but he gathered her up close to his breast, as if to shield her from the whole world, and said over and over again, so tenderly, "My little AMY!—dear little AMY!" * * * * * * *

There was a quiet wedding at the cottage six weeks later, and AMY, with fresh roses laughing on her cheek, and sunshine sparkling in her eye, became Mrs. ELLIS GRANDON. That Miss HOWARD was greatly disappointed, we have reason to believe, for she had given every one to understand that he was *her* lover, and it is only fair to believe that she expected to be his wife.

AMY wrought no more lilies and violets on Miss HOWARD'S velvet, but sent it back with a sober little excuse, which brought a red flush to her cheek when she read it.

She finds blossoms growing under her own feet now, in the comfort and security of her husband's beautiful home; and when she says, as she often does, "I never thought to be so happy, dear ELLIS," he only kisses her for answer, but thinks in his heart that the happiness that blesses her thrice blesses him.

STUPENDOUS TRIUMPH OF THE HAIRDRESSER'S ART.

THE VERY LAST THING IN CHIGNONS.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 22 letters.
My 2, 1, 6, 19 is a kind of fish.
My 8, 1, 13 is what we all do.
My 14, 20, 18 is a kind of metal.
My 21, 20, 2, 7 is a silver coin.
My 21, 5, 9, 10 is a kind of bird.
My 4, 20, 9, 12, 11 is a large stream of water.
My 17, 16, 2 is an intoxicating liquor.
My 15, 22, 12 is an insect.
My whole is a Union General.
Hillsdale, Mich. ARTHUR L. CLOSE.

ANSWERS TO ENIGMAS, &c., IN No. 900.

Answer to Miscellaneous Enigma:—A rolling stone gathers no moss.

Answer to Charade:—D. D. T. Moore.

Answer to Anagrams of Places:—Monrovia, Tekama, Eastport, Bridgeport, Constantinople, Archangel, Chester, Stockport, Jerusalem, Hastings.

Answer to Algebraical Problem:—84 sheep.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $13; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2.50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2.70 is the lowest Club rate for Canada, and $3.50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper.* Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

RESTORE YOUR SIGHT!
USE

DR. J. STEPHENS & CO.'S PATENT
CORNEA RESTORERS,
OR RESTORERS OF THE EYESIGHT.
They will Restore Impaired Sight, and Preserve it to the Latest Period of Life!
SPECTACLES RENDERED USELESS.

The most eminent Physicians, Oculists, Divines, and the most prominent men of the country, recommend the use of the CORNEA RESTORERS for Presbyopia, or Far or Long-sightedness, or every person who wears spectacles from old age; Dimness of Vision, or Blurring; Overworked Eyes; Asthenopia, or Weak Eyes; Epiphora, or Watery Eyes; Pain in the Eyeball; Amaurosis, or Obscurity of Vision; Photophobia, or Intolerance of Sight; Weakness of the Retina and Optic Nerve; Myodesopia, or Specks or Moving Bodies before the Eyes; Ophthalmia, or Inflammation of the Eye or Eyelids; Cataract Eyes; Hemiopia, or Partial Blindness; Sinking of the Eyeball, etc.

They can be used by any one with a certainty of success, and without the least fear of injury to the Eye. More than 5,000 certificates of cures are exhibited at our office. Cure guaranteed in every case when applied according to the directions inclosed in each box, or the money will be refunded. Write for a Circular—sent gratis. Address DR. J. STEPHENS & CO., OCULISTS, PRINCIPAL OFFICE, No. 840 BROADWAY, NEW YORK.

P. S.—DR. J. STEPHENS & CO., have invented and patented, *MYOPIA*, or *CORNEA FLATTENER*, for the cure of NEAR-SIGHTEDNESS, which has proved a great success. Write for a Circular. 852-26teo,

PERUVIAN GUANO SUBSTITUTE!
BAUCH'S RAW BONE
SUPER-PHOSPHATE OF LIME.

BAUGH & SONS,
SOLE PROPRIETORS & MANUFACTURERS,
DELAWARE RIVER CHEMICAL WORKS, Philadelphia, U. S. A

For Wheat, Rye, Barley, Corn, Oats, Potatoes, Tobacco, Buckwheat, Sorghum, Turnips, Hops, Garden Vegetables, and every Crop and Plant.

Especially recommended to the Growers of
STRAWBERRIES, RASPBERRIES, BLACKBERRIES, AND ALL SMALL FRUITS.

BAUGH'S RAW BONE
SUPER-PHOSPHATE OF LIME,

Is eminently a success as a Substitute for Peruvian Guano and Stable Manure—and is offered to the Agriculturists of the Northern and Eastern States as a fertilizer that will cheaply restore to the Soil, those essentials which have been drained from it by constant cropping and light manuring.

IT is very prompt in its action—is lasting in effect to a degree unattained by any commercial manure in the market, and is afforded at a much less cost than *bought* Stable Manure, or Peruvian Guano. The Labor involved in its use is far less than that of applying stable manure, while there is no risk from the introduction of noxious weeds.

Our NEW PAMPHLET, "HOW TO MAINTAIN THE FERTILITY OF AMERICAN FARMS."—90 pages, giving full information in regard to the use of manure, &c., will be furnished gratis, on application.

BAUGH BROTHERS & CO.,
GENERAL WHOLESALE AGENTS,
No. 181 PEARL ST. AND 4 CEDAR ST., NEW YORK.
☞ For sale by Local Dealers in all parts of the United States and British Provinces. 892-6teo

SOUTH DOWN COMPANIES' PATENT
SheepWashTobacco
THE BEST KNOWN REMEDY FOR
TICKS, SCAB, VERMIN AND FOOT-ROT,
SHOULD BE USED BY ALL FARMERS ON
SHEEP, ANIMALS and PLANTS.

☞ This pure preparation has been successfully used for years, and never fails to produce the desired effect when used according to directions.

IT WILL NOT INJURE THE MOST DELICATE ANIMAL.
IT WILL IMPROVE THE QUALITY AND QUANTITY OF WOOL.
IT KILLS TICKS ON SHEEP.
IT CURES SCAB ON SHEEP.
IT CURES ALL SKIN DISEASES ON ANIMALS.
IT KILLS ALL VERMIN THAT INFEST ANIMALS, TREES, PLANTS AND VINES.

☞ For FOOT-ROT it is a sure cure, used as a poultice.

☞ **ONE POUND of this Extract will make TWELVE GALLONS of Wash, and contains the strength of EIGHT POUNDS of Tobacco, as prepared by Farmers.**

Sold by all Druggists and Country and Agricultural Stores.

JAMES F. LEVIN,
23 Central Wharf, Boston, Mass.

For sale by E. M. Livermore, Cleveland, Ohio; Bliss & Sharp, Chicago, Ill.; Valentine & Laurence, West Aurora, Ill.; McCulloch, McCord & Co., LaCrosse, Wis.; Clark & Hawley, Red Wing, Min.; Wm. Constans, St. Paul, Min.; Edward H. Biggs, St. Paul, Min.; Wm. H. Leonard & Co., Minneapolis, Min.; Jas. Jenks, Clearwater, Min.; Dr. G. F. Townsend, St. Anthony, Min.; Ticknor, Tolman & Co., St. Cloud, Min. 894-9teo.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

RURAL FARMERS' CLUB.

To Club Readers.

THE RURAL FARMERS' CLUB is a success. From the tone of numerous letters received we imply that it is highly interesting to our readers. Our aim is to bring to the farmer's home the advantages of an interchange of facts and experience among the cultivators of the soil — a condensed, pointed, practical discussion of a wide range of subjects. You, farmers, must sustain this. What you would say to your neighbors in a friendly chat about farm operations, write to us, and we will tell it for you to a host of willing listeners all over the land. We want, and your neighbors want, your *facts* and *experience*, and no farmer's fingers are so stiff with toil but that he can handle his pen well enough to give these. And we will illustrate for you, too, if you only send along sketches or models—no matter how rude if the idea is made plain—of any labor-saving, convenient, or valuable devices or implements, not patented or a monopoly, which you consider would help your brother farmers to know of and use.

More About Growing Corn.

"A WESTERN PENNSYLVANIA FARMER," replies thus to "Eastern Pennsylvania Farmer's" criticisms on his article about growing corn:

"1st, *Manure.*—I bed down with chaff until it is exhausted, and then with saw dust, so that all the dropings of the horse and cattle stables is *short manure* as soon as the snow disappears. The dropings and litter of the sheep cotes is corded up *out of doors*, and is fermented or short manure by the 25th of August, and ready for the wheat. I manure no other grain crops. My rotation is corn, oats, wheat, clover.

2d, *Plowing.*—On the same ground where I have raised over two hundred bushels of sound ears of corn per acre, by plowing *ten inches deep*, my predecessor raised fifty to sixty bushels under the "pennymite" *regime*, plowing three to five inches. Corn roots find the bottom.

3d, *Home-made Guano.*—I tried "putting it in the bottom of the hill at planting," two successive years; result, rotted seed and replanting. I tried plaster in the bottom of the hill with the same result.

4th, *Number of Stalks in the hill.*—With the rows four feet apart each way, my ground will fully sustain and mature five stalks in a hill. There are not as many stalks per rod as in drills at 3½ feet, and 12 inches in the rows,—80 stalks in rows, 82½ in drills.

Will my *Eastern* friend please give the number of bushels he grows per acre?"

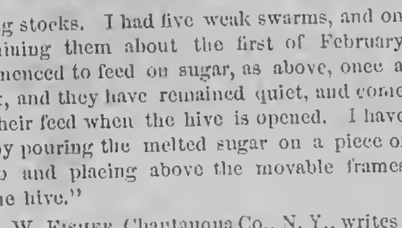
Feeding Bees.

W. D. B., East Hardwick, Vt., writes that in his experience, "the best feed for bees is honey if you have it, but if not granulated white sugar melted, having water enough added to make it about as thick as honey. This makes a good substitute for bee's honey as a food, and is not very expensive. Maple sirup will answer, after the bees commence to fly, but is not safe to feed long before the spring opens. A little feed now will be likely to produce early swarms from strong stocks. I had five weak swarms, and on examining them about the first of February commenced to feed on sugar, as above, once a week, and they have remained quiet, and come for their feed when the hive is opened. I have fed by pouring the melted sugar on a piece of comb and placing above the movable frames of the hive."

W. W. FISHER, Chautauqua Co., N. Y., writes: "I would say, in answer to HARVEY HALL, in the RURAL of April 6th, that I have learned from experience in bee-keeping, by observation, that bees can be wintered without loss as easy as a herd of cattle. Feed the bees with sirup made of sugar or refuse honey, in the fall; and also in the spring with the same, and unbolted rye flour and water for the young bees, and there will be no danger of losing a swarm. The following recipes for making artificial bee food are given:—*For Making Sirup.*—To ten pounds of sugar add four pounds of water, boil five minutes, skim well and cool. Use good brown or coffee sugar. *For Preparing Candied Honey for Bee Feed.*—Place the honey in a kettle with a little water over a fire and let it remain until the comb is entirely melted; then set off to cool and the wax will rise to the top, which may be removed, and the honey, if too thick, thinned sugar sirup may be mixed with it to advantage."

Clod Crusher.

WE illustrate a very cheap, simple, but efficient implement—first made and used, we believe, in England—for breaking lumps of earth on plowed fields, and leaving the surface smooth and finely pulverized. It is a very good substitute for the roller to smooth the surface of the field and cover grass seed sown after spring grains. It is made



in this wise:—Lay two oak scantling, 3 by 3 inches square and 3½ feet long, parallel on the shop floor three feet apart. Then spike a strip, 2 by 2 and 5 feet long across two ends of the scantling; then four two-inch plank 8 inches wide and 5 feet long, spiking them on like clapboarding, and finish with a plank 14 inches wide for the front. Turn your crusher over, affix a stool for the driver, and the chains to the cross-pieces for the team to draw by, and the implement is completed.

Potatoes—Garnet Chili and Goodrich.

S. F. TOOLEY, Marshall, N. Y., writes for our Club, that—"The best varieties of potatoes raised in this section are the Goodrich Seedling and the Garnet Chili, both originated by Mr. GOODRICH of Utica. The first, is an excellent potato for summer use, and keeps sound until planting time. The Garnet Chili is a large yielder, averaging from two to four hundred bushels per acre. It is the "stand-by" with us, being free from rot, and an excellent potato for consumption through the year; retaining its freshness when other varieties are wrinkled and stale. It should be planted on dry soil. Alluvial beds should be avoided, as these potatoes fail to reach maturity in such soil. Plow under coarse straw manure, and plant in rows three feet apart, with the hills 20 inches apart in the row. The Garnet Chili's are now one dollar per bushel, by the load, in Utica."

Salting Butter.

IT is becoming a very prevalent complaint, among butter dealers, that farmers are not careful enough as to the kind and quantity of salt they use in preparing butter for market. Some put in too much, others hardly enough, while too many are careless as to the quality of the article used. Ordinary barrel salt is reported to contain so much lime as to cause a soapy texture to the butter, while lacking the preservative power essential to good flavor and protracted keeping. An exchange states that the Ashton salt, imported in sacks of four bushels, combines all the essentials necessary to the preservation of butter,—the salt costing about one-fourth more than that commonly in use. It pays well to be particular in everything relating to butter manufacture—a good article, cleanly made and properly put up being certain to remunerate the maker for all trouble and expense, by the enhanced price it is certain to will bring in the market.

MESSRS. WALCOTT & CAMPBELL'S AYRSHIRE BULL "TARBOLTON."

THE bull "Tarbolton," herewith illustrated, was imported by Messrs. WALCOTT & CAMPBELL, New York Mills, Oneida Co., N. Y., at the age of one year, and has since taken the first premiums at the New York State Fair as a two-year-old at Utica, and a three-year-old at Saratoga. The engraving is a fair representation of his points as we remember them in his appearance last fall, at Saratoga. His heifer-like head is peculiar, and is a feature admired by fanciers of milking stock. The Ayrshires are pre-eminently celebrated for their excellent milking qualities. As compared with other celebrated breeds they are recent in their origin, and are supposed to have sprung from the original stock of the county of Ayr, which extends along the eastern shore of the Firth of Clyde, Scotland.

Opening of 1867 for Bees.

S. J. PARKER, M. D., Ithaca, N. Y., writes:—"The first pollen gathered by my bees this Spring (1867,) was on Sunday, March 31st. This was brought in eagerly after a hot forenoon, at 2½ to 4 o'clock. April 3d and 4th, still more was gathered; and April 7th was a good pollen day. But to-day (April 8th,) they are crowding in with it. To-day, too, is the first day in which they collected dew early in the morning, in the door-yard and garden. This year, by the sound state of white clover roots, promises to be a fine honey year. Indeed, it ought to be a good wheat and grass year, a year of ample harvest."

Poultry Manure.

THE productive power of the droppings of the henery are very great as compared with ordinary barn yard manure, yet many farmers, with a score or two of fowls, take little or no pains to preserve and apply it to the purposes of vegetable production. It is an excellent dressing for gardens, and will repay, a hundred fold, the care and expense of preserving and applying it.

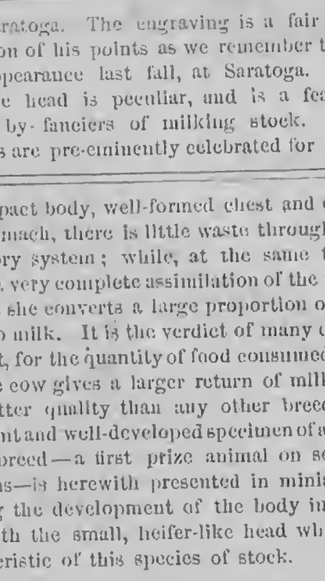
IMPROVED CATTLE—AYRSHIRES.

WITHIN a period of about seventy years the leading breeds of cattle have been vastly improved with respect to appearance, size and productive power. The precise period when this improvement commenced is not material, though tolerably distinct traces of it are found in records a hundred years back more or less. Previous to that time the prevalent breeds of cattle on the Continent and the British Islands were noticeable rather for the incompleteness of their make up, the diminutiveness of their bodies and the paucity of their products whether for the dairy or for slaughtering purposes. The peculiar distinctive divisions are Long-Horns, Middle-Horns, Hornless or Polled and Short-Horns. There are several intermediate varieties differing, in some characteristics, but still retaining a general family resemblance to one or the other of the leading classes.

Whether it has been by crossing, on the part of breeders, or, from improved management and keeping, certain it is that all the leading stocks have shown marked improvement within the last thirty or forty years. Among the most noticeable of these improved breeds, and marked favorites with cattle breeders and dairymen, is the Ayrshire, supposed to be an improved development of the old Tiswater, once in high repute in various parts of England. FLINT, in his treatise on milch cows and dairy farming, devotes considerable space to this breed, and concludes that for dairy purposes purely, or mainly, the Ayrshires deserve the first place. In consequence of the cow's small, symmetrical and compact body, well-formed chest and capacious stomach, there is little waste through the respiratory system; while, at the same time, there is a very complete assimilation of the food, and thus she converts a large proportion of her food into milk. It is the verdict of many dairymen that, for the quantity of food consumed, the Ayrshire cow gives a larger return of milk and of a better quality than any other breed. A prominent and well-developed specimen of a male of this breed—a first prize animal on several occasions—is herewith presented in miniature, showing the development of the body in contrast with the small, heifer-like head which is characteristic of this species of stock.

THE RAIN-GAGE.

WE have thought many of our readers would be interested by a description of the rain-gage, an instrument intended to measure accurately the quantity of rain which falls in any given period of time. The one we herewith illustrate has been adopted by the Smithsonian Institution for use by its observers in various parts of the country, and is probably as accurate and simple an instrument for this purpose as can be devised.



It consists of a brass or tin cylinder *a*, *b*, *c*, *d*, three inches in diameter to catch the rain; a small cylinder, *e*, *f*, to receive the water and reduce the diameter of the column, to allow of greater accuracy in measuring the height; a whalebone scale, *s*, divided by experiment, so as to indicate tenths and hundredths of an inch of rain; a wooden cylinder, *w*, *w*, inserted permanently in the ground (represented by the shading) for the protection and ready adjustment of the instrument.

The rain-gage should be placed in an open, unsheltered place; trees, high buildings and other obstacles if too near, may have considerable influence in increasing or diminishing the quantity of rain falling into the tube. It should be located, if possible, so as to avoid eddies caused by the wind. The wooden cylinder should be sunk in the ground until its upper end is even with the surface of the earth. The upper cylinder to catch the rain is screwed to the tube in which it is measured. Experiments must be made with the gage and measuring scale until it is found what height of water in the lower tube represents one inch in the upper cylinder; then measure this height on the scale and divide it into tenths and hundredths. The scale thus made, plunged into the water in the smaller tube, will tell the amount in inches and tenths and hundredths thereof, of the rain that has fallen.

ABOUT PLOWS.

IT is frequently the case that a farmer will buy two plows of the same make and pattern, and one will prove to be a much easier running and holding plow than the other. Why? It may be that the castings are warped and do not fit together well; but far more generally, because the iron in the two moldboards is not of the same temper,—the plow with the softest moldboard being the poorest of the two. The furrow adhering more closely to the soft moldboard, makes the draft of the plow heavier, and, likewise, pulls the plow around to the right, away from the land, therefore making it run unsteady. As an illustration take two pleasure sleighs; the one having on hard cast shoes and the other soft cast shoes. When these two sleighs run over a piece of bare ground the one with soft shoes draws very much the hardest, and has the most side draft. It is quite difficult for furnacemen to make their moldboards always of the same proper temper, and especially is it so where they melt soft machinery iron at the same heat with hard plow iron. As a general rule the best and most uniform plows come from those firms who make that particular tool a speciality and a study. Their mechanics become familiar with selecting and melting iron for that purpose, and their castings are apt to be fitted together with extra care.

PLOW MAKER.

PEAS AND PORK.—A writer in the American Stock Journal advocates the raising of peas for fattening pork. Ground or boiled they are deemed excellent for other stock, also, when mixed with cut hay, straw or corn fodder. But the Canadians rely on peas for pork-making, deeming six bushels of these equivalent to ten bushels of corn, for this purpose. The pea is an excellent decomposer of stiff and damp clayey soils.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE STATE SHEEP FAIR.

Our readers will not forget that the large edition which is printed of this paper requires it to go to press so early in the week that no part of the proceedings of the State Sheep Fair can go into this number. We hope to furnish an entire report of them next week.

PROPER SIZE OF MERINOS.

We often receive accounts of heavy Merino fleeces, shorn from carcasses of under seventy pounds, in the full-grown ewe, and one hundred pounds in the full-grown ram—both being in good ordinary condition. A large proportion of wool to carcass is, of course, a prime point of excellence — but it is bought too dearly if it is bought at the expense of a *proper* sized carcass. It is a demonstrable fact that a small spherical body, like the body of a sheep, presents more surface in proportion to weight than a larger one; and consequently that, other things being equal, the smaller sheep must proportionally produce more wool. We have seen runts on which its production appeared too great to be natural in a well-balanced, healthy organization. It seemed as if the system abnormally devoted its energies to the formation of the pabulum of wool (the special substances which constitute and tend to the growth of wool) to the partial exclusion of those secretions which enter into the composition of muscles, bones, and other structures of the body; and hence while the wool grew as fast or faster than on the ordinary full-sized sheep, the carcass remained dwarfish, unthrifty and deficient in constitution. We have seen sheep that were very small or very large for their species, which were strong and hardy; but this is rather the exception than the rule. The common observation of mankind has always discovered and recognized the fact that the average or medium size, in any variety of animals, is the size which indicates the best constitution—i. e., that development of the general organs and functions, which best fits them to perform their mechanical duties, utilize food, resist disease and withstand hardship. But if excessively small or excessively large animals, for their species, do happen to possess the full average vigor of constitution, it is not therefore expedient to breed from them. These peculiarities are very likely to reproduce themselves, especially in the male sheep. A very small stock ram generally gets under-sized progeny—a very large one, over-sized progeny. This is peculiarly the case where these characteristics of the stock ram are inherited and not accidental. Such a course of breeding, persisted in, permanently changes the average size of the flock. Unless there is a special reason for this — as, for example, to better adapt the flock to meagre or rich pasturage—it is not generally advisable. And where such a motive exists, it is more expedient if practicable, to select a variety whose natural size is adapted to the surroundings, than it is to select an unadapted variety, and then, by changing their size, adapt them to such surroundings. Why? Because we believe, as we have already said, that the natural size of a species, is the size in which it exhibits most vigor; and secondly, because it is most convenient. Why create a new sub-variety, or family, by breeding, to meet a local want, when other already adapted varieties are equally attainable?

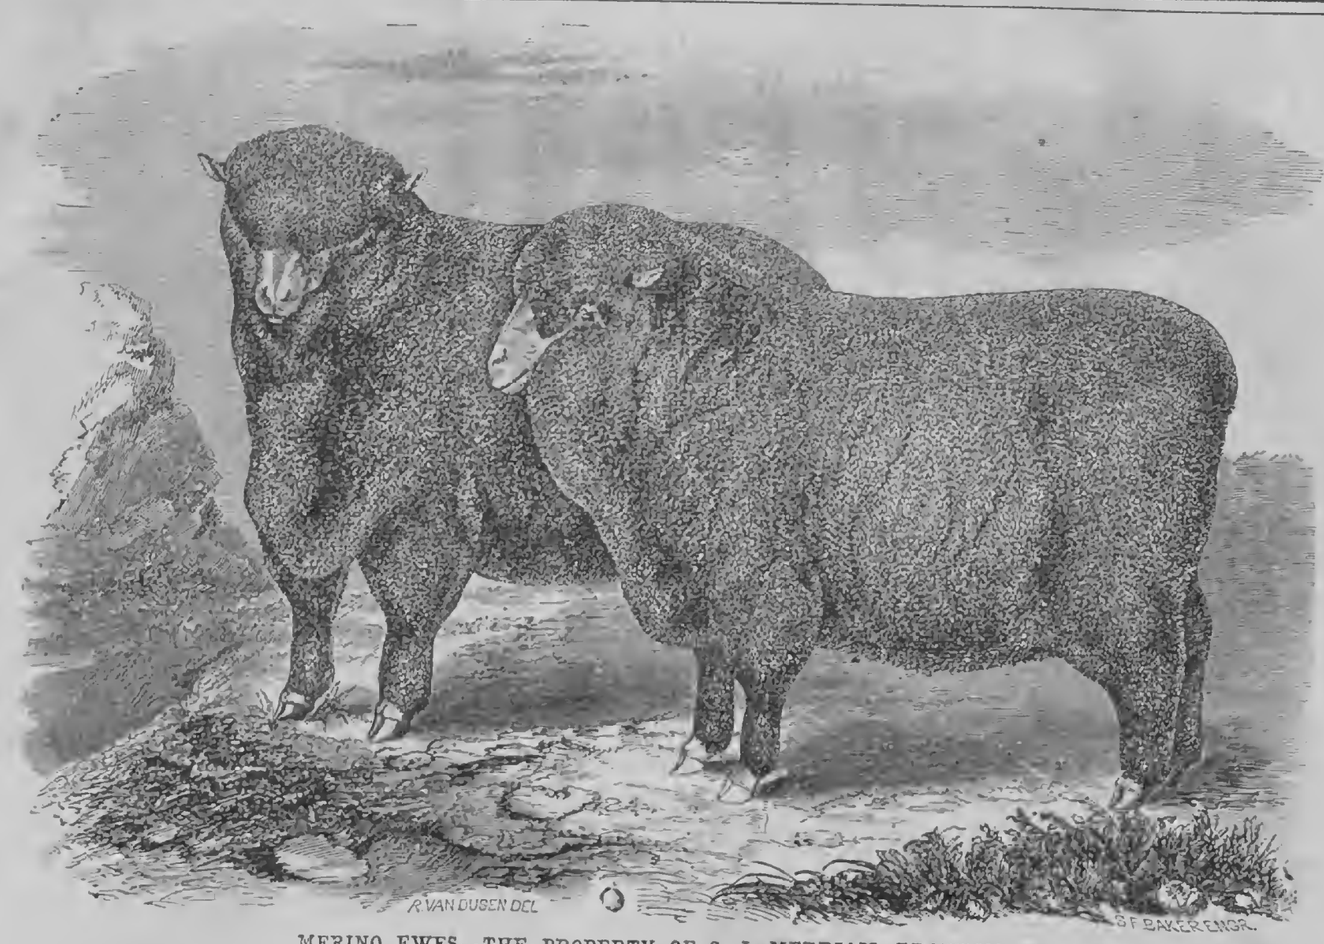
The *proper* size of the Merino, with the conditions above laid down, depends upon the quantity and quality of the aliment—summer and winter feed—which can be profitably bestowed on it in the locality where it is to be kept. On the rich grain lands of Western New York and Southern Ohio, for example, where sheep are only an incident in convertible husbandry—where all its varieties of feed are superabundant—the largest variety is called for. It is called for, because it can as well be kept as smaller ones, and because it will produce a given amount of mutton, with a less percentage of offal than a smaller variety. And it will pay quite as well for what it consumes. The advantage of greater surface for the production of wool, in the small sheep is probably nearly or quite counterbalanced by its increased consumption to support parts of the carcass which are not salable products, namely, the offal — for it requires food to grow offal, in proportion to its amount, as well as mutton and wool. Adding the superior proportion of mutton in the large sheep, the balance stands in its favor, in the situations to which it is adapted.

On light or meagre soils and pasturage, or those habitually exposed to periodical drouths, smaller varieties of the Merino are called for. Sheep, it is well known, consume food in proportion to their weight. It follows then that when pasturage is scanty, a smaller sheep has not to travel so far to obtain its necessary supply as a larger one. And if the large sheep is for this purpose required to travel beyond what is necessary for healthy exercise, the labor thus incurred both wastes its valuable products (wool and mutton) and creates a demand for additional food. How long would the high-fed and heavy Infantados of Vermont retain their present size, condition and weight of fleece, if forced to travel fifteen or twenty miles a day over the burning plains of Australia, or half that distance over the prairies of Texas, when scorched by drouth, to obtain even a moderate supply of food? And turning our eyes to other breeds besides the Merino, how long would the great splendid mutton varieties of England contrive even to *live*, under such circumstances?

Many persons suppose that small sheep are hardier *per se* than larger ones. We doubt this. But it is made to appear so to superficial observation, because the physical causes — meagre feed, privation and hardship—which in the natural course of things render varieties small, inure them to such surroundings; and it is this and not their small size which renders them capable of enduring greater hardship and privation. The size is but a coincident effect of the same cause. We have already, however, noted one apparent exception. The small sheep is not compelled to waste so much strength in securing its food, and can therefore better encounter the consequences of extremely meagre pasturage. But this is rather a mechanical advantage than a result of superiority of constitution. If the small sheep traveled as far the result would be the same.

It follows, from the preceding views, that we would determine the proper size of Merinos, first, by selecting a variety, if it can be found, adapted in this particular to the keep; and second, that in choosing animals from any variety, we would consider good medium-sized ones preferable to either runts or monsters. We have two varieties of Merinos in the United States which, when unmixed with each other, will meet the wants of most localities. The mixture forms an admirable class of sheep—but we have always urged at least a portion of those who specially breed sheep to sell to the founders of new flocks, to preserve these varieties entirely distinct, in order specially to meet the wants of different localities.

We can, indeed, suppose cases where larger, and possibly smaller, varieties of Merinos might be desirable. In breeding to secure either object we would "hasten slowly" and not, so to speak, disturb the equilibrium of the constitution by sudden and violent changes. This is especially important if it be true, as many breeders and physiologists suppose, that the progeny inherit to a great extent a part of their organs and structures from one parent and a part from the other. Thus, it has been claimed, for example, that while the sire controls in much the greater degree the size of the progeny, the dam exerts the predominating influence in transmitting the characteristics of the viscera—and one of those characteristics is size. If then this theory is sound, it would follow that the coupling of a large male and a small female would generate offspring whose viscera were disproportioned in size to the general frame, and like results would follow coupling large females with small males. Such results would obviously be injurious. The ram does, undoubtedly, as we have already said, far most control size. The proofs are visible to all eyes. The other hypothesis has not, so far as we know, received any ocular demonstration. But waving all speculations on the subject, we are prepared to believe on general physiological principles that any sudden and violent changes in the size and structures, produced by breeding, must derange to some extent the animal machinery and the adaptation to each other of the different parts. We could, we think, furnish proofs of this, patent to all eyes. But this is not the topic now chiefly under consideration, and we have not space or time to pursue the investigation at present.



MERINO EWES—THE PROPERTY OF S. J. MERRIAM, BRANDON, VT.

Condensed Correspondence, Items, &c.

The Lamb Drop in Texas.—George Wilkins Kendall, the most distinguished wool grower of Texas, writes us:—"My lambs commenced coming on the 12th of March, at the end of a warm and growing spell. On the 13th, the worst sleet storm ever experienced in this State set in; away went the grass: the ewes had no milk; and the consequences you can easily judge. I hoped to raise 1,800 lambs this season at least, but if 500 rub through I shall be satisfied. Most of my neighbors—all with large flocks—are served in the same way. The weather (April 7th) has continued persistently cold, raw and backward. In the older Southern States it has been floods here, freshets there, and late frosts everywhere. * * * Yet I am as hopeful of the future as ever I was. I know what I have done in Texas in years past, especially before the war, and unless Providence has entirely changed the seasons, I am sanguine I can effect the same results again. Why not? April 9th. A warm and growing day at last, the first time in nearly a month. But so treacherous has been the weather this month, and nearly all the last, that I will not crow. Our old ewes are picking up a little, and the curled up lambs, what are left of them, are straightening out—but we are not yet out of the woods."

Why are Rams Short-Lived?—E. E. Gorham, Hadley, Ill., states that a larger per cent. than usual of stock rams and ram tegs have died in his vicinity—and that unused rams running in the same flocks with wethers have not done well. He asks the cause. Under any treatment, we have always found that rams—especially tegs and yearlings past—are more subject to disease and death than ewes and wethers; and this is particularly the case where they are kept together in considerable numbers. They require to be kept in small flocks; to be fed with judgment,—neither too much nor too little; and they should get habitual exercise. The choice stock rams of the country are proverbially short lived—and the evil has rapidly increased within the last half dozen years. We attribute this to the forcing system. They are pampered when tegs to make them precociously large and showy, and to get "brag fleeces." They are pampered the second season for the same reason and to enable them to do extra work—and this forcing system and over-work are kept up through a life rendered short by a total disregard of the natural habits of the animal, and an obvious violation of the laws of nature.

Diseased Ram.—W. M. Holmes, Greenwich, N. Y., writes:—"I would like to know what to do for a ram that has been tough and rugged for two years, and then becomes all at once stiff and apparently *foundered*—but that never has had over half a pint of oats twice a day—no corn—and was not heated." We have no idea that the ram is "foundered." If *all* the symptoms are given, we would merely nurse him well, protect him from sudden changes of weather, keep all the evacuations regular, and trust to nature for the rest.

Cure for Hoof-Rot.—"An Old Farmer," Knowlesville, ——, gives the following as a "sure cure" for hoof-rot:—"Take 4 ozs. blue vitriol, 4 do. verdigris, 2 do. butter of antimony, 1 pint spirits of turpentine, 1 do. strong vinegar. Shake all well together before using. Pare the hoof down so as to remove the affected parts, and then apply with a swab; after which the sheep should be kept on dry straw for twenty-four hours."

The Lamb Drop in New York.—Further information goes to show that the season has not been so favorable for lambs, in New York, as we hoped when we recently wrote on the subject. We have received a number of letters from good and careful breeders which mention severe losses of lambs in their own flocks and those of their neighbors.

Sheep Wintering in Ohio.—A letter dated April 19th, from a leading sheep breeder in Lake county, (Western Reserve) Ohio, says:—"Sheep have wintered badly. Fodder was never so scarce, or used up so closely as now."

Rural Spirit of the Press.

Castor Beans—Cultivation, &c.

The editor of the Farmer's Advertiser, St. Louis, Mo., has had considerable experience in the cultivation and preparation of the castor bean for market. This he communicates in a recent number of his paper, from which we condense the leading features of his practice in the cultivation of this article. The soil for this crop should be dry and adapted to growing wheat or corn. The bean straw is said to be superior to clover as a fertilizer if plowed under in the fall as soon as the seed pods are gathered. Planting should be done as soon as the ground can be got into good tilth, as for other cultivated crops. If the ground is low, or likely to suffer from rains, throw it into ridges. The rows should be from five to six feet apart each way. About every eighth row leave a space of eight feet for the passage of a wagon at gathering time. In preparing the seed, pour water, raised to nearly the boiling point, upon it and let it remain twenty-four hours before planting. Eight or ten seeds to the hill should be dropped, as the cut worms are likely to destroy some of the plants. Keep the ground open and mellow as for other hoed crops. The pods are generally about eighteen inches long, and should be gathered as soon as they begin to turn brown — cutting them off as they ripen. They may be dried in a house specially prepared, or in an open place with a southern inclination — the ground being first rolled down hard to facilitate the gathering of the beans, as they pop out of the pods, as they frequently do to the distance of a dozen feet. The spikes or pods should be frequently turned over till they are all clean, when a new batch, which ripened later, may be put in the same place. If rain is threatened, rake the pods into heaps and cover them with straw or boards. When all the beans are out sweep them together, clean with a fanning-mill, sack or store them, in a dry place, for market. The yield is about twenty bushels per acre, and the price per bushel ranges from two dollars to five. Prolific seasons may depress the price below two dollars, but this is not often the case. Where the cultivation is on an extended and permanent scale, a drying-house is important, as loss from bad weather is avoided and a saving made in the end, amply repaying the cost of the structure.

A Novel Way of Taming Bees.

A writer in a recent number of the Scottish Gardener says:—"To tame vicious bees, we have only to accustom them to the form of human beings. A scarecrow, or what my Scotch friends call 'a potato bogle,' placed in front of the hives of stinging bees, is a great help. It can be shifted now and then, and, to provoke a general attack, place a loose waving rag or handkerchief in the hands of the bogle. I have been told that vicious, kicking horses have been completely cured by hanging bags of hay behind them in the stalls. They kicked and plunged at the bags till their strength was exhausted, when their vice and folly left them, so that they quietly tolerated the bags to dangle by their sides, and grooms to do as they liked. In like manner the bees attack the waving, provoking handkerchief, and sting it till their vice leaves them. That which scares crows tends to domesticate bees. If kept in a garden where men, women and children are often seen, and where they are not disturbed, bees are as tame and peaceable as cocks and hens.

Barks in Steers and Oxen.

This ailment is caused by an accumulation of matter in the sheath of the animal, retarding the passage of the urine, and causing a feverish swelling. The result, if not fatal, is a falling away of flesh, and a general loss of spirit and diminution of vigor. A correspondent of the Maine Farmer suggests that the first thing to be done is to confine the animal and remove the obstruction by the use of brilled stick, by which the matter is drawn out. Cleanse with soapsuds and grease, and follow with a rod or piece of tobacco reaching above the point of obstruction and soreness. Repeat the operation two or three times during the year. To prevent the barks altogether, delay the castrating operation till the calves are six months old or thereabouts. It is to a premature performance of it that the authority referred to imputes this ailment of cattle.

Black-Tooth—Pigs.

These animals, when young, are sometimes afflicted with what is denominated among farmers as black-tooth, which generally proves fatal in a short time, if means are not used to relieve them. A gentleman, formerly a resident in this city, but now a successful farmer in Wisconsin, states that pulling out the affected or black tooth of the ailing pigs, if promptly done when the animals give signs of distress, will produce a speedy and certain cure. A pair of ordinary pincers will answer for the purpose, if a better instrument is not attainable. If pigs are found to be ailing—refuse their food and are disinclined to their customary exercise—they should be examined for the black-tooth, as these are symptoms of this ailment.

Farming in Kansas.

The Ashtabula Sentinel states that Judge Chaffee has purchased a farm of 1,000 acres, near Manhattan, Kansas, sending forward to stock it $5,000 worth of blooded cattle. Among these animals are the imported bull Clarendon and twenty-five other short-horns. A lot of very fine sheep, native and imported, has been sent in the same direction. The Judge has devoted much time and money to the stock department of his business, and his present enterprise, under the management of his son, can hardly fail of proving highly advantageous to the farming interest of Kansas.

Rural Notes and Items.

The Season.—So far, this spring has shown a close relationship to that of thirty years ago. Cold, blustering winds have prevailed most of the time for the last two months, accompanied by frequent falls of rain, sleet and snow, and *vice versa*. It was generally supposed that March and April had exhausted what was left of winter, but May came in quite as grim as its immediate predecessors. Several severe frosts occurred in the earlier days of the month; snow was not wanting, but owing to the preceding cold weather the fruit trees were not sufficiently advanced to receive much if any damage. As we write a change for the better is perceptible, inducing a hope that the worst is now over. Farmers are backward with their work, but it may be brought up in time, as has been the case on former occasions analagous to this one.

Seed Sower and Hand Cultivator.—One of the finest implements that ever came under our notice for use in the garden or on the farm, for sowing and cultivating all kinds of root crops, is "Harrington's Combined Seed Sower and Hand Cultivator." It is simply a hand machine which, as the operator wheels before him, marks the rows, opens a slight furrow, drops the seed, covers it, and finishes by rolling down the ridge. Then the sowing attachment may be taken off and cultivator teeth put in its place, and you have an efficient hand cultivator which will do the work of half a dozen men with hoes in the garden or among root crops. All slides, reeds and brushes are dispensed with in its construction. The large silver medal of the N. E. Ag. Society was awarded to it in 1866. We have received a machine from F. F. Holbrook, No. 24 Merchant's Row, Boston, who manufactures improved agricultural implements.

About Guano.—(J. W.) We cannot say, definitely, whether it will pay or not to use guano on winter wheat. We have an impression that in good wheat growing regions it will not pay to buy and use expensive fertilizers, the result to the wheat crop alone being considered. If the object be to restore exhausted land, and get a good turf on it, guano might be profitably used. We should prefer harrowing in the manure previous to sowing the seed. From three to five hundred pounds per acre should be used. If plaster is also used, sow it on the green blades of grain.

Pork Packing in Cincinnati.—The Report of the Commissioner of Agriculture for February contains a table showing the number of hogs packed at Cincinnati during thirty-five years, also their average weight per head for the last ten years, and the average price per pound for the last fourteen years. The results are: Number of hogs killed in 35 years, 10,752,027; average weight per head, omitting fractions, 210 lbs.; average price per hundred pounds for last fourteen years, $6.75. The highest price paid in the series of years was $14.62½ in 1864-65. The lowest, 2.22 3-5 in 1861-62.

Potato Culture.—Under this heading J. H. Vail, in the Cultivator, gives his experience in cultivating the potato and "the decrease in the yield per acre now, compared with former years. He thinks that experience has proved that the farther we get from the source of all new kinds—the seed ball — the less the yield, the weaker the plant, more subject to disease, and the finer the quality of the tubers when they do escape the rot." He adds that using potatoes for seed, grown in mucky land, on upland, and *vice versa*, will add twenty per cent. to the quantity.

Elliott's Hay and Manure Loader.—(C. R. M., Marengo, Iowa.) The "machine" termed "Elliott's Hay and Manure Loader," is an unmitigated humbug. The proprietors of it are shrewd operators and have "deeded" more money out of farmer's pockets than they could ever hope to earn in a lifetime of honest toil. However nicely the model may operate you will find the machine perfectly worthless when put to practical work.

New England Ag'l Society Fair.—The Executive Committee of this Society has decided to hold the next New England Fair at Cranston, about three miles from Providence, R. I. The grounds selected are those of Col. Amasa Sprague, containing seventy-five acres, encompassed with a substantial fence twelve feet high. A hall is in process of erection competent to seat five thousand people. The Fair will be held the first week in September.

The Cotton Crop.—The cotton crop of last year has been about half sold, according to an estimate at New Orleans, bringing the growers about one hundred and thirty-five millions of dollars. Pressing demands will soon absorb the avails of the remaining moiety. The National Intelligencer says the great resource of the South must, or ought to be found in the application of a large force in the production of cotton.

Gas-Tar on Corn.—(A. W., Saratoga Co., N. Y.) Gas-tar applied to seed corn is said to prevent birds from pulling it. We have never tried it, but know that ordinary tar is efficacious. One quart would be sufficient for half a bushel of seed. Pour hot water on to the corn, let it stand a few minutes, then drain off the water, pour on the tar and stir briskly. The corn will be hot enough to spread the tar sufficiently.

The Cattle Plague.—At a recent meeting of the "American Institute Farmers' Club," Prof. Brown delivered a lecture on the Cattle Plague which is said to have given great satisfaction. He showed diagrams of the virus enlarged 2,800 times, which the Tribune denominates opening the wonders of the invisible world.

Farm Manager.—Any one requiring the services of an experienced person to manage a farm in all its branches is referred to the advertisement of Mr. Geo. Gardener in this paper. The advertiser can give unexceptional references, and has the capacity to "fill the bill" he publishes.

Large Eggs.—O. C. H., Whitney, Vt., writes us that Black Spanish fowls, owned by Calvin Kelsey of that town, laid two eggs, one of which measured 8 inches in circumference one way and 7 inches the other; the second egg 7½ and 6 inches.

Hildreth's Gang Plow.—E. E. S., Saline, N. Y., asks where the above named patent gang plow is manufactured. Our advertising columns ought to tell him. We do not know.

Anthracite Coal Ashes.—(A Subscriber, Hoosic Falls, N. Y.) These ashes possess little value for fertilizing purposes. Perhaps they are of most use scattered on grass land, or applied to light, sandy soil.

HORTICULTURAL.

THE FRUIT GARDEN.

Most farmers are ambitious to possess a good orchard, but few cultivate what might strictly be termed a fruit garden. On many farms orcharding for market purposes is of doubtful profit, but on every farm a garden devoted to growing fruits for family use would be remunerative in every sense of the term.

The fruit garden should not be large, as it will not be taken care of well enough; it should be located near the dwelling both for convenience in cultivating and pleasure in beholding it; it should be sheltered under the lee of the buildings, or a hill, and surrounded by a dense, high evergreen hedge, or a tall, close board fence or stone wall. A sunny, warmly exposed location should be chosen, and the soil should be thoroughly drained, well enriched, and deeply dug up. In short, make a good beginning, for when the trees are planted you cannot drain, subsoil, or change the location without incurring great expense.

Half an acre will make a fair sized fruit garden. Let us say that it is eight rods one way and ten the other; that it is longest north and south, and is inclosed with a tight board fence or stone wall eight feet high.

Now let us see what we can plant in it. First, we will have a border on the south, west and east sides, four feet wide, planted to grapes, apricots, and nectarines, which are trained against the fence. Next to this border on the west and east sides only we will have a strip of grass eight feet wide. The two entrances to the garden shall be on the south end, opening to the ends of these grass strips or walks. These are our only walks; they serve for turning places for the horses in cultivating the garden, and the grass will mulch the strawberry bed. Along the south end of the garden devote ten feet to strawberries, then set seven rows, five feet apart, with raspberries, blackberries, currants and gooseberries, then four rows of dwarf pears, and as many of peaches, planting the trees eight feet apart each way, and heading them low; then you will have room left for two rows of cherry and one of plum and one of apple trees.

This variety and quantity of fruit well taken care of will amply supply an ordinary family.

MEAN TEMPERATURE NECESSARY FOR GRAPES.

J. S. Lippincott, Esq. of New Jersey, a man of scientific eminence, in an article on the Geography of Plants, gives the following rules for determining the fitness of districts in the United States for the growth of certain varieties of vines: Those places which have a summer temperature of 66.5°, a hot month of 70° and a September of 60°, will ripen Delaware, Clinton, Perkins, Iona, Logan, Israella, with other hardy varieties. The temperature of their growing season corresponds to a mean of 65° and upwards, and an aggregate of heat of about 8.000° Farenheit.

Those places which have a summer of 70°, a hot month of 72°, and a September of 63°, will ripen Concord, Hartford Prolific, Diana, Creveling, &c. Their season of growth corresponds to a mean of 67°, and an aggregate of 8.500°.

The Isabella requires a summer of 72°, a hot month of 73°, and a September of 65°, and a mean during its growing season of 70°, and an aggregate of 10.000° of heat, &c., &c.

The summer temperature of Buffalo, N. Y., is 68°; it has a hot month of 70°, and a September of 62°; and it is said that the temperature of places on the banks of the Niagara, north of the city, is from two to three degrees greater.

INSECTS ATTACKING RASPBERRIES.

Eds. Rural:—Almost every cane of my raspberies, both black and red, has been pierced by some insect depredator, with small perforations the size of a pin, in each of which, in the pith of the cane, I find an egg about an eighth of an inch long, of a whitish color. These perforations occur in rows and very close together. The rows are from half an inch to half a foot long, and sometimes several rows on a cane. Above these nests the cane is dead. The most of them are as much as two feet from the ground. The prospects of my berry crop are diminished at least one-half in consequence of this. I would like information as to the nature of the "varmint" that has caused the trouble, and also how to prevent his operations in the future.

I have a patch of artichokes in my garden and want to get rid of them. If there is any thing more fatal to them than large doses of hoe well followed up, I would be glad to know it. Can they be killed in one season by keeping the tops hoed off? Dr. F. H. Guiwits.

Clinton, Mich.

Remarks.—What do those skilled in insectology say to this? As to the artichokes, our correspondent might turn his bed into an unfloored pig sty, and put an unrung pig thereon, and we think the artichokes would "come out."

GARDEN AND ORCHARD WORK.

May is a busy month in the vegetable garden. Peas want hoeing, and perhaps brushing; early beets, parsneps, carrots, etc., if sowed the last month, want weeding. If not sown, the sooner the task is done the better for your chance of long, strong tubers. Make the ground deep and mellow. Melons, cucumbers, sweet corn, squashes, beans, etc., all to be planted this month. Keep the melons and cucumbers and squashes each a good distance apart, if possible. Tomatoes when first taken from the frame and planted should have a box around them a few days, until their roots get newly established. The same also of melons and cucumbers taken from the frame. In making melon and cucumber hills, put in plenty of well-rotted manure, and distribute it wide as well as deep. Lima beans want rich, well-manured soil, or they give but a poor return. Celery plants need to be pricked out into a gentle spent hot-bed frame. Cauliflower plants, as well as cabbages, are benefited by adding a handful of bone meal in each hill where they are to be planted.

If you expect to gather good fruit, or large and fragrant flowers, keep the soil frequently stirred; never let it get packed down and dried. If drought comes, the more you stir the land the better. Soil stirred after four o'clock P. M. will absorb the dew almost equal to the effect of a small shower. Many years ago, we kept a large nursery fresh, green, and growing all summer, by keeping our plow and cultivator working from three P. M. to dark, and sometimes a little on moonshiny nights. Grass fields all around us were burned out, forests were brown, and yet our trees and plants grew on as usual, and all by means of constant stirring of the soil.

Dahlias may be planted out any time after the 10th of the month. Deep, moist ground gives the growth and blooms; while as manure, we have never found anything equal to a weekly application in liberal quantity of soap-suds, water and chamber lye.

Stir the soil carefully around Japan lilies or other bulbs that are now coming strong out of the ground.

This is the best month to prune peach-trees. Take out all dead wood; shorten back the last year's growths one third to one-half; take away entire most of the puny little twigs, and shorten others back into spurs for bearing another year. Clear away all borers from the roots.

Fruit-trees may yet be pruned; indeed, it is better to do it now than in mid-winter. Pruning now will be for the purpose of creating form and more vigorous growth. Trees that are already growing thriftily had better be left until the last of July or early August, when the pruning will have a tendency to check extended growths and increase the number of fruit-buds.

Pelargoniums will now be flowering freely. Water liberally and often, with liquid manure. Keep the plants as near the glass as possible, and shade them at noonday.

Plant Gladiolus bulbs this month. Select your colors, and plant the most brilliant in the center of the bed.

This is a good month to propagate all greenhouse plants.

Lawns require frequent mowing and rolling at this season. If left to grow so as to send up the seed stem at this time, it will be difficult to get the grass again into good shape this season. As the hot weather approaches, mowings will not require to be as frequent.

About the 10th of this month all bedding plants may be planted out. It is always best to harden them off, as it were, for a few days after being received from the green-house, by placing them in an open frame and shading them slightly. If planted out in the border immediately when received from the forcing frames or greenhouses, they often flag and die. It is also always best to head them back one-third to one-half in planting, thus taking away the most succulent and unripe parts, leaving the supplies from the roots to fill more perfectly and push forward with new vigor the remaining buds.—*Horticulturist.*

TRITOMA UVARIA.

We give herewith a fine illustration of the flower and spikes of this splendid bulbous, perennial plant. When first introduced it was thought to be hardy, but experience has proved that it is not safe to leave it through the winter in an unprotected border. The plant is half evergreen, the flower stem and large leaves dying down, leaving a tuft of green, side shoots. The varieties are *Glauca*, which is of a hardy, herbaceous character, with a flower stem from two to three feet in height, covered on the top with oblong, bell-shaped flowers of brilliant scarlet and yellow colors, densely covering the stalk in a pyramidal form for about six inches. The foliage is light-green, from one to two feet long, narrow pointed, with a slight shade of grey. This species begins to flower at the end of July. *Glaucescens*, succeeding the former in blooming, but a little more luxurient in growth. *Grandiflora* and *Serstona*—these species bloom somewhat later, and show a succession of flowers until the winter sets in. They grow in any well-worked soil, and deserve a place in every garden.

Cucumber Raising.

Cucumber Raising.—The editor of the Southern Farmer tells how he manages cucumbers and never failed of a good crop. Manure a bed on the border of the garden—the size depending on the quantity to be produced. Spade the manure well in. Draw up small ridges about two feet apart; soak the seed for twenty-four hours in a weak brine of saltpetre and as much soot as can be stirred in, using hot water. Press the seed into the earth about six inches apart. When up, cultivate till the vines are well developed, and then look out for a good return.

Horticultural Notes and Queries.

Ripening New Wines.—The Agricultural Committee of Sologne, France, has awarded the gold medal offered some time since to the inventor of a process which should enable French wines to be conveyed by land and sea, and preserved in any climate, without alteration in flavor. M. Pasteur, who receives the award, has succeeded in establishing the fact that the heating of ordinary wine to the extent of 50 degrees centigrade, is sufficient to kill all microscopic vegetation, or the ferments by which it is produced, without affecting color or flavor, and to insure the preservation of the wine in closed vessels for an indefinite period. The various morbid changes in wines are found to be due to various stages or phases of microscopic vegetation, which M. Pasteur has accurately described.

New Grape Region.—Hon. Lewis F. Allen has published a series of articles in the Buffalo Express, showing up the capabilities of Grand Island and the banks of Niagara River for grape culture. He thinks the earliest varieties of American grapes will grow and ripen anywhere along the river after reaching a point six miles north of Buffalo, so successfully that good wine in abundance may be produced, and he advises the planting of vineyards in that locality.

Fruit Boxes Given Away.—The person sending the advertisement with the above heading wishes us to state that he made an error in the same. It should read "price of pints and quarts $10 per 1000, instead of 100." See advertisement as corrected.

Propagating Roses.—Please ask your Rural correspondents who love flowers to inform us how to propagate roses by cuttings or layering. All that I have seen upon this subject is so indefinite that I cannot tell how to proceed.—E. S. S.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Eds. Rural:—Like every other housekeeper and lover of good things, I am disappointed if the "Domestic Column" is omitted from the Rural, and therefore send my mite to help fill it:

Dutch Cheese.—Put thick sour milk or fresh buttermilk in a suitable vessel, and set it over the fire where it will scald slowly; never having the heat greater than the hand can bear, if cooked too much it is dry and hard. As soon as the whey separates from the curd dip the whole carefully into a colander or seive, to let the whey run off, and squeeze the curd as dry as possible with the hand; then add sweet cream, a lump of butter and a pinch of salt, according to the amount of curd you have. Mix this well and press your cheese into a bowl, and you will have an excellent dish.

Cottage Cheese.—Take curd prepared as above, salt it, and tie in a cloth. Lay a plate on the top and put a weight on it to press the whey out; let it stand till tea time, then take out your curd, slice it in a suitable dish, cover it with sweetend cream. This is a favorite dish with many.

Pickled Eggs.—As this is the season for fresh eggs, if you have a quantity of boiled ones left, as often happens, remove the shells, slice the eggs (they should be hard boiled,) cover them with vinegar and a layer of horseradish, and lovers of eggs will enjoy them.

Geneva, Wis., 1867. Aunt Rachel.

To make Ham Balls.—Take what is usually left and otherwise lost of boiled ham, chop fine, add as many eggs as you have persons to eat and a small amount of flour; beat together and make into balls. Fry in a little butter to a nice brown. They are eatable.—Mrs. M., *Holly, N. Y.*

Orange Pie.—In reply to the inquiry for a recipe to make Orange Pie, I send one which I have used for pies or tarts, and find very good: Boil sour oranges in plenty of water until a straw will pierce the skin; then cut off a piece from the top and bottom, cut the remainder in bits or slices; to a quart bowl of the orange, put a teacup of sugar, and half a grated nutmeg, and finish as pie or tart. If sweet oranges are used, the quantity of sugar should be less.

Cocoanut Cake.—Grate the white meat of one cocoanut; take half a pound of flour, three-quarters pound sugar, six ounces butter, and six beaten eggs for the cake; flavor to taste; when well beaten, stir in the cocoanut, and bake as pound cake.—Nix.

Ostrich Feathers.—To clean white ostrich feathers, take four ounces of white soap, cut small, dissolved in four pints of water, rather hot, in a large basin; make the solution into a lather. Introduce the feathers, and rub well with the hands for five or six minutes. After this soaping, wash in clean water, as hot as the hand can bear. Shake until dry.

To Drive Nails.—Many persons, especially ladies, are ignorant of the proper place in which to drive a nail in the wall when desiring to hang a picture, &c. Examine the wainscoting around the bottom of the wall, and where you find the heads of the nails that have secured it to the wall, immediately over it from the bottom upwards will be the only place wherein to find a firm footing for a nail.

"A Penny Saved Good as Two Earned."—This time-honored proverb has lost none of its pith, and those who make it the rule should not fail to use Pyle's O K Soap, which does not waste away like the common brown soaps, and which leaves the garments washed beautifully white and pure. Sold by grocers everywhere.

Merchants—Are you willing to buy a certain number of pounds of Saleratus and only get so many papers containing only 14 or 15 ounces? Buy *Best Chemical Saleratus* and you will get full weight and best goods.

New Advertisements.

THE

GREAT AMERICAN

TEA COMPANY

Established, 1861,

Is endorsed by the leading newspapers, religious and secular, in this and other cities, viz:

AMERICAN AGRICULTURIST, Orange Judd, Editor.

CHRISTIAN ADVOCATE, New York City, Daniel Curry, D.D., Editor.

CHRISTIAN ADVOCATE, Cincinnati, Ohio, J. M. Reid, D.D., Editor.

CHRISTIAN ADVOCATE, Chicago, Ill. Thomas M. Eddy, D.D., Editor.

CHRISTIAN INTELLIGENCER, E. S. Porter, D.D., Editor.

EVANGELIST, New York City. Dr. H. M. Field & J. G. Craighead, Editors.

EXAMINER and CHRONICLE, New York City. Edward Bright, Editor.

INDEPENDENT, New York City. Wm. C. Bowen, Publisher.

MOORE'S RURAL NEW-YORKER, D. D. T. Moore, Editor and Proprietor.

THE METHODIST, Geo. R. Crooks, Editor.

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists in former editions of the leading papers of the country.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₩ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,30 ₩ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₩ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,

Post-Office Box, 5643 New York City.
No. 610 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 34th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 133 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.

Post-Office Box, 5643 New York city.

PRESERVE YOUR FRUIT.
SPENCER'S PATENT
Self-Sealing Fruit Jars.
The Most Reliable.—A Perfect Success.

☞ The Easiest to Open and Close. Will Produce the Greatest and Most Perfect Vacuum, without which Fruit will not Keep. Consult your interests and buy no other. COLEMAN & BARNES, Rochester, N. Y.

☞ Merchants through the West can order from the following Agents:—Hale, Frackelton & Co., Milwaukee, Wis.; F. Wetmore & Co., Detroit, Mich.; Eaton, Maguire & Co., Chicago, Ill. 900-17t

ANNIVERSARY OF A DAUGHTER'S DEATH.

BY KATE WOODLAND.

My child I do not love thee less,
That I can say, now years have flown;
"I would not call thee back to earth,
Even if the power were all my own."
I loved thee fondly then, but more
Unselfishly I love thee now,
For I am willing to endure
My sorrow, rather than that thou
Should'st sully thy white robes with earth,
Or wearily 'neath sorrow bow.

I do not love thee less my child,
Because I sit with tearless eye,
And tell of all thy gentle ways,
Ere thou didst leave us for the sky.
I calmly fit and fold away
Each little garment thou didst wear,
The toys thy childish hand hath borne,
The locks of shining golden hair;
And tears, sweet gentle tears I shed,
Where once my murmurs filled the air.

If GOD had willed that thou shouldst stay,
Long happy years beside me here,
Thrice blessed would my lot have been,
Each little household flower to rear.
But since the Father called thee home,
I dare not murmur at His call;
Unbounded wisdom judges best,
And loving kindness governs all.
Oh! let me say "Thy will be done,"
Whatever may my life befall.

Van Buren Co., Mich.

Written for Moore's Rural New-Yorker.

MRS. ELIZABETH CADY STANTON,

AS SEEN AT HOME.

IN almost every newspaper we pick up now-a-days, something can be found to the effect that literary women and bad housekeepers are synonymous. We have seen this so often that, with the thought of such, immediately a vision of a wife with dishevelled locks, a husband with buttonless shirts, children with begrimed faces and ragged clothing, rises before us. The house a babel of confusion, with unmade beds, unwashed dishes, with a slatternly maid, stares us in the face; dust on the piano, dust on the sofa, dust everywhere; we feel it in our eyes and nostrils, and we cry out in desperation, "Why were not women created like oysters? Why were they supplied with that seemingly worse than useless appendage, a head?"

Then, like the fragrant breath of a June morning, comes the thought of ELIZABETH CADY STANTON, fanning the motes from our eyes and the cobwebs from our brain. Knowing how strong and eloquent an advocate she is of the equal rights of her sister women, we are willing to trust to her goodness to forgive if we slightly invade her domestic sanctuary, in trying to free them from unjust censure. Not that we think her an isolated instance of capacity for making home pleasant and beautiful among thoughtful women, but because years spent in the same neighborhood enable us to "speak that we do know, and testify that we have seen," and because her life proves so completely the folly of such sweeping assertions.

With Mrs. STANTON, both as speaker and writer, many are familiar, but Mrs. STANTON at home all may not know. A most devoted wife and mother, she studies at all times the best welfare of her family. The affairs of her household, by no means small, are conducted with a perfection of arrangement never excelled, and rarely equaled. There is no jarring, no confusion. Whatever she attempts to do she endeavors to have done as perfectly as possible; whether it is an address on Reconstruction, or the superintending of the preparation of pickles and preserves. I do not believe any one *ever* entered her doors to find the house in disorder. Even house-cleaning she robs of its horrors.

If she advocates "Woman's Rights," it is evident many a thought of the loved ones at home inspires her. To her husband, a genial, intelligent companion; to her children, an interested sharer in all their joys and sorrows; nevertheless ready at any time, if she so desire, to enter into conversation, public speech, or argument, with men of thought and action. Speaking of this reminds me that I have heard of men of giant intellect, whose minds became so unballanced by their almost superhuman efforts that they did not know that their boots were on the center-table and their hats in the coal scuttle; who were obliged to have recourse to two or three glasses of *aqua-ardente* and a vigorous use of the meerschaum to obtain an equalibrium. Whatever Mrs. STANTON says or does, she needs not the aid of brandy or tobacco. H. A. A.

Chicago, Ill., April, 1867.

DR. FRANKLIN'S DAUGHTER.—The Philadelphia Ledger says of the widow of Prof. Bache: "It has not been so generally remembered as it deserves, that Dr. Franklin's only daughter, Mrs. Bache, was a true inheritor of the zeal of her father in the cause of this country, and by her energy and efficiency more than 2,200 needlewomen were at one time employed in making clothing for the army. The French were particularly struck with her appearance, and the Marquis de Chastellenx recommended her as a model of domestic virtues and feminine patriotism to all the ladies of Europe. This no doubt secured to the sewing circle over which she presided the immense European contributions, which were necessary to support so vast a work."

MRS. A. D. T. WHITNEY, the author of "Faith Gartney's Girlhood," is a woman about thirty-three years of age, has dark hair and eyes, and a face as beautiful as that of an Italian madonna.

THE LITTLE GOSSIP.

TIMELY blossom, infant fair,
Fondling of a happy pair,
Every morn and every night
Their solicitous delight,
Sleeping, waking, still at ease,
Pleasing, without skill to please;
Little gossip, lithe and hale,
Tattling many a broken tale,
Singing many a tuneless song,
Lavish of a heedless tongue;
Simple maiden, void of art,
Babbling out the very heart,
Yet abandoned to thy will
Yet imagining no ill,
Yet too innocent to blush;
Like the linnet in the bush,
To the mother linnet's note
Moduling her slender throat;
Chirping forth thy petty joys,
Wanton in the change of toys,
Like the linnet green in May,
Flitting to each blooming spray;
Wearied then and glad of rest,
Like the linnet in the nest;
This thy present happy lot,
This, in time, will be forgot;
Other pleasures, other cares,
Ever-busy Time prepares:
And thou shalt in thy daughter see,
This picture once resembled thee.

GOSSIPPY PARAGRAPHS.

"JENNIE JUNE"—Mrs. D. G. Croly, formerly of Rockford—it is said makes about one hundred and fifty dollars per week, for the twenty odd letters that she regularly writes to newspapers, on fashions, and other topics. Her husband is managing editor of the New York World.

ONE important feature of the Paris Exhibition will be the delegation of French artisans, comprising 305 males and 10 females, whose duty it will be to study the mechanical contributions of other nations, with a view to France being benefitted to the fullest extent by their exhibition. This delegation is to be elected by the great mass of the working people, and every one who votes is to receive a free ticket for one visit to the Exhibition. Women are to be allowed to vote in this election.

IN Paris, a young couple went to a church to be married. During the time the ecclesiastic who presided at the ceremony was addressing them, the bride fell into a deep sleep, which lasted till the moment came at which the young husband was to put the nuptial ring on the finger of his drowsy partner. On perceiving her state of unconsciousness, he was, as may readily be believed, shocked and angry at such a flagrant disregard of decency. At the conclusion of the ceremony, he informed his bride's friends that he would not live with her; and, giving two thousand francs, as stipulated in the contract, he left her.

ONLY let a woman be sure that she is precious to her husband—not useful, not valuable, not convenient simply, but beloved; let her feel that her care and love are noticed, appreciated and returned; let her opinion be asked, her approval sought, and her judgment respected in matters of which she is cognizant; in short, let her only be loved, honored and cherished, and she will be to her husband and her children, and society, a well-spring of pleasure. She will bear pain, and toil, and anxiety, for her husband's love is to her a tower and a fortress. Shielded and sheltered therein, adversity will have lost its sting. She may suffer, but sympathy will dull the edge of her sorrow. A house with love in it is to a house without love as a person to a machine; the one is life, the other mechanism.

A FEW days since a gentleman from a distance visited Columbus, Ohio, on business, and having a leisure hour, concluded to call on Miss ——, with whom he had some acquaintance. He went, rang the bell, and when she made her appearance at the door he did not recognize her in her kitchen attire. He asked if Miss —— was at home. She very prudently accepted the situation, and informed him that she was in, and after seating him in the parlor retired, as she observed, to inform her of his presence. She went to her dressing room, and after a thorough re-rigging, application of paints, powders, false curls, tilters, etc., she presented herself a second time, when she was at once recognized by the gent. Of course a pleasant hour was whiled away, during which she found occasion to apologize for not making her appearance sooner than she did. How many ways deception shows itself.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

COUNTRY SKETCHES.

NUMBER TWO.

THE ANSON farm was purchased; and ROBERT began to feel a new dignity in assuming the duties of a bona fide land-owner. Not a very enlivening prospect did the premises present to a casual observer; for the late possessor was narrow of mind and feeble from age, and had pinched out his darling dollars from a half-starved soil, ineffectually battling a wild horde of straggling enemies, that held full sway in the fence corners, now and then marching boldly out into fields of grain, insinuating themselves into an acquaintance with the clover-tops of the meadow, or bristling their briery heads with a defiant air among the potato vines.

But to ROBERT these things did not present so discouraging a prospect as most people might imagine. The situation of the place was excellent—wide, naturally fertile fields, with a rolling slope to the southward, bordered on the north by a line of heavily timbered acres, quite a rare acquisition in these days of woodless farms and patent coal-burners. All the disadvantages of neglect left only wider room for improvement. How many self-formed schemes were arranged and re-arranged before they could be made to assume a practicable shape? How many times to his mind's eye there arose the ANSON farm, as it might be made under a thorough system of agriculture, after a while to be assisted, perhaps, by its fairer handmaiden, Horticulture?

But all these plans were kept to himself; for he knew they would only subject him to the ridicule of those who had been practical farmers for years, and of course well knew all ideas differing from their own to be more "bosh and nonsense." Even if it were possible to carry out these new-fangled schemes, they would not pay in money value, which is the criterion by which all things should be judged.

Now the decisive step was taken, ROBERT'S family took a lively interest in his future prospects, and there was a great deal of spirited discussion about the new farm and all pertaining thereto. It was about two miles from the homestead, and ROBERT had thought of living at home and renting the dwelling on the farm. But the girls put their heads together and laid another plan. Mother was consulted, and made no serious opposition, providing it should meet with ROBERT'S approval, who was informed that if he chose to set up an establishment of his own in the queer little old-fashioned house on the premises, there were two girls ready to undertake the office and duty of housekeepers. MARY was to be superintendent-general, and SUSAN and JANE were to take turns in being housekeeper-extraordinary, as they laughingly said in their frolicsome discussions. You may be sure there were a great many rich scenes and new experiments in view when they calculated upon reigning supreme in their own dominion.

MARY was pretty well initiated in all the mysteries of housekeeping, but the other girls had a great many more fanciful notions than practical ones. I think their mother had an idea they might profit by the experiment when she gave her consent to it.

ROBERT acquiesced in their proposition very readily, saying that now meeting with such a glad surprise at the outset, he thought it a propitious sign. The next day they agreed to ride over and investigate. I went along with the load of merry-hearted young folks, and entered into all their earnest, bright-hued schemes with as much zest as any of them. An empty house always has a gloomy look, and when it is rather dilapidated, and just left by a not over-neat family, with dirty doors swinging and bare floors strewed with odds and ends of every description, it is not the most favorable place for the imagination to paint fancy pictures in. I had a fear it might damp the ardor of my young friends, but was happily disappointed, for they beheld it somewhat in the same light as ROBERT did the farm. It did one good to listen to their lively chatter—how this, that, and the other might be fixed and made to look as good as new. I so wish you could have listened, but I'll put down a few things in their own words, as nearly as may be:

Robert—I'm afraid it will be even more inconvenient than our house, girls, and you'll get discouraged before you begin.

Mary—Ah! you need not be afraid of that at all. We know pretty well what to expect. In fact, it is really better than I had looked for. See these two rooms;—paint, paper and carpet them, and they will be real cozy and comfortable. And what a nice large pantry. Clean it all up, paper the shelves, fix the cupboard doors, and it will make quite a model pantry. And this bedroom down stairs will be just right for you, ROBERT.

Susan—Oh, see here! What a nice little nook of a room here is. May'nt I have this, MOLLIE, and fix it all up my own way? 'Tis'nt large enough to put a bed in. I can take some pieces of that plaid carpet for it, and have cleats for shelves all up one side. This shall be the library.

Jane—Being as you have such a large collection of books, SUE!

Susan—Well, I know that; but I've got ten, besides school books and the dictionary, and then MARY and ROBERT can put theirs in; and one shelf I will use for shells, and those curious stones RUFUS gave me.

Jane—Yes, I guess it will be nice after all, and you might use the south side by the window in the fall to put plants—your geraniums and stocks—you know. But let's go up stairs. Up here, this front room is to be ours, I suppose. Just come and look out this east window. What a beautiful view it will be in summer. There is a spire glistening between the hills. I had no idea we could see so far. And here is a wide clothes-press, and a little old closet full of dusty, musty papers. Come up here, SUE, and maybe you can discover some relics to found a story on. Come up and look out this window, anyhow.

Thus their feet tripped from cellar to chamber; their curious eyes peering into every place that could be investigated, while their tongues kept merry time telling how it could all be appropriated to the various needful uses of a family. When we were driving home a dark cloud scattered great, dancing snow-flakes over us;—ROBERT whistled a low tune in a quiet undertone to himself, and as he landed us at the home door he said he should begin to make maple sugar next week, if the weather was favorable; and if we had a mind to straighten the old house a little, we could build crackling fires in the broad, old-fashioned fire-places, and christen the new home by having a sugar party. ERIE.

Home, March, 1867.

DON'T BE EXTRAVAGANT.

IF the poor house has any terrors for you, never buy what you don't need. Before you pay three cents for a jewsharp, my boy, ascertain whether you cannot make just as pleasant a noise by whistling, for which nature furnishes the machinery. And before you pay seventy-five dollars for a coat, young man, find out whether your lady would not be just as glad to see you in one that cost half the money. If she would not, let her crack her own hazel nuts and buy her own clothes. When you see a man spending two or three dollars a week foolishly, the chances are five to one that he'll live long enough to know how many cents there are in a dollar, and if he don't, he's pretty sure to bequeath that privilege to his widow. When a man asks you to buy that for which you have no use, no matter how cheap it is, don't say yes until you are sure that some one else wants it in advance. Money burns in some folks' pockets, and makes such a big hole that everything that is put in drops through past finding.

CARVING A CHARACTER.

DID you ever watch a sculptor slowly fashioning a human countenance? It is not moulded at once. It is not struck out at a single blow. It is painfully and laboriously wrought. A thousand blows rough-cast it. Ten thousand chisel points polish and perfect it—put in the fine touches, and bring out the features and expression. It is a work of time; but at last the full likeness comes out, and stands fixed and unchanging in the solid marble. So does a man carve out his own moral likeness. Every day he adds something to the work. A thousand acts of thought, and will, and effort, shape the feature and expressions of the soul. Habits of love, piety and truth—habits of falsehood, passion or goodness, silently mould and fashion it, till at length it wears the likeness of GOD, or the image of a demon.

Sabbath Reading.

CONVALESCENCE.

SICKNESS comes to us with an iron hand,
Bidding us lay aside the cares of life,
Looking beyond them to the "better land,"
We see the end of toil, and sin and strife.

We scarcely heed the pain of fell disease;
We breathe the airs that come from o'er the tide,
Sweet songs float over on the heavenly breeze;
Songs of His love—Our Saviour crucified—

Unclasping gently all the ties of earth,
Our very frailty seems a missive sweet,
The soul rejoicing in its higher birth
Sits softly singing—low at JESUS' feet.

But when, at last the stern disease is stayed,
And Health returns, laden with care and strife,
We miss the perfumed airs which round us played,
And almost dread this coming back to life.

So now our chastened hearts resume again
The cares of earth, until the race is run,
We would not shrink from duty, toil, or pain,
"Father in Heaven—Thy will, not ours, be done."

Brooks' Grove, N. Y. A. A. H.

SUNSHINE IN HEART AND HOME.

BY REV. THEO. L. CUYLER.

IT is not *where* we are, but *what* we are, that determines whether we shall be happy or be wretched. When we read of the most eminent sovereign in the world sitting in her melancholy weeds of mourning, beside her dead husband's tomb, and refusing to be comforted we say to ourselves, "Royalty cannot save a heart from the heaviness that maketh it to stoop!" In splendid mansions quite as often as in lowly huts the heart knoweth its own bitterness.

When an envied statesman was congratulated with the usual salute, "My Lord, I wish you a happy New Year!" he sorrowfully replied, "It had need be a happier one than the last, for I never knew one happy day in it." After a gifted young man had, by hard study, won the first honor in old Cambridge University, he said, "I was surprised to find that I had grasped a shadow." In more senses than one it was a *shadow*, for it shaded his soul with disappointment. But when that same brilliant young Henry Martyn gave himself up to the missionary work, and laid dying alone under the walls of Tocat, he wrote in his diary, "I thought with sweet comfort of GOD—in solitude my company, my friend, my comforter. Oh! when shall appear to me that new heaven and new earth wherein dwelleth righteousness and love!" Ah! here was sunshine in the soul, that flowed from the light of GOD'S countenance.

It is not where we are, remember, but *what* we are, that determines the joy or sorrow of our lot. I know of many a one who walks the lowly vale of utter poverty with a perpetual sunshine on their path. I could take my reader into the little room of an aged widow of my flock, and show him how cheerful a Christian can be when the light of the eye has been extinguished. Blindness has hidden from her the sight of her own grandchildren, the pages of her Bible, and the faces of those she loves. She lives in a perpetual night. Yet there is not a happier, serener spirit among us. The sun shines on her soul.

IMMORTALITY.

I CANNOT believe that earth is man's abiding place. It cannot be that our life is cast up by the ocean of eternity, to float a moment upon its waves, and sink into nothingness. Else, why is it, that the glorious aspirations, which leap like angels from the temple of our heart, are forever wandering about unsatisfied? Why is it that the rainbow and clouds come over us with a beauty that is not of earth, and then pass off and leave us to muse upon their faded loveliness? Why is it that the stars, who hold their festival around the midnight throne, are set above the grasp of our limited faculties, forever mocking us with their unapproachable glory? And, finally, why is it that bright forms of human beauty are presented to our view, and then taken from us, leaving the thousand streams of our affections to flow back in Alpine torrents upon our hearts? We are born for a higher destiny than that of earth. There is a realm where the rainbow never fades; where the stars will spread before us, like islands that slumber on the ocean, and where the beings that pass before us, like shadows, will stay in our presence forever.—*Exchange.*

SOME ONE HAS WRITTEN:—"I never found pride in a noble nature, nor humility in an unworthy mind. Of all trees, I observe that GOD has chosen the vine, a low plant that creeps upon the helpful wall; of all beasts, the soft and patient lamb; of all fowls, the mild and guileless dove. When GOD appeared to Moses, He was not in the lofty cedar, nor the spreading palm, but a bush—an humble, abject bush. As if He would, by these selections, check the conceited arrogance of man. Nothing produceth love like humility; nothing hate, like pride."

GOOD DEEDS.

THE peaches redden on the wall,
Hiding in hollow cells of green,
Where plaited leaves hang thick about,
And scarce permit them to be seen.
And so, in truth, good deeds should be
Concealed in sweet humility.

"HE that has the happy talent of parlor preaching has sometimes done more for CHRIST and souls in the space of five minutes, than by the labor of many hours and days in the usual course of preaching in the pulpit."—*Dr. Walls.*

The Traveler.

GEORGIA—LIFE IN THE PINE WOODS.

BY MRS. M. E. JACQUES.

We find the greatest difficulty here in getting the thing we need—whether family supplies, domestic animals, implements, or seed for planting; and this being our first year among the pine hills, we have everything to procure.

Among other things, we wanted some sweet potatoes of a particular kind for planting, and Mr. J. being temporarily disabled by an accident to his foot, and Tom and Bill (our freedmen) being busy with the planting and not to be spared, I undertook to find them. We had heard of an Irishman living about five miles down the road, who was in the habit of raising the kind of potatoes we wanted for market. One evening, right after dinner, Josie (our young colored girl) and I set out in search of the "Red Bermudas." It was a fine day, but so cool a breeze was blowing I wished I had worn a shawl.

Our way lay by our country post-office, three miles off. It took about an hour to walk there over the sandy roads, and through piney woods gay with thousands of spring flowers. Mr. A., the acting post-master, told me there was a man named Brown, living about a mile down on the left-hand road that crosses the creek, who had potatoes to sell. So we took that road and went on until I began to think we were getting into the wilderness—though the road was by no means unpleasant. We crossed a good many clear streams, and at last came in sight of houses and cabins. The last house was the one in which I was to inquire. I thought I had got to it, and bolted right in. It was a negro cabin; but Mr. A. had not told me whether the man Brown was white or black. In the cabin I found a black girl and two black babies.

"Does Brown live here?" said I.

"Yes'm," said the girl.

"Where is he?"

"Down by the spring."

I found the path and went down to the spring. Two black women were washing there. I asked them where Brown was.

"I'e she," one of them replied.

So I asked about the potatoes.

"Oh!" she said, "you mean *Mr.* Brown, that lives up dar on de top of de hill, dar—de las house on de road."

Well, I finally came to "de las house." A black man who was passing hailed Mr. Brown for me, (there are from four to six dogs at every house here, and it is dangerous to go near them,) and he came to the gate.

He was a tall, spare man, with gray hair and eyebrows, and very sharp eyes, such as look right through one. Most persons would have shrunk before the gaze he gave me, but I was on urgent business and not to be turned aside. He had more customers than potatoes, and could sell me none.

After looking at me awhile, he said, "I reckon you are Mrs. J."

I said "Yes, sir."

He invited me in, and I found the family quilting before a large wood fire, burning in an enormous fire-place. There was the mother and three daughters, sitting with their backs to the fire, and all wore sun-bonnets and woolen mitts, and were busily at work.

After the compliments of the day, I bethought myself of several other things we were in need of—a cow, a dog, and last and least, too, a cat, and made inquiries. I was made welcome to a cat, which, with a deal of trouble and *mewing*, I succeeded in carrying home in the sack brought for the potatoes I did *not* get. I was rather sick of my bargain, and inclined to agree with Josie, who gave her opinion that "the cat was no count, no how, if you have to hold her all the while!"

It was now too late to go to the Irishman's that evening, so we came home, resolved to "try again."

The next day we renewed our "pursuit of potatoes under difficulties." At the post-office Mr. A. kindly directed us to a house where he said there lived a "young lady" who would show us the way.

I found the young lady, who would go if her mother was willing. Her mother wasn't willing; but, finally relenting, gave a sort of half-consent, and Molly set out with us.

Molly was a "character!" She was a tall girl of eighteen, with the clayey complexion so universal with the pine-woods people of her class, blue eyes and yellow teeth, and was dressed in a pink calico dress, innocent of any crinoline expansion, a dark calico sun-bonnet that covered her face, and half-mitts. I observed she had a small stick, one end of which she had chewed till it was like a brush, and that she kept up a continual squirting and spitting. I had my suspicions, but was not sure of the cause. We walked on briskly, talking of almost everything. She kept on spitting, and at every spring and stream would stop to drink. At last the wind blew her breath in my face, and with it—what do you think?—the odor of bad tobacco!

She was a "snuff dipper" and chewed. Both "dipping" and chewing are common here among the women. They have a box or bottle of snuff, into which they dip their chewed stick and rub it on their teeth. When they can get chewing tobacco they prefer that.

She was, I found, really our country post-mistress. The people wanted a post-office, but no man could be found who could or would take the oath; so they got her to go to town and be sworn in before the proper officer, with the understanding that Mr. A. should attend to the business for her. This was a peep behind the political curtain which I had neither sought nor expected.

On the whole, Molly is an interesting girl, and I like to hear talk.

Coming to a deep stream, she said, "How I wish it was summer so that I could go barefoot!"

"Do *you* go barefoot?" I said.

"Oh, yes," said she; "it is as much as I can do to wear shoes on Sunday! And," she added, "I do love the water so dearly."

She then told me of a pond "away down by the old mill," which she said was "such a nice place to go swimming." She said she often went there in summer, and that she could beat every one around in swimming—could swim on her back, float motionless on the water, &c. Once she swam right under a big snake.

She said that a sister married and lived "up the country;" had to work very hard, having, among other things, to "tote" all the wood they burn from the woods in her arms.

Our country post-mistress is not a bad girl—not a *fast* woman by any means. She used no slang phrases, nor did she talk or act unladylike in any way. She was modest, discreet, and expressed great respect for the Sabbath and fondness for going to "meeting."

We found the Irishman's plantation, but no "Red Bermuda" potatoes; and thus ended my adventures for that day.

Hollycroft, Ga.

MONTANA.

An old resident of Atchison, Missouri, writes most enthusiastically of Montana Territory. He says:—"I am satisfied that within two years the extensive and fertile valleys of the Territory will supply our population with the products of the soil now brought from the States. As a stock-raising country, it certainly surpasses the best stock country known to me. Stock thrives summer and winter, without grain or provender, even in winter. The diggings will yield the coming season, more than twice the amount of gold of any previous season; whilst in addition, many quartz mills and smelters will be in successful operation. Indeed, many mills are now in successful operation, not one of which, known to me, fails to more than meet the expectations of the owners. The climate is well adapted to persons afflicted with pulmonary affections.

Various Topics.

VARIED INDUSTRY

A HELP TO HIGHER CULTURE AND CHARACTER.

No country in the world is so well adapted to that varied labor and skill which grow with, and help increase civilization and freedom, as ours. Rich in abundant and varied products—rivers and lakes, natural highways far inland, water-power in every State, steam and skill to use it,—everywhere, all combine to bring producer and consumer side by side.

A farmer in New York or Wisconsin, for instance, raises wool. A waterfall is heard from his door, or the puff of a steam engine, cutting lumber from the adjacent forest; but his wool is taken to the seaboard, and the cloth he wears, and the tools he uses, brought from some workshop in a foreign land, thousands of miles away. His wheat, corn and cattle go to New England or to Europe to be sold, always at a price governed by a foreign market, and he gets that price, less the cost of transportation and commission, and the risk of shipwreck. Spend half these costs in putting the water-wheel in place, whereby the stream might be his servant; or in making the waste power of the steam engine turn lathes and wield trip-hammers, and his wool is woven and tools made.

No country, exclusively agricultural, ever grew permanently rich. To take from the earth and not wear it out, the farmer must give back. Let this be done, and crops increase with the growth of population; neglect this, and when decay shall come to the best land is but a question of time; come it will inevitably.

We cannot have the best farming until we have the best manufacturing, in varied forms and materials, each an indispensable help to the growth and perfectness of the other.

Give us both, and the blending of these varied experiences and vocations, the meeting and mingling of these many life currents, tinged and shaped by such wide mastery of man over Nature's forces and materials, is full of benefit. It is civilization, culture, wealth of soul as well as purse. To the farmer it is increase of the product of his acres, economy of exchange, work of hand or brain for whatever gift of power, or character, his children may possess, instant and constant call for a variety of labor, and all the while the thrill of inventive genius pulsing through the serene quiet of his life in the fields, saving it from all narrowness and stagnation, that he may more enjoy Nature's beauty, and the better make her forces serve him.

COST OF RAILROAD TRAVEL IN EUROPE.

In sixteen countries, from Russia to Italy and Great Britain, the average cost of travel on first class and express trains, is from four to six and a half cents per mile. On second and third class from two and a quarter to three and three-quarter cents. In some countries the companies have aid from Government to help the low tariff they are obliged to adopt. In Great Britain this is not the case. Wealthy persons there and on the Continent, travel on trains at high price, say six cents—and exclusive accommodations.

All English roads are obliged to run one train a day at a penny a mile—two cents. These second class are slower than express trains, and largely used by those to whom a little time is of less value than the extra fare—mechanics, farmers, and often gentlemen of position and character, but of democratic habits and feelings. It is said they pay well. Mechanics in London, &c., commute their daily ride of a few miles for less than a cent per mile.

STATUE OF COMMERCE, CENTRAL PARK, NEW YORK.

Stephen B. Guion, a native of New York, now a leading Liverpool merchant, of the American firm of Guion & Co., in that city, has presented to the Central Park Commissioners the Statue of Commerce, of which our illustration shows the gigantic size and symmetrical proportions. It was on exhibition at Paris, and was highly commended as a work of art. The cost, in gold at Paris, was $20,000, and it is now at the Park.

Thus this gentleman testifies his remembrance of his native city, by placing in *the people's Park*, a beautiful statue, open to the sight of all. Central Park, with its hundreds of acres of lawn and grove, and shrubbery, its fine walks and broad carriage roads, its statuary and fountains, is becoming a place of great resort, and will grow still more beautiful and attractive as its fine trees grow and its adornments multiply.

The design of this noble statue is partly from the ideal of the god Mercury, of the Romans; the Hermes of Greece—the messenger of the immortals, and the god of Commerce and Eloquence. It has the Caduceus of Mercury, of which the rod signifies power, the serpents wisdom, and the wings activity and diligence.

INTERMARRIAGE OF COUSINS.

A Michigan correspondent asks for copies of the Rural in 1863, with an article on the above subject. We cannot send them. The Commissioners of the Kentucky Institution for the Education and Training of Feeble-minded Children, have just made a report to the Legislature. They add their testimony to the abundant evidence already collected by physicians and philanthropists, that a large percentage of deaf mutes and of the blind, a limited percentage of lunatics, and no doubt a much larger one than either of feeble-minded or idiotic children, are the offspring of the marriage of first cousins. The charitable institutions of the State are all the time filled with children whose parents are so related—sometimes as many as four from one family—and in the case of idiots, of a still larger number in a family. It is a fearful penalty to which persons so related render themselves liable by forming the matrimonial relation, and which they, in nearly every instance, incur.

HOW TO MAKE NEAT'S-FOOT OIL.

The hoofs are chopped off, and the other portions are cracked and boiled thoroughly. From the surface of this boiled mass, pure neat's-foot oil is skimmed, which is unsupassed by any other oleaginous matter for harness, shoes, &c. After the oil is taken off, the water is strained, to take from it any fatty particles that remain, and then it is boiled again, until, upon trying, it is found to settle into a stiff jelly. It is then poured into flat-bottomed dishes, and, when cold, cut into suitable-sized pieces. It hardens in a few days, and then you will have a very fine article of glue, free from impurities of any kind. By taking a portion of this glutinous substance before it becomes too thick, and brushing it over pieces of silk, you have just as much court-plaster as you desire, inodorous, tenacious, and entirely free from those poisonous qualities which cause (as much of the article to be sold by apothecaries does) inflamation, when applied to scratches, cuts and sores.

A plan for converting Springfield muskets into breech-loaders, more effective than the Prussian needle gun, at small cost, and also models of new breech-loaders, are before a special Board of Examiners at the War Department.

LUXEMBURG—WHERE IS IT?

Just now this point of dispute between France and Prussia is of interest.

Luxemburg is a province about the size of Delaware, lying between France, Belgium and Prussia, with some 276,000 people, mostly Germans, the rest Walloons. Its soil is poor, and its great importance is in the fortress of Luxemburg, said to be, next to Gibralter, the strongest in Europe. The town of 12,000 people is on the Alzete River, and the chief fortress on a plateau some 200 feet above the valley, with massive walls, escarpments, and bristling batteries on the summit and down the steep hillsides toward the river.

From 1684 to 1697 it was held by France. In 1795 it was taken by the French Republic after a year's siege. In 1814, at Buonaparte's fall, the Allies occupied it, and it was given to the King of Holland—not as a province of Holland, but as a State of the German Confederation, and was garrisoned by Prussian and Dutch troops—a majority Prussians.

The King of Holland, probably counting the old German Confederation as broken up by the late war of Austria and Prussia, proposes to sell Luxemburg to France.

The Prussians refuse and pour in troops and supplies. The German feeling against the transfer of this historic old fortress is strong, and besides it is of great importance as a key to the regions on either side.

Thus is fanned the flame of a great war, which, however, at last accounts, may be subdued by compromise, but the war feeling is still very strong both in France and Germany.

The Locomotive.—We quote the following eloquent passage from an address delivered by the Rev. Justin D. Fulton:—"In the night time, as in the day, the iron horses rattle on their iron way. It is a luxury to listen to the chime of those mighty chronometers. We hear the beat of great pendulums swinging through their iron arcs — East and West — Boston and Chicago—further to the westward still goes the train—

> Swinging through the forest,
> Rattling over ridges,
> Shooting under arches,
> Rumbling over bridges,
> Whizzing through the mountains,
> Buzzing through the vale.

and pushing on through the golden gate to the shores of the blue Pacific."

A bookseller in Paris, being asked for a copy of the French Constitution, replied, "Sir, I keep no periodicals."

Reading for the Young.

LITTLE ROSIE.

Rosie, my posy,
You're weary, you're dozy;
Sit upon grandmamma's knee.
Songs will I sing you,
Sweet sleep to bring you;
Cuddle up cozy with me.

I will sing ditties
Of birds and of kitties—
The "Song of the Well," to begin;
How young Johnnie Stout
Pulled pussy-cat out
When Johnnie Green let her fall in;—

Of timid Miss Muffit,
Who fled from the tuffit,
Of Bobby, who sailed on the sea;
Of Jack and his Gill;
Of the mouse at the mill:
And baby that rocked on the tree.

Rosie, my Rosie,
As sweet as a posy—
Ah! now she is coming, I see,
Sleepy and dozy,
To cuddle up cozy,
And hush-a-by baby with me.

[*The Nursery.*

THE YOUNG BEAVER.

A FABLE.

A colony of beavers selected a beautiful spot on a clear stream, called Silver Creek, to build themselves a habitation. Without waiting for any orders, and without any wrangling about whose place was the best, they gnawed down some young trees and laid the foundation for a dam. With that skill for which they are so remarkable, they built it so that it would protect them from water, and from their foes. When it was completed, they were delighted with it, and paddled round joyously in the pond above, expressing their pleasure to each other in true beaver style.

In this colony there was one young beaver by the name of Flat-Tail. His father, whose name was Mud-Dauber, was a celebrated beaver, who, having very superior teeth, could gnaw through trees with great rapidity. Old Mud-Dauber had distinguished himself chiefly, however, by saving the dam on three separate occasions in time of flood. He had done this by his courage and prudence, always beginning to work as soon as he saw the danger coming, without waiting till the damage had become too great to repair.

But his son, this young fellow, Flat-Tail, was a sorry fellow. As long as old Mud-Dauber lived, he did pretty well, but as soon as his father died, Flat-Tail set up for somebody great. Whenever any one questioned his pretentions, he always replied:

"I'm Mud-Dauber's son. I belong to the best blood in the colony."

He utterly refused to gnaw or build. He was meant for something better, he said.

And so one day in autumn, when the beavers were going out in search of food for winter use, as Flat-Tail was good for nothing else, they set him to mind the dam. After they had started, Flat-Tail's uncle, old Mr. Webfoot, returned back and told his nephew to be very watchful, as there had been a great rain on the head waters of Silver Creek, and he was afraid there would be a flood.

"Be very careful," said Webfoot, "about the small leaks."

"Pshaw," said Flat-Tail, "who are you talking to? I'm Mud-Dauber's son, and do you think I need your advice?"

After they had gone the stream began to rise. Little sticks and leaves were eddying round in the pool above. Soon the water came up fast, to the great delight of the conceited young beaver, who was pleased with an opportunity to show the rest what kind of stuff he was made of. And though he disliked work, he now began to strengthen the dam in the middle, where the water looked the most threatening. But just at this point the dam was strongest, and in fact the least in danger. Near the shore there was a place where the water was already finding its way through. A friendly kingfisher who sat on a neighboring tree warned him that the water was coming through, but always too conceited to accept of counsel, he answered:

"O, that's only a small leak, and near the shore. What does a kingfisher know about a beaver dam, any way? You needn't advise me! I am the great Mud-Dauber's son. I shall fight the stream bravely, right here in the worst of the flood."

But Flat-Tail soon found that the water in the pond was falling. Looking round for the cause, he saw that the small leak had broken away a large portion of the dam, and that the torrent was rushing through it wildly. Poor Flat-Tail now worked like a hero, throwing himself rashly into the water only to be carried away below and forced to walk up again on the shore. His efforts were of no avail, and had not the rest of the Silver Creek beaver family come along at that time, their home and their winter's stock of provisions would alike have been destroyed. Next day there was much beaver laughter over Flat-Tail's repairs on the strong side of the dam, and the name that before had been a credit to him was turned into a reproach, for, from that day the beavers called him in derision, "Mud-Dauber's son, the best blood in the colony."

Don't neglect a danger because it is small; don't boast of what your father did; and don't be too conceited to receive good advice.—*Little Corporal.*

Let us only think of achieving the present day well; and when to-morrow shall have arrived, it too will be called to-day, and then we shall think of it.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6.—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added,—(see part in RURAL of 9th, and full list in Supplement.)

ANOTHER SEWING MACHINE PREMIUM!—*Take Your Choice!*—Since our Spring Campaign Premium List was issued we have made an arrangement by which we can give the celebrated HOWE SEWING MACHINE (Cash price $60) for Fifty-Five yearly Subscribers to the RURAL (40 of them being *new*) at our club rate—$2.50 per copy. This offer extends to July 1st, and subscriptions can commence Jan. 1st or July 1st, or any time between those dates. Our offer of the Wheeler & Wilson Machine (price $55) for Fifty Subscribers (40 of them *new*) is still continued.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $11, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*.) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MAY 11, 1867.

NEWS OF THE WEEK.

From Washington.

JOHN H. SURRATT is to be tried in the Criminal Court of the District of Columbia on the 27th of this month.

The Japanese Commissioners were received at the State Department the first inst., with due ceremony.

Conscience money from Cincinnati in two packages, one of $2,500 and one of $1,000, has been sent to the Treasury Department.

A soldier who had been overpaid $50 by his paymaster, sent it from Hartford to the Department.

The following notice has been issued:

TREASURY DEPARTMENT, April 27th, 1867.

In consequence of the increasing trouble, wholly without actual benefit, arising from notices which are constantly received at the Department respecting the loss of coupon bonds, which are payable to bearer, and of Treasury notices issued and remaining blank at the time of loss, it becomes necessary to give this public notice:

"That the Government cannot protect and will not undertake to protect the owners of such bonds and notes against the consequences of their own fault or misfortune. Hereafter all bonds, notes and coupons payable to bearer, and treasury notes issued and remaining blank will be paid to the party presenting them, in pursuance of the regulations of the Department in the course of regular business, and no attention will be paid to caveats which may be filed for the purpose of preventing such payment.

H. MCCULLOCH.

Twelve large boxes filled with presents for the President, Secretary Seward and General Grant, and consigned to the Japanese Commissioners, have arrived. The sword for General Grant is one of the finest pieces of workmanship ever seen in this country.

Destructive Fire—Loss of Life.

AT 11, o'clock at night on Friday, the 3d inst., fire broke out in a drug store in Palmer's Block, Main street, in this city, and destroyed the building, damaged Farmers' Hotel, next east, and destroyed a double brick house on the west side of the block. A high south-east wind swept the cinders across the street, and at six o'clock, Saturday morning, Washington Hall Block a large, fine building, corner of Main and Clinton streets, caught fire and was rapidly burned. While a number of firemen were on duty in the large auditorium, the roof fell in and crushed three of them to death. Their charred remains were recovered. The names of the deceased firemen are John Pike, Henry Forscheler and Joseph Wernette. A brick dwelling adjoining Washington Hall Block on the north side, was also destroyed. The total loss on buildings and contents is over $100,000.

From the South.

JAMES M. BROWN, Treasurer of the Famine Relief Commission, has received, by telegraphic transfer, $4,757.25 in gold, contributions of the citizens of Storey county, Nevada, to assist in relieving the sufferings of their countrymen at the South. This makes $45,757, in gold, contributed to this Commission from the Pacific States.

WILMINGTON, N. C., May 1.—Senator Wilson addressed an immense crowd of both races here to-day. But little enthusiasm was manifested, and no disturbance occurred.

Governor Brown of Georgia, addressed a large meeting of citizens at the Court House in Augusta, April 27th. He took the same ground as in his Atlanta and Savannah speeches, advising the people to accept the terms offered by Congress, as being the best and only hope of Southern restoration. Persistent opposition will exasperate the Northern people, and may lead to confiscation. On the other hand, a speedy acceptance of the terms offered will lead to the speedy restoration of the South. His address was favorably received.

MACON, Ga., May 1.—The Colored Educational Convention met to-day, Mr. Eberhardt in the chair. There is a full attendance.

RICHMOND, VA., May 1.—The Street Car Company will run four cars for both whites and blacks, and two for ladies. The company have only six cars, and this is done after consulting with Gen. Schofield.

Foreign Intelligence.

THE Peace Conference will meet at London May 12th, and representatives of Great Britain, France, Prussia, Austria, Russia, and the King of Holland as Grand Duke of Luxemburg, will be present. The terms agreed on as a basis for deliberation, are—1st, France is not to enlarge her present boundaries; 2d, the fortifications of Luxemburg to be evacuated and dismantled; 3d, the future political status of the Grand Dutchy is to be ascertained and determined by the Conference; 4th, the final decision of the Conference to be guaranteed by all the Governments participating therein. Lord Stanley, it is reported, will preside over the Conference. A dispatch from London the 3d inst., states that the Derby Government has accepted the amendment to the Reform Bill, which has just been carried by the Liberals. From Paris, the 3d inst., we learn that the basis agreed on for the action of the Peace Conference is likely to insure the peace of Europe. The *Moniteur* officially states that orders have been issued to stop the recent military preparations throughout France. Belgium is still augmenting its military force. The Russian American Treaty had been made known in St. Petersburg, and created surprise, the negotiations having been secret.

TORNADO IN NEW JERSEY.—The tornado which swept through New Jersey last week, is described as "a dark, huge, funnel-shaped mass, illuminated at intervals by electrical explosions, whirling, swaying, surging and forcing its way, rapid in progress and fearful in power. Now veering to the right and anon to the left, plunging furiously forward and sharply recoiling, it swept away all that obstructed its course, and by its eccentric evolutions made the path of desolation much wider than its own bulk could have effected had it rolled onward in a straight line."

A BARRELL OF MONROE COUNTY APPLES FOR QUEEN VICTORIA.—Even in the poor fruit season last year, John Park of Gates, selected eight barrels of his choice Baldwin's and took them to England in January as presents to his friends. One extra choice barrel—wherein was no apple of less than eight ounces, and so up to eleven—was sent to Victoria, with a letter stating where grown, &c. Doubtless the Queen knows what a choice Baldwin is; for she sent back her thanks by one of her Secretaries.

NAPOLEON'S PRESENT POSITION.—Louis Napoleon's present position is thus stated by a London journal:—Ordered out of Mexico, defeated at Nicholsburg, defied at Schleswig, resisted in Luxemburg, abused in Auxerre, with no liberties to offer to France, and new sacrifices to demand from his people, the Emperor, to keep his seat, must accomplish some great thing. His claim to reign is success, and in Mexico and Germany, at home and abroad, he has of late been unsuccessful."

RUSSIAN AMERICA CLIMATE.—By meterological records kept at Sitka, Russian America, by the Russian Government, in latitude 57.03 degrees, the mean temperature for a period of ten years, was in spring, 44.5 degrees; in the summer, 57.6 degrees; in autumn, 47 degrees; in winter 36.5 degrees, and during the year 47.4 degrees. This indicates colder springs, summers and autumns, but milder winters than in Philadelphia.

CANADA.—Patrick McGrath, the last of the Fenians convicted at the Winter Assizes at Toronto, has been sentenced to be hung June 11th, but the Judge said that while he was obliged to pass the sentence, he did not suppose it would be carried out. Canadian delegates will attend the great Medical Convention at Cincinnati the 7th inst., and a plan will be proposed for a general quarantine system over the continent.

THE CHICAGO LUMBER TRADE FOR 1867.—Moshier & Garrick of Chicago, state from personal observation and inquiry, that the lumber brought to that city the coming season will be equal in quantity to that of last, and from Michigan perhaps greater. They judge that the whole amount, Canadian included, will be from 700,000,000 to 800,000,000 feet, board measure, and the demand will be good.

CALIFORNIA.—Since the legal decision against General McDowell, rendering him liable to damages in consequence of arresting and imprisoning persons for using treasonable language and expressing exultation over the assassination of President Lincoln, suits are being commenced throughout the State by those who were arrested during the war.

FROM NEW YORK CITY.—Rt. Rev. E. J. Tuttle, Bishop elect of Montana, was consecrated at Trinity Chapel May 1st. The carpenters' strike is not yet closed, but many employers are disposed to compromise on three dollars and seventy-five cents a day.

MEXICO.—Senor Romero, Mexican Minister at Washington, has a telegram from the Mexican Consul at New Orleans, saying, "Miramon is dead. Imperial forces disbanded. Marquez is defeated, Queretaro taken, and Maximilian hidden."

NEWS PARAGRAPHS.

AT the M. E. Conference recently held at New Haven, Connecticut, it was said that a third of the people in the cities of the State had no Bible last year.

A WHITE MUSKRAT—a rare curiosity—was caught, a few days ago, in Chili, Monroe Co., N. Y., by FAY KENNELL, and is now in his possession.

JEFFERSON DAVIS is said to have decided to ask for a pardon, if he is not arraigned at the May term of the United States Court at Richmond, Virginia.

PHILADELPHIA has voted $1,000,000 for new school houses, and the authorities have sent a committee to visit western cities and examine their school buildings.

THE great strike at Pittsburg which began Jan. 12th, and has cost the workmen over $3,000,000, ended April 28th, by the mill owners paying the old prices.

AN important meeting of stockholders of Pennsylvania Central Railroad has heard a report of a Special Committee, expressing faith in the soundness and management of its affairs.

THE Detroit Tribune gives the list of eighteen colored men, worth, in all, $112,000 at a low estimate, and says many others are in comfortable condition, mostly by their own efforts, with no inheritance.

GARIBALDI has joined the ranks of the novel writers, and his first production in that line will soon appear in three volumes, of course to be immediately translated and republished in England and America.

JOHN G. SAXE of Burlington, Vt., the poet and wit, has gone to Europe with his accomplished wife—not, as reported, to lecture in England or write for *Punch*, but to see the Exposition at Paris, and make a continental tour of three or four months.

MOST of the railroads and factories in Illinois propose to pay by the hour for work hereafter. A great eight-hour procession come off in Chicago on the first of May, various trades being represented with music, banners, and a suspension of work in most shops.

THE amount of butter and cheese shipped from Cuba, Allegany county, from April 1st, 1866, to April 1st, 1867, paid dairymen about three hundred thousand dollars over and above charges for freight, commission, &c. Number of pounds of cheese, 1,118,858; pounds of butter, 350,000.

DE WITT C. LITTLEJOHN of Oswego, is to remove to Buffalo and manage the affairs of the Union Transportation Company. He is a leading business man, and has been a Member of the State Assembly eight times, and in Congress in 1864, where he was a champion of a Niagara Ship Canal.

A STEAMER left Pittsburg, Pa., recently for the Missouri River and the Montana mining regions—a distance of nearly 4,000 miles. She carried a number of families designing to settle in that remote Territory, and took on at Cincinnati fifty-five Dakota Indians on their way home from Washington.

IT is said that the secret of making the Russian sheet iron was sent to this country clandestinely, through the agency of a citizen of Youngstown, Ohio, and a relative he had in the Iron works of Russia. It was sent a word at a time, in a long correspondence. This process, is now in the hands of men at Cincinnati.

THE following royal personages will visit the Universal Exhibition:—The King and Queen of Portugal, the Prince of Wales, the Crown Prince of Prussia, Prince Humbert of Italy, Prince Oscar of Sweden, the Prince of Orange, the brother of the Tycoon of Japan, the Viceroy of Egypt, and the King of Sweden.

LITTLE FREDDIE, son of Rev. U. F. Burdick, formerly pastor of the M. E. Church in Keeseville, N. Y., now of Beaufort, N. C., was disfigured for life the other day, by a savage dog which the little boy undertook to caress, but which seized him in the face, tearing off his nose, and otherwise lacerating the child's face.

REV. J. C. WHITE undertook to lecture on Romanism in Quincy, Ill., Wednesday night, but the hall was taken possession of by the Catholics, and upon his attempting to speak he was hustled out of the hall and barely escaped lynching. At least two thousand persons were present inside and outside of the building, armed with clubs, stones and other missiles.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE, ROCHESTER, May 7, 1867.

THERE is an easy money market generally throughout the country. Money is very abundant in New York, and capital is on the increase. From the large commercial towns at the West bankers are expressing currency East to keep up their balances, in consequence of the small amount of produce going forward. The amount of wheat, corn, &c., to be sent to tide water must be comparatively small this season.

Of the amount of interest on 5-20s payable on the 1st inst., nearly seventeen millions will be paid out at the Sub-Treasury in New York. About seven millions were paid out the first day. There are now something over one thousand millions of the various issues afloat, and the amount is constantly increasing by the conversion of 7-30s.

Speculators manage to keep up the price of gold more than was anticipated. Sales were made in New York yesterday at 135¾.

The New York stock market has been improving for the last ten days. Western Union Telegraph, which went down a short time since to 35c., has decidedly improved, and sold yesterday at 45¼. For some days there has been a cash demand for the stock at the East.

The new three per cent. certificates, in all $50,000,000, were signed by Gen. Spinner last week, and it is expected they will be immediately issued.

WOOL.—The market continues much as heretofore. The sales in Boston last week amounted to 525,000 lbs., at a range of 50@71½c. for fleece, and 35@65c. for the various grades of pulled. The Boston Bulletin says:—"The near approach of the new crop has the natural effect to incline holders to sell at a small margin, and the prevailing dullness in commercial and manufacturing circles tends to increase this disposition."

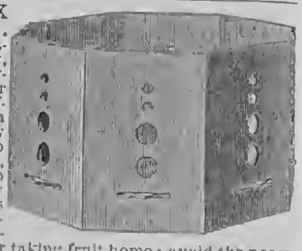
Address, to advertiser, GEORGE GARDNER, Fisher's Island, New London, Conn.

A FRUIT BOX To Give Away.



The Gothic or Octagon Tree Fruit Box, for marketing berries and all other Small Fruits, is offered at so low a price that fruit growers can afford to give them away, while they are in no way inferior to any in the market. This will furnish the buyers a neat and convenient package for taking fruit home; avoid the necessity of handling the fruit until ready for the table, and also the trouble and expense of collecting and return freight. This box was exhibited at the American Institute Farmers' Club, April 2d, and pronounced a "perfect success" by prominent fruit growers present. It is also especially commended by all the leading Hotel Keepers in the principal cities of the United States. Price for pints and quarts $10 ₩ 1000. Send for Circular. Address F. H. LUMMUS & CO., 82 John st., New York.

THE PREMIUM MACHINE!

BUCKEYE MOWER & REAPER

Extract from Official Report of Great National Field Trial, held at Auburn, in July, 1866:—"The record of the Buckeye is interesting in view of the fact that it was the pioneer in the path of the great improvements which have popularized Mowing Machines and made them an absolute necessity of every farmer. It took the prize at the Great National Trial of Mowers and Reapers, at Syracuse, (in 1857,) and at once sprang into a great popularity. In the hands of Mr. J. P. ADRIANCE it met with an enormous sale. The result of this trial clearly shows that it still keeps the forward rank which it won at Syracuse, and at many other subsequent trials, and that it is still as worthy the patronage and confidence of the public as it has been in any preceding portion of its history."

Beware of mongrel machines, which attempt to steal the reputation of the Buckeye to cover their own imperfections. Descriptive Circulars and Synopsis of Official Report of Auburn Trial forwarded by mail.

Manufacturers—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Allbion, Orleans Co., N. Y.; H. & E. F. THE ALL-WHITE RUBBER ROLLER Monitor Clothes Wringer,

With or without Cog-wheels, manufactured by JOHN YOUNG & SON, Original Inventors of Clothes Wringers, Amsterdam, N. Y.

This is the FIRST Clothes Wringer ever invented. It has been awarded more "First Premiums and Medals" over cog-wheel and plain CLOTHES WRINGERS, THAN *any other Wringer made.*

We do *not claim* any laurels as yet, for our new style of cog-wheels (which is a recent invention;) but what we *do* claim is this; the most perfectly regulated cog-wheel ever attached to a Clothes Wringer, and to have a machine constructed so as to work as easily *with* cogs as *without.* This we have done by *an entirely new style of gear,* and *Self-adjusting Rubber Spring combined,* by which arrangement the cogs are constantly in gear, and the rollers always level at both ends.

All Rollers ARE WARRANTED to be A. No. 1, *all* White Rubber clear to the shaft. WE MAKE NO OTHER. Rollers in most other Wringers are made of *black rubber,* covered with a thin coating of white rubber, which soon cracks or wears off, when the black rubber will crock and stain the clothes, but our WHITE ROLLERS cannot crock or stain the clothes; and they are so arranged as not to tear or rust the fabric upon or from the shaft, as will frequently occur while using other wringers. The MONITOR is very simple in its construction. No mechanic required to operate it. It can be attached to tube of any size, shape or thickness. The frames are oiled with hot oil, which prevents the suds penetrating the wood. It will wring large and small articles with equal ease. All machines warranted to give perfect satisfaction.

N. B.—Do not buy the Boston Monitor, for our WIDE GUAGE WHITE ROLLER MONITOR.

☞ Sold by all Clothes Wringer Dealers, generally, throughout the country. AGENTS WANTED. [903-3tom.

EMPLOYMENT—LIGHT WORK—GOOD pay. See New Book List. Sent first post, on rec't stamp, by S. R. WELLS, 389 Broadway, N. Y. 902-4t

Special Notices.

THE PRACTICAL SHEPHERD,

A COMPLETE TREATISE ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.

By Hon. HENRY S. RANDALL, LL. D.,
Author of "Sheep Husbandry in the South," "Fine-Wool Sheep Husbandry," &c., &c.

PUBLISHED BY D. D. T. MOORE, ROCHESTER, N. Y.

TWENTY-FIVE THOUSAND COPIES of this valuable work have already been issued, and the demand for it is now greater than a year ago. To meet this demand a large edition is now in the hands of the binders and will be ready for agents in a few days.

THE PRACTICAL SHEPHERD is unquestionably *the best and most complete Treatise on Sheep Husbandry now obtainable.* It is the *latest* of Dr. RANDALL'S works on the subject, and combines the results of a life-long experience and observation as a sheep breeder and wool grower. Every flock-master in the land should have the work. It is indispensable,—and no work on any branch of husbandry ever gave better satisfaction. The work is highly approved by both Press and People, as extracts from letters and notices heretofore published) abundantly testify.

☞ THE PRACTICAL SHEPHERD comprises 454 large duodecimo pages, and is printed, illustrated and bound in superior style. Sold only by Agents and the Publisher. The canvassers for Todd's Patent Stamp for Marking Sheep are authorized Agents for the sale of the Practical Shepherd. Price, $2. Sample copies mailed, post-paid, on receipt of price.

Address **D. D. T MOORE,**
Editor Rural New-Yorker, Rochester, N. Y.

Headache.—The brain and stomach are very intimately connected, consequently a disordered stomach produces Headache, Dizziness, Vertigo, &c., &c. COE'S DYSPEPSIA CURE will certainly correct the Stomach, and assist digestion, thus removing the cause of these troubles.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

Itch, Salt Rheum.—Wheaton's Ointment will cure the itch in 48 hours,—also cures Salt Rheum, Ulcers, Chilblains and all Eruptions of the Skin. Price 50 cents. Free by mail by sending 60 cents to WEEKS & POTTER, Boston, Mass.
For sale by all druggists. 855-52t

$25 GENUINE **Bartlett Sewing Machine.** **$25**

Best cheap Licensed Machine in the United States. Agents wanted everywhere. Pay $50 to $200 per month. Enclose stamp, and address PAGE BROTHERS, General Agents, 514 Chestnut St., Philadelphia, Pa., and 221 Summit Street, Toledo, Ohio.
Sews with single or double thread.—*Scientific Am.*

AGENTS WANTED FOR GEN. L. C. BAKER'S History of the Secret Service. This work was announced more than a year ago, but owing to the attempts of the Government to suppress it, its publication was delayed. It will now be issued, *unaltered* and *unabridged, under the supervision of Gen. Baker,* whose marvelous narratives are all attested by the highest official authority. The morals of the National Capital are thoroughly ventilated, and there are some strange revelations concerning Heads of Departments, Members of Congress, Female Pardon Brokers, and distinguished military characters. Send for Circulars and see our terms, and a full description of the work. Address JONES BROTHERS & CO., Philadelphia, Pa. 902-4t

REMINGTON'S FOOT-ROT REMEDY.
1,000 TESTS—NOT ONE FAILURE.

Two months ago I applied Remington's Foot-Rot medicine to a flock of sheep and they have kept perfectly sound since, and I have no doubt that if properly applied that it will make a sure cure.
Geneva, N. Y., Feb. 16, 1867. JOHN JOHNSTON.

One thorough application is generally sufficient; rarely the second may be needed. The best Remedy we have ever used. T. C. MAXWELL & BORS.
Nurseries, Geneva, N. Y., April 16, 1867.

The best cure I have ever used. RON'T J. SWAN.
Geneva, April 16, 1867.

I cured 50 sheep for 50 cents. If taken in time one application is sufficient. In the worst cases two applications are sufficient. H. D. BENNETT.
Geneva, April 6, 1867.

I took 100 maggots from one foot and cured with one application. JOHN E. BOOTHE.
Canandaigua, April 1, 1867.

Warranted if used according to directions. For sale by Druggists. Price, $1. C. REMINGTON, Agent, Manufacturer, Geneva, N. Y.

THE "WEED" SEWING MACHINE,
OR
"FAMILY FAVORITE."

It never grumbles at its labor,
Nor gossips with a talking neighbor;
It idles not away its time;
It disregards all change of clime;
In heat, or cold, or wet, or dry,
It works without a pause or sigh;
'Tis neither rude nor obstinate,
Nor ever in a sulky state;
Nor does it ever join in "strikes,"
But does whate'er its owner likes.
If oil you give and suited thread,
Its onward course is surely sped.
In cleanliness it much delights,
For this its progress expedites.
Without a change of "tension" sews
Thin muslin or thick leather shoes.
It works with beauty and precision,
Unmoved by praises or derision;
It flies along the whole day through,
And, if you wish, the whole night too,
And still next morning ready stands
To answer your renewed demands.
It does the piles of work you bring
Just like a sentient, living thing,
Yet asks no fee, requires no drink,
And never is known to balk or shrink;
A child may guide this household fairy,
It is so simple, light and airy.
Its worth to tell a book would need,
For though its modest name is "WEED,"
'Tis better far than fruit or flower
For those who wish its housewife power.
This WEED machine, of wide renown,
Is now for sale in every town
And country village, where the people
Can boast a tavern and a steeple;
Where local agents, (never doubt it,)
Will show and tell you all about it.
Headquarters in Connecticut,
The land of brave old General PUT,
In Hartford city—famed for much
Of genius, talent, wealth, and such,
But bound to be still more, I ween,
For this triumphant WEED machine! [902-2t

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

SEND FOR CIRCULAR.

Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

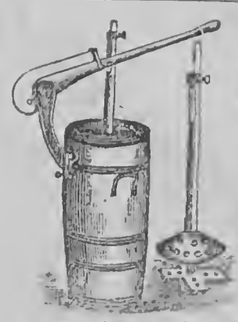
On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.



H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate." *Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candles, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent postpaid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 897-tf

INGERSOLL'S COTTON AND WOOL PRESSES.

INGERSOLL'S HAY AND STRAW PRESSES.
INGERSOLL'S RAG AND PAPER PRESSES.
INGERSOLL'S HIDE AND HAIR PRESSES.
PRESSES, BOTH HAND AND HORSE-POWER,

For baling all kinds of material, on hand and made to order. Also, a practical machine for sawing down trees. Price $25. For price list and full information, call on or address the manufacturers. INGERSOLL & DOUGHERTY, Greenpoint, (Brooklyn,) N. Y. [869-12tom

BARKER'S CORN SHOCKER was Patented DEC. 19, 1865.—It works to entire satisfaction, saving much time. The corn is set around the Shocker and held in position by the springs, as seen above. When the shock is completed it is easily removed, the springs yielding as it passes from the shock. The legs are movable, consequently are not liable to be obstructed by fallen corn or vines. It is durable and cheap; can be sold at retail at $2; when not in use, may be shut up like a knife, and occupies but little space. Read what one neighborhood think and say of it:

We, the undersigned farmers of Jefferson, Hillsdale Co., Mich., hereby say that we consider L. S. BARKER'S PATENT CORN SHOCKER a useful invention, and cheerfully recommend it to the public.—Elisha Hibbard, J. W. Coffin, J. H. Bailey, W. L. Johnson, H. J. Cole, Joseph Cheney, James A. Cote, R. J. King, S. F. Fuller, John W. Tiffany, Jonathan Green, Geo. W. Ramsey, Wm. Way, M. Ramsey, Zela Hadley, Willett Green, Henry E. Crane, H. H. Herring.

For Farm, Town, County or State Rights, apply to the undersigned, at Pittsford, Hillsdale Co., Michigan.
ANSON BACKUS.

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address

DRIVING HOME THE COWS.

Out of the clover and blue-eyed grass
He turned them into the river-lane;
One after another he let them pass,
Then fastened the meadow bars again.

Under the willows, and over the hill,
He patiently followed their sober pace;
The merry whistle for once was still,
And something shadowed the sunny face.

Only a boy! and his father had said
He never could let his youngest go;
Two already were lying dead
Under the feet of the trampling foe.

But after the evening work was done,
And the frogs were loud in the meadow swamp,
Over his shoulder he slung his gun
And stealthily followed the foot-path damp.

Across the clover and through the wheat
With resolute heart and purpose grim,
Though cold was the dew on his hurrying feet,
And the blind bats flitting startled him.

Thrice since then had the lanes been white,
And the orchards sweet with apple bloom;
And now when the cows came back at night,
The feeble father drove them home.

For news had come to the lonely farm
That three were lying where two had lain;
And the old man's tremulous, palsied arm
Could never lean on a son's again.

The summer day grew cool and late,
He went for the cows when the work was done;
But down the lane, as he opened the gate,
He saw them coming one by one;

Brindle, Ebony, Speckle, and Bess,
Shaking their horns in the evening wind;
Cropping the butter-cups out of the grass—
But who was it followed close behind?

Loosely swung in the idle air
The empty sleeve of army blue;
And worn and pale, from the crisping hair,
Looked out a face that the father knew.

For Southern prisons will sometimes yawn
And yield their dead unto life again;
And the day that comes with a cloudy dawn
In golden glory at last may wane.

The great tears sprang to their melting eyes;
For the heart must speak when lips are dumb,
And under the silent evening skies
Together they followed the cattle home.

[*Harper's Monthly.*

The Story Teller.

THE TOMB OF CHEOPS.

BY FRANCES POWER COBBE.

The state of Coleridge's mind when he wrote his fragments of Kubla Khan, must have nearly resembled that of any reasonably excitable person during a first visit to Cairo. Just a degree too vivid to be a natural dream; many degrees too beautiful and wonderful to be an ordinary daylight vision, the rich dim courts, the glorious mosques, the marble fountains, the showers of southern sunlight poured on stately palm-tree and slow-moving camel and a shifting, many-hued crowd—all form together a scene such as no stage in the world may parallel for strangeness and splendor. One day spent in roaming aimlessly through the bazaars, and the gardens, and the mosques of Hassan and the Gama Tayloon, does more to reveal to us what Eastern life means—what is the back-ground of each great Eastern story, the indescribable atmosphere which pervades all Eastern literature—than could be gained by years of study.

At least, I can speak from experience that it was such a revelation to me, and one so immeasurably delightful that, having performed the long journey to Egypt mainly with the thought of the attractions of the ruins of Thebes and Memphis, Karnack and Philæ, I waited patiently for a fortnight within sight of the Pyramids without attempting to visit them, satisfied with the endless interest of the living town. At last the day came when the curiosity of some quarter of a century (since that epoch in a child's life, the reading of Belzoni) could no longer be deferred. I had a *concern*, as good folks say, to visit the Cheops that particular morning, and to Cheops I went, mounted on the inevitable donkey, and accompanied by a choice specimen of that genus of scamp, the Cairene donkey-boy. Unluckily I had over night ordered my dragoman to wait in Cairo for certain expected mails, and bring them to me in Old Cairo whenever they might arrive; and of course the order involved my loss of his services for the entire day, spent by him, no doubt, with my letters in his pocket, at a coffee shop. Thus it happened that my little expedition wanted all guidance or assistance—such acquaintances as I possessed in Cairo being otherwise occupied on that particular morning, and not even knowing of my intention.

Arriving at the ferry of the Nile, just above the Isle of Rhoda, it was with considerable satisfaction that I found a party of pleasant English ladies and gentlemen also proceeding to the Pyramids. Their time, however, was limited by the departure of the Overland Mail that day, and of course they could make no delay—as they seemed kindly disposed to do—to keep up with me and my wretched donkey, or rather donkey-boy.

If there be an aggravating incident in this very trying world, it is assuredly that of being mounted on a non-progressive donkey, unarmed with any available whip, stick, spur, or other instrument of cruelty, and wholly at the mercy of a treacherous conductor, who pretends to belabor your beast, and only makes him kick, and keeps you behind your party, when you have every reason in the world to wish to retain your place in it. Only one thing is worse, a mule which carries you through a whole day of weary Alpine climbing, just too far from all your friends to exchange more than a scream at intervals. If there chance on such an excursion to be ten pleasant people of your party, and one unpleasant one, whom you particularly wish neither to follow nor seem to follow, it is inevitably that particular objectionable person whose mule your mule will go after, and press past every one else to get at, and drag your arm out of its socket if you try to turn it back, and finally make you wish that an avalanche would fall and bury you and the demon-brute you have got under you, in the abyss forever. On horseback you are a lord (or lady) of creation, with the lower animal subject unto you. On mule-back, you are a bale of goods, borne with contumely at the will of the vilest of beasts—not where you please, but when, where, and how *it* pleases.

To return to my expedition to the Pyramids. Very soon the English party were out of sight, and slowly and wearily I was led a zig-zag course through fields of young growing corn, and palm groves, and past the poor mud villages of the Fellah-Arabs. Mud, indeed, occupies in Egypt an amazing prominence in every view. Mud hovels, mud fields, where the rank vegetation is only beginning to spring through the deposit of the inundation, mud dams across a thousand ditches, and finally the vast yellow mud-banks of the mighty Nile. If man were first created in Egypt, it is small marvel that his bodily form should be a "muddy vesture of decay." In the course of my pilgrimage on this particular day my donkey-boy cleverly guided me into a sort of peninsula of mud, out of which there was no exit (short of returning on our steps) save by crossing a stream of some three or four feet deep. As usual in Egypt, two or three brown Arabs arose immediately when wanted, from the nearest brake of rushes, and volunteered to carry me across on their shoulders; their backshish, of course, being divided with the ingenious youth who had brought me into the trap. What it costs to the olfactory organs to be carried by Fellah-Arabs, language altogether fails to describe.

At last the troubles of the way were over; the sands of the Desert were reached, and the stupendous cluster of edifices, the three Pyramids of Ghizeh, the Sphinx, the Cyclopean Temple, and the splendid tombs, were before me and around. For miles off, in the clear air of Egypt, where there is literally no aerial perspective, I had been able to distinguish the range of stones which constitute the exterior of all the Pyramids, save the small portions of the second and third, still covered with their original coating. It was hardly, as Longfellow says:

> The mighty pyramids of stone
> That wedge-like cleave the desert airs,
> When nearer seen and better known
> Are but gigantic flights of stairs.

Almost as soon as they come within the range of vision they are seen with their serrated edges and the horizontal lines of the deep steps, marked sharply with the intense shadows of the south.

Of all these ruins of Ghizeh—these earliest and mightiest of the records of our race—the one by far the most affecting and impressive, is assuredly the Sphinx. A human face, nay, an intensely human face, a portrait full of individuality even in its solemnity and colossal grandeur—gazes at us with the stony eyes before which have passed Hebrew prophet and Greek philosopher, and Roman conquerer, and Arab khalif. Had Napoleon the Great told his troops that sixty centuries looked on them through the Sphinx's eyes he would have used no unmeaning metaphor. Even the very ruin and disgrace of the mighty countenance, seems to render it more affecting. Half immeasurably sublime, half pitiful, nay, grotesque, in its desolation, it stands, with its brow calmly upturned to heaven, and with what one might almost deem a ruddy flush upon its cheek, but with every feature worn and marred since it has stood there, a stony St. Sebastian, bearing through the ages the shafts and insults of sun and storm.

I must not pause to muse over the Sphinx, nor yet to describe the gradual revelation which comes to the traveler, of the enormous magnitude of the Pyramid, as he slowly wades at its foot through the heavy sand, and perceives when he has walked thrice as far as it seemed he need have done, he has but reached the half of the base.

The English party, who had outridden me, were concluding their luncheon as I reached the Pyramid, and after declining their cordial offers to share it, I asked one of the ladies, "Had she visited the interior and Cheops' chamber?"

"No. Some of the ladies and gentlemen had done so. The Arabs were a wild set of men, and she did not like to put herself in their power."

Deeming the lady's caution must be overdeveloped, and too intensely interested to make very serious reflections on what I was doing, I engaged the Scheik at the door of the Pyramid to provide me with proper guides so soon as the English party had ridden away. Five strong Fellah-Arabs volunteered for the service, in spite of my remark that three were enough, and we were soon plunged into the darkness of the first entrance-passage. All the world knows how the Pyramid is constructed: a solid mass of huge stones, all so perfectly fitted that scarcely a penknife might be introduced in any place between them. The passages at the widest scarcely permit two persons going abreast, and are for long distances so low as to compel the visitor to stoop almost double. The angle at which these passages slope upwards, is also one which, on the slippery, well-worn floor, renders progress difficult as on the ice of an Alpine mountain. But oh, how different from the keen, pure air, the wide horizon, the glittering sunlight, of the Alps, this dark, suffocating cavern, where the dust, and lights, and breath of heated men, make an atmosphere scarcely to be breathed, and where the sentiments of awe and horror almost paralyze the pulse. Perhaps my special fancy made me then, as ever since, find a cave, subterranean passage, or tunnel, unreasonably trying to the nerves; but so it was—the awe of the place well nigh overpowered me.

The Arab guides helped me easily in their well-known way. One or two carried the candles, and all joined in a sort of a song at which I could not help laughing, in spite of both awe and lack of breath. It seemed to be a chant, of mingled Arabic and English (a language they all spoke after a fashion,) the English words being apparently a continual repetition:

> Vera goot lady, backshish, backshish;
> Vera goot lady, give us backshish:

and so on, *da capo*. Twice we had to rest on our way, from sheer exhaustion, and on one occasion, where there is a break in the continuity of the passage, there was an ascent into a hole high up in the wall, by no means easy to accomplish.

At last, after what seemed an hour, and I suppose was about fifteen minutes, since we left the sunshine, we stood in Cheops' burial vault, the center chamber of the Great Pyramid. As my readers know, it is a small oblong chamber, of course wholly without light or ventilation, with plain stone floor, with roofs, and with the huge stone sarcophagus (which once held the mummy of Cheops, but is now perfectly empty) standing at one end. The interest of the spot would alone have repaid a journey from England; but I was left small time to enjoy it. Suddenly I was startled to observe that my guides had stopped their song and changed their obsequious voices, and were all five standing bolt upright against the walls of the vault.

"It is the custom," said one of them, "for whoever comes here to give us backshish."

I reflected in a moment that they had seen me foolishly transfer my purse from the pocket of my riding skirt to the walking dress I wore under it, and which I had alone retained on entering the Pyramid.

"Well," I said, as coolly as I was able, "I intend, of course, to give you 'backshish' for your trouble, and if you choose to be paid here instead of at the door, it is all the same to me. I shall give three shillings, English, (a favorite coin in Cairo,) as I said I only wanted three men."

"Three shillings are not enough. We want backshish!"

"There they are. They are quite enough."

"Not enough! We want backshish!"

I must here confess that things looked rather black. The Fellahs stood like so many statutes of Osiris (even at the moment I could not help thinking of it,) with their backs against the wall and their arms crossed on their breasts, as if they held the *flagellum* and *crux ansata*. Their leader spoke in a calm, dogged sort of way to which they all responded like echoes.

"Well," I said, as there are five of you, and I am rather heavy, I will give you one shilling more. There it is. Now you will get no more." Saying this I gave the man the fourth shilling, and then returned my purse to my pocket.

"This won't do. We want backshish!"

"It must do. You will get no more backshish."

"It won't do. We want backshish!"

Each moment the men's voices grew more resolute, and I must avow that the horror seized me at the thought that they had nothing to do but merely to go out and leave me there in the solitude and darkness, and I should go mad from terror. Not a creature in Cairo even knew where I was gone. I should not be missed or sought for days, and there I was unarmed, and alone, with these five savages, whose caprice or resentment might make them rush off in a moment, leaving me to despair. Luckily I knew well it would be fatal to betray any alarm, so I spoke as lightly as I could, and laughed a little, but uncomfortably.

"Come, come. You will have no more backshish you know very well; and if you bully me, you will have *stick* from the English Consul. Come, I've seen enough. Let us go out."

"We want backshish!" said all five of the villains, in one loud voice.

It was a crisis, and I believe if I had wavered a moment, I might never have got away; but the extremity, of course, aided one's resolution, and I suddenly spoke out, angrily and peremptorily,

"I'll have no more of this. *You* fellow there, take the light and go out. *You* give me your hand. Come along, all of you."

It was a miracle; to my own comprehension, at all events. They one and all suddenly slunk down like so many scolded dogs, and without another syllable did as I ordered them. The slave habit doubtless resumed its usual sway with them the moment that one of free race asserted a claim of command. Any way, it was a simple fact that five Arabs yielded to a single Anglo-Saxon woman, who was herself quite as much surprised as they could be at the phenomenon.

O, how I rejoiced when the square of azure sky appeared at the end of the last of the passages, and when I at last emerged safe and *sane* out of the Great Pyramid! Dante ascending out of the Inferno, could not have been half so thankful. Away I rode home to Old Cairo on my donkey, and could spare a real laugh under the sunshine, when I found that the wretched old Arab Scheik, with whom I had left my riding skirt, had quietly devoured my intended luncheon of dates, and then carefully replaced the *stones* in my pocket!

A scene recently took place at a Paris wedding, in which the refining influence of love and French politeness combined to make a very charming picture. The bridegroom, an honest and industrious locksmith, was uneducated, and when called on to join the register, marked a cross. The bride, on the contrary, although belonging to a poor family, had received an excellent education. Nevertheless, when the pen was passed to her, she signed a cross. The bridesmaid, a former schoolfellow of the bride, having expressed her astonishment, the young wife replied, "Would you have me humiliate my husband? To-morrow I will commence teaching him to read and write."

ARITHMETICAL PROBLEM.

Two men buy a slaughtered beef weighing 250 lbs., each paying $5. One takes the hind quarters allowing one cent per pound more than for the fore quarters, each man taking $5 worth. How much per lb. did each man pay, and how many pounds of beef did each man have. S. D. Kelly.

Kirkersville, Ohio.

☞ Will some Rural reader please answer?

ANSWERS TO ENIGMAS, &c., IN No. 901.

Answer to Miscellaneous Enigma:—God made him, let him pass for a man.

Answer to Arithmetical Problem:—16 Histories at $4 each; 4 Bibles at $5 each; 80 Testaments at 20 cents each.

Answer to Anagram:
For we are the same our fathers have been;
We see the same sights our fathers have seen;
We drink the same stream, we view the same sun,
And run the same course our fathers have run.

Answer to Printer's Rebus:—The season is backward.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master or some other influential person to become a recruiting officer for the "Rural Brigade."

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle,
Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER
Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines.*

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS
twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

MOORE'S RURAL NEW-YORKER.

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO. 20.} ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, MAY 18, 1867. {WHOLE NO. 904.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

NITROGENOUS MANURES:

WHY NEEDED FOR CEREAL CROPS.

ALTHOUGH an application of superphosphate of lime will grow a large crop of turnips with the aid of very little organic manure, and red clover will grow luxuriantly on a medium conditioned soil, with the aid of the same application, or a little plaster, yet no grain crop will reach the maximum on such a soil, no matter how rich you make it in all the mineral and inorganic elements, without a liberal application of nitrogenous, well saved stall manure, or its equivalent in Peruvian guano or ammonia salts. J. B. LAWES, in his long series of experiments, ascertained conclusively that where every mineral element was in the soil necessary for a maximum crop of wheat, the yield of wheat on an acre was doubled by the aid of 200 lbs. of sulphate of ammonia alone; and Indian corn being a great feeder, it is in much greater need of more nitrogen (ammonia) than the more dainty wheat plant; in fact it may be truly said, the more ammonia the more corn, provided the soil is well drained and tilled. As neither the stalks or grain of cereal plants contain nitrogen in anything like the proportion in which it is found in peas, beans, clover and other leguminous plants, Mr. LAWES has come to the very reasonable conclusion that wheat, barley, rye, timothy, &c., destroy nitrogen during the process of their growth, or rather that nitrogenous compounds are used up and destroyed in making other matters in the soil into soluble plant food. LIEBIG says that quick-lime applied to the soil, particularly to clay, dissolves the silicates into soluble plant food. If this is so, *aupius forte raison*, we should expect that the salts of ammonia would perform the same office to all the insoluble matters in the soil necessary for the maximum growth of the plants it supports.

The result of these experiments should teach grain-growing farmers the great importance of also growing red clover and other leguminous plants, which collect most of their nitrogen from the dew, rain and air, and yet retain it in their tissues to twice the amount that it is found in the cereal grasses. Thus, clover, peas, beans, &c., whether plowed under in the green state or fed to animals and the manure applied to the soil, are nearly thrice the value of manure made from the cereal grasses.

On the light, sandy soils of Georgia, the cow pea is grown as a manuring plant, and plowed in green; as peas and beans contain three times as much nitrogen as wheat or other cereals, the Georgia planter proves the truth of chemical analysis in his own success. The clover plant being of the same order as the cow pea (leguminous) consuming little but affording a great deal of nitrogen so necessary to all cereal crops, every farmer who grows grain, or even timothy and other narrow leaved grasses, should also grow clover without stint. But while the cereals require a soil richer in nitrogen than in the mineral elements of plant food, yet a liberal supply of superphosphate of lime will also add to the incipient growth of cereals, and to the stalks but not to the grain of Indian corn, and to turnips and all leguminous plants the minerals are especially beneficial. Mr. LAWES wrote to JOSEPH HARRIS thus, "when the alkalies and phosphates alone are used, the pasture is a mass of clover and trefoil, but when ammonia is used it is all grass."

POTATOES IN NEW YORK MARKET.

THE potato trade in our market is a very important branch of the produce business, and I am inclined to think that there is no one article in the produce line that will yield as good profit if confined entirely to it. Many of our dealers make a speciality of them and sell enormous quantities. When we consider the large population of New York, and the surrounding country for five miles which depends entirely on our city for its supplies, we may imagine that it must require a large quantity of everything eatable to supply the demand. In the fall, the trade opened brisk, and potatoes sold well, the supply being about equal to the demand—but later in the season the stock increased above the demand, and they became very dull. Many were infected with the rot, and the dealers refused to buy in large quantities for their winter stores for fear of losing them. Consequently the trade through the winter has been very even, and owing to a backward spring the demand for seed has been very limited. For the benefit of your new readers, I will repeat the localities from which they are principally received:

The first we receive are sent from Bermuda in April, and frequently sell for $12 or $13 per barrel. The seed is sent from here, and is the Western Red. When returned, they do not much resemble the original stock, the skin being much lighter and of a peculiar transparent appearance, the flesh almost white, and possessing a very sweet flavor. Of late years they have tried other varieties, but not with the same success, there not being as great an improvement on the original stock, and many growers object to them because their customers do not know the article, and look upon them with suspicion, thinking they are not genuine. The Southern States are next in order; Louisiana, Georgia, Virginia, New Jersey, New York, Connecticut and Maine are the principal potato States in the Union. Those from Louisiana and Georgia are principally of the common varieties, without any improvement, but being new sell well. Virginia sends a good article, mostly from Norfolk. The Mercers from there are very fine, and bring good prices. Before the war our large steamers came loaded with them, but since then the trade has not been of much consequence. This spring large quantities are being planted, and if the crop proves good we will again see them crowding our market.

The farmers of New Jersey grow largely of the Buckeyes for their early kinds; and Peachblows for their late crop, although they are testing some of the new varieties. Long Island sends in large quantities of Dykemans for early ones, and Mercers for late. Owing to their plan of raising from two to three crops off the same land in one season, their potatoes are dug early and sold. The Jackson White, from Maine, is a first-rate potato for cooking qualities; I think it superior to any other variety in market. It has a white skin and flesh, eyes deeply indented, is of good size, and yields well. It resembles the Carter very much except in shape, it being round. The Mercer of late has failed to such an extent that we see but few of them compared with former years. The best, and most reliable article we receive is from and around Rochester, N. Y. They are very fine and sell well. The Peachblow is the principal variety among us, and it gives general satisfaction. The Prince Albert is another good variety, and is growing in favor every year. The greatest objection to them is that they do not grow large enough, that is, short and thick—they are much inclined to grow long and slim. The Buckeye is grown largely as an early variety, and is very popular.

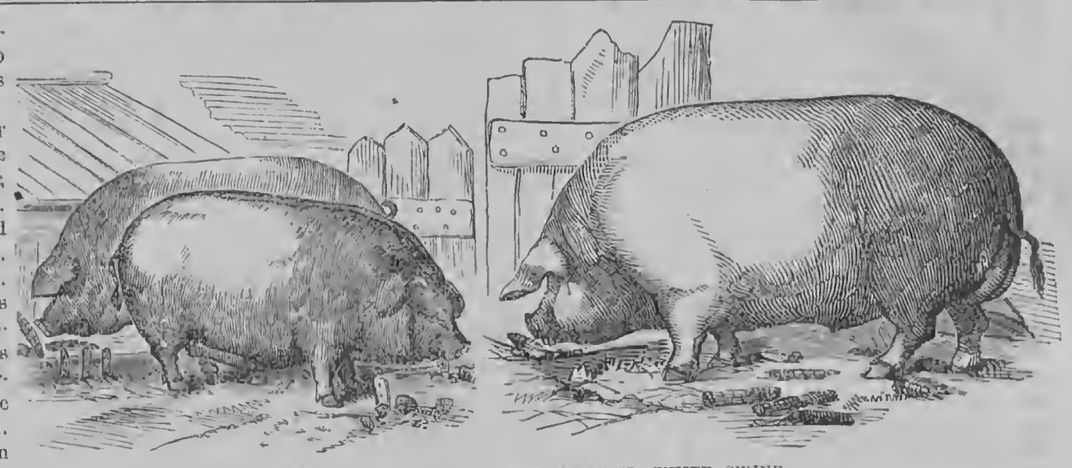
The Dykeman is the most popular early variety. It sells higher for seed than any other of the old kinds. There is no better paying crop for a New York farmer to grow than the Dykeman, provided he sends them to this market for sale at the correct time, and does not sell them at home for a common potato. The sales will average about one dollar per barrel more than Peachblows. The Monitor is a good potato in the fall, but does not sell well in the winter. The Chili Red is not popular; it only sells as a common article. Garnet Chili is a better variety. The Carter has almost disappeared from our market. The White Peachblow sells well, principally owing to the color of the skin, as it cooks about the same as the old variety. There has been quite a demand for the Goodrich potatoes for seed, the prices running up to $12 per barrel; other new varieties are being tested.

Sweet potatoes have been good this year, and sold at high prices. They are now worth $6 per barrel. Persons wishing the small potatoes for sprouting, would do well to procure them direct from the growers in the lower counties of New Jersey, for about one-half the price that nurserymen charge for them. The best seed is short and thick in proportion to length.

NOW AND THEN.

New York, May, 1867.

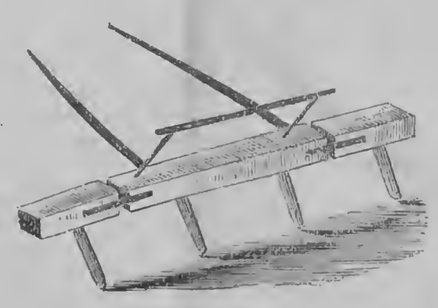
REMARKS.—The Western Red, of which our correspondent speaks, as grown here is a coarse, second-class potato. The improvement made by one seasons growth in Bermuda is a curious instance of the effect of climate in changing the quality of the original stock.



PORTRAITS OF PURE-BRED CHESTER WHITE SWINE.

A GOOD CORN-MARKER.

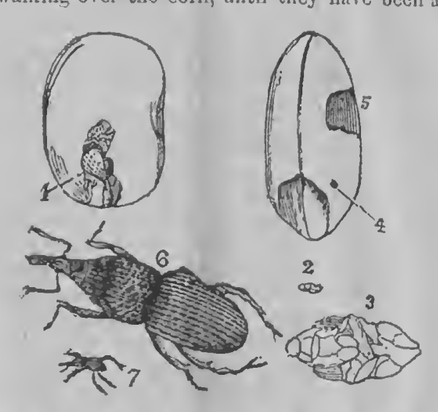
THE worst difficulty with the ordinary three or four tooth corn-marker, results from the inflexibility of the long bar to which the teeth or markers are attached. In passing over uneven ground some of the teeth will not touch the earth, and consequently the planter must guess at the position in which the seed should be planted.



The marker we herewith illustrate, is constructed to surmount this difficulty—two joints being made in the bar which allow each tooth to make its proper furrow on a very uneven surface. The joints are made by sawing the bar apart at the places indicated in the engraving, then connecting the sections by bolting on two stout iron straps, the bolts passing entirely through the bar of wood. Four straps of light wagon tire iron, each six inches long, and four six-inch bolts will make the two joints. A space of one inch left between the sections of the bar will give sufficient flexibility to it for the purpose required.

GRANARY WEEVIL.—(Calandra Granaria.)

THIS destructive insect lives amongst stored grain and malt. We sometimes hear complaints from our readers, that their granaries, wherein corn or wheat has long been stored, are infested with weevil which has worked considerable injury. It is sometimes difficult to detect the presence of this insect, unless they are seen walking over the corn, until they have been at



7, Perfect insect, natural size. 6, Same magnified. 2, Pupa natural size. 3, Same magnified. 1, Kernel of maize magnified with the beetle inside. 4, Hole pierced in grain of wheat for the egg. 5, Place of exit of the beetle from the grain of wheat.

work for some time and the holes of their exit become visible in the empty grains. If a handful of grain be thrown upon water their operations are manifested by the floating kernels. The weevils cannot endure cold, and on the approach of winter they mostly desert the grain, and seek refuge in the chinks of walls and crevices of beams and floors. They remain there until the approach of warm weather, when they sally forth to resume their depredations on the grain. In the winter time the infested bins should be emptied, and a thorough cleansing performed, and if the wood or stone work is in a dilapidated state it should be renovated. Boiling water injected into the crevices will rout them, and we suggest the use of powdered Hellebore.

As soon as the weather is warm enough—commonly in April or May—the beetles pair, after which the female burrows in the grain heap, and pierces a minute hole with her beak in the grain, laying an egg in each until her supply is exhausted, which often is not until autumn. The maggots soon hatch, and feed upon the flour until the husk alone is left. It then changes to a pupa, hatches into the perfect weevil, and eats its way out of the grain. The beetle is one of the *Curculionidæ*; varies from a dark chestnut to a pitchy color; it has no wings, and its six legs are short and stout.

CHESTER WHITE SWINE.

WE give the portraits of pure-bred Chester Swine, bred and owned by THOMAS WOOD, Doe Run, Chester Co., Penn. This breed, already famous, is believed to have originated some thirty years ago by crossing an imported Bedfordshire boar with the then best stock of Chester County. By careful selections and breeding their characteristics have been firmly established, and they are now a distinct breed. They are known by their pure white color, great depth and length of carcass, small head and offal parts, quiet habits, and easy feeding and fattening qualities.

IMPROVEMENT IN BEES.—No. I.

OUR honey-making before the introduction of the Italians, was with most farmers at a low ebb, and it is not very flattering now. This in a great measure is unnecessary. Even yet, if our RURAL readers would take the QUIMBY plan, published a dozen years ago, without patent or other exclusive claims, the fine box honey of our homestead will be in amply supply.

The writer by this mode has an annual average of 35 lbs. box honey to a hive. He never murders his bees by sulphur, to get the sweet store—as was the case with the man who killed the goose to find the golden egg. In the vicinity where he lives there are say 2,000 hives. Not over a dozen farmers, even in this enlightened day, ever get five pounds annual average of box honey from a hive. And to their shame be it said, he believes at least 500 hives are yearly ruthlessly slaughtered by sulphur, in the same district, for the sake of the poor, bee-bread, strained, black honey of the *brood chamber* of the hive. A savage waste. Surely we cannot boast of learning very fast, when the whole of a town, county or State is considered!

My first improvement then would be, making, on the plan suggested, a hive with a brood chamber 12¼ inches square, and high on the inside; and in the usual way put in two cross sticks, not, as often, an inch, but three-sixteenths of an inch in diameter. This is really the old hive but slightly modified. Then by making caps of seven inch wide pine siding, this would give honey-box space 12¼ inches square and 7 inches high. These to be entirely loose on the top of the hive, but fitting closely. Now make the honey-boxes large. My rule is 11¼ inches square and 6 inches high, so as to clear the cap one inch on the sides and top. The honey-boxes I make of siding planed down to ⅜ for the ends, and ¼ for the sides, and tops and bottoms ¼ thick of split one or two inch boards, split by a buzz-saw or splitting mill. Such a honey-box is light, and will hold on an average 25 lbs. of honey. And now for a secret, to most bee-keepers. *The bees will fill a 25 lb. box sooner than four small boxes of 4 lbs. each.* Thus you get more every time the large box is filled, and usually more than double the honey yearly by the large boxes than by the small ones. The bungler ought to get, more than half the time, one 25 lb. box from each hive, though years will occur when he cannot do it. Yet even this low aim would increase ten-fold our honey crop. The attentive man will get one 25 lb. box of clover honey, nice, pure and white; and a second box filled in part by clover and in part by buckwheat or colored honey. Yet if he is not quite attentive he will not get most of the second boxes full.

An expert bee man or woman—for women do finely with bees—will get two boxes full, and the third box partly full, from every stout hive of bees. But mark you, reader! not by the sniveling, mean allowance of two one-inch auger holes to the top of a hive; or the equally lazy way of two slits, ½ inch wide and 2 inches long, in the top of the hive. Such sense is not *common sense*, even if it is very commonly done by farmers who go by rule, not by *their own thoughts and experience*. Traditional rules, and old sayings on bees, are like every old matter, without the enlivening touch of progress. I make sixteen one-inch holes in the top of each hive, and these not with an old dull auger, but a smooth nice bit, that cuts so that a bee can walk through it, not tumble over the roughnesses.

"Don't plane the inside of your hives," says old stupid Tradition. Now, kind reader, tell me why not? Did some old jack-a-knapes tell you that, or do you think it sound common sense? The day for your old rough-board hive, half put together, is gone by. What is worth doing is worth doing well. Every crack, roughness and want of finish in a hive is a nest for a worm, or a labor for the bee, which takes the time honey is to be made in. The best inside finish of a hive is that given by a planing mill or machine. Then cut your lumber true and plane the ends smooth, and nail together stoutly with nice "finishing nails," and paint neatly. Such a hive will last twenty to forty years; requiring the comb to be cleaned out only once in every ten years, and that not by "sulphuring out" and *murdering* (you stupid old coon!) your bees, but drumming them out when weak, and adding them to a weak second swarm.

Simple as is the plan I have recommended, it would add wonderfully to the success of bee-culture. And since Mr. QUIMBY of St. Johnsville, N. Y., published a book, at least ten years ago on it, I call it his plan, though doubtless not the originator of it, still he gave a finish to it. The most remarkable thing about it is, that though thousands of his books have been sold, the hives have been on exhibition at our Fairs for years, and every county has more or less of them in use in the hands of good bee-keepers, *yet there is so little known of it generally.* This shows that, with all our boasted intelligence, the mass of men read but little, *and think less.* Not that they do not consider themselves *intelligent readers*, and *thoughtful*, but that *self-reliant thought*, that *sees and knows*, is scarce. For example, I had a farmer from a distance visit me. His vein of conversation was wheat and apples. So I took him to see these products in this vicinity. I explained apple after apple, showed him the original of the Tompkins Co. King, and supposed the man had eyes and ears. Judge then of my surprise, a few months after, on receiving from him a letter asking "would you

advise me to set out Tompkins Co. Kings, Baldwins and Swaars?" Had I written as I felt in reply, it would have been, "You simpleton! had you had brains last fall, when I showed you boat loads of these, and how the market stood, you never would have asked so silly a question." But instead of that I wrote a mild reply, advising him to plant largely. Yet on visiting him later the old blockhead had not set out a tree, and was without his mind made up still. So with bees. The public ought to know, did they but half read. They stand awkwardly gazing at the truth, yet like the apple man fear to step out of the old stupid path.

Ithaca, N. Y., 1867. S. J. PARKER, M. D.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

N. Y. STATE SHEEP FAIR.

NEVER have the preparations been so extensive or expectation of success so high at our previous State Sheep Fairs. The officers had assurances of a full representation of both stock and men from all the principal sheep growing localities in the State, and from many others in other States. The attendance from the county in which the Fair was held and some of the neighboring ones, was expected to be unusually large. The people of the city of Auburn had arranged to give the Orphan Asylum a benefit by attending the Fair and dining on the grounds. The local press had thoroughly stirred up the people on the subject. The efficient General Superintendent, A. M. CLARK, Esq., and his assistants, had made every needed preparation.

But for three weeks at least before the Fair, it rained nearly incessantly, so that the spring crops could not be got in the ground. The storm culminated during the first two days of the exhibition. On the entry day, it rained a torrent from morning until night. The lowlands were under water. Rivulets soon swelled to rivers. Bridges were swept away. Even the mail coaches did not run. The steamers on several of the interior lakes did not make their trips. Great detentions and difficulties occurred on the railroads, by reason of the washing away of culverts, water on the track, &c. In some places on the Central Railroad, the water was almost deep enough to enter the cars.

Under such circumstances, it could not be expected that many valuable sheep would be brought from a distance. Even the farmers near Auburn who had not covered cages in readiness, could not get out their sheep without having them drenched with water, and thus rendered unfit for examination; and those who started with them were, in many cases, stopped by the swollen streams from which the bridges were carried off, or by the suspension of the ordinary public modes of transportation. And a great many turned back, believing that the Fair would not and could not be held.

The Fair grounds presented a most desolate appearance. The road round them was washed away in many places. The mud was nearly ankle deep. The water at times stood several inches above the surface in and about a portion of the sheep pens. The rain pelted through their coverings. It was impossible to use them. The great dining tent put up by the ladies blew over or blew down—the water run over it—the land about it was converted into a swamp. All thoughts of taking provisions on the grounds had to be abandoned. And all expectations of the promised local attendance from the city and surrounding country, for the benefit of the Orphan Asylum, ceased at the same time.

A few more determined or more favored sheep breeders persevered and exhibited their sheep, and these were housed principally by building pens in the Exhibition Hall of the Cayuga Co. Agricultural Society, and in stables attached to the grounds. Only about three hundred sheep were on exhibition, but we can truly say that never were all the classes, taken together, represented better if as well. As a whole, the sheep shown in nearly every class were the *cream of the cream*. This was the opinion of all present—and every one seemed satisfied that he had been well repaid for his journey, though there were gentlemen present from a number of other States. Among these we were glad to see J. R. DODGE, Esq., of the Agricultural Department, Washington, commissioned by Mr. NEWTON to represent the Department at the Fair. In view of all the circumstances we cannot but regard the exhibition as a remarkable demonstration of the energy and zeal of the sheep breeders of New York.

Classified List of Entries and Prizes.

CLASS FIRST—AMERICAN MERINOS.

Rams—Two Years Old and Over.—William R. Sanford, Orwell, Vt., 1st prize, $30; Wm. R. Sanford, do. do. 2d, do., 20; John Sheldon & Son, Leicester, N. Y., 3d, do., 10; H. & A. H. Miller, Greenwich; Conrad Bush, Lafayette; L. J. Burgess, North Hoosick; Pottle & Maltman, Naples; G. J. Hollenbeck, Hoosick; Wolverton, Matthews & Co., Canandaigua; Simmons & Sackett, Canandaigua; J. C. Short, Livonia; Walter Cole, Batavia; I. J. Whitney, Clarkson; Isaac Aiken, Scipio; L. S. Ketchum, Galen; Thos. Johnson, Savanna; Ackerman & Weston, Fleming.

Rams—Yearlings.—John L. Quackenbush, Hoosick, 1st prize, $20; Marriner & Bronson, East Bloomfield, 2d, 20; E. E. Brown, Niles, 3d, 10; A. Thayer, Jr., Hoosick; J. H. Simmons, Canandaigua; J. S. Goodrich, Lima; Walter Cole, Batavia; C. E. Shepard, Canandaigua; Horace Allen, Aurelius; Isaac Aiken, Scipio; Ackerman & Weston, Fleming; E. Munson, Tyre.

Ewes, 2 Years Old and Over—E. E. Brown, 1st prize, $30; Marriner & Bronson, 2d, 20; Isaac J. Whitney, 3d, 10; P. H. McMillen, J. S. Goodrich, Horace Allen, Isaac Aiken, E. Munson.

Ewes—Yearlings.—C. E. Shepard, 1st prize, $30; Pottle & Maltman, 2d, 20; E. E. Brown, 3d, 10; Davis Cossitt, Onondaga; Marriner & Bronson, Isaac Aiken.

CLASS TWO—FINE MERINOS.

Rams—2 Years Old and Over.—Theo. N. Davison, Culpepper Co., Va., 2d prize, $20; E. R. Freeman; Howard Leonard, Hampton; Wm. H. Pugsley, Danby.

Rams—Yearlings.—C. E. Shepard, 2d prize, $20; Isaac Bowers, Riga; Horace Allen.

Ewes—2 Years Old and Over.—Marriner & Brown, 2d prize, $20; A. Thayer, Jr., Wm. H. Pugsley, Horace Allen.

Ewes—Yearlings.—Clapp & Sweet, Pompey, 2d prize, $20; A. Thayer, Jr., Horace Allen.

CLASS THREE—DELAINE MERINOS.

Rams—Two Years Old and Over.—Wm. M. Holmes, Greenwich, 1st Prize $20; John L. Quackenbush, Hoosick, 2d do., 20; Theron Steele, Lima, 3d do., 10; T. C. Short, Livonia; C. H. Warner, Lima; Isaac Bowers, Riga; L. W. Crandall, Alden; Geo. Bowen, Birdsall; Slocum and Aiken, Scipio; John Tyler,——.

Rams—Yearlings.—Hiram Hand, Genoa, 1st prize, $20; N. and N. Bottom, Shaftsbury, Vt., 2d do., 20; E. Munson, Tyre, 3d do., 10; J. H. Simmons, Canandaigua; G. B. Sackett, Canandaigua; Wm. H. Pugsley, Danby.

Ewes—Two Years Old and Over.—P. H. McMillen, Canandaigua, 1st prize $30; George Brown, Birdsall, 3d do, 10.

Ewes—Yearlings.—T. H. Simmons, Canandaigua, 1st prize $30; George Brown, Birdsall, 2d do., 20.

CLASS FOUR—LAMBS OF PRECEEDING CLASSES.

Pottle and Maltman, Naples, 1st prize, $15; John Sheldon and Son, 2d do., 10; Marriner and Bronson, 3d do, 5; Hiram Hand, Genoa; H. Allen, Aurelius.

CLASS FIVE—LONG WOOLS.

Rams—Two Years Old and Over.—John D. Wing, Washington Hollow, 1st prize, $30; John D. Wing, do., 2d do., 20; Samuel H. Barons, Irondequoit, 3d do., 10.

Rams—Yearlings.—John D. Wing, 1st prize, $30; John D. Wing, 2d do., 20; S. C. Griswold, 3d do., 10.

Ewes—Two Years Old and Over.—S. H. Barons, 2d prize, $20.

Ewes—Yearlings.—S. H. Barons, 2d prize, $20.

CLASS SIX—MIDDLE WOOLS.

Rams—Two Years Old and Over.—John Lynch, West Brighton, 1st prize, $30.

Ewes—Two Years Old and Over.—John Lynch, 1st prize, $30.

Sweepstakes Prizes.

The Diploma of the Association.

IN CLASS ONE.—*Rams, Two Years Old and Over*—John Sheldon and Son. Mr. Sanford's rams were not entered.

Rams, Yearlings—John L. Quackenbush.
Ewes, Two Years Old and Over.—E. E. Brown.
Ewes, Yearlings.—C. E. Shepard.

IN CLASS TWO—*Ewes, Two Years Old and Over.*—Marriner and Bronson.

IN CLASS THREE—*Rams, Two Years Old and Over.*—Theron Steele.
Rams, Yearlings.—N. and N. Bottum.
Ewes, Two Years Old and Over.—P. H. McMillen.

IN CLASS FIVE—*Rams, Two Years Old and Over.*—John D. Wing, (Golden Fleece.)

AWARD OF PRIZES TO SHEARERS.

The first prize of $10 to Daniel West, Richmond.
The second prize of $8 to John T. Clapp, Pompey.
The third prize of $6 to Charles Scrivines, Washington Hollow, Duchess Co.
The Committee make favorable mention of Jas. Grace and G. N. Sherman.

ENTRIES FOR THE MOORE PRIZE.

Isaac Bowers, North Chili, 1 two-year old ram. Weight of body, 84½ lbs.; weight of fleece, 16 lbs. 6 oz.; age of fleece, 355 days.
Walter Cole, Batavia, 1 yearling ram. Weight of body, 63¾ lbs.; weight of fleece, 13 lbs. 7½ oz.
William M. Holmes, Greenwich, 1 two-year old ram. Weight of body, 75 lbs.; weight of fleece, 18 lbs. 7 oz.; age of fleece, 363 days.

ENTRIES FOR THE PITTS PRIZE.

L. W. Crandall, Alden, 1 two-year old ram. Weight of fleece, 19 lbs. 7 oz.; age of fleece, 361 days.

ENTRIES FOR THE WILCOX PRIZE.

J. N. Chamberlain, Owasco, yearling ewe. Weight of body, 85½ lbs.; weight of fleece, 8 lbs. 10½ oz.; age of fleece, 1 year and 8 days.
A. B. Clapp, Pompey, four-year old ewe. Weight of body, 59 lbs.; weight of fleece, 10 lbs. 3¼ oz.; age of fleece, 365 days. Shorn at the Rochester Fair.

ENTRIES FOR THE COSSITT PRIZE.

P. H. McMillan, Canandaigua, 1 two-year old Ewe. Weight of body, 104 lbs.; weight of fleece, 16¾ lbs.; age of fleece, 367 days.

ENTRIES FOR THE RANDALL PRIZE.

John D. Wing, Washington Hollow, 1 two-year old Cotswold ram. Weight of fleece, 19 lbs. 4½ oz.; age of fleece, 381 days.
John D. Wing, yearling ram. Weight of fleece, 18 lbs. 9 oz.; age of fleece, 381 days.
Samuel H. Barons, 1 four-year old ram, (Leicester.) Weight of body, 265 lbs.; weight of fleece, 11¾ lbs. of well washed wool; age of fleece, 399 days.

WEIGHT OF SHEEP AND FLEECES SHORN BUT NOT ENTERED FOR SPECIAL PRIZES.

Conrad Bush, Lafayette, four-year old ram. Weight of fleece, 27½ lbs.; age of fleece, 365 days. Shorn at the Rochester Fair.
Wm. R. Sanford, Vermont, three-year old ram "Blucher." Weight of body, 153½ lbs.; weight of fleece, 27 lbs. ¼ oz.
L. J. Burgess, Hoosick, two-year old ram "Cashier." Weight of body, 109½ lbs.; fleece, 23¾ lbs.
J. J. Whitney, Clarkson, 1 three-year old ram. Weight of body, 130½ lbs.; fleece, 24¼ lbs.
Marriner & Bronson, 1 yearling ewe. Weight of body, 74½ lbs.; fleece, 17 lbs. 10½ oz.
Wolverton, Mathews & Co., Canandaigua, two-year old ram. Weight of body, 113¾ lbs.; fleece, 20 lbs. 3½ oz.
Thos. Johnson, Savanna, three-year old ram. Weight of body, 122 lbs.; fleece, 23½ lbs.
Slocum & Aiken, Scipio, five-year old ram. Weight of body, 123 lbs; fleece, 18 lbs. 10 oz.
W. H. Pugsley, Danby, five-year old ram. Weight of body, 117½ lbs.; fleece, 15 lbs. 7½ oz.; age of fleece, 365 days.

Dairy Department.

BUTTER MAKING.

IN the RURAL of April 20th was a communication from "MARGARET, a butter maker in distress," which has brought to us five good communications for her consolation, and others similarly afflicted. Want of space, in the Dairy department compels us to abbreviate these letters somewhat, much to our regret. We hope their authors will accept this excuse for the absence of portions of their communications.

The first response, according to date, is from Mrs. GEO. M. CURTIS of Monroe Co., N. Y. She commenced housekeeping a little more than one year since;—had had but two weeks experience in butter making at that time, and approached the business with "fear and trembling." She adds:—"Judge of my surprise and delight at finding my first churning of cream transformed into beautiful butter in less than five minutes; the next in three minutes, and the next two in less than three minutes, and never, but once, have I churned over five minutes. That time, as an experiment, I neglected to warm the cream the night before — proving to me that, in warming the cream over night and allowing it to cool again, the butter may be hard and nice when it comes, lies, at least, one of the secrets of success. * * * In winter, always strain the milk into tin pails and place it in a kettle of scalding water to heat. The water prevents it from adhering to the bottom of the pail and prevents the cream from becoming bitter or strong. When the milk sours remove the cream to a stone crock and as fresh cream is added always give the mass a thorough beating with a stick kept for the purpose. Churn once a week—placing the cream near the fire at least two hours the night before, then remove to a cold room till morning. To add sweetness to the flavor and give the color of grass butter, grate three medium sized orange carrots for every two gallons of cream; warm one quart of milk and strain the juice into the cream before churning; then, whether your cow have three rings or ten ornamenting her horns, a golden harvest will be the result."

The next response is from "C. B. B.," who made good butter till she had the misfortune to lose her cow. Another fine looking one supplied her place for a while, but the butter was lacking—that is, any fit to use, and that cow went to the beef-barrel. This correspondent adds:—"One thing I noticed with her milk, in contrast with the one I had before and with others since: The cream would rise very slowly, and to make good butter—and *good* butter generally comes quickly—the cream should rise quickly. Scientific people may talk learnedly about *why* it is so. I only mention the fact."

The third in order is from "A Butter Maker," Waukegan, Ill., who says:—"My *modus operandi* is, first, to heat the pans by pouring boiling water into them. Pour it out and strain the milk quickly after being milked. Then place the pans on the rack and let them stand twenty-four hours. Remove them carefully and place them over a kettle of boiling water and let them remain until the cream begins to ripple. Then replace on the rack and let stand twenty-four hours longer; remove the cream, being careful not to take milk with it, remembering always to stir the cream in the crock or tin pail, which is better, every time more cream is added. Before churning, place the vessel in which the cream is, in water as warm as you can comfortably hold your hand in. Stir often till it is warmed through; put into the churn and BRIDGET will tell you she will have butter in twenty minutes."

The fourth response is from "A Farmer's Daughter," Brutus, N. Y. She says:—"Scald the milk when first taken from the cow and set it in a cool airy place, where it will not freeze. When ready to churn, have the temperature of the cream about 65°. If you want sweet, yellow butter in the winter, put carrot juice into the cream."

The fifth and last is from "SARAH," Rolling Stone, Winona Co., Minnesota. To "A Butter Maker in distress, and others similarly afflicted," she says:—"Heat your milk and there will be no trouble about the non-appearance of butter, with ordinary churning, in fifteen or twenty minutes, and generally in less time. My method is when I strain the milk to put the pans containing it on the stove until the milk gets hot, but not so hot that the pans cannot be handled with bare hands. Then, if the milk is to be put in a close cupboard, it should be allowed to cool first, as the steam arising would soon cause the place to become musty. And I would urge the necessity of perfect cleanliness in all operations connected with butter making."

These directions, it will be seen, have special reference to winter-made butter, but may not be amiss even in the season of grass.

DAIRY ITEMS.

Caked Bag—Cure.—LUCIUS RENIFF, Buckland, Mass., proposes a cure for caked bag in cows. He says:—"Take salt pork or pork fat and heat it so as to scorch it to a dark brown or nearly black. Rub it on the part affected three or four times, and it will effect a cure. It did on cows of mine and on others."

Cows Leaking Milk.—E. W., East Hamburg, N. Y., referring to cows leaking their milk, says:—"I have used Dr. MAYNARD'S Collodion, and found it very effectual. Apply with a small brush or swab to the end of the teat immediately after milking, first wiping it off dry. The drug stores supply the article."

Hogs as Milkers.—The editor of the Dansville Advertiser was informed by H. B. GREEN of Union Corners that he has two hogs of about 175 lbs. weight each, which made a regular practice of milking one of his cows whenever they could get access to her, and he was obliged to shut them up in consequence of this dairying proclivity.

Avoiding a Nuisance.—A dairyman, in Herkimer Co., to secure his face from the switchings of the cow's tails while milking, stretches a wire across the stable, just in the rear of them. A ring is fastened in the bush of each cow's tail, and this carried to a hook on the wire. When milking is over, the ring is detached, the wire removed, and the cow sent out till the next milking time.

Cheese Market.—The Utica Herald reports considerable cheese offering at the Little Falls market on the 6th instant—prices ranging from 14 to 16c. generally. Extra lots were a shade better, bringing 17c. Some 400 were on sale from five factories. The cheese season, like that of spring, is rather backward this year.

The latest reports from Liverpool give the receipts for a week at 6,057 boxes, and a fair demand for medium and good dairies at 62s. to 68s. Fine moved rather heavily at 70s. to 72s. Fodder cheese in fair demand at 50s. to 60s.

Communications, Etc.

YORICK'S CHICKENS.

EDS. RURAL.—One morning in September last our early chickens began to crow, and one of them gave me a specimen of his vocal powers in this wise: marching leisurely onto a garden bed, in the style of a dancing master's best pupil, and giving a couple or three kicks (making his bow) threw a good-sized vegetable oyster some ten feet behind him, and turning up an eye square towards me as much as to say, "Do you see anything green?" raised himself to full height and gave his lungs full play—and such a sound never could be drawn from a cracked fiddle or a broken bag-pipe; still, I saw there was merit in the chicken, and from that moment resolved to save him for seed. He wintered over well, and as it has cost me no more than two barrels of corn and three of potatoes to keep him, I don't mind the expense. He is likely to prove a valuable auxiliary, for only this morning he kicked out a rhubarb root a little less than a peck measure in size, with all the ease and grace imaginable, and then convinced me that his voice had improved wonderfully. He has probably been taking lessons from old Chanticleer himself. If I had a new piece of clearing that needed stumping he would be worth a fortune to me. Take him all in all, he just comes up to the *scratch*, but he has a sister that can beat him on the *eat*.

Spading up some soil for early peas, this female chicken followed close to the spade for worms. Curiosity led me to see how many she would eat; so I spaded away, counting worms, until she had devoured five hundred, when thinking it cruel to strain her gizzard any harder, dug twenty more which weighed a plump ounce. Now I think over a pound and a half of worms on top of a good corn and potato breakfast is a pretty good dessert for a chicken.

YORICK.

WOODCHUCKS.—TANNING SKINS.

EDS. RURAL:—Those boys who want a nice robe with but little expense had better hunt the woodchuck. Their fur is best in early spring. When taken from the animal, let the skins be nailed in the shape of an oblong square, each of the same width, on a board to dry. Managed in this way, there will be little waste when you sew together in strips for your robe. Before taking them from the boards clean off all the fat or oily matter with a dull ax or knife. Be careful and not get anything sharp enough to cut the skins. When you wish to tan them, soak thoroughly in cold water until soft; then squeeze out the water and you have them ready for tanning. Take three quarts of soft water and half a pint of salt; add thereto one ounce of the oil of vitriol, (be sure and get a good article;) stir with a stick, and put in the skins quickly, from five to eight—according to their size, and leave them in thirty minutes. Then take them in your hands and squeeze, not wring, them out, and hang in the shade for side down to dry.

If you get the quantity of liquor proportioned to the skins they will need no rubbing to make them soft, and tanned in this way the moths will never disturb them.

Raccoon skins can be tanned in the same way, and will make a much nicer robe. It is harder to find them, for they are not plenty like the woodchuck. If you wish to tan larger skins, such as sheep, calf or deer skins, let them remain in the liquor twelve hours, then hang to dry as above mentioned. Boys, don't stop these woodchucks in their holes, but see who will make the best robe this summer. M.

Rural Notes and Items.

TRIAL OF STUMP MACHINES.—On Saturday, the 11th inst., there was a trial of Stump Machines near the village of Wayland, on the Dansville road, attended by a hundred or two of people. The rival feeling of the owners and partizans of each machine was quite animated, but a marked feature in the affair was a singular unity on the part of the immediate friends of three competing implements, against a fourth one owned by W. W. WILLIS of Rochester. The particular cause of nully in this opposition, while competitors in every thing else, was rather difficult for an outsider to detect, but of its existence there is no room to doubt.

There were four machines on the ground, as competitors for the honors attaching to success, each with willing friends to proclaim its good points and possibly to hide its weak ones if such it had. After an informal trial and a good deal of talk about a formal one, a committee of five, to supervise matters, was appointed. They selected three stumps for each machine, as nearly of a size as possible, and grouped pretty much alike as respected distance apart. A time committee of three was also appointed to declare the result of the contest. The selection of the four groups of stumps having been made they were numbered from one to four and drawn for by the proprietors of the competing machines. These preliminaries adjusted, the work commenced and was completed in the following order: No. 1—Glover Machine—Screw, 3 stumps, time 11½ minutes; No. 2—Willis Machine—Lever, 3 stumps, 9¾ minutes; No. 3—Parish Machine, 3 stumps, 14 minutes; No. 4—Empire Machine, 3 stumps, 16¾ minutes. An accident occurred to a chain of No. 4 while at the last stump which marred the completeness of its work. All things considered, the performances of the machines were much beyond expectation, and show that a pine stump farm may be readily cleared and a good fence be made of the extracted material at the same time.

SHORT HORN HERD BOOK.—HON. LEWIS F. ALLEN, Black Rock, N. Y., Editor of the American Short Horn Herd Book, is now compiling the 8th volume of that indispensable work to the Short Horn Cattle breeders of the United States and Canadas, and will receive pedigrees for insertion therein up to the month of June next, by which time he wishes all pedigrees for the volume to be sent in, if possible. No other person is authorized to receive pedigrees, for the 8th volume. Those persons, not already having received, and wanting circulars containing directions for making out their pedigrees, with terms of entry, price of the book, &c., will please address him, as above.

The last—7th vol.—contained upwards of six hundred large octavo pages, with upwards of 3,500 approved pedigrees, and the rapid increase of the valuable breed of cattle, whose pedigrees these volumes record, will probably swell the next one to an equal, if not larger size. It is important to every breeder of thorough-bred Short Horns, to have a correct record of his stock, in the American Herd Book.

SUPERIOR MAPLE SUGAR.—M. L. SIMONSON, Esq., East Rush, N. Y., sends us a sample of maple sugar, manufactured by him, which for clearness of grain, excells anything of the kind we have seen the present season. It is claimed that this sample, or rather the mass of which it is a portion, was made by a "new process," but, as this is not explained, of course we cannot determine in what the novelty consists. Be the art of manufacture what it may, there can be no doubt about the excellence of the article itself.

ORLEANS AGRICULTURAL SOCIETY.—The Board of Managers of this Society have decided to hold their annual Fair in Albion September 13th and 14th.

ITEMS FROM MINNESOTA.—Under date of April 20, G. F. ROCKWELL writes:—"I am employed here as engineer on a railroad which is being built in the northern part of Iowa and southern part of Minn., or a road when built, (which will be this summer,) which will connect the Minnesota Central with the Milwaukee & Prarie du Chien, thereby making a direct route from St. Paul, Minn., to Milwaukee or Chicago, crossing the river at Prarie du Chien. The Spring is very backward. Farmers have done no sowing, as the frost is not entirely out of the ground. There is a warm rain falling to-day. The snow is nearly gone. Wheat is from $2.00 to $2.25, oats 60c. to 80c., and other grains in proportion. Hay is from $10 to $15 per ton. There was almost a failure in the wheat crop last summer owing to the great amount of rain which fell. Money consequently is scarce. The country is very healthy, with broad prairies which invite immigration. There is not much timber, and what there is is on the streams. I am sure that the country will settle fast, as soon as the roads are connected. Wishing the RURAL unbounded success."

LITTLE FALLS FARMERS' CLUB.—This is an association of farmers whose organization dates back ten years. Its meetings are held semi-monthly, and hitherto only at Little Falls. But a change has been made, and hereafter they will be held alternately at Herkimer and Little Falls. The discussions at these meetings are conversational, as we learn from a report of them in the Utica Herald, the members not rising when they make their observations. The result of this chatty system is to enlist all the members in the topic under consideration—a specified one being announced for the next meeting at the close of each one. The plan works admirably, and it is to be regretted that these clubs are not more generally formed over the country. The members impart and receive information on all subjects connected with agricultural pursuits, acquire confidence and increased facility in giving utterance to what they know through this medium of association, while frequent contact tends to quicken and render warm the social relations of neighborhoods.

THE MOON QUESTION.—A correspondent from Missouri asks us to open our columns to a discussion respecting the influence of the moon in farming operations. We must decline. We should be overwhelmed with communications tenaciously maintaining both sides of the question, and when done we hardly believe a convert would have been brought over from either side. But we ask our correspondent, and all who believe in the "moon theory," to note, first, that not a solitary prop is found for it in all the realms of science, and, second, the great discrepancy which exists in the opinions of the moon theorists—one asserting that planting must be done in the "new of the moon," and another the contrary, one that the cabbage won't head and another that it will—and as facts seem to bear out all theories alike we conclude that all have an equal value.

OUR MAY FLOOD.—A short trip up the Genesee Valley on the 11th afforded an opportunity to witness the Genesee River in one of its maddest moods. It was a kind of a Mississippi junior—the entire flats being covered with water from one to two miles wide. It is seldom that a flood of this description occurs so late in the spring season, but this has been an exceptional one all round, North, East, South and West. Owing to the general prevalence of wet weather, spring work is very backward, but few traces of the plow being seen for a distance of nearly fifty miles. As a general thing the wheat fields—those above water—have a promising look. The grain has rooted well, and but little of it injured by the winter. Grass is improving rapidly, and a few warm days will bring it up with the season.

"NEW YORK WILDERNESS" MAP.—The yearly increasing interest attaching to the northern section of the State of New York,—known generally as "the New York Wilderness,"—has induced the issue of a new map of that region. It is published by G. W. & C. B. COLTON & Co., New York, from drawings furnished by Dr. W. W. ELY of Rochester, N. Y., who has visited the Wilderness country annually, for a series of years, and is well posted with reference to its topography. The map has been prepared with great care and is believed to be as nearly perfect as a delineation of such a large tract of country can be made. It is 27 by 40 inches, colored and folded in pocket form, with cloth cover, and furnished by the publishers at $2.50.

GRAIN TRADE—INTROVERSION.—Singular as it may seem yet it is probably true, as asserted in Eastern papers, that wheat is being shipped from New York City—California wheat at that—to Oswego, Rochester and other points West. One would as soon have expected the people of Newcastle to import coals as that those of the famous wheat region of New York would have to go abroad for their supply of bread stuff. The times are out of joint all around.

SHEEP SHEARINGS.—W. S. HANCOCK, Secretary of the Wool Growers' Association of Morrow Co., Ohio, desires us to state that the annual exhibition and shearing will be held at Cardington, May 15th. A hearty invitation is extended to all to come and bring their "woolly chattels."

Also the Palmyra Union Wool Growers' Association hold their eighth annual shearing May 22nd.

MILKING MACHINE.—I wish to inquire about the machine for milking cows, about the price, where I can obtain one, and whether they are useful or not. —SUBSCRIBER, *Springville, N. Y.*

We believe these machines are not much in use among dairymen. They are probably a failure.

TO CORRESPONDENTS.—"Woman's Drifting," No. 3, is lost by accident. Will Mrs. M. E. JACQUES and LARDNER GIBBON, Esq., both in the South, send us their P. O. addresses? "Estelle DeVere," received and will be examined. "Alice," Peekskill, N. Y. Inquire for a note at the postoffice.

SHEEP KILLED BY DOGS.—Reports from 539 counties, comprising a portion from all the States, show that the loss of sheep by dogs in those counties during the year 1866, was 130,427—indicating that the entire loss must have been, in all the States, fully a half a million.

IMPLEMENT TRIAL POSTPONED.—At a meeting of the Judges for the proposed farm implement trial at Utica, on the 9th of May, it was voted to postpone the exhibition until two weeks previous to the State Fair. The trial will take place where this is located.

LETTER FROM MR. MOORE.—Our readers will find a communication from the Editor-in-Chief on the Horticultural page; it was intended for last week's issue but arrived one day too late.

HORTICULTURAL.

[Editorial Correspondence.]

SEMI-HORTICULTURAL MATTERS SOUTH.

SALISBURY, N. C., May 2, 1867.

THOUGH I did not promise to write any "hasty" letters for publication during my Southern trip for health and recreation—but, rather to take full notes of matters and things seen and heard *en route*, for future use—I am constrained to send a few facts about Horticultural affairs, which may interest your readers in the North, West and East.

To begin right and before saying too much, will first speak of what I saw in and about Philadelphia, ten days ago. In the city, visited the seed establishments of our friends PASCHALL MORRIS and ROBERT BUIST, both of whom were doing a thriving business. Friend MORRIS is a veteran in the Seed and Implement business, and is now extending his trade and influence through the pages of his well-conducted Practical Farmer. R. BUIST, senior, has given up his seed trade to his son, but continues the superintendence of the Nursery, which lack of time prevented me from visiting. Mr. B. informed me that the season was some two weeks later than usual, and the winter had been the most severe (in and about Philadelphia) that he had ever known—some plants (the Camélia, for example,) being killed for the first time in his experience there.

Of course one of my first calls was at the office of that able and always excellent horticultural journal, the Gardener's Monthly, edited by THOMAS MEEHAN and published by W. G. P. BRINCKLOE. Was glad to find the publisher in good spirits, and to learn of the prosperity of the Monthly, which is receiving increasing support, though not in proportion to its merits. Subsequently called upon Brother MEEHAN at his nursery in Germantown, and had a very pleasant visit while looking over his grounds and their surroundings. As I have not my note book at hand, will not attempt to particularize, but impressions of what I saw and heard are generally quite favorable. Mr. M. has a fine location (about five miles from Philadelphia,) and is apparently doing a thriving and increasing business, in flowers, plants and trees. Many gentlemen about Philadelphia plant largely of fruit and ornamental trees, and of course purchase extensively of such reliable men as our friend MEEHAN. The season was late for the region, yet some three weeks ahead of Western New York.

In Germantown I also had the pleasure of visiting Maj. FREAS, editor of the popular and practical Germantown Telegraph, and found him (though temporarily confined to his house by illness,) a very pleasant and hospitable member of the "press gang." His son showed me through the garden and grounds—the finest I had thus far seen on my route—and I was surprised at the evidences of fine taste and good culture there exhibited. In the midst of the fine garden—containing splendid dwarf pear trees, grape vines, black and red raspberry bushes, strawberries, and many choice shrubs, plants, etc.,—the Major has a fine fish pond, fed by a spring, and had but two days previously added a thousand young trout from the celebrated breeding ponds of SETH GREEN, on Spring Creek, Mumford, near Rochester, in our beloved and somewhat famous Western New York. (The reader will please pardon the egotism of the preceding remark.)

After leaving Philadelphia I stopped in Baltimore several days and was highly pleased with what I saw in and around the "Monumental City"—which, by the way, I found to be a *full city* instead of a *brevet*, as I had been wont to suppose. Through the kindness of Mr. N. L. BUCKINGHAM (the Southern General Agent for the sale of BICKFORD & HUFFMAN'S Grain Drill, a very popular machine at the South,) and Mr. LEWIS SLINGLUFF (of the firm of BANKS, SLINGLUFF & Co., Seedsmen and Dealers in Agricultural Implements, &c.,) and other gentlemen, I had a fine opportunity to see the suburbs and surroundings of the city—riding out through the principal avenues, fine parks, &c., &c. The priuelpal park (Druid Hill) contains about 800 acres, is hilly and most of it heavily timbered, and comprises many pleasant and picturesque points, with beautiful avenues for carriages and pedestrians. I also saw many fine residences, with beautiful surroundings—groves, drives, gardens, etc. The foliage and blossoms of forest, ornamental and fruit trees, the flowers and grass, appeared charming to one who had but recently left snow banks in New York and Massachusetts,—and hence the visit to Baltimore was pleasant exceedingly. The peach, pear and other trees in full blossom, were magnificent.

On reaching Washington, one of my first visits, after calling upon Commissioner of Agriculture NEWTON, was to the Government Botanical Garden, of which Mr. WM. SAUNDERS is the capable Superintendent, (under Com. NEWTON,) and the Experimental Grounds, also an adjunct of the Ag'l Department, superintended by ISAAC NEWTON, Jr. The Garden has been greatly improved since my last visit, two years ago, and is a credit to Mr. SAUNDERS and the Department. The fruit and ornamental trees, shrubs, grape vines, green-house plants, flowers, &c., are numerous and mostly healthy and flourishing—many of them exotics, but in fine condition. Whatever may be said of the Ag'l Department, I am of the opinion that Mr. SAUNDERS is "the right man in the right place," and any horticulturist or florist visiting Washington can readily discover that the Botanical Garden is an interesting and useful institution.

The Experimental Grounds are likewise interesting and worthy of a more extended notice than I can now give them. Here I saw over one hundred varieties of wheat growing—from 2 to 31 inches high, the latter a Russian variety. Also a large number of varieties of clover, including Alsike, Chinese, and many others—curious and interesting. The grounds also embrace plots comprising different varieties of peas, roots, cucumbers, and other vegetables, sorghum, &c., &c., many of them rare, and likely to prove of value to the farmers and gardeners of the country.

Leaving Washington I passed "on to Richmond," and spent two or three days in the late Confederate capital—calling upon Messrs. ALLAN & JOHNSON, Seedsmen and Nurserymen, the editors of The Farmer, and of the Southern Planter, and visiting some fine places in the vicinity of the city. Here I found many more evidences of taste and good culture than anticipated. Many of the places about Richmond are very beautiful, the gardens and grounds giving little indication of the severe ordeal through which the people have passed. The fruit prospect is good here, as in other places I have visited, and fruit growers, florists and nurserymen are quite encouraged. A Horticultural Society is about being formed, and increased attention is being given to landscape gardening, horticulture, floriculture, &c. A visit to Hollywood Cemetery gave me an exalted opinion of the taste and refinement of the people. But I must omit mention of many matters of interest in and about Richmond, and speak of the place from which this letter is dated, and

A NORTH CAROLINA GARDEN.

This is written in the front room of the hospitable mansion of the Hon. LAKE BLACKMER, formerly of Wheatland, near Rochester, N. Y., who has been a prominent lawyer here for some twenty years. As I write on this 2d day of May—after a stroll through the garden and fruitery of my host—the air is warm and balmy and the wide windows open on the spacious verandah. In the flower and vegetable garden, principally superintended by Mr. B., I found that the early flowers (such as hyacinths, daisies, &c.,) were all withered and gone; but the roses, tullps, sweet syringas, virgin bowers, spireas, and many others, are in perfection—fragrant and beautiful, and especially attractive to a Northerner at this season of the year. Of vegetables, lettuce, radishes, &c., are mostly past their season. New potatoes, peas and strawberries are just coming into use, while cherries will be ripe within ten days. Of course many vegetables and fruits are from six weeks to two months in advance of Western New York. The adjoining fruitery is a wonder at this season of the year. The peaches and pears are from one-third to one-half grown, and the cherries nearly full grown. The collection comprises 58 varieties of pears, the favorite of Mr. B. being Buerre Clairgeau, a large and fine tree of which variety, from ELLWANGR & BARRY'S Mount Hope Nurseries, is a prominent object in the fruitery. The fruitery is stocked from E. & B's, and PARSONS of Long Island, REED of Elizabethtown, N. J., Col. STEELE'S nursery of North Carolina, and from ANDRE LE ROY of Angers, France. In the collection are the leading varieties, in cultivation here, of the peach, pear, nectarine, apricot, cherry, plum and grape. I cannot enter into particulars, but many of the favorite and popular Northern varieties of pears, plums, cherries and grapes, are included in the collection. Pears and cherries have succeeded remarkably well, but last year, for the first time, the pear blight made its appearance, and has destroyed or seriously affected many of the finest trees. To my surprise the trees of the Seckel pear, both standard and dwaf, are affected by the blight, though none are yet seriously injured or destroyed. [Have any of the Northern readers of the RURAL observed any blight in that pear in their localities?] As a singular fact I will also state that Mr. B.'s cherries—especially the Black Tartarian and Napoleon Bigarreau—are affected by a blight similar to that of the pear. All the leading Northern varieties of the plum are rendered worthless by the curculio, while Southern varieties escape its effects.

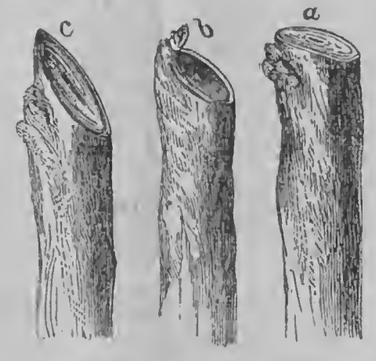
The fruitery comprises over thirty varieties of grapes, including the Delaware, Catawba, Concord, Rebecca, Diana, Clinton, Isabella, &c., &c.,—but in the opinion of our host the Clinton is the best of all for its hardiness, productiveness, flavor and entire exemption from all disease. [Tell our friend, L. B. LANGWORTHY, the father of the Clinton in Western New York, not to put on any extra airs on account of this strong testimony in favor of his favorite!] On the whole I find from personal observation, that our friend, (originally from Western New York,) has the finest garden and fruitery, and the most pleasant homestead of the many I have visited South. And here allow me to remark that, so far as I have observed, the Southern people are peculiarly generous in their hospitality, and that those who have the best arranged and most tasty surroundings are the most hospitable. This I have found in Baltimore, Washington, Richmond and Salisbury, and hope the same will prove true of the *habitans* of Columbia, Augusta, Atlanta, Nashville, &c.,—which I next visit.

If any one objects to the length or prolixity of this letter, please say to them, Mr. Managing Editor, that I had not time to make it shorter, and believe me, as ever, the true friend of all genuine Ruralists. D. D. T. M.

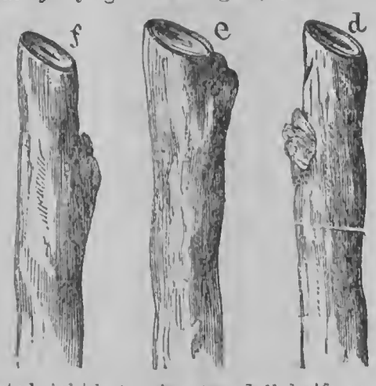
PRUNING APPLE TREES.—A correspondent of the N. E. Farmer says he has transplanted some apple trees ten or twelve years old, and wants to know whether it would be a good plan to trim them this spring, or let them go over till autumn or winter. The advice given is not to cut much, at this season of the year, but if the trees have not sufficient vitality to impart foliage to all the branches, it may be well to shorten most of them somewhat—taking care to preserve the top in such a form as to produce a suitable equilibrium.

PRUNING—MAKING THE CUT.

IN pruning branches from trees with the knife the method of making the cut is a matter of some importance. We have had some illustrations made, showing several ways, often followed, however, which are wrong, and the one which is right.



(*a*,) Shows the right method of making the cut, at an angle of about forty-five degrees, and having the bud at the back in the best position for throwing new bark and wood quickly over the wound; (*b*) shows too much of the wood cut away, leaving the bud exposed and liable to death by drying or freezing. (*c*.) This cut was



started right but owing to a dull knife or want of firmness in the hand, the cut was made too sloping. This will not heal over so quick as the cut at *a*. (*d*,) (*e*,) and (*f*,) are all wrong; the wood above the bud dying will cause knots and perhaps decay. Crooked limbs will also result from these ways of cutting.

POMOLOGICAL GOSSIP.

Fruit in Ohio.—A note in the Ohio Farmer from Columbiana Co., reports the apple and other fruits safe up to April 24th, but the weather was very trying and the chances rather against the fruit crop.

Grapes in California.—A Mr. KELLER of Los Angelos estimates the wine yield of that county in 1866 at 1,190,000 gallons, and for the State at 4,000,000 gallons. The yield per acre in grapes is about 12,000 pounds, and the value about $100 per acre.

Peaches in Illinois.—The Salem Republican thinks that in exposed localities in the West three-fourths of the peach buds are killed, while in sheltered ones the damage is trifling. If one-fourth of the buds survive a fair crop may be anticipated.

Grapes on Lake Erie.—From the islands on the Ohio shore of the lake; from Toledo all the way down, even to Dunkirk and Fredonia, the Catawba now abounds in vineyards of one to fifty or a hundred acres; and about "North-East" in Pennsylvania they count the vineyards at some hundreds of acres in a compact body.

The Concord Grape.—In a recent number of the Oneida Circular is a communication from a very competent judge of fruits, in which the Concord grape is spoken more highly of than is customary among fruit-growers. It is assigned to about the position among grapes that Wilson's Seedling holds among Strawberries.

Strawberries.—The editor of the Germantown Telegraph is of opinion that strawberry plants sown, as it were, broad-cast, will produce better than when planted in hills. When a good bed has been secured it is not advisable to renew it so long as it continues to produce well. Transplanting may be done till quite late in May, but earlier is better.

A Three-Acre Orchard.—Last year Capt. PIERCE of Lexington, Mass., raised apples and pears on three acres of ground, and sold of these to the amount of $1,737.07. He took care of his trees; killed the insects on them as they appeared; mulched the ground between the rows and cultivated squashes in the open spaces. Care, at the proper times and seasons, was that to which he imputed his success.

War in the Orchard.—In a recent number of the Boston Cultivator, JOSEPH BROOKS gives his experience about canker-worms in his apple orchard. He fought the worms persistently for a couple of years, availing himself of all the aids, natural and artificial, with which he was acquainted. He used, too, "protectors," and the aid of the birds was not repelled, and the result of the conflict has been the vanquishment of the enemy in his orchard.

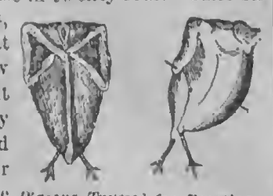
Apricot Growing.—The apricot tree when young is a rapid grower, and if left to itself will produce long naked branches in consequence of its growing only from the terminating buds and those near the top of each year's growth, leaving the lateral branches and fruit spurs feeble. In order to obviate this and develop the fruit wood all through the tree, there should be only branches enough to form a nice open head and these shortened every season.

Pomology—Kansas.—A State Pomological Society has been organized in Kansas, and WILLIAM TANNER of Leavenworth chosen President of it. His inaugural address appears in the Kansas Farmer for May, and is a creditable effort. It speaks hopefully of the future with respect to fruits, as the climate and soil of the State are deemed congenial to their production. Complaint is made of some of the eastern fruit tree venders as palming off stock under false names.

Domestic Economy.

TO ROAST PIGEONS.

THESE should be dressed while they are fresh; if extremely young, (says a work on Modern Cookery,) they will be ready in twelve hours for the spit, otherwise in twenty-four. Take off the heads and necks, and cut off the toes at the first joint; draw them carefully, that the gall-bladders may not be broken, and pour plenty of water through them, wipe dry, and put into each bird a small bit of butter lightly dipped into a little cayenne. Truss the wings over the backs, and roast them at a brisk fire, keeping them well and constantly basted with butter. Serve with brown gravy and a tureen of parsley and butter. About 20 minutes will roast them.



Pigeons Trussed for Roasting.

VARIOUS ORIGINAL RECIPES, &c.

WEDDING CAKE.—Four lbs. of flour; three do. of butter; three do. of sugar; two do. of currants; three do. of raisins; twenty-four eggs; one ounce of mace; three nutmegs. This will keep two or three years.

POUND CAKE.—Four lbs. of raisins; three do. of currants; one do. of citrou; one do. of almonds; one and one-half do. of butter; one lb. four oz. of sugar; one lb. flour; sixteen eggs; one glass of brandy; one of wine; do. of molasses, nutmeg, cloves and allspice.

GINGER POUND CAKE.—Six cupsful of flour; two do. of molasses; one do. of sugar; two do. of sour milk; one do. of butter; four eggs; two tablespoonsful of soda; two do. of cinnamon.

BREAD GRIDDLE CAKES.—Soak a few pieces of stale bread until soft; then rub them through a sieve; put into one quart of buttermilk and add two eggs, one teaspoonful of salt, do. of soda, and flour enough to make the batter of the right consistency.

TO MEND BROKEN CHINA.—White lead ground in oil will mend china or glass-ware, and will not come apart with the most constant use. It can be had at any paint shop.

RENEWING VELVETS.—Place old velvets in a wet cloth and steam them well; take out and brush them thoroughly with a clean brush while warm, and they will look as well as new.

WASHING RIBBONS.—All ribbons, except those of the cheapest sorts, can be washed in cold coffee, with toilet soap, without fading, and will look nicely. Iron on the wrong side before they get dry.—J. M. I.

DUTCH SHORTCAKE.—One pound of flour, a quarter of a pound of butter, a few carraway seeds, a quarter of a pound of sifted sugar, a teaspoonful of carbonate of soda in a cup of warm milk. Mix, then let it stand a quarter of an hour before the fire, roll out, and cut in various shapes.

SILVERS' EXCELSIOR BROOM.

THE great virtue of this invention is its simplicity. Possessing the metallic parts, any person can make a new broom, as often as one is needed, in far less time than a broom maker, with all the appliances of his shop, can produce one of the old-fashioned kind. Nor is this all. If the handle of an ordinary broom gets broken, the whole is destroyed; but in this a new handle can be supplied as easily as new corn. It is more elastic than the common broom, and is said by those who have used it to wear more evenly. Its lightness, beauty and portability (it can be sent by mail) are also worthy of note.

The first cost is of course greater than that of a common broom; but then you have a most perfect sweeping instrument, which, when the brush is worn out, can be re-made in a moment, at two-thirds the cost of a broom, if you buy the corn, or at almost no cost, if you raise a few hills yourself. Thus it is equally adapted to city and country. The bell-shaped head is a marvel of mechanical ingenuity, being stamped from a single piece of brass, without seam.

This patent is owned by C. A. CLEGG & Co. of No. 206 Broadway, N. Y. For terms, &c., see their advertisement, on the 162d page of this paper.

THE

GREAT AMERICAN

TEA COMPANY

Established, 1861,

Is endorsed by the leading newspapers, religious and secular, in this and other cities, viz:

AMERICAN AGRICULTURIST, Orange Judd, Editor.

CHRISTIAN ADVOCATE, New York City, Daniel Curry, D.D., Editor.

CHRISTIAN ADVOCATE, Cincinnati, Ohio. J. M. Reid, D.D., Editor.

CHRISTIAN ADVOCATE, Chicago, Ill. Thomas M. Eddy, D.D., Editor.

CHRISTIAN INTELLIGENCER, E. S. Porter, D.D., Editor.

EVANGELIST, New York City. Dr. H. M. Field & J. G. Craighead, Editors.

EXAMINER and CHRONICLE, New York City. Edward Bright, Editor.

INDEPENDENT, New York City. Wm. C. Bowen, Publisher.

MOORE'S RURAL NEW-YORKER, D. D. T. Moore, Editor and Proprietor.

THE METHODIST,—Geo. R. Crooks, Editor.

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists in former editions of the leading papers of the country.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.
No. 640 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 34th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 133 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.

PRESERVE YOUR FRUIT.
SPENCER'S PATENT
Self-Sealing Fruit Jars.
The Most Reliable.—A Perfect Success.
☞ The Easiest to Open and Close. Will Produce the Greatest and Most Perfect Vacuum, without which Fruit will not Keep. Consult your interests and buy no other. COLEMAN & BARNES, Rochester, N. Y.
☞ Merchants through the West can order from the following Agents:—HALE, FRACKELTON & Co., Milwaukee, Wis.; F. WETMORE & Co., Detroit, Mich.; EATON, MAGUIRE & Co., Chicago, Ill 900-17t

Ladies' Department.

ROSES.

BY CLIO STANLEY.

I.

SWEET fragrance rested on the air,
And on my lifted brow,
As we stood, hand in hand, beneath
The waving summer bough:
A single rose from off its stem
He broke, with careless hand,
And held it there against my cheek
'Till all the quiet land
Seemed bathed in roseate hues of bliss
Stolen from sunset skies,
And all my love and longing woke
In tender trancing sighs.

II.

"The rose has lost its splendor, dear,"
He said, "but not from earth
Has faded, richer than it seemed
In its sweet hour of birth,
It blooms upon your maiden cheek
And scents your golden hair;"
"Ah, yes, I know the joy, dear one,
That marks its presence there."

III.

To-day he brought a slender spray
Of roses red and rare,
And twined them in the fading gold
Of my unbraided hair;
Till, as they swept my lifted cheek
He laid them gently down—
Smiling, as I replied, with touch
Of fond love in my tone—
"The roses that so long ago
Bloomed when we dwelt apart,
You seek in vain—but ah, dear soul,
They've blossomed in my heart!"

IV.

"Their color gives a warmer glow
To life, and love in life,
Since that dear day, those years ago,
When I became your wife.
Ah, love, dear love, still hold me close
To your kind, trusting heart,
The roses soon would wither, dear,
Should we two stand apart."

GOLDEN MEAN IN DRESS.

THE story it told of an old Turk at Cairo,—strong in the faith of his fathers, and with a bigoted hatred of all the customs or costumes of "infidel dogs," *alias* Franks or Christians—that walking down the narrow street one day, clad in the flowing amplitude and turbaned glory of his Moslem garb, he spied a Frank in tight pantaloons, snug coat, and stove-pipe hat. Laying his hand on the shoulder of his little son by his side, and pointing to the strange object, he said with dignified scorn, "My son, if you ever forget GOD and the Prophet, you may come to look like *that!*"

We feel a little as the staunch old Turk did, when we see man or woman dressed in the *extreme of fashion*. Just now a man so clad would be a poor spider-legged fellow, with striped pantaloons tighter than his skin, a coat scant and *scrimpy*, and a hat like an inverted skillett. A woman would be,—we can't tell what; for, on the very start, the bonnet could not be described and analyzed without microscopic aid, and a larger knowledge of botany than even the learned *corps* of the RURAL possess; and, never having been to Nootka Sound, or near the Potawatamie squaws, we are not versed in beads. But either man or woman would be somewhat absurd and foolish to the eye.

Fashions will change. We cannot expect the same style for generations, as in the placid stagnation of Oriental society. Varied costumes are but the rapid current of our intensely active life, tossed to the surface in dancing foam, and rainbow hues, and all this seized on, magnified and perverted, by *artistes* who put money in their purses thereby. We may not wholly refuse to adopt the prevailing modes, but we can keep so near as not to be marked for oddity, and yet avoid the extremes.

There is a large class of the best people, cultured and of high standing, whose taste and gentility are undoubted, who are not fashionable extremists. The most perfectly dressed person attracts the least attention by display, but the most quiet admiration by harmony and fitness of costume.

A cultivated man or woman we admire; first for their attractiveness and beauty of character, and their dress we simply consider as fit for so gifted a person; but the garb of the fashionable extremist is first, the person subordinate;—and we are often reminded of EMERSON'S saying, "It is easier to buy a fine coat than a fine behavior."

Young woman; never go into the shop of milliner or dress-maker and yield yourself a passive subject to be clad as they decide. If so, you often run the risk of being ridiculous when "dressed," and are quite sure to have a bill to pay that will make you stare. Hear all their suggestions, select with a view to your person, complexion, and purse, and decide as to style and terms fairly, yet in such manner that it shall be understood they are to meet your wishes; not to make you a subject to theirs, and tax an extra price for your subjection beside.

Young man; act in a similar way in regard to your garments. All this, of course, with no overbearing spirit or manner, but because persons so often give up all mind or judgment of their own in these matters, that *artistes* in dress have, naturally enough, come to feel that the sole business of their customers is to submit to their decisions, pay their bills, and go away peaceably.

Above all, avoid extremes. Find the "golden mean,"—the placid channel, safe between the Charybdis of oddity on the one hand, and the fearful Scylla of garrish display on the other.

INFUENCE OF MARRIAGE.

IN Edinburg, a short time ago, Dr. Stark read a paper on the influence of marriage on the death-rate of men and women in Scotland:

Dr. Stark based his calculations on the statistics issued by the registrar-general, and brought out results which, to a great measure, he believed, were now presented for the first time. He first showed the results in the case of men. He found that between twenty and twenty-five years of age the death-rate of bachelors was exactly double that of the married men. As the age increased, the difference in the death-rate as against the bachelors decreased, but at every stage of life the advantage was in favor of the married men. From twenty years of age to the close of life the mean age attained by married men was fifty-nine and a half years, while that of bachelors was only forty years; in other words, married men had the chance of living nineteen and a half years longer than those who were unmarried. From twenty-five years of age to the close of life the mean age of married men was sixty and two-tenths, while that of unmarried men was only forty-seven and seven-tenths. Very nearly one-half of all the bachelors who died had not attained thirty years of age. The results, Dr. Stark thought, clearly proved that the married state was the condition of life best fitted for mankind, and that a prolongation of life by that state was a special provision of nature. It was based on fixed laws of life. Married men were generally more regular in their habits, better housed, better cared for, and more under the condition of health and long life. In the case of women also, the results were in favor of the married as compared with the unmarried, though the difference was not so marked as in the case of the men. Married women died at a greater proportion during the quinquennial periods—from fifteen to twenty, and twenty-five to thirty, but at a lower rate from thirty to forty. The death-rate, in the case of married women, was higher between forty and forty-five years of age, but the rate was in their favor again from the latter period to old age.

EMPLOYMENTS OF WOMEN IN PARIS.

THERE is no land in which women are so respected and honored as in America. A woman in high life on this side of the Atlantic is treated with marked courtesy, but women, as a class, are drudges and nothing else. Looking down from my window I see a scavenger's cart, with two men and two women scooping up the offal of the streets—the women with great brush-brooms and the men with shovels. Come with me to the great market of St. Eustach, a few steps from the Rue de Rivoli. It is an immense structure—a great iron shed or sheds, covering two squares—women at all the stalls—burly, red-faced, wielding cleavers, cutting up sides of beef—fish women, crying in shrill voice the excellence of their solo and salmon—fruit women—also sellers of vegetables, and pretty girls with flowers for sale, beseeching you with such grace that you are the owner of a bouquet before you know it. There goes a woman with a basket of potatoes on her head; another with a big tub filled with meat. There comes one with a rack on her back, filled with baskets. Another trips along with a yoke on her neck, bearing two pails of buttermilk. She is certainly under the yoke, and so are they all. High born—those who would go down on their knees before the Duchess d'Angouleme or my Lady Highflier—would crowd every one of these hard-working women into the gutter. No respect is paid them in public places. Gentlemen puff away at their cigars in the cars without deference to the presence of a lady, no matter how well dressed or well behaved. No Frenchman resigns his seat to a woman. He will bow very low and do everything for Lady So-and-So, but for a woman whom he may meet in public—never!—*Carleton.*

AMERICAN WOMEN.

IF what we quote from the Round Table be true, it shows a dawn of wisdom and truer taste which will be well for womanhood, for motherhood and humanity:

The women of America are growing more and more handsome every year, for just this reason: They are growing rounder of chest, fuller of limb, gaining substance and development in every direction. Whatever may be urged to the contrary, we believe this to be a demonstrable fact. We have been accustomed to hear such dismal moans over dispepsia and the heat of stoves, bad food and bad habits of life, that an impression of degeneracy finds place in many minds; and the proposition, therefore, that American women are visibly growing handsomer, may at first provoke a good deal of dissent. We believe, however, that reflection and observation will endorse and sustain it. The change may be less marked among the poorer classes, and may be more pronounced in the chief centers of population and refinement; but that it has taken place, is progressing, and is probably destined favorably to affect the community at large, we have no doubt. When the rising generation of American girls once began to wear thick shoes, to take much exercise in the open air, to skate, to play croquet, and affect the saddle, it not only began to grow more wise, but more healthful, and, which must follow as the night the day, more beautiful.

HOUSEHOLD CARES NOBLE.—A woman with a broom, a cradle, a needle, a few dollars' worth of kitchen tools, pursuing her housewifery and making home pleasant, and life clean and sweet to herself, her husband, children and friends, is to me a sight delightful, even sublime. Feeding the body, educating the spirit, and teaching humankind to get the mastery over the world, she is weaving the Jacob's ladder whereby mankind and womankind are climbing to GOD.—*Selected.*

Choice Miscellany.

THE BROOK.

BY TENNYSON.

I COME from haunts of coot and hern,
I make a sudden sally
And sparkle out among the fern,
To bicker down a valley.

By thirty hills I hurry down,
Or slip between the ridges,
By twenty thorps, a single town,
And half a hundred bridges.

I chatter over stony ways,
In little sharps and trebles,
I bubble into eddying bays,
I babble on the pebbles.

With many a curve my banks I fret
By many a field and fallow,
And many a fairy foreland set
With willow-weed and mallow.

I chatter, chatter, as I flow
To join the brimming river,
For men may come and men may go,
But I go on forever.

I wind about, and in and out,
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling.

And here and there a foamy flake
Upon me as I travel
With many a silvery waterbreak
Above the golden gravel.

I draw them all along, and flow
To join the brimming river,
For men may come and men may go,
But I go on forever.

I steal by lawns and grassy plots,
I slide by hazel covers;
I move the sweet forget-me-nots
That grow for happy lovers.

I slip, I slide, I gloom, I glance,
Among my skimming swallows;
I make the netted sunbeams dance
Against my sandy shallows.

I murmur under moon and stars
In brambly wildernesses;
I linger by my shingly bars;
I loiter round my cresses;

And out again I curve and flow
To join the brimming river,
For men may come and men may go,
But I go on forever.

Written for Moore's Rural New-Yorker.

PSALM OF LIFE.

"Let us then be up and doing,
With a heart for any fate,
Still achieving, still pursuing,
Learn to labor and to wait."

I WONDER how many sad hearts, how many weary discouraged ones, have read these words from the noble "Psalm of Life," by LONGFELLOW, and have taken heart again to face a stern life, and make their way through bitter discouragements, and at last could *pause* and *rest*, look back with a smile at the thorny path, and stretch out helping hands to others who toil over the same way. The life of the author of such a noble poem certainly cannot be an "empty dream," and *he* has found that "*Life is real, life is earnest*," and that each and all must be "up and doing" if we achieve the *victory*. There is something so *appealing*, so rousing; so hearty and brave in the simple words, "Let us then be up and doing." Is there any that have "*nothing to do?*" Look around; what a broad field of labor, with only here and there one at his task! How sublime the thought that of this immense family of so many millions each has a life-work to perform, and the responsibility of doing it or not rests upon our own shoulders.

"With a heart for any fate."

Oh! there is the trouble. It is hard to *smile* and be *cheerful* and carry a brave heart when filled with fear for the future, and heavy with the cares and responsibilities laid upon us; saddened by "last looks" at dear faces and hallowed scenes, or embittered by frowns. "Still achieving, still pursuing,"—for, if we *try* we may expect to *achieve*, in part at least, and if we intend to reach the goal we must keep the beacon light in view. This line is the best of all, "Learn to labor and to wait." Yes, we must learn to labor and toil. Some have more to accomplish, to be sure, than others,—some are more gifted, some have gold and lands, yet to labor and then to wait is for every one. And for what do we wait? Some earthly results, of course, we hope to attain, but the end of all the labor and waiting is—the eternal life, joy, peace, and the higher work, that shall yet be rest forever. Then let us not forget these great words of the poet, but make them our watchword.

Watkins, N. Y. A. M. M.

Written for Moore's Rural New-Yorker.

A WORD ON TEMPERANCE.

BY A CRIPPLED SOLDIER.

I IMAGINE I hear a voice from the dark and dismal mansions of the dead, saying, "Oh, ye sons of dissipation and excess, come and behold the victims of your folly!" Behold the husband and father forget the duties he once delighted to fulfill, and by slow degrees become the creature of intemperance,—and she who has ventured everything feels that everything is lost. Woman, silent, suffering, devoted woman, here bends to her direst affliction. Here the hope of his country, and there the promise of connubial bliss and object of virtuous affection—the flower of youth and beauty, displaying its glory, shedding its fragrance,—a father's pride and mother's joy—all poisoned by intemperance, and devoted to an ignominious death.

Would to GOD that I could make an undying impression upon the minds of the youth of our land, and induce them to forever beware of that dreadful monster, Intemperance. I am well aware that fashion and false pride are polluting our land, that a vast number of our noble youth are laboring under the impression that unless they smoke fine Havanas, drink fashionable toasts, and use (as they think) fancy profanity, they are not gentlemen. Young men, beware of your delusion, for it will prove a snare to your feet!

"Then from you dash the bowl away,
As the ocean sendeth forth her spray,"

ever remembering that the road to honor and fortune is strewn with thorns and temptations. We know that valiant and brave men fight and die rather than break the laws of man, or waver from their duty to their country, and suffer themselves to be cut in pieces rather than deserve the name of traitor. And yet these very men, to avoid the name of drunkard and to preserve their temperance, will not pour a cup of wine on the ground when they are invited to drink by the laws of the circle. If to give life to uphold a cause be not too much, they should not think it too much to suffer thirst for the reputation of that cause.

Liquor! Oh, how many earthly Edens hast thou made desolate! How many starved and naked orphans hast thou cast upon the cold charities of an unfriendly world! How many graves hast thou filled with confiding and broken-hearted wives and mother's. What sad wreck hast thou made of brilliant talents and splendid genius! Were all the miseries, the horrors of intemperance to burst at once into view, a peal of seven fold thunder could scarce strike greater alarm. Flee the inebriate, ye fair, as ye would a deadly malady. Would to GOD there was one universal Temperance Society and all mankind were members of it. But I will say no more. Every one who desires to see the youth of our noble land respected and happy, and our country cleared of the foul stain of intemperance, will readily find the way and means to labor for that end. WILLIE "T. H."

Rushville, Yates Co., N. Y.

THE VALUE OF ACCURACY.

IT is the result of every day's experience, that steady attention to matters of detail lies at the root of human progress, and diligence above all, is the mother of good luck. Accuracy is also of much importance, and an invariable mark of good training in an individual—accuracy in observation, accuracy in speech, accuracy in the transaction of affairs. What is done in business, must be well done; for it is better to accomplish perfectly a small amount of work, than half do ten times as much. A wise man used to say—"Stay a little, that we may make an end the sooner." Too little attention, however, is paid to this highly important quality of accuracy. As a man, eminent in practical science, lately observed, "It is astonishing how few people I have met in the course of my experience who can define a fact accurately. Yet in business affairs, it is the manner in which small matters are transacted, that often decide men for or against you. With virtue, capacity and good conduct in other respects, the person who is habitually inaccurate cannot be trusted; his work has to be done over again, and he thus causes endless annoyance, vexation and trouble.

WIT AND WISDOM.

THE motto of "fast" young men is meet and drink.

WHY is a prolix clergyman like an aged person? Because they both di-late.

WHAT is better than presence of mind in a railroad accident? Absence of body.

ALLOW nobody to tread upon your toes—when you have corns—or when you have not.

MOST people seem to think that advice, like physic, to do good must be disagreeable.

WHY are the Mary's the most amiable of their sex? Because they can always be Molli-fied.

WHY are cats like unskillful surgeons? Because they mew-till-late and destroy patients.

WHO is the laziest man? The furniture dealer. He keeps chairs and lounges about all the time.

WHICH are the patients that should be placed in the highest part of the hospital? The roomatties.

WHAT kind of essence does a young man like when he "pops the question?" Acquiescence.

A LAZY fellow, lying down on the grass said, "Oh, how I wish this was called work, and was well paid for."

LEND an ear to the advice that is given to you; but you will find it a good plan to lend no money to the adviser.

THIS toast was offered at a railroad festival: "Our mothers, faithful tenders, they never misplace the switch."

A SCHOOLMASTER in Ohio advertises that he will keep Sunday School twice a week—on Tuesdays and Saturdays.

IF your parents and relatives are good, love them; if bad, put up with them. The same course will answer very well with your grapes.

SPEAKING of the "undeveloped wealth of the country," a loafer said that was exactly his position; he possessed vast resources—was very rich—but his wealth was undeveloped.

A FORLORN fellow says:—"When Sally's arms her dog imprisen, I always wish my neck was hisen; how often would I stop and turn, to get a pat from a hand like hern; and when she kisses Towser's nose, O don't I wish that I were those."

IF there is anything under the canister of heaven that I have in utter excrescence," says Mrs. Partington, "it is the shuderer going about like a boy constrictor, circulating his calomel upon honest folks."

Sabbath Reading.

STAND LIKE AN ANVIL.

BY BISHOP DOANE.

"STAND like an anvil," when the strokes
Of stalwart strength fall thick and fast,
Storms but more deeply root the oaks,
Where brawny arms embrace the blast.

"Stand like an anvil," when the sparks
Fly far and wide, a fiery shower;
Virtue and truth must still be marks
Where malice proves its want of power.

"Stand like an anvil," when the bar
Lies red and glowing on its breast;
Duty shall be life's guiding star,
And conscious innocence its rest.

"Stand like an anvil," when the sound
Of ponderous hammers pains the ear;
Thine but the still and stern rebound,
Of the great heart that cannot fear.

"Stand like an anvil," noise and heat
Are born of earth, and die with time;
The soul, like GOD, its source and seat,
Is solemn, still, serene, sublime.

UNDYING MEMORIALS.

A ST. LOUIS correspondent of the New York Evangelist closes a recent letter with the following statement:—The North Church of this city still deeply feel and mourn their bereavement in the death of Rev. Frederick Starr, Jr Still he lived long enough to infuse his own indomitable energy into the souls of this people. They are forward not only to speak of his inestimable services to them, but to take up the cross where he fell, among the foremost, and bear it on to victory. The study in which I write still remains much as he left it. There is the tool-chest in one corner, the contents of which he was so skillful in wielding. That remarkable piece of mechanism, "the tabernacle," reposes undisturbed in its case near by. And here in the bookcase is his library, the tools with which he was wont to beat the oil for the sanctuary in his prompt and masterly manner.

It is quite in vain to look again for the man who can combine powers such as he possessed, and wield them so unwearledly and effectively. His congregation has erected to his memory, in the vestibule of the church, a beautiful marble tablet, containing his photograph in large size, and bearing the quotation "He yet speaketh," together with his dying words, "Tell them to be God's, to be God's, to be God's, every one of them, to stand up for Jesus all the time, to hate sin and love righteousness." But his most endearing monument is found in the hearts of this people, and in the church itself, which began with his pastorate, after the changes and close of the war, a new and bright end of its history.

ENEMIES WITHIN.—Beyond all doubt, the worst of our enemies are those which we carry about in our own hearts. Adam fell in paradise, Lucifer fell in heaven, while Lot continued righteous among the people of Sodom. Indifference to little sins and mistakes, the self-flattering voice of the heart, ever ready to sing its lullaby the moment conscience is aroused, the subtle question of the serpent, "Hath God indeed said?" These are unquestionably the adversaries we have most to fear. There never was a fire but it began with a smoke. I beseech Thee, therefore, dear Master, to give me a sensitive conscience, that I may take alarm at even small sins. Oh, it is not merely great transgressions which bring a man to ruin. Little and imperceptible ones are, perhaps, even more deadly, according to the beautiful figure of Tauler, who says:—"The stag, when attacked, tosses from him the great dogs, and dashes them to pieces upon the trees, but the little ones seize him from below and tear open his body."—*Tholuck.*

LOOK UP!—When the Breton mariner puts to sea, his prayer is, "Keep me, my God! my boat is so small, and the ocean so wide!" Does not this beautiful prayer truly express the condition of each of us?

Sir Philip Sidney said, "I am no herald to inquire of men's pedigrees! It sufficeth me if I know their virtues."

Frederica Bremer, in her work on Greece, speaks of "the longings after a freer and nobler life," which distinguishes many of the finely gifted and high-minded young maidens of the country. Conversing with one of them, on a stormy night, she said, "I will become good, very good! I should not dread a great misfortune, for instance, the loss of my sight, *if it would give me inner light and goodness!*"

She who so spake was a young girl of princely birth, rich in everything that can flatter the worldly sense.

RETRIBUTION.—No man ever sacrificed his sense of right to lust of pleasure, money, power or fame, but the swift feet of justice overtook him. She held her austere court within his soul, conducted the trial, passed sentence and performed the execution. It was done with closed doors; nobody saw it, only that unslumbering eye, and that man's heart. Nay, perhaps the man himself felt it not, but only shrank and shrunk and shrivelled, and grew less and less, one day to fall, with lumbering crash, a ruin to the ground.

O! HOW many thousands at this hour are worshiping GOD in spirit and truth, and laboring to advance His kingdom! and I still stand idle, cold and lifeless, tongue-tied and fearful, as fast bound to the world, and as averse to thorough work as ever.

THE Spirit of GOD is the spirit of benevolence. It will make a man patient towards the failings of others. He will be full of delicacy and gentlemanliness.

Biographical.

DAVID LIVINGSTONE,

THE GREAT MISSIONARY TRAVELER IN AFRICA.

DAVID LIVINGSTONE, the famed traveler and missionary in Africa, whose portrait illustrates this page, was the child of poor parents, but of a family with its traditions going back for generations, in Scotland. At ten years old he was a *piecer* in a cotton factory; and the buying of a Latin book with his first earnings showed his genius and resolution. Through years of labor he studied Greek and Latin, read much, in books of science and travel, and decided to be a missionary to China: with rare sagacity he also studied medicine and botany, to enlarge his influence and usefulness. Spinning cotton in summer, studying in winter, he graduated as a physician at Glasgow.

The "opium war" blocked up the path to China and he fortunately turned to Africa. In 1840 he reached the Cape of Good Hope, and soon married a daughter of Mr. MOFFATT, a missionary, who was the sharer of his trials and dangers, and ever ready to inspire him with the spiritual power of a true woman.

He was in Africa until 1856, as missionary among the Caffres, made several long journeys, and showed not only the earnest zeal of the missionary, but the sagacious wisdom of a man who saw that commerce must open intercourse with the civilized world, and thus help that growth from barbarism so necessary for the growth of higher religious ideas. His practical wisdom led him to see that the ending of the slave trade, and the breaking up of the Portuguese monopoly of power on the eastern coast of that Continent, could be best accomplished by opening peaceful and profitable commerce with a rich country.

In 1854 he traveled a thousand miles north of the Cape to Loando, an old Portuguese settlement on the western coast, and thence, first of all white men, struck boldly across the country, to the eastern coast, returned safely to the Cape, sailed for England, lectured in London and elsewhere, and returned to Africa, not a poor and unknown missionary, but a famed man, sustained by Mission Boards, Scientific Societies, and men of wealth and rank. His history of travels through the interior is full of interest. His glowing yet simply truthful narrative of the rich beauty of broad plains, the grand aspect of mountains, the variety of products, the noble rivers, ready channels of lucrative commerce, and the character and capacities of the natives, surpasses our dreams of the mysteries of that heretofore unknown land.

Lake Nyassa, two hundred miles long, through which flows the Zambesi river, and hundreds of miles westward of which, that great stream, a mile broad, plunges down a cataract more than three hundred and fifty feet, and its angry waters flow between rocky walls in a dark and narrow chasm to the open plains beyond, give some conception of this wide realm. His suggestion of steamboat navigation, for 600 miles above these falls, up the river and lake, to gather the products of the country shows his practical view of affairs.

Latest intelligence confirms the report that LIVINGSTONE has been killed by a band of rude natives in the interior:—"fighting the good fight" for a Christian civilization, and dying in the harness like a true man.

ELIAS HOWE, JR.,

INVENTOR OF THE HOWE SEWING MACHINE.

TURN to our advertising page, good reader, and you will see a portrait of this man, turn your thoughts to his life, and what struggle and hope, what persistent courage, what a long fight with poverty; and, at last, what conquest! In the Atlantic for this month, we have this "truth stranger than fiction," of his career, told by PARTON.

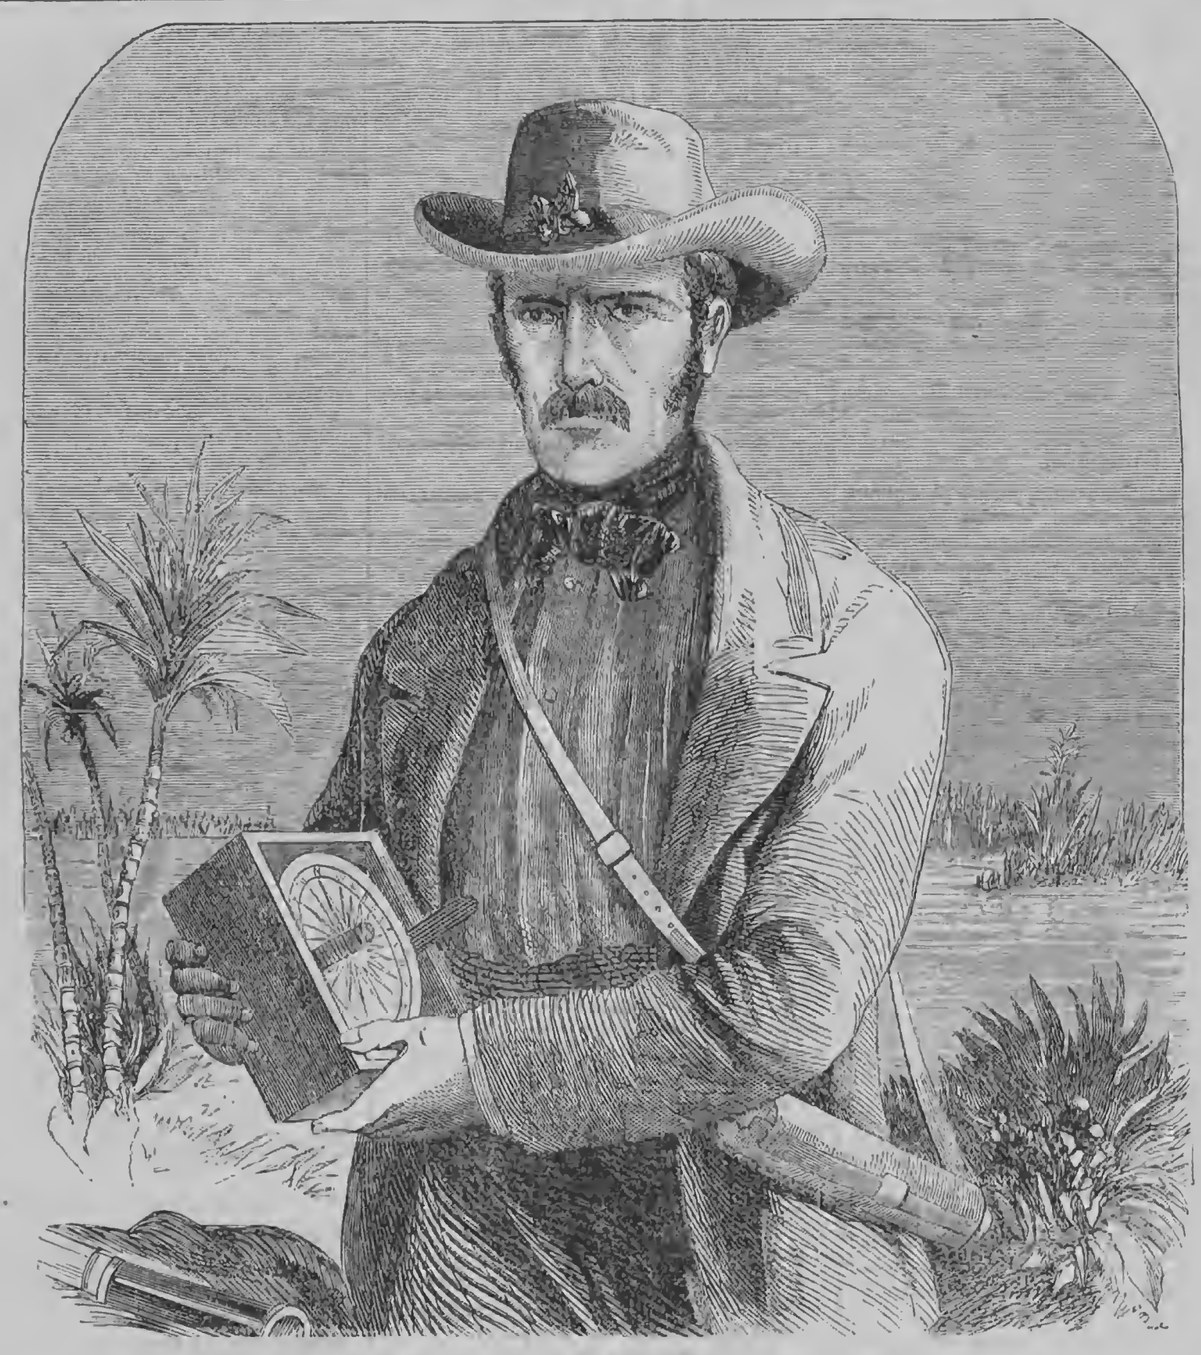
Born in 1819, in a humble home, in Massachusetts, beside a mill-stream where his father tilled the soil and did duty as miller also; he worked until sixteen, farming, milling and choring, and then went to Lowell into a machine shop. Not frightened by memories of hard work in a poor home, where were many children, he married early, while earning but nine dollars a week, and children soon came—welcome, yet needing bread and clothing. Inventive genius ran in the family blood. His father made a machine to split palm leaves, for hat-making, and he heard some talk about a possible sewing machine, in the shop of ARI DAVIS, Cornhill, Boston. As his workmen, HOWE one of them, were looking at a knitting machine, DAVIS said to the owner, "make a sewing machine and I'll insure you a fortune."

HOWE thought it over and over, and some four years after, at the age of thirty-three, was working in a garret in Cambridge, five months, to realize his ideal, his family meanwhile living on next to nothing. In April, 1845, he made a machine, which made 250 stitches a minute. It is now at the office of the HOWE Machine Co., on Broadway, and does as good work, not so fast, as the best since made. But nobody would use it, journeymen tailors opposed it. He went to England and lived literally on beans for a time, and his wife when about to return to America left part of her clothes, as she could not pay the washwoman.

An Englishman at last paid him $1250 for a machine and gave verbal promise, never kept, of paying a fixed sum for each one sold, when he got a patent. He has since made over $1,000,000, of which not a cent has been paid Mr. HOWE. Coming home, still poor but brave, at last, after nine years he began to get a living from his great invention; and to-day, of the WHEELER & WILSON, SINGER, FLORENCE, and other makers, nearly a thousand daily are turned off and do the work of millions of busy fingers. Such wondrous addition to the working power of the world, such real and wide benefit, starting from the brave persistence, and toil and genius of one young man, is a lesson grander and nobler than ever King or Conqueror taught.

ELIAS HOWE is a man of good habits and character. Vice is not bred in such a school as he graduated from, and he deserves his reward. During the war he enlisted as a private soldier, in a Connecticut regiment, and faithfully discharged his duties, walking daily for some weeks, to and from a post-office in Maryland, seven miles from the camp, as carrier of the regiment's mail; thus setting the example of personal labor, besides giving generously from his ample means.

In our premium list it will be seen that we offer the "Howe Machine" as a reward for the workers for the RURAL.



DAVID LIVINGSTONE, THE GREAT MISSIONARY TRAVELER IN AFRICA.

Various Topics.

LONGEVITY OF MAN.

A WRITER in the Atlantic Monthly proves by statistics that a man's longevity is in exact proportion to his educational attainments, provided his health has not been injured by over-mental exertion. It seems that increasing intelligence and decreasing war have prolonged the average length of life in Europe from twenty-five years in the seventeenth century, to thirty-five in the eighteenth, and forty-five in the nineteenth. The best educated communities are the longest lived, and the best educated soldiers live amazingly longer than the more ignorant, and seem to wear a charmed life, not so much against bullet and bayonet as against the effects of disease, privation, and even severe wounds, on their constitutions and lives.

Similar statistics show that the physical power of civilized men is greater than that of savages, and all help to explode the notion that somehow the race is running out, and that, as the mental powers increase the body grows weak. Doubtless there may be too little use of the body, too much of the brain and nerves in some occupations, but, on a broad scale, the tendency of culture and civilization is to harmony of development, to health, and greater power. Otherwise we had best go back to the savage state, and grant that the lower life is better than the higher. We remember that, a few years since, a wealthy English nobleman proposed a *tournament*, in which the gentry should ride the lists clad in ancient armor, and armed with the lances of the knights of the days of chivalry. For this purpose there was a general hunting up of ancestral armor in the old castles. To the surprise of all it was found that the coats of mail in which the forms of the old knights were clad, were *too small* for men of the same class in society to-day. The lusty Englishman of to-day who travels over burning deserts and icy seas for pleasure or knowledge, laughing at toil as he goes, would tire out any *knight-errant* of that famed old time. The vast labor of our Pacific Railroad puts the Egyptian Pyramids in the shade, and we saw a late mention of stones used in some modern masonry larger than the great masses in temples and pyramids on the Nile.

WHAT word is that of five letters from which, if you take two of them, only one is left? St-one.

WESTWARD, HO! CHINA AND NEW YORK.

THE "Western World," a splendid sleeping car built by PULLMAN, a commissary car for meals, and a beautiful day-car, left Albany a few days ago for a through trip beyond the Mississippi with a company of gentlemen and ladies, who were thus to have a foretaste of the style of railroad travel—by day and night, meals and all on board—which will be offered to travelers to the Rocky Mountains and the distant Pacific—soon to be brought near by the magic of steam rails. The Pacific Railroad is already 300 miles west of the Missouri, and going on at the rate of over a mile a day. The California end has reached eastward a hundred miles, over the highest grade in the country, rising 6,000 feet and overcoming great obstacles. The Sierra tunnel is half done, the Nevada silver mines will soon be reached, and 156 miles are to be done by July.

The road, so far, has an income far beyond what was expected, and the vast investment of over $100,000,000 promises to pay fair dividends. When it can draw tribute from the plains, and transfer the vast trade of Asia from the line of steamships now running from China to San Francisco, its traffic and travel must be great. Not only the silks, teas and other products of the Asiatic continent which we need will come by this road, but those for Europe will also seek this pathway across ocean and continent, more direct and far less dangerous than either that by the Cape of Good Hope or the Red Sea.

FRENCH BREAD.

BREAD in Boston and New York, and elsewhere in the United States, appears in the form of loaves; but go into a Paris bake-shop and you will see it standing up around the room in rolls as long as fence rails! There goes a woman now, past my window, with her left arm full of *sticks* of bread—the sticks about four feet in length—as if it were an arm-full of firewood. In her right hand is a stick of double length, which she uses for a cane. It is fully seven feet long—literally the staff of life! In the matter of bread-making, American bakers have something to learn from the French. Bread here is sweet, moist and nutritious; that left at the doors of many of your city readers is not unfrequently dry and sour. The bread here is rather hard baked, but other than that it is excellent. And yet, for nice, nutritious, hunger-satisfying bread, there is none which can compare with that baked in thousands of New England kitchens where these lines may be read—those white, generous loaves, moist and tender — the crust a delicate brown. Ah! it makes one's mouth water to think of them!—*Carleton.*

No matter how hard the times may be, Young America (masculine and feminine) is determined to have his and her luxuries, else we should not see among the importations (to be paid for in gold) during one week, such items as these:—Segars, $13,137; Champagne, $30,100; jewelry, $74,440; toys, $2,074; fancy goods, $107,484; perfumery, $2,036; furs, $2,830—and so on.

WHEN the treaty for the purchase of Louisiana was completed, Bonaparte is said to have exclaimed, "This accession of territory strengthens forever the power of the United States; I have just given to England a maritime rival that will sooner or later humble her pride."

AN INGENIOUS IDEA.

A PUBLIC dinner in England had dwindled away to two guests, an Englishman and a Highland gentleman, who were each trying to prove the superiority of their native countries. Of course, at an argument of this kind, a Scotchman possesses, from constant practice, overwhelming advantages. The Highlander's logic was so good that he beat his opponent on every point. At last the Englishman put a poser:—"You will," he said, "at least admit that England is larger in extent than Scotland?" "Certainly not," was the confident reply; "you see, sir, ours is a mountainous, yours a flat country. Now, if all our hills were rolled out flat, we should beat you by hundreds of square miles." This is like the Vermonter who claimed that his State had more land to the acre than any other, because they set it up edgewise and cultivate both sides.

GREATEST DEPTH OF MINES.—The Eselchacht Mine at Euttenburg, in Bohemia, now inaccessible, is the deepest mine in the world, being 3,778 feet below the surface. Its depth is only 150 feet less than the height of Mount Vesuvius, and it is eight times greater than the height of the pyramid of Cheops. The bore of the salt works of Minden in Prussia, is 2,231 feet deep, and 1,993 feet below the level of the sea. The mine of Valenciana, in Mexico, is 1,686 feet deep, and yet it is 5,960 feet above the level of the sea. The Tresavean copper mine, in England, 2,112 feet in depth, and 1,700 feet below the sea level.

Reading for the Young.

A GOOD STORY—READ IT!

ALL the boys and girls will be highly pleased with this extract from a story we find in the last page of a large and handsome newspaper that comes to us weekly from Holland, Mich.

Several thousand men and women from Holland in Europe, have settled in and near this pleasant town on the eastern shore of Lake Michigan, a little south of the mouth of Grand River, and live there very pleasantly much after the fashion of the "fatherland" across the ocean.

Let us just say that, although all Germans are called Dutch in this country, really only those from Holland *are* Dutch. They are a very neat and busy people, and children and parents skate together a great deal in winter. We give the title of this newspaper, which you will like to see:

DE HOLLANDER
WORDT, IEDEREN DONDERAG, UITGEGEVEN TE
HOLLAND.
H. VAN EYK,
REDACTEUR.

It has a picture of an eagle under its name, and the words "OENDRACT MAAKT MAGT"—which we *guess* mean "Right makes might"—and, if so, they are good words. But here is the story, and our good printers are very careful to spell all the words right:

HET GEVECHT MET DE WILDEN.

Vervolg.

Zij waanden mij ontwapend en zwaaiden hunne knodsen in de lucht; zonder evenwel mijne tegenwoordigheid van geest te verliezen, deed ik den voorsten van den hoop door een schot nedertulmelen. Dit nieuwe salvo bragt hen in verwarring; want zij begrepen niet, hoe men tweemaal met een wapen schieten kon zonder tweemaal te laden. Besluiteloos bleven zij een oogenblik staan en gingen vervolgens weer naar het digte bosch terug.

WHAT A SPIDER EATS.

IN order to test what a spider could do in the way of eating, we arose about daybreak one morning to supply his fine web with a fly. At first, however, the spider did not come from his retreat; so we peeped among the leaves, and there discovered that an earwig had been caught, and was now being feasted on. The spider left the earwig, rolled up the fly, and at once returned to his "first course." This was at 5:30 A. M. At 7 A. M. the earwig had been demolished; and the spider, after resting a while, came down for the fly, which he finished by 9 A. M. A little after 9 we supplied him with a daddy-longlegs, which was eaten by noon. At one o'clock a blow-fly was greedily seized; and with an appetite apparently no worse for his previous indulgence he commenced on the blow-fly.

During the day, and towards the evening, a great many midges had been caught in the web. Of these we counted one hundred and twenty, all dead, and fast prisoners in the spider's net. Soon after dark, provided with a lantern, we went to examine whether the spider was suffering indigestion or in any other way from his previous meals; instead, however, of being thus affected, he was employed in rolling up together the various little green midges, which he then took to his retreat and ate. This process he repeated, carrying up the lots in detachments, until the whole was eaten. A slight rest of about an hour was followed by a most industrious web making process, and before daybreak another web was ready to be used in the same way.

Taking the relative size of the spider and of the creatures it ate, and applying this to a man, it would be somewhat as follows:—At daylight a small alligator; at seven A. M., a lamb; at 9 A. M., a young camelopard; at ten o'clock, a sheep; and, during the night, one hundred and twenty larks.—*Chambers' Journal.*

HE that makes anything his chiefest good, wherein virtue, reason and humanity do not bear a part, can never do the offices of friendship, justice or liberality.

For Moore's Rural New-Yorker.

POETICAL ENIGMA.

I AM a maxim good and true
For every boy and girl to mind,
Composed of letters sixty-two,
In reptiles, beasts and birds you'll find.

38, 57, 46, 51, 52, 53,
Could he talk, a very good Yankee would be.
62, 55, 41, 54,
Makes a very small house,
With the ground for a floor;
The furniture plain, a stool for a chair,
Assisting the gardener his cabbage to spare.
56, 50, 15, 28,
Though low in creation, you never should hate.
33, 42, 35, 27, 61,
The boys are not like when nimbly they run.
29, 19, 57, 49 and 6,
An African beast with cowardly tricks.
26, 8, 11, 47, 21, 45,
Look out for it boys, it lives where you dive.
17, 59, 60, 37, 22,
If you journey in Asia, will be nothing new.
20, 7, 4, 48, 58,
Is sought by hunters when the season is late.
In 32, 36, 10, you'll find
The horse, the ox, and deer combined.
13, 9, 43, 44,
Was a messenger sent to seek for a shore.
5, 14, 25, I will bet,
(Spell his name right,) is an Irishman's pet.
1, 58, 23, 46, 54 with 24, 2, 3, 12, and no more,
Is a small armor-cased animal,
When rolled up like a ball,
(Its means of defence,)
Seldom suffers at all.
38, 16, 33, 20, 31,
In nature's broadest fields I roam,
Still moving toward the setting sun.
18, 30, 31, 34,
To the hunter I'm deer, to the epicure more.
Some nations have added to their crimes untold
By hunting your brothers with me;
This is my name, so easily told,
40, 39, 23. W. E. W

ANSWERS TO ENIGMAS, &c., IN No. 902.

Answer to Miscellaneous Enigma:—Ambrose Everett Burnside.

Answer to Geographical Enigma:—Never get oil on the brain.

Answer to Anagram:

Prayer is the soul's sincere desire,
Unutter'd or express'd;
The motion of a hidden fire,
That trembles in the breast.

Answer to Mathematical Enigma:—$155.88441+.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6,—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added.

ANOTHER SEWING MACHINE PREMIUM!—*Take Your Choice!*—Since our Spring Campaign Premium List was issued we have made an arrangement by which we can give the celebrated HOWE SEWING MACHINE (Cash price $60) for Fifty-Five yearly Subscribers to the RURAL (40 of them being *new*) at our club rate—$2.50 per copy. This offer extends to July 1st, and subscriptions can commence Jan. 1st or July 1st, or any time between those dates. Our offer of the Wheeler & Wilson Machine (price $55) for Fifty Subscribers (40 of them *new*) is still continued.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added DOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MAY 18, 1867.

NEWS OF THE WEEK.

From Washington.

THE city registry gives about 5,500 voters, a majority of 969 white.

Gen. Palmer, treasurer of the eastern division of the Pacific Railroad, has received $480,000 of United States bonds for the 7th section of thirty miles just completed.

The Japanese are visiting the Navy Yard, &c., and will present a splendid sword to Gen. Grant.

A Washington special says the Japanese have come to look after $3,000,000 sent to New York to buy a vessel for their Government; the cash being gone, with only a small vessel to show for it.

Trial of Jeff. Davis.

HE is to be delivered to the Marshal, for court trial, and probably kept in Libby Prison at Richmond, until it takes place. Chief Justice Chase will preside some time about the 25th. The United States Court at Richmond has on its Grand Jury J. M. Botts, Joseph Segar and five colored men.

A Tribune special says no word has passed between Davis and the President on his release.

RICHMOND, Va., May 11.—The steamer Jno. Sylvester, with Mr. Davis on board, arrived this afternoon at half past five o'clock. Mrs. Davis accompanied her husband. A detachment of military were posted about the wharf to prevent any disturbance. Everything passed off orderly. Many spectators witnessed the arrival of the defunct Ex-Confederate President. Gen. Burton of Fortress Monroe, has Mr. Davis in charge, and it is expected he will produce him in the U. S. Court on Monday, the 13th. Gen. Burton conveyed his prisoner in a carriage to the Spottswood Hotel.

RICHMOND, May 13.—Jeff. Davis has been admitted to bail in the sum of $100,000. Horace Greeley, Augustus Schell, and Judge Jackman, of Pa., becoming his bondsmen.

Convention of Manufacturers.

A CONVENTION composed principally of western manufacturers, was held the 8th, and Peter Cooper presided. A number of letters from prominent manufacturers and political economists were read expressing a desire for an organization movement against free trade.

Governor Pierpont of Virginia, and Horace Greeley were among the speakers, and representatives from Massachusetts, New Hampshire, Vermont, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, Georgia, Tennessee, Illinois, Michigan and other States, announced their names.

A temporary organization was effected, but the temper of those from a distance did not correspond with the New Yorkers, who wanted an immediate permanent association.

The formation of a protective society in each village was recommended, to act in concert with the National League.

From the South.

REGISTRATION near the James River, Va., is going on with good feeling, and the colored suffrage prospect is accepted. Gen. Hooker has a year's absence for health.

G. A. Treuholm, Wellman, his partner, and Col. Wetherbee, all of Charleston, were examined by the impeachment investigation Committee at Washington.

A meeting of eight-hour men at the Court House in St. Louis last week, resolved to discourage all riot or force, and to seek for fair wages in proportion to work done and time given, but to sustain the eight-hour system.

Indian Affairs.

THE reported Fort Buford massacre is contradicted. Gen. Sully had an interview with some Sioux chiefs on the South Fork of the Platte River, April 28th, and reports a wish for peace in many tribes.

Col. Wynkoop reports from the Cheyennes and Arapahoes that it may be possible to prevent war.

From New York.

THE Sunday Laws are to be enforced—liquor shops, &c., closed.

Refugees from Ireland come in large numbers, viewing the rising as ended.

The Bible Society, Anti-Slavery Society and Equal Rights Association, held Anniversary Meetings last week. Bible Society receipts, $734,000. Phillips and others spoke at the Anti-Slavery meeting; Mrs. Stanton and others at Equal Rights.

The American Tract Society had a large meeting.

Foreign Intelligence.

THE Peace Conference on the Luxemburg question met at London the 8th; representatives of England, France, Prussia, Austria, Italy, Luxemburg, Belgium and the Netherlands, were present.

Its doings are secret, but it is known that France assents to the razing and disarming of Luxemburg, but Prussia not, unless the Powers guarantee both sides from future efforts to seize it. England hesitates, and telegrams are being sent to European monarchs on the matter. Meanwhile both sides are arming. France is buying guns in England and Spain, and Prussia is ready to support Luxemburg.

A Herald dispatch from Berlin says Bismarck declares the situation more serious than before. All depends on the London Conference, and if it fails a general war may come on.

It is thought Russia is looking towards Poland and the East, in that case, to increase her power. The Czar will visit Paris in June.

Prussian demands are menacing. Prospects of uniting Hungary and Croatia are popular.

Spain has amnestied all private soldiers engaged in last winter's revolts.

The English Government has accepted the Liberal amendment to the Reform Bill giving lodger franchise. One hundred thousand persons were at the Hyde Park meeting on the 6th inst. Order prevailed. It is thought the Government will not execute the condemned Fenians. An expedition goes to Africa to learn the fate of Dr. Livingstone, and a small iron steamer to navigate Lake Nyassas.

Most tailor shops in Paris are closed, and 30,000 men have stopped work.

LATEST—LONDON, May 12.—The treaty signed by the members of the Peace Congress has been ratified by their Governments. Luxemburg is to be evacuated by Prussia in a month.

If this fails it is said Victoria will suggest a general disarming; but all parties are yet making great warlike preparations.

ANOTHER LARGE GUN.—The last twenty-inch navy gun finished at Fort Pitt Cannon Foundry, Pittsburg, Penn., which was conveyed a few days since to the Government proving-ground on the Pennsylvania Railroad, was tested on the 6th inst. Nine rounds of ammunition were fired, a solid ball weighing 1,000 pounds being used each time. For each of the first three rounds the charges of powder used were sixty pounds, for the next eighty, and for the last three one hundred pounds. It stood the test admirably, and is regarded as a success.

PRESBYTERIANS—OLD AND NEW SCHOOL.—A move is made to refer the question of their union into one body to the Synods, to be decided next year. Doubtless it will succeed. The New School General Assembly meets in this city the 16th inst.; the Old School at Cincinnati the same day.

NEWS PARAGRAPHS.

THE colored citizens of Baltimore have presented a portrait of Henry Winter Davis to his widow. It was painted by a colored artist named Simpson.

A NEW Custom House at Portland, Maine, of granite, sixty-eight by one hundred and thirty-feet, is to go up in place of a fine building swept away by the great fire.

ACTIVE steps are now in progress by the freedmen of America for the erection of a monument to the immortal Lincoln in Washington, to be called the freedmen's memorial.

THE Hon. John A. Kasson, late member of Congress from Iowa, has gone to Europe as agent of the Post-office Department, authorized to make postal treaties with the European Governments.

GENERAL BUTLER is engaged in collecting evidence concerning the assassination conspiracy from Jno. T. Ford of Washington, who wrote down conversations held with Spangler in Carroll Prison.

THE Secretary of the Treasury has issued orders for the attaching of safety valves to boilers on steamers, pursuant to the third section of the act passed July 25, 1866, for the protection of the lives of passengers.

THE corner-stone of a magnificent Jewish Temple was laid in Louisville, Wednesday, with imposing ceremonies, attended by an enormous crowd of spectators. The corner-stone had, beside the Jewish date, "Anno Domini, 1867," an acknowledgment of the Christian Era. Rabbi Wise of Cincinnati, Ohio, was the orator of the occasion.

THE commercial editor of the Boston Watchman and Reflector, in a report of the Lynn shoe market, notices as a curious fact the difference in shape required by various sections. "The Southern ladies wear boots cut very high in the instep; the ladies of California and the Western States require a broad, wide boot, while for the trade of the New England cities a very narrow, delicate-shaped boot is demanded."

The News Condenser.

— "Blind Tom" is in London.

— James Buchanan is worth $250,000.

— Cholera is feared in St. Petersburgh.

— An $80,000 church is proposed at Auburn.

— Twenty-three Methodist preachers in Nebraska.

— A Unitarian Church in Boston is to cost $260,000.

— Ball's bust of Everett is on exhibition in Boston.

— The Fenian weapons in Buffalo were sold at auction.

— An Episcopal church is to be established at Salt Lake City.

— A scientific expedition to Russian America soon leaves San Francisco.

— The Brazilian navy on the La Plata has 35 vessels, 148 guns, and 4,000 men.

— Toombs of Georgia advises the acceptance of the reconstruction situation.

— St. Louis has borrowed $2,000,000 from the National Bank of Missouri.

— Ten physicians in New York have a practice worth $30,000 yearly each.

— Protestant religious services are to be held on the Paris Exposition grounds.

— The first through freight train has gone from Boston to Council Bluff, Iowa.

— The North-Western Horse Nail Co. at Chicago made 400 tons of nails last year.

— 4,000 Bibles are daily printed at the American Bible Society's New York office.

— Over 4,000 rebel dead, buried in Chicago, are being moved to Rosehill Cemetery.

— The National Horse Fair at Springfield, Mass., is to be Aug. 27th, 28th and 29th.

— Claflin & Co., New York, returned last year $1,000,000 income; this year $25,000.

— Emigration to Minnesota is large. Pure and healthy air and cheap land attract.

— Gold, and rich promise of more, is found on Chestnut Creek, Autauga Co., Ga.

— Senator Wade of Ohio once worked on the Erie Canal with spade and wheelbarrow.

— 34 per cent of children in Washington schools are those of Government employes.

— Joseph Stafford of Lenox, Oswego Co., made $155 each from 23 cows in his dairy.

— The Postoffice Department will sell at auction 6,000 "dead letter" ambrotypes, photographs, &c.

— The Empress Charlotte is well in body, but in well-nigh hopeless condition—insane.

— A Chicago bill-sticker offers $10,000 for the use of 160 feet of railing on City Hall Square.

— Frank Cowan, son of ex-Senator Cowan, is special Secretary to President Johnson.

— The Indiana State Sunday School Convention is to be at Lafayette, June 4th, 5th and 6th.

— 40,000 bushels of wheat were shipped from Liverpool to New York in one week in April.

— A Vermont starch factory used last year 28,000 bushels of potatoes at 30 cents per bushel.

— The Appletons are to build, in New York, the largest book-publishing house in the world.

— Stewart's great store, on Broadway, N. Y., is to be enlarged and cover an acre and a quarter.

— $1,000,000 worth of salt and 1,500 tons of iron have been stolen from Government in Russia.

— Over 5,000,000 pounds of books were exported from England last year, mostly to this country.

— A penny weekly paper "Low Church," to be called "The Christian," is proposed in London.

— Six hundred cords of white birch wood have been used for spools for thread at one town in Maine.

THE MASON AND HAMLIN CABINET ORGANS.—The amount of musical power which these instruments possess, the purity and beauty of their tones, and the great variety of effect which can be produced upon them, are remarkable, especially when they are compared with melodeons, which instruments they are rapidly taking the place of, and must supercede entirely, as soon as they become known. Nearly all artists of note pronounce them superior to all others—the best instruments of their class in the world. —*N. Y. Day Book.*

THE COMPASS BOXED.—East, West, North and South, in every direction, Pyle's Saleratus is fast superseding all others. It has more strength; is pure, wholesome and harmless. Ask your grocer for Pyle's Saleratus. See that his name is on the package.

SAFE.—It is safe to say that no better Saleratus can be made than D. B. De Land & Co.'s *Best Chemical*. Besides it is full weight, and that is more than can be said of other Saleratus.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, May 14, 1867.

THE financial affairs of the country are now in a favorable condition. The last statement of the public debt is regarded in commercial circles as highly satisfactory. An exchange says:—"We look upon this as the most favorable and encouraging statement that has been presented by the Secretary of the Treasury, for the business interests of the country, since the close of the war. It is not only a highly favorable statement in itself, but its chief importance lies in the promise which it gives of the future course of the department. Mr. McCulloch seems to have been forced to the conclusion that he could not carry out the policy which he so unwisely announced, of destroying the currency by converting a non-interest-bearing debt into gold bearing bonds, without so disarranging the business of the country as to bankrupt the Treasury."

Money is very abundant in New York, and the volume of currency at that point is daily increasing. Call loans are made at 4 ₱ cent., and loans for thirty days at 5 ₱ cent. Capitalists at the East, particularly in New York city, are turning their attention to real estate.

The earnings of the great lines of Rail Roads show large gains over the receipts for the corresponding time in 1866.

Stocks as a whole have improved considerably during the past week. Express stocks are active and have advanced about 10 ₱ cent. in the last ten days.

The prospect of a favorable result of the London conference to arrange the European difficulties, has had a favorable effect upon markets. Governments were in consequence considerably exalted on Friday and Saturday, and large purchases are reported to have been made by foreign bankers.

The exports of specie from New York last week were something over $2,000,000. The gold receipts from California are large. It is said the 3 ₱ cent. certificates will not be issued until August. Compound interest notes maturing before that time will probably be paid in greenbacks.

WOOL.—The Boston wool market during the past week has been very quiet. The current consumption is reported less than usual at this season of the year. Holders, feeling that there is but little more to be received of last year's clip, are not very anxious to sell, and on the other hand manufacturers manifest but little desire to purchase. It is not probable there will be any great activity in the wool market until the clip of 1867 is offered. There is already considerable speculation as to what prices will be at the opening, but as yet it is impossible to determine. The clip will not be ready for market until a week or two later than usual, on account of the backwardness of the season.

WHEAT AND FLOUR.—There is no new feature in the market. Prices are firm, and the West shows no additional supply.

Rochester Wholesale Prices Current.

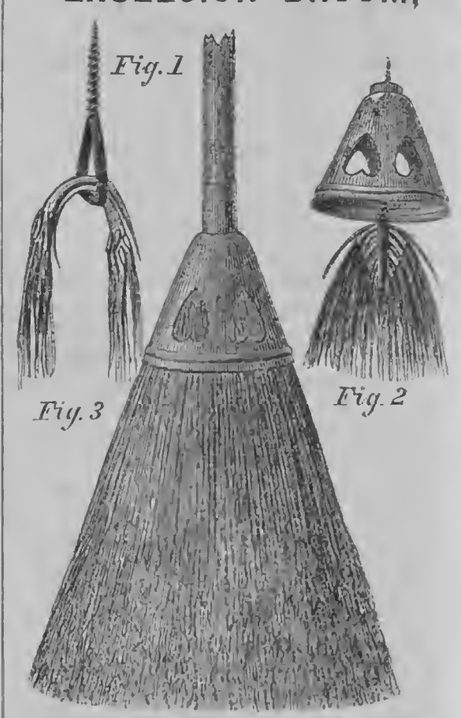
SILVERS' CELEBRATED PATENT
EXCELSIOR BROOM,



Which has taken the FIRST PREMIUMS at the NEW YORK, OHIO and KENTUCKY STATE FAIRS, is unequaled for durability, lightness, elegance, and elasticity, and universally acknowledged the most beautiful Broom in the world. It is the only one accepted for

THE PARIS EXPOSITION.

The ladies pronounce it THE MOST VALUABLE IN USE, when applied to Tapestry, Wilton, Brussels or Ingrain Carpets. Housekeepers proclaim that it sweeps with half the effort and does not wear out the carpet one-fourth as fast as the old-fashioned broom, therefore, MONEY and TIME are saved by its USE.

In the short period this broom has been before the public it has received the highest commendations from people of all classes, and there is now no reason to doubt that in a short time it will entirely supersede the old-fashioned tied broom as a household implement.

We present the following testimonials as evidence of the value of this invention:

NOTICES OF THE PRESS.

From The American Artisan.

Aside from its real utility, the brass-ferruled handle and the polished metallic cap give the broom a finished and beautiful appearance, which no other forms of broom can possibly claim.

From The Cincinnati Scientific Journal.

We have just seen a plan for the manufacture of brooms which must, for many reasons, supersede all others.

From a Report of the American Institute "Farmers' Club," in The New York Weekly Tribune.

After giving a full description of the Broom it said—*A child ten years old can make a new broom in ten minutes.*

From The New York Weekly Tribune, May 8, 1867.

PATENT BROOMS.—Within a few years several patents have been issued for improved brooms. The end aimed at by all has been to make a broom which could be renewed by inserting a new brush. To combine this quality with lightness, beauty, elasticity and durability was difficult and seemingly impossible. An Ohio inventor conceived a plan which it was thought would answer, but a brass cap, such as his broom required was declared impossible to make. One thought differently. A skillful worker in brass was employed who, after eight months study and labor, produced the cap now used on Silvers' Patent Broom. With the improved cap we shall not be surprised if this Broom becomes popular among Housekeepers in city and country.

From the Prairie Farmer, Chicago.

Silvers' Patent makes a very elastic and durable broom. When worn out the brush can be instantly removed and new brush inserted in a few moments. A few hills of broom corn, raised on the farm, with one of these heads, would insure good brooms all the time.

From The American Phrenological Journal.

SILVERS' PATENT EXCELSIOR BROOM.—We have seen it, tried it, and like it. All who are interested—all the women, of course—should induce their other selves to get one of these new brooms at once. It will do no harm to get a half-dozen to give away; as they are as beautiful as useful, and an ornament to any house. What more appropriate present from a young man to a young lady? We know two or three among the Phrenological fraternity who have tried them, and now refuse to use any other kind.

From The Home Journal (New York.)

SILVERS' EXCELSIOR BROOM. We are using Silvers' broom, which not only sweeps clean, but will sweep cleaner than any other, and is an improvement in several ways. In the first place, it is quite light; secondly, it is elastic, and removes the dirt with little trouble to the sweeper; thirdly, it does not injure the finest carpet, but does all kinds of sweeping equally well; and last, but not least, it lasts for years.

For valuable notices from the Scientific American, Agriculturist, (after testing it for three months,) and Boston Cultivator, see RURAL of February 23d, 1867.

Letters from Hon. Horace Greeley and Mme. Demorest.

Office of The Tribune, New York, May 3, 1867.

Messrs. C. A. CLEGG & Co.:—Your broom is a good implement, and will, to a very large class, be acceptable and useful. To be able to renew a broom in ten minutes and at a few cents cost, will be to many at once convenient and economical. I predict your success.

Yours, HORACE GREELEY.

Emporium of Fashions, No. 473 Broadway, N. Y.

MR. SILVERS:—The beauty and practical utility of your "Excelsior Broom-Head" are too self-evident to require commendation. I cordially indorse all you claim for it. MME. DEMOREST.

For testimonials from Prof. O. S. Fowler, Otis Brewer, Esq., and others, see RURAL of Feb. 23, 1867.

What Our Agents Write Us.

Over 200 Agents are already engaged in its sale. We give the following extracts from some of their letters:

Upper Principle, Cecil Co., Md., March 25, 1867.

Messrs. C. A. CLEGG & Co.:—I received the outfit for Silvers' Patent Broom, and have sold five dozen already. The people like it and the women like it. Nearly all want it, and I have sold it in some families who have brooms enough made up to last them for two years. I will send you a large order next week. Very respectfully yours, WM. M. BROWN.

Danville, Ill., April 13, 1867.

C. A. CLEGG & Co.:—Inclosed find amount for Three Dozen complete Brooms. All agree that Silvers Patent far excels anything ever seen in the Broom line. Yours, in haste, C. W. KEESLAR.

Greene, Chenango Co., N. Y., April 18, 1867.

Messrs. C. A. CLEGG & Co.—Gents:—The sample Broom has arrived. I like it very much, and the people generally call it a beauty. I inclose a draft for 6 dozen Brooms, and one peck Broom Corn seed. Please send by express as soon as you can, and oblige, Yours truly, OLIVER HOTCHKISS.

[From an Agent who has already sold over 1,200 Brooms in Athens Co., Ohio.]

Malta, Ohio, April 18, 1867.

Messrs. C. A. CLEGG & Co.:—I think you may depend on a big thing being done with your Broom in Vinton Co., O., the next one you have given me to canvass in. Truly yours, G. A. WETHERELL.

Jamestown, Greene Co., O., March 25, 1867.

C. A. CLEGG & Co.—Dear Sirs:—I sent Feb. 17, $1,50 by mail for the brass metallic parts of your Broom, and after testing it I am so well pleased that I want the Agency for this county, and accordingly send the cash for three dozen Brooms without corn. Express to Zenia, Ohio. Yours, respectfully, ROBERT M. HARPER.

Marion, Franklin Co., Pa., March 25, 1867.

Messrs. C. A. CLEGG & Co.:—The sample Broom has been received, and the people like it so well that I sold 48 the first two days. I will send an order soon. I remain, truly yours, J. R. M. RITTER.

Pittsford, Vt., April 17, 1867.

Messrs. C. A. CLEGG & Co.—Sirs:—I think it is time you heard from your agent in this county again. I have already sold 156 brooms in two small townships. Respectfully yours, MARTIN LEACH.

To Farmers.

The brass metallic parts will be sent to Farmers (where we have no Agents) with full instructions for making their own Brooms, by mail or express (pre-paid,) for $1,50.

Agents Wanted.

Agents wanted in every city and county in the United States, to whom exclusive right of sale will be given, without any charge for Patent. Send for Illustrated Circular.

Address, stating first, second, and third choice of Territory, C. A. CLEGG & CO., Sole Owners of the Patent, No. 205 Broadway, New York.

Sheep Growers—Abram Stocking.
Coe's Dyspepsia Cure.

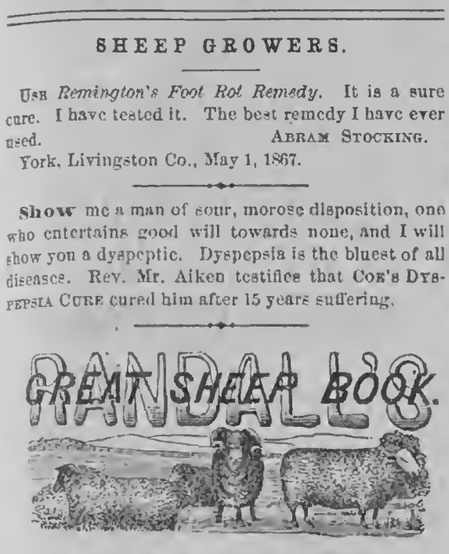
Special Notices.

SHEEP GROWERS.

Use *Remington's Foot Rot Remedy*. It is a sure cure. I have tested it. The best remedy I have ever used. ABRAM STOCKING.

York, Livingston Co., May 1, 1867.

Show me a man of sour, morose disposition, one who entertains good will towards none, and I will show you a dyspeptic. Dyspepsia is the bluest of all diseases. Rev. Mr. Aiken testifies that COE'S DYSPEPSIA CURE cured him after 15 years suffering.



THE PRACTICAL SHEPHERD,

A COMPLETE TREATISE ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.

By Hon. HENRY S. RANDALL, LL. D.,

Author of "Sheep Husbandry in the South," "Fine-Wool Sheep Husbandry," &c., &c.

PUBLISHED BY D. D. T. MOORE, ROCHESTER, N. Y.

TWENTY-FIVE THOUSAND COPIES of this valuable work have already been issued, and the demand for it is now greater than a year ago. To meet this demand a large edition is now in the hands of the binders and will be ready for agents in a few days.

THE PRACTICAL SHEPHERD is unquestionably *the best and most complete Treatise on Sheep Husbandry now obtainable*. It is the *latest* of Dr. RANDALL'S works on the subject, and combines the results of a life-long experience and observation as a sheep breeder and wool grower. Every flock-master in the land should have the work. It is indispensable,—and no work on any branch of husbandry ever gave better satisfaction. The work is highly approved by both Press and People, as extracts from letters and notices (heretofore published) abundantly testify.

☞ THE PRACTICAL SHEPHERD comprises 451 large duodecimo pages, and is printed, illustrated and bound in superior style. Sold only by Agents and the Publisher. The canvassers for Todd's Patent Stamp for Marking Sheep are authorized Agents for the sale of the Practical Shepherd. Price, $2. Sample copies mailed, post-paid, on receipt of price.

Address **D. D. T MOORE,**
Editor Rural New-Yorker, Rochester, N. Y.

TWO GOLD MEDALS AWARDED ONE MACHINE.

HARDER'S PREMIUM RAILWAY Horse-Power and Combined Thrasher and CLEANER, at the Great National Trial, Auburn, July, 1866, for "Slow and easy movement of horses, 15 rods less than 1¼ miles an hour, mechanical construction of the very best kind, deserving of high commendation, thorough and conscientious workmanship in every place, nothing slighted, excellent work," &c., as shown by Official Report of Judges. Thrashers, Separators, Fanning Mills, Wood Saws, Seed Sowers and Planters, &c., all of the best in market. Circulars with price, full information, and Judges Report of Auburn Trial, sent free. Address R. & M. HARDER,
901-in13-je1,22-j20 Cobleskill, Schoharie Co., N. Y.

THE PREMIUM MACHINE!

BUCKEYE MOWER & REAPER

Two great National Field Trials of Mowers and Reapers have been held in New York State. The first at Syracuse in 1857, and the second at Auburn in July last. At each of these trials the HIGHEST PREMIUM, GRAND GOLD MEDAL, was borne away by the "Buckeye Mower," and the justly merited distinction is endorsed by the leading Agricultural Societies in all sections of the country, and by a large majority of the farming community everywhere. Do not allow yourselves to be deceived by mongrel machines which are offered as the Buckeye, combined with something else. Having no reputation of their own, they try to steal that of the Buckeye.

☞ Descriptive Circulars of the Genuine Buckeye and Synopsis of the Official Report of Auburn Trial forwarded by mail.

Manufacturers.—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. REMINGTON'S FOOT-ROT REMEDY.

1,000 TESTS—NOT ONE FAILURE.

Two months ago I applied Remington's Foot-Rot medicine to a flock of sheep and they have kept perfectly sound since, and I have no doubt that if properly applied that it will make a sure cure.
Geneva, N. Y., Feb. 16, 1867. JOHN JOHNSTON.

One thorough application is generally sufficient; rarely the second may be needed. The best Remedy we have ever used. T. C. MAXWELL & BOBS.
Nurseries, Geneva, N. Y., April 16, 1867.

The best cure I have ever used. ROB'T J. SWAN.
Geneva, April 16, 1867.

I cured 50 sheep for 50 cents. If taken in time one application is sufficient. In the worst cases two applications are sufficient. H. D. BENNETT.
Geneva, April 6, 1867.

I took 100 maggots from one foot and cured with one application. JOHN E. BOOTHE.
Canandaigua, April 1, 1867.

Warranted if used according to directions. For sale by Druggists. Price, $1 ₱ bottle. C. REMINGTON, Agent. Manufacturer, Geneva, N. Y. 902-9t

1867.

The Joseph Hall Agricultural Works,

GLEN & HALL, Proprietors,

ROCHESTER, N. Y.,

MANUFACTURE THE CELEBRATED

HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal.
899-tf GLEN & HALL, Rochester, N. Y.

THE HOWE MACHINE CO.'S

SEWING MACHINES,

699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Manillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.

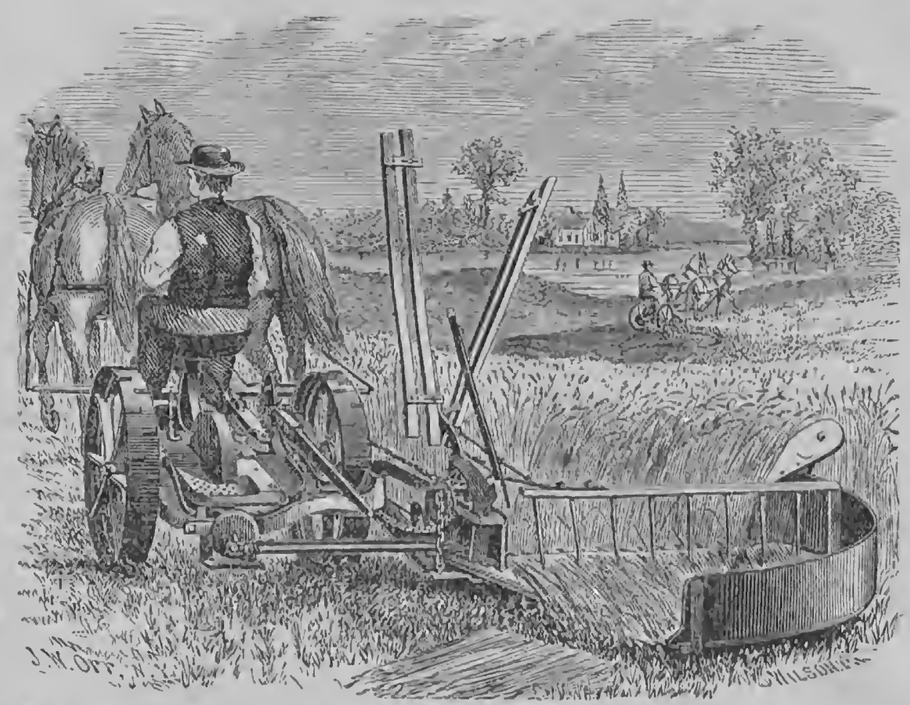
PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In completeness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 3. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

SPECIAL NOTICE.—A VALUABLE NEW BOOK JUST PUBLISHED.

THE AMERICAN FRUIT CULTURIST.

BY JOHN J. THOMAS,

Associate Editor of "Cultivator & Country Gentleman."

In one handsome Post Octavo Volume of over FIVE HUNDRED pages, illustrated by FOUR HUNDRED AND EIGHTY accurate engravings. Strongly and beautifully bound in extra muslin. Price, $3, by mail, free of postage.

☞ This is the most thorough and complete work on the subject published in this country. It covers the whole ground of Fruit Culture—containing in a clear, practical, and systematic manner the simplest detail as well as the more difficult methods of cultivation. It seems as if nothing had escaped the attention of its experienced author. The criticisms of the Press are, without exception, of the most flattering and favorable character. A few will show the opinion expressed by all:

Possesses sterling value.—*N. Y. Daily Tribune.*

Superior to any Fruit book yet published.—*Illinois Journal, Springfield.*

It has *an honest look about it;* we advise all who feel an interest in Fruit culture to put themselves in possession of it at once.—*Moore's Rural New-Yorker.*

A book of great value.—*Farm and Fireside, Phila., Pa.*

The most complete and practical work on the subject published.—*Rochester Daily Democrat.*

We commend it both to experienced practitioners and to new beginners with entire confidence.—*Cultivator and Country Gentleman.*

No Agriculturist or Horticulturist ought to be without it—we recommend it unhesitatingly.—*Practical Farmer, Philadelphia, Pa.*

A safe and reliable guide, on the various subjects of which it treats.—*Worcester Gazette.*

The book is one of great value.—*New Haven Register.*

The best and most comprehensive horticultural treatise for general use it has ever been our fortune to read.—*New Bedford Mercury.*

The work is a practical one.—*Philadelphia Inquirer.*

The work is a practical one.—*Philadelphia Inquirer.*

DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (⅜ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHER of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

FLAX AND HEMP CULTURE.

Now Ready, the Sixth Edition of

A Manual of Flax Culture and Manufacture:

Embracing full directions for *Preparing the Ground, Sowing, Harvesting, &c.* Also, an Essay by a Western man, on HEMP AND FLAX IN THE WEST: Modes of Culture, Preparation for Market, &c., with Botanical descriptions and Illustrations. Published by D. D. T. MOORE, Editor of Moore's Rural New-Yorker, Rochester, N. Y. Price, Twenty-Five Cents.

☞ Those who wish PRACTICAL INFORMATION on the subjects named above should send for the work, which is sent, post-paid, for 25 cents.
D. D. T. MOORE, Rochester, N. Y.

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candles, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 897-tf

CANCERS CURED WITHOUT PAIN, use of the knife, or caustic burning. Circulars sent free of charge. Address
886-tf Drs. BABCOCK & SON, 700 Broadway, N. Y.

$25 A DAY!—FIFTEEN New Articles for Agents. O. T. GAREY, Biddeford, Maine.

MAY DAY.

BY RALPH WALDO EMERSON.

WHERE shall we keep the holiday
And duly greet the entering May?
Too strait and low our cottage doors,
And most unmeet our carpet floors;
Nor spacious court, nor monarch's hall,
Suffice to hold the festival!
Up and away! where haughty woods
Front the liberated floods;
We will climb the broad-backed hills,
Hear the uproar of their joy;
We will mark the leaps and and gleams
Of the new delivered streams,
And the murmuring rivers of sap
Mount in the pipes of the trees,
Giddy with day, to the topmost spire,
Which for a spike of tender green
Bartered its powdery cap;
And the colors of joy in the bird,
And the love in the carol heard,
Frog and lizard in holiday courts
And turtle brave in his golden spots;
We will hear the tiny roar
Of the insects evermore,
While cheerful cries of crag and plain
Reply to the thunder of river and main.

As poured the flood of the ancient sea,
Spilling over mountain chains,
Bending forests as bends the sedge,
Faster flowing o'er the plains,—
A world-wide wave with a foaming edge
That rims the running silver sheet,—
So pours the deluge of the heat
Broad northward o'er the land,
Painting artless paradises,
Drugging herbs with Syrian spices,
Fanning secret fires which glow
In Columbine and clover-blow,
Climbing the northern zones,
Where a thousand pallid towns
Lie like cockles by the main,
Or tented armies on a plain.
The million-handed sculptor moulds
Quaintest bud and blossom folds.
The million-handed painter pours
Opal hues and purple dye;
Azaleas flush the island floors,
And the tints of heaven reply.

The Story Teller.

Written for Moore's Rural New-Yorker.

MRS. HAMILTON'S ECONOMY.

BY MAY MAPLE.

"SEE here, Coz.," said CHARLEY HAMILTON, as he reclined on the lounge in the sitting-room, "you have got everything put to rights to suit your fastidious taste, or that of an old bachelor like myself. I just want you to sit down here and give me a little information, before that young upstart, RILEY REED, comes in and takes you out of my sight."

"Just be a little careful, my dear sir, how you call names, or I may not wait for RILEY to take myself out of your way. But what can such a little ignoramus as I am give you information about?"

"Well, I would like to know if JESSIE CARSON ever does anything but embroider and make tatting? I have been in there often, and never saw her doing anything about the house. Her white fingers, that throw that glistening shuttle so swiftly, do not look much like work, and she always appears dressed for company."

"And what of all that? Hasn't she a right to have white hands, and always look neat and tasty? I'd just like to know what difference it can make to an old bachelor like you whether she works or plays. She is a good ways beyond her teens; and *you* could not see any one over sixteen. She is one of my intimate friends; so be careful how you speak of her."

"That's just why I am talking to you of her. I expect you will be flying to another nest soon. Iv'e some idea of looking for a starling to fill your place; for mother and I might be lonely living by ourselves."

"Oh, you are getting in a hurry to be rid of *me*, are you? Well, I'll not leave my dear old Aunty now, just to spite you."

"My dear cousin, you jump at conclusions. I am in no hurry to have you take your departure. But will you not help me a little?"

"I don't see how I can, for JESSIE is far from being a beauty, and you always admire the beautiful, and, as I said, she is more than sixteen, and I remember very well how lover-like you treated me when I was at that age, and as soon as I had reached my seventeenth birth-day, you told me my face was looking old and wrinkled! Well, because you are my cousin, I'll try to help you if you'll tell me how."

"Well, MIN, the fact is, I have only been a sort of brother to you dear little beauties, while you were passing through the trying season of cutting your wisdom teeth. I knew you would, any of you, marry the first scapegrace that asked you to, because you'd think you must. Girls and boys think *then* it would be a fine idea to get married. They never stop to think whether they have a dollar in the world towards getting a living, until it is too late. The next thing is a divorce or some other disgrace. If they pass over this bridge, they are better able to judge for themselves what they need. You see I know by experience, for I've been there."

"And this is the way you plead innocence for all the hearts you have broken?"

"I do not believe I was ever guilty of breaking a heart; perhaps a few have been grieved for a time, but hearts are not so easily broken. I tell you, MIN, I've been there. I've imagined I was in almost heart-breaking love for a number of pretty faces. But now, when I'm getting nearer to forty than thirty-five, and the star of our home is about to pass from view, it's time for me to be looking about sensibly. I've always liked JESSIE CARSON, though for a long while she was so reserved I thought I never should get acquainted with her. I used up all my small talk, but it was like pouring oil upon water. Then I changed, and talked of books and their authors. I had gained a point, and found she could talk well and was a most interesting companion."

"I'm glad, CHARLEY, you have found out so much. But why did you ask if she knew anything about house-work? You are abundantly able to hire help, if necessary."

"I know I am now, and I don't wish to have my wife, whoever she may be, a drudge. But, MINNIE, men meet with reverses, and I don't know what is in store for me. I should want my wife to know how to step down, if need be, and help me to gather up the seeds that fall by the wayside—or, in other words, to know how to work if necessary. Many of our fashionable ladies can't carry on a sensible talk more than five minutes; and if poverty comes they have neither knowledge or ability to lift themselves out, or lend a helping hand to their husbands."

"As you seem to be in earnest, take a walk with me at eight o'clock to-morrow morning. I think I can satisfy you; but, mind, I'll have no flirting with JESSIE just to pass off time."

"You need have no fears. Now I'll go down town, and leave you to some one else; for a pony carriage is at the gate."

As cousin CHARLEY went away, RILEY REED came in. He had been absent the whole of two weeks; so we had much to talk over, and the day soon passed. At night CHARLEY said soberly, "This has been a very long day."

Equipped for my walk in the morning, I did not wait long, for he soon came down stairs, hat in hand, looking quite pleased to find me ready.

"Well, MINNIE," said he, as we started, "you seem to be a very prompt little body. I don't think that lover of yours will need to complain of you if you always do as well. You must remember, cousin, that a man's stock of patience oozes out very fast if he is obliged to wait long for another, especially after he is married, and that other one happens to be his wife."

"You talk as though you had some experience. Pray, where did you get all your wisdom, my dear SOLOMON?"

"It does not take long to understand where one is observing. It's the little things that try patience most; as in my own case, this waiting a whole day before I could learn what I most desired to know about your friend JESSIE, was really a trial to me. So if you would keep RILEY'S love, don't keep him always waiting."

"Thank you for your advice," said I rather sarcastically; for, although grateful for his well-meant kindness, I would not let him think so, and continued, "I will try and act upon it when it suits my convenience. But are you really going to pop the question this morning provided she suits you?"

"No; of course not! How ridiculous you would make me appear," said he, laughing.

"Well," said I, "how will you be able to wait for the lady's answer? She will make you, I am sure; for it's just like JESSIE. She *will* take time to think on any matter till she believes she is in the right, and then she'll go ahead, no matter what's in the way."

"That is just right. But here we are," said he, as he opened the gate.

"Now, I am going in at the side door without ceremony, and you may follow and use your eyes to the best of your ability. "Good morning, JESSIE," said I, upon opening the door that led to the kitchen, "you see I'm not going to make you stop your work to come and let me in."

JESSIE said, "I'm glad you came right in; you know you are welcome to come just as you like; so just —" She looked up with some surprise, and for a moment seemed a little embarrassed, as she saw my cousin standing in the door.

"Oh, never mind CHARLEY," said I, as I saw her give a quick glance at her dress, at the same time inviting him to a seat. "You see, he did not know what else to do this morning, so he must come with me. But you need not put yourself out of your way for him, more than you would for Don, my pet dog. They can either of them live a little while without all the attention in the world, although they are both fond of being petted and stroked down. Just go right on with your work; we can all talk just as well."

"Well, Mr. HAMILTON," said JESSIE, laughing, "MINNIE does not think you are of much importance, if her words and thoughts really agree. As she has said I should go on with my work, if you will excuse me I will do so."

"You are quite excusable, Miss CARSON," said he, "and I never trouble myself about what MINNIE says of me, as long as I know she thinks me a model man."

I handed him a newspaper, saying, "There, JESSIE, you see I've quieted him at last; and you and I will go on now as though he was in China."

She wore a print dress, which just fitted her *petite* form, a large apron, and the daintiest little collar. Everything in the room was free from dust, and in order, even at that early hour. She finished making some bread, and made pies and cake, and a nice pudding for dinner. All this time we had been chatting away as busy as magpies. Finally I said, "Where is your mother, JESSIE?" not because I did not know, but because I wanted CHARLEY to know that she had done all the housework for some days, and I knew that although his eyes were on the paper, he heard our talk."

"She has gone to visit one of her sisters."

"How long has she been away?"

"Almost a week."

"And so you have all the work to do?"

"Yes! but I get along with that very well. You know mother taught me to work while I was young, and I always help when she is at home."

"I am glad, JESSIE, you and I do not feel as some do about house work. To be sure, it would not be pleasant to be obliged to drudge from morning until night, and I am thankful we do not need to do so."

"I hope, MINNIE, if it were necessary we should go about it cheerfully."

Our call grew to a visit; we dined from fare, wholesome and nicely cooked, and as we reached home the moon was high in the heavens.

"Now," said I, as we were walking up the pathway, "are you perfectly satisfied with regard to JESSIE?"

"Yes, indeed! She is a diamond of the first water; and if possible I'll win her. Do you think she will say me nay?"

"I will not tell what I think, except that you will be obliged to wait for an answer, and it will be a satisfaction to have one man learn to wait."

"But you have had only a specimen of every-day life. Their work is done by rule—'everything in its place' is JESSIE'S motto. I wish you success, dear cousin, for there is no one I would so willingly give up my place to as JESSIE CARSON."

A month passed, and one day CHARLEY said, "Well, MIN, you may congratulate me; for I've won my diamond."

"I'm sure I'm glad to hear you say that; but why don't you tell me the rest?"

"The rest? what more can I tell? Of course, you know by experience all the forms of 'popping the question.'"

"Oh, then you are not going to tell me that you have been waiting a whole week?"

"You seem to know all about it. Who has told you so much? For I know JESSIE is too true a woman to speak of such an affair."

"You are right there; she has told me nothing of the kind. Perhaps you are not aware how much you talk in your sleep, when on the lounge."

"Bah! you need not try that; it won't go down."

"But you'll own you had to wait a week? I hope you will always be so patient."

"Yes, I did wait a week; and it has been an unmercifully long one. But now just tell how you knew."

"Hasn't your face been drawn down to the most solemn length for a week, and when you entered the room just now, didn't it shine like any freedman's in your happiness?"

"Thank you for your explanation. We are to be married in two weeks; that will give us a chance to travel some, and get back in time to see you take those sacred vows, my dear little cousin. I shall always feel grateful to you for the part you have had in this affair. You have helped me to a real treasure."

Five happy years have passed since JESSIE CARSON became Mrs. CHARLES HAMILTON, and since I, MINNIE HAMILTON, became the wife of RILEY REED. How swiftly and noiselessly time flies. These years have been almost free from troubles. To be sure, death has been in our midst. When Aunt JANE was taken from us we could not but feel that we were truly afflicted. Still, I could never call the dispensation of GOD, —when he calls his beloved home—a trouble.

But it may come now; for my husband tells me there has been a commercial crash, and he is a loser by several thousands. It might be worse; for I have now a good knowledge of household duties—thanks to Aunt JANE'S thoughtfulness—so I can help economize, and we can move into the little house Aunt JANE gave me and still be happy. And with RILEY'S energy, we will mount the ladder of well-to-do, at least."

"Dear JESSIE," said CHARLES HAMILTON, as he came home from his counting room a few nights after Mr. REED had told of his losses, "I'm a ruined man. Our house has come down with a terrible crash; and I am a loser with the rest of the company."

"Oh! well, CHARLES, you will have me left; and you know you've always said I was worth a fortune," said she with a smile.

"Yes, indeed you are a fortune. But how will you like the idea of beginning at the bottom of the ladder; for it may come to this? I'm afraid you will not find it very pleasant to give up your cheerful home and come down to all the hard work besides."

"You will see that I can do it, and cheerfully too. But shall you not have enough left to begin again?"

"There may possibly be one thousand dollars left, after the debts are paid."

"I should think that might make a beginning, at least."

"It would; but you know we must have a home, and food, and clothes; and that would take quite an item out of our stock in trade."

"For clothes, I think we could get along for one year with very little expense. For a home, perhaps this will make us one," and Mrs. HAMILTON handed her husband a paper which she had taken from the little secretary that always stood in her sitting-room.

"Why," said he, "this is a deed of the little vine-covered cottage we have both admired so often, when riding out in the country. But how did you come by it? Did your father buy this for you?"

"No, he did not. But before I tell you how I came in possession of it, you must answer me a few questions. First, have you ever had occasion to be ashamed of my manner of dressing, at home or abroad?"

"Most assuredly not. Quite the reverse. I have always felt proud of you, and frequently wondered how you managed to look so elegant with the means I gave you; for you never asked for it; while many of our clerks' wives spend double the money that you do for dress, and then do not look so well dressed."

"And have not the hats I have worn been quite as becoming as the most fashionable style would permit?"

"Yes, to be sure; but why these questions?"

"The prices of those hats ranged from thirty to fifty dollars."

"I know how milliners put on prices; but that is their trade as well as the merchant's."

"Well, they have never cost me half that. I bought the materials and made my own. When I bought a new dress—which I did not do every week—I always tried to buy the best material, though it was not always at the highest price; then I would get a large pattern, so I could easily change the style if I wished. I have always been my own dressmaker. Sometimes, instead of getting new ones, I would only get new trimming for the old ones. My collars you have always admired. If I had bought them, they would have cost from five to ten dollars apiece. Those fine ones, that you call so exquisite, were made with that little glittering shuttle you used to laugh so much about. The money saved in this way, I have laid out for a home, knowing that merchants, however prosperous, often meet with reverses. So, dear husband, you see that those rolls of bills you have so generously put in my hands for 'pin money,' as you called it, have not all been spent for dress."

"You are a treasure, as I have always said. But where did you learn so much economy?"

"Oh, that is my secret," said JESSIE, laughing. "You've heard of 'born geniuses,' I presume. I happen to be one of that class of 'humans.' Now are you satisfied?"

"Long ago, cousin MINNIE asked me that same question; and I'll tell you as I did her, 'yes, perfectly.' But, my darling, forgive me for the slight deception. We shall not be obliged to give up our establishment at present. I saw some time ago that our firm was about to fail, and so withdrew my share. Some of the firm have been unwisely extravagant, taking from the capital to furnish houses in the most princely style. I knew it would be impossible for us to stand it long, so I have by degrees taken my stock and put it in better shape. I shall lose something, but gain more by your strength."

"Well, I'm glad the loss is no more; but almost sorry I've told you how little I need for 'pin money,' for fear you will grow parsimonious. But how is it with RILEY and MINNIE: have they really got to give up their home?"

"I'll tell you first, you need have no fears about your spending money. As for RILEY, I think his loss is more than mine—but here they are, and MIN can speak for herself."

"Indeed she will," said I, as I heard cousin CHARLEY call my name, "this is a fine idea for these two great fellows to come home with doleful faces and heart-rending stories, and try to frighten us two lone women out of house and home. And then, when we are ready to brave every danger, to bear cheerfully every trial, why, there is no trouble to face, no trials to endure. Well, they found we could *do* as well as *talk*, if it was necessary."

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $11; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

READER,—Please act as Club Agent for the Rural, or induce your Post-Master for some other influential person to become a recruiting officer for the "Rural Brigade."

Notice of Spring Campaign on News page.

SOUTH DOWN COMPANIES' PATENT

SheepWashTobacco

THE BEST KNOWN REMEDY FOR
TICKS, SCAB, VERMIN AND FOOT-ROT,
SHOULD BE USED BY ALL FARMERS ON
SHEEP, ANIMALS and PLANTS.

☞ This pure preparation has been successfully used for years, and never fails to produce the desired effect when used according to directions.

IT WILL NOT INJURE THE MOST DELICATE ANIMAL.
IT WILL IMPROVE THE QUALITY AND QUANTITY OF WOOL.

THE BEST IN AMERICA!—J. BRINKERHOFF'S CORN SHELLER, SEPARATOR AND CLEANER. Patented April 12, 1864 and February 28, 1865. This Machine has been selected, by the Advisory Committee, for J. C. Derby, U. S. Agent, as the best in America, and sent to Paris to the Universal Exposition. Has also taken the first premium at the New York State Fair in 1866—the Committee pronouncing it the *best Corn Sheller they ever saw*. It shells, separates and cleanses rapidly and easily, at one operation, as fast as the ears can be put in the hopper. For territory or agencies in Pennsylvania and Maryland, address
901-4t WM. WIBLE, Box 246, Gettysburg, Pa.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remedies the ill effects of *Bad Dyes*. Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor*. All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y.
☞ BEWARE OF A COUNTERFEIT. 882-26teo

A SURE CURE FOR FOOT-ROT IN SHEEP. Whittemore's Cure for Foot-Rot in Sheep is a positive and speedy cure. Diploma awarded at New York State Fair. Testimonials as to its reliability from prominent Sheep Raisers are constantly being received. This Cure is also a sure Remedy for FOUL IN CATTLE AND THRUSH IN HORSES. For sale by Druggists at 50 cents and $1 per bottle. If your Druggist has not got the Cure on hand, get him to order it for you of the sole manufacturer, F. W. WHITTEMORE,
Chatham 4 Corners, Columbia Co., N. Y.
☞ A liberal discount allowed to Druggists.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

RURAL FARMERS' CLUB.

Aphis or Plant Louse.

ONE of our subscribers, Mr. A. J. BROWN, Adams, N. Y., has forwarded us the terminal bud of an apple twig, very much infected with small insects, which prove to be the aphis, or plant louse; an insect incident to almost every plant and tree that the earth produces. They are an anomaly among insects, being oviparous and oviviparous producing during summer their young alive, and in the autumn, laying small

FIG. (1,) shows the male, natural size; (2,) magnified; (3,) female natural size; (4,) magnified.

shiney black eggs, at the axil of the leaves, which hatch at the first opening of the buds and attach themselves to the underside of the leaves, doing no damage to fruit, further than absorbing a portion of the nutriment that should be used for the growth and subsistence of the tree or plant, and not materially injuring the growth. The only remedy known, and which can only be applied to small plants, is whale oil soap suds, and tobacco smoke. They propagate so rapidly and at so early a period of existence, that their name is *legion*, and some naturalists have asserted that a single pair are capable, in one season, of producing hundreds of millions and would, were it not for the numberless natural enemies that nature has provided in larger and more voracious insects.

Their color varies on different plants; on the tansey they are red, on the cherry black, and on the dahlia spotted, though on most plants green and brown. They are the cause of honey dew, by injecting honey from two tubes that stand out from the body near the tail of the insect. The ants feed on this substance by irritating them and thereby inducing them to eject the honey which they absorb and so pass on through a whole colony.

Since writing the above we have received letters from Niagara Co. and Millville, N. Y., stating that "Countless millions of black bugs or lice are infesting the apple trees," and asking some of the members of the "Rural Farmers' Club" to give the name, nature and remedies for them. They are, undoubtedly, some of the numerous species of *plant lice*, and no available method of destroying them is known. Their number renders them unconquerable. But their natural enemies are also formidable and numerous, and it is probable they will be troublesome only for one season; they ordinarily disappear as quickly and mysteriously as they come. In 1861 the grain fields of some portions of Western New York, were black with the *aphis*, but they disappeared with the season and have not since been troublesome.

Notes from Minnesota.

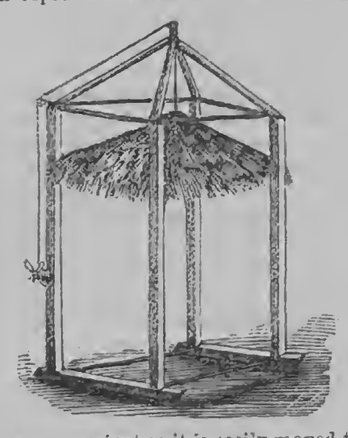
"F. J. S." writes from Read's Landing, Minn., under date of May 1st, "that the past winter has been a very long one, but not very severe, with plenty of snow. The coldest day was the 17th of January, 26° below 0. Spring is very backward; excepting a few acres here and there, no grain has been sown yet; most of the farmers will raise more oats and corn this season than heretofore on account of the scarcity and high prices of the coarse grains. We have been growing too much wheat to the neglect of other grains, depending on having them shipped up from below than raising ourselves; so there will be less wheat sown this season in comparison to the number of acres under cultivation. Prices are very high for all kinds of grains, and provisions:—Wheat, $2.25@2.80; oats, $1@1.15; corn, $1.30@1.50; potatoes, $1,25@1,50; hay, $16; cows, $50@60; oxen, $150@200 per yoke; horses, $400@600 per span; beef cattle, $8 per lb. live weight; butter, 30 cts.; eggs, 25c., &c. The trade in dry goods is poor, very little doing, most of the merchants are selling goods at cost and are glad to sell at that. Money very scarce, interest from 12 to 20 per cent. It will be very tight times until we have another harvest; no wheat in the country worth speaking of."

California Wheat Prevents Famine Prices.

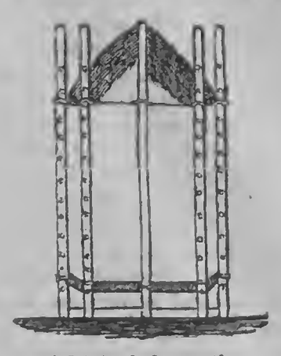
THE shipment of wheat and flour from California, to England and the United States this season, already amounts to millions of bushels. Thousands of sacks of both wheat and flour now come weekly to New York by way of Panama Railroad from San Francisco, at an expense of two dollars per cental (100 lbs.) freight; and what is better, this wheat is so well saved and extra rich in gluten, that it commands an extra price in New York. What an enterprising agriculture now blesses the magic State of California; only a few years ago that country was dependent on Chili for wheat and flour; now it keeps the poor of the Atlantic States from famine prices for flour. It is said that the wheat from California shipped here and to England has kept flour from advancing several dollars a barrel in New York. LXXVI.

Barracks for Hay or Grain.

"PRACTICAL FARMER" sends the Rural Farmers' Club his method of making barracks for storing hay and grain. He writes:—"The larger sketch represents a movable barrack which I



find very convenient as it is easily moved to any part of the farm, where it is desirable to stack hay or grain. In its construction four posts, 18 feet long and 6 inches square, are used; these are framed, at the bottom, into two oak sills which serve as runners when moving. The roof is made of a light frame work, thatched with rye straw which is lighter than shingles or boards, and is suspended to the frame-work of the top of the barrack by a rope which passes over two pulleys and down one of the posts to a sort of windlass. This rope should be well tarred to endure the weather; instead of the



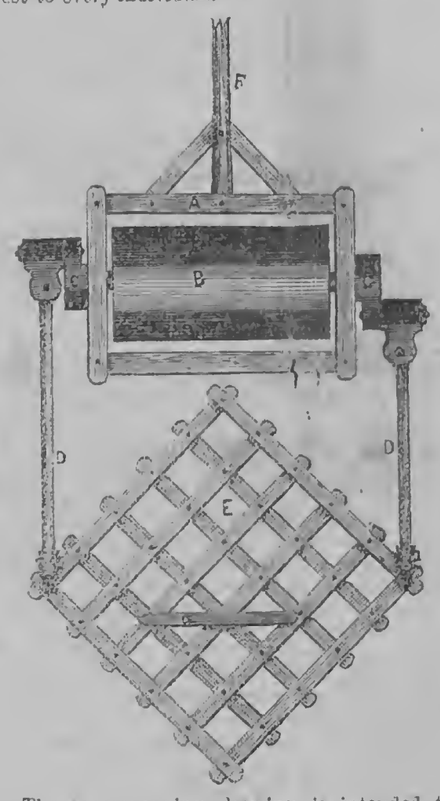
windlass a weight to balance the roof may be used, and is perhaps simpler and better. The roof should notch into the posts at the corners and be somewhat larger than the square of the barrack. To move from one field to another lower the roof to the bottom, attach a team to each sill, and away you go without delay.

Permanent barracks are made of four or eight posts (the engraving shows eight,) set in the ground. They have also a thatched roof which is lowered and raised by means of holes in the posts through which pins are inserted. These contrivances are cheap and practical, and their general use in the prairie States would save a great deal of farm produce from damage by storms."

Combined Roller and Vibrating Harrow.

Mr. W. R. BROOKS, this State, sends us the following for our Club:

"The thorough pulverization of the soil is, and will ever be, an important item in the tillage of the earth. The most effective method, therefore, of attaining this result, is one of interest to every individual.



The accompanying drawing is intended to represent an arrangement which I have recently invented, of a combined roller and vibrating harrow, the successful working of which, in the limited experiments I have had the opportunity to make, has been most gratifying and satisfactory. The invention consists of the frame, A, roller, B, which may be constructed of either iron or wood, the axle of which terminates at each end, in a strong crank, C, C, of from six to nine inches in diameter. These cranks are keyed upon the axle in opposite positions. Connected to the wrist pins of each crank, are the connecting rods, D, D, which extend backward, and are attached to opposite corners of the harrow, E. The attachments of the connecting rods to the cranks are made with universal joints, so as to allow of a free and easy working of all the parts, and to permit the roller and harrow separately to accommodate themselves to the inequalities of the ground. The manner in which the harrow is vibrated, through the medium of the crank in rotating with the roller, it is not necessary further to explain.

If the machine is used as shown in the drawing, the last operation performed will be that of harrowing, but if it is desired to leave the ground in a rolled condition, all that is necessary to do is to turn over the tongue, F, of the roller, until it rests upon the cross-piece, G, and attach the team by a chain, to what will then be the front corner of the harrow. Or should it be desired to use the roller or harrow separately, they may be readily disconnected by driving out two of the bolts in the universal joints. This invention, although I believe to be patentable, I have decided to make public property, and do hereby present it for the benefit of the world at large."

S. T. KELSEY proposes, through the columns of the Kansas Farmer, to ask the Legislature of that State to pass a law making a hedge a legal fence as soon as planted, and holding parties possessing stock, running at large, responsible for any damage done by them to fields inclosed by these incipient hedges. This course, it is supposed, will lead to a general fencing with hedges, and preserve the timber bordering upon and interspersed over the country from the destruction which fencing with it must involve.

THE CUT WORM.

THIS pest of the corn crop has for years baffled the skill of most cultivators, and in some places almost the entire crop is frequently lost. It has become such an intolerable nuisance, that I am sure anything like a cure for this evil, will attract general attention. Without pretending that I have an infallible remedy, I will briefly state what I believe to be the true course to adopt—adding what I believe is strictly true, that in nine years I have not lost fifty hills by the cut worm; while my neighbors in some cases, on lands near and adjoining, whose practice has been different from mine, have lost half their crop.

In the first place, early planted corn generally suffers most. Many persons turn their whole stock on their corn ground before plowing, seeming to have an idea, that all the grass which is turned under, is so much lost. Now, I would much prefer to have the grass untouched and plowed under. It will make manure for the corn, and while green, furnish food for the cut worms until the young corn gets beyond their reach. I would be governed to some extent by the season—always delay plowing until near safe planting time—then put in the plow and *drive ahead* until the seed is in the ground. Let a *heavy roller* follow the plow—the same or the following day, unless the soil is very wet and adhesive—in that case wait till the surface is a little dry. Do not omit this on any account, for if there is any specific for the cure of the cut worm, it is the roller. Again, the ground should be thoroughly fitted. Do not establish a rule to harrow just twice or three times, but stick to it till it is *done*, and then to make it sure *harrow it once more*. Fill up every hole and crevice, so that the sod will be effectually smothered. It will then retain its moisture much longer than when left lying in ridges open to the sun and air. If it is a dry time, or if the soil is light, I would roll again after planting.

Very little can be done by subsequent cultivation to head off the worms, except visiting the field in the early morning and catching the rascals at their work. It has almost always been my practice to apply plaster and ashes to the young plants as soon as they make their appearance. This may or may not have had a tendency to keep off the worm. If ashes are applied in their full strength, it is better to apply them to the hill soon after the planting and before the corn comes up, as they will otherwise kill the corn down to the surface of the ground wherever they come in contact with it. It will grow up again, but it must retard the growth for a time, at least. Anything which excites the growth of the young plant is beneficial, as it is so much sooner out of the way of the worm.

Other cultivators may have a better theory than mine, and very likely mine may have been practiced by others, but it has this much in its favor—it has borne the test of experience, and requires no new machinery to put it into operation, or any radical change in cultivation. That its general adoption by the farmers of Western New York would be followed by favorable results, I have no doubt. If this cool, backward weather continues ten or fifteen days longer, we may reasonably predict a prolific year for the cut worm. P. P. B.

Batavia, N. Y.

IMPROVEMENT IN BEES—NO. II.

I ADVISE the square box, loose cap, large honey box, and many holes between brood chamber and honey box—not because it is the highest possible system, but because it is *one of the best*, and I believe the *very best for common, practical use*. What is the use of asking a man to go up a ladder ten feet when you can't get him up one foot out of the mire he is in? So, what is the use of asking our bee keepers to adopt the movable comb hive when *constitutionally tired* or rather when *constitutional thoughtlessness* leads them to freeze their bees out of doors in the winter, put them in all sorts of ill shaped hives, buy a patent humbug and kill their bees in them, and all that sort of thing; just as though they did not know any better, in the blaze of light and knowledge on bees, now so clear and bright?

The truth is, bees require attention as much as horses and cows. And it is true that movable combs require ten times the attention that immovable ones do. So, if I can get you to buy no patent at all, (unless that for movable combs—the only valuable one I know of, *or believe to exist*,) but make the philosophic and paying hive I have recommended and so get you to care for your bees, to get your honey, then I have done you, my dear reader, the best service I can. If you think me sharp in my words, very well. But could you see the farmers come and inspect my hives every year, and that I have hundreds of pounds of box honey, and they, most of them, not a pound,—they calling me *lucky* and themselves *unlucky*,—then you would want to perform the surgical operation of *ripping them up*, as the Japanese do, or some other thing; for they and you, my reader, deserve it richly.

But the Italians? Well, I fear that there is such a thing as *a fashionable bias* to the press. The Delaware grape, was to cure all our grape evils. But it did not. Now one or two other grapes must not be spoken against. The press and a few grape savans wont allow it. So the Italians. If there is not an Italian furor over pure queens, for the sake of a few who have them to sell, at very high prices, then I am mistaken.

Again. If the *impurity* is the rule and the purity of queens the exception (only as like grapes in certain Dr's hands,) then there is no gain in our useless experiments, for the Black bees are the dominant race, and will in the end out rule the white Italians. Besides, the Italians are not yet proven. We really know but little of them. It is true that in the brood chambers they make more honey in proportion to the bee-bread than the common bee. But whether 100 or 1000 hives of Italians will make, under the same care and circumstances, more honey than 100 or 1000 common hives no man in the United States yet knows. Single hives have little. Our renowned Italian advocates are keeping them to rear queens, and make their money out of their sales of queens—not by the real honey they get. So far as I have proven them they are not as fond of making box honey as the common bees. And if I were to choose, the opening of movable comb hives (the patent right of which is held at quite a high figure,) to get the surplus honey out of the brood chamber in sheets; or to get box honey by the common bee, in the immovable comb hive;—then I say the latter is preferable, and the only way that will generally be adopted.

But the Italians are less apt to sting. That is true; but woe be to you when you are stung by them. Now I am not a seventh son of a seventh son of a bee man, and therefore won't make believe I am never stung when I am, as "bee men" generally do. For I am often stung, and in a few moments I forget it, the pain is so little. But a pure Italian sting is days in getting well on my flesh. But this I say, Italians run over my hand, light on my face, get under my clothes, crawl, with their stings out, on my flesh, but rarely sting. Yes, I never have been stung by one unless I pinched it.

"But the hybrids, or improved Italians, sting dreadfully." Ask a man with Delaware grape on the brain, if Delawares ever pay under ordinary culture, and he will of course say they do, and only the *divine* introducers of Delawares are to be believed, despite your own eyes and trials. But my experience is that impure Italians are no worse than common bees. The truth is, a hive of any bee occasionally is cross; so are all its descendants. I have a hive that was given me the first year I had bees. I have it yet. It is cross, and always has been, though its queens have been changed at least eight or ten times by removing and old age. And all its swarms are cross. There is no training it or its descendants. So I fight them, that's all, whenever it is necessary to do anything with them. I have other hives of common bees that are always mild. A path goes within two feet of one such hive and anybody can pass unstung. Go within ten feet of that splendid "gift hive," I just named, and there is a demonstration at once. My impure Italians act no different from common bees; indeed, not quite as bad.

In all this I am not condemning the Italians, nor those who have been at the expense to rear them, as well as import them. I only say, use them with a mind prepared for either gain or loss. And the point of my remarks in respect to them is, that while they may prove an inestimable gain, we are not to despise the arts by which the common bee is made to be profitable to us all. So far, only those who, either in this country or Europe, are interested in their dissemination, are the advocates of the Italians and their alleged gains. They are excellent men and would not deceive us, but may be themselves not aware yet of their ultimate value. While then it is wise not to receive too readily any new thing, we can at least do far better with

what we have, and for this latter purpose I have written this article.

The system best for the Italians may not yet be known. But hundreds have proven that of the common bee. And reader, after this you will, I hope, do better than your fathers, and the old, senseless, by-gone, traditional men, have done. If a live man, reading the invaluable RURAL NEW-YORKER, the best paper of its kind published anywhere, I have nothing to say to you; but the dull man who reads, half believes and never does, for him I have put in, I hope, a few genuine Italianized stings in this article.

Ithaca, N. Y. S. J. PARKER, M. D.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

WOOL GROWERS' MEETING IN AUBURN—PREPARATION OF WOOL FOR MARKET.

IT will be remembered that in response to the invitation of a Wool Buyers' Convention held in Rochester, in April, requesting the Wool Growers to meet with them in an adjourned Convention, a notice was issued that the N. Y. State Sheep Breeders' and Wool Growers' Association would be held in Auburn, on the evening of April 8th, to discuss and take action on the subjects entertained by the Rochester Convention, and all the wool manufacturers of the State were invited to be present and to participate in the proceedings.

The meeting was adjourned, on account of a severe storm, to the evening of the 9th.

Finding a fuller report of the proceedings in the Utica Herald than was made for us, and one which we believe presents an essentially correct, though brief synopsis of the debates, we adopt it with some trifling additions, which are placed in brackets.

AUBURN, May 10.

Last evening, a meeting of the Association was held in the Court House, in this city, for the purpose of discussing various matters in the interest of wool growers. Most of the members of the Association sojourning in town were present, and an assemblage of men exhibiting in its appearance and evincing in its action, more intelligence, and practical wisdom, greater frankness and honesty of purpose, is seldom gathered together. Among the gentlemen present we noticed Mr. Edwin Hammond, the famous Vermont sheep breeder, Mr. Sanford of the same State, Mr. Wing of Dutchess county, the breeder of Cotswolds, Mr. Holmes of Washington, Hon. Mr. Pottle of Ontario, Judge Ketchum of Wayne, and others, representing about every section of the State. The meeting was called to order by the President of the Association, Hon. Henry S. Randall of Cortland.

Hon. E. P. Pottle of Naples, Ontario Co., N. Y., was called upon to state the object of the meeting, which was, said that gentleman, to take into consideration the recent action of a convention of Wool Buyers, held at Rochester, which bore directly on the interests of the Association, and to indicate some line of action as to the right method of putting wool on the market. Wool should be put up in such a way, said Mr. Pottle, as to preclude the possibility of fraud. Every one having at heart the true interests of this branch of industry will see to this. But we raise wool to sell, and to sell for the highest price that it will bring. Farmers will prepare it for market with this object. Wool has been put up, confessed the speaker, in a manner disadvantageous to the manufacturer. It has been put up, after having been washed in such a manner as to make no difference in its character. Some farmers would take their sheep in sight of the water merely; some would do as much as swim them across the stream. This was not washing. He would not follow the dictation of a class of middle-men, who knew nothing at all about wool and its character; but if faults existed, he would have wool growers correct them out of respect to themselves. The fact is, however, that the highest premium has actually been offered by buyers to do just the thing that is complained of. They have made no distinction between washed and unwashed wool. The farmers have learned this, and learned also to neglect the unnecessary washing as a great and positive loss. If the miller will pay just as much for impure as for pure wheat, dirty and smutty wheat will be offered him. Mr. Pottle held that wool ought to be clean when presented to the manufacturer. The price ought to be graduated, and graduated according to quality. This will correct all the wrong. The manner of putting up wool in this State has lowered its price, unquestionably. New York wool ought to be put up so that it will bring the highest market quotations.

Mr. Pottle moved the appointment of a committee of seven, to frame resolutions in reference to the subject in hand. [He requested the President not to place him on the committee.] Carried. The committee appointed were Messrs. A. F. Wilcox, J. D. Wing, F. J. Marshall, E. Gazley, W. M. Holmes, D. W. Percy, J. S. Goodrich, and S. N. Franklin.

During the session of the Committee, Mr. Johnson of Wayne, said if we had the means to prevent the middle-men, who are ignorant of the quality of wool, but buying with reference to a percentage, from coming into the market, we can reach the question. Nineteen-twentieths of the wool bought in this section is sold to these men, who can't tell whether wool has been washed or not. If manufacturers will take hold of the matter themselves, they can correct the difficulty. Mr. Johnson's speech was a frank statement of the facts in the case, full of witty and pungent points, and told happily on his hearers.

He was followed by Mr. Hayden of Auburn, himself a manufacturer of wool, who presented the question from his standpoint. Mr. Hayden said he did not agree with the Rochester Convention. In relation to unwashed fleeces, he made it a rule to demand a deduction. He had found that the wool was cleanest in soft water regions. Wool can be bought in Michigan at better rates for manufacturers than here. He thought a third deduction of weight for unwashed fleeces was advantageous to the farmers. He thought the farmer should not put up tags and dead wool; it was as bad as the use of shoddy in manufacture. Mr. Hayden does his own buying. He would prefer not to have wool washed before shearing. It works better and cleans more easily at the mill.

The Committee on Resolutions here reported as follows:

RESOLUTIONS.

Whereas, A Wool Buyers' Convention at Rochester, N. Y., April 19th, 1867, recommended to wool growers the following "rules":

"1st. That sheep should not be allowed access to straw stacks, especially of barley or bearded wheat.

"2d. All sheep, except perhaps bucks, should be well washed in a running stream, and as early in the season as the weather will permit.

"3d. That sheep should be shorn, weather permitting, within six to ten days after washing.

"4th. At the time of shearing, the fleeces should be carefully folded, moderately loose, and wound with small, strong, light-colored, glazed twine, brought twice each way around the fleece, carefully excluding all dead wool and tags."

And, whereas, The same Convention recommended to wool buyers to be governed in their purchases by the following "rules":

"1st. A deduction of one-half on unwashed bucks.

"2d. A deduction of one-third on washed bucks.

"3d. A deduction of one-third on all other fleeces, black, unwashed or excessively gummy or heavy, or other unconditioned wool, or that made unmerchantable by an excessive use of twine, or by stuffing with tag, or dead wool.

"4th. In purchasing wool thus prepared for market, to pay a price proportioned to its relative worth as to texture, strength and other desirable qualities."

And, whereas, Wool Buyers' Conventions in other States have recently recommended the same rules as above to growers and buyers, and have gone so far, in some instances, as to require an effort to be made to obtain a list of such purchasing agents as disregard them, to the end that they may be discountenanced, and thus thrown out of business; it is hereby

Resolved, That sheep should be guarded as far as practicable from an admixture of hay, straw, thistles, burs, or other like extraneous substances, with their wool.

Resolved, That washing sheep in running streams, in season to shear them at the proper time in the spring, is often dangerous by reason of the coldness of the water, especially in regions where the streams descend from mountains or highlands; that it is not conveniently practicable in other regions, on account of the remoteness of running streams; that in many localities the prevalence of contagious diseases, like scab and hoof rot, render it unsafe to take sound sheep to any of the convenient washing places; that the natural yolk or "grease," if left in the sheared wool, does not injure it in any respect for keeping or manufacturing; that the greatest portion of the wool grown in the world is, and always has been, shorn and sold unwashed, without objection from any quarter; that we possess certain information that many of the largest wool manufacturers in the United States are willing, and a large number of them prefer, to have American wool brought to market unwashed; and that accordingly we recommend the wool growers of the country to consult their own convenience and inclinations in this matter.

Resolved, That the length of time which should elapse between washing and shearing cannot be determined properly by the number of days, but it should also be regulated by the state of the weather; that wool should not be shorn after washing until it has acquired its characteristic glossy look and soft feeling.

Resolved, That wool is not injured in the least degree for *manufacturing* by being done up as tightly as practicable; that, however, when done up extremely tight and then pressed together by its own weight in large masses, the difficulty of separating it by the sorter is increased; that there is no danger of producing this effect by any ordinary application of strength, when the fleece is folded and tied by the hand, but that it may be produced, especially in the case of greasy wools, in wool presses; that the twine used for tying should not be unnecessarily large, or used in unnecessary quantities, and should be of such texture that particles of it will not become incorporated with the wool.

Resolved, That dead wool, or any other wool of inferior quality or condition, should not be put within fleeces; but that such being the prevailing and well understood custom in this State, it is proper, in the absence of any contrary understanding, to put the tags of every fleece within it, if in equal condition.

Resolved, That any uniform and arbitrary rate of deduction on unwashed fleeces operates unequally and unjustly on growers, because some breeds and varieties of sheep have far more yolk or "grease" in their wool than others, because the proportion of yolk or "grease" which is retained in the unwashed fleeces of even the same sheep, depends in a great degree upon the care with which they are housed from rain and snow, because some flocks are kept where their wool becomes mixed with dirt and other heavy substances, while others are not; that such arbitrary rate of deduction for impurities is not tolerated in the sale of other farm products; that no excuse can be set up for it in the case of wool, but the inability of the buyer to determine the relative amounts of the impurity—in other words, his ignorance of his business; that wool growers are not required to submit to loss and injustice to enable wool dealers or wool manufacturers to employ cheap and unqualified agents.

Resolved, That the practice which has obtained among buyers of establishing a maximum price to offer for the best wools of a neighborhood, which is sufficiently low to enable them to offer nearly the same price for all the wools of that neighborhood, thus, in effect, sacrificing the interests of the grower who aims at high quality and condition, for the benefit of the grower of inferior and dirty wools, directly encourages the production of the latter, and offers a premium on those bad modes of preparing wools for market, of which the buyer so loudly complains; that it has tended, more than all other causes put together, to the debasement of American wools; that when the buyer will make a just discrimination in favor of superior quality and condition, he will have no difficulty in securing them.

Resolved, That we favor no prospective combinations, and that we utter no menaces to those of our number who do not carry out our recommendations; nor do we propose to be in the least degree influenced by such action on the part of others towards the persons who buy of us.

The resolutions were passed without a dissenting voice.

Mr. Johnson then brought up the question in regard to the advantage of the "yolk" of wool, or the grease that the fleece of sheep contains in quantities varying in different sheep. The speaker held that the prominent points to be sought after in a sire are length and thickness of staple, not "yolk." Grease is not transmitted. He had concluded that of all sheep he had ever seen, none ever produced as much wool as "Old Sweepstakes." The blood of that ram shows itself down to the "great-grandchildren. His wool was rather dry. The dry sheep keep more easily and are not so apt to become diseased. Mr. Johnson related, in his wonted piquant style, how he and his wife had washed a greasy fleece from twenty-two and one-half pounds down to six pounds eleven ounces.

Judge Ketchum of Clyde, Wayne Co., called the attention of the Association to the dog question. He set forth various facts relating to the destruction of sheep by dogs, which justify a demand for action on the subject. The amount of loss thus incurred by sheep breeders is enormous, and it comes about through dogs which are utterly worthless. The dog fund is quite inadequate to make up these losses. The statistics show only what is paid from this fund by assessors—not what is actually lost by owners. The damage awarded in Wayne county last year was about $2,000; the actual loss was probably $6,000. The speaker concluded by offering a resolution that a committee be appointed to inquire into the subject and report [at the next meeting of the Society] what should be done. Carried.

[The Chair appointed the following Committee: L. S. Ketchum, E. B. Pottle, A. F. Wilcox, F. H. Hibbard, J. V. Baker, Jr.]

After some remarks by Mr. Wm. M. Holmes of Washington county, to the effect that manufacturers are learning that unwashed wool is most profitable for them to buy, the meeting of the Association was adjourned.

N. Y. STATE SHEEP FAIR—VIEWING COMMITTEES.

IN the Report of the N. Y. State Sheep Fair, published in last week's issue of the RURAL, the list of Viewing Committees was omitted, which we regret. This omission is not chargeable to Dr. RANDALL, as the list of Viewing Committees was included in the copy which he furnished us. We give them now as follows:—w

CLASS FIRST—American Merinos—Rams, two years old and over, and yearling rams. Viewing Committee—F. J. Marshall, Peter H. McMillen, Wm. R. Pitts.

CLASS TWO — Fine Merinos—Ewes 2 years old and over—yearling ewes. Viewing Committee—Silas G. Holyoke, J. C. Short, Wm. T. Curtis.

CLASS TWO.—Fine Merinos—Rams, 2 years old and over—yearling rams. Viewing Committee—Wm. M. Holmes, D. M. Percey, G. B. Sackett.

Ewes, 2 years old and over—yearling ewes. Viewing Committee—Henry Willard, J. S. Goodrich, S. N. Franklin.

CLASS THREE.—Delaine Merinos—Rams, 2 years old and over — yearling rams. Viewing Committee—L. S. Ketchum, A. H. Clapp, G. J. Hollenbeck.

CLASS THREE.—Ewes, 2 years old and over — yearling ewes. Viewing Committee—Nathan Bottum, W. W. Wright, A. Hemingway.

CLASS FOUR.—Lambs of preceding classes. Viewing Committee—William M. Holmes, T. S. Steel, James Geddes, P. L. Atwood, E. E. Brown.

CLASS FIVE.—Long Wools—Rams, 2 years old and over—yearling rams. Viewing Committee—F. H. Hibbard, G. H. Chase, C. C. Taylor.

CLASS SIX.—Middle Wools—Rams and ewes, 2 years old and over. Viewing Committee—John R. Page, E. Gazley, Charles M. Davis.

SWEEPSTAKES — CLASS ONE.— Rams and ewes, 2 years old and over—do. yearlings. Viewing Committee—J. C. Short, F. J. Marshall.

CLASS TWO.—Ewes, 2 years old and over. Viewing Committee—H. Willard, J. C. Short.

CLASS THREE.—Rams and ewes, 2 years old and over. Viewing Committee—L. S. Ketchum, B. S. Wood.

Award of prizes to shearers. Committee—George M. Sisson, C. C. Taylor, N. H. Noyes, H. P. Randall, J. P. Maltman.

Rural Spirit of the Press.

The Colorado Potato Bug.

LAST winter there appeared in the Prairie Farmer a communication from N. RYERS of the Rocky Mountain News, in reference to the Colorado potato bug, its ravages and advance eastward. The substance of that letter was published in the RURAL. A subsequent communication, from the same source, materially modifies the first one. In the last the writer says: "Had I suspected that my letter, of Jan. 24th, would be published, I should have been more careful and explicit in my statements. The fact is there was nothing alarming in the appearance of the potato bug as it came under my observation. I found it upon occasional hills of potatoes in a field of several acres. In some cases they stripped most of the leaves from the vines. They were slow and sluggish in movement, and made no attempts to fly."

Less Ground and More Comfort.

ONE farmer complained to another that he had so much ground to till and look after that he could not attend to each section in a way to make them aggregately profitable. Besides, he had not a minute free from care and perplexity. He wanted some seasons of comparative repose but could not find them. A neighbor advised a sale of a considerable portion of the five hundred acres; the erection of more suitable buildings with a part of the avails, coupled with a thorough system of underdrainage and a greater diversification of farm products on what was retained. With a diminished area to look after and a higher grade of cultivation, cares and perplexities would decrease, while the profits on both capital and labor would steadily increase. This advice will not be relished by those whose ambition is to be "lord of all they survey," but to such as prefer home enjoyments, to extended power and care, it will commend itself as best calculated to secure a rational enjoyment of the blessings resulting from well regulated farm pursuits.

Poultry—Profits.

GEORGE R. HAWLEY, Glen's Falls, writes the Messenger of that place concerning a small experiment in poultry raising during the past season. His account embraces ten months, ending Jan. 31st, 1867. He paid for stock, Spanish and Brahma, $34.65; feed, 10 months, $10.20; advertisement, $1,50. Total cost, $46.35. He sold 14 doz. eggs, at $2 per doz., $28; chickens raised, $7; premium on poultry, $6; stock on hand, Feb. 1867, $34.65. Total credit, $75.65. Net balance in favor of the hens for ten months, $29.30.

Value of Artificial Fertilizers.

AT a late meeting of the Philadelphia Agricultural Society, Dr. LEWIS HALL stated that during the last summer he had analyzed different artificial fertilizers sold in Philadelphia, making particular efforts to ascertain their value as manures. He reported on seven different kinds, showing that their market value was about one hundred per cent. above the real one. Super-phosphate sold for $60 per ton, worth $38; second quality, $50, worth $40; third, burned ground bone, $60, worth $37.50; said there was very little ammonia in it—that the bones were burned so much before grinding that they lost about 3½ per cent. of their value. Peruvian guano, selling for $100, was worth only $49.50. His mode of reaching the value of guano was to determine the amount of ammonia in it; this was valued at 12½ cts. per pound; the phosphate at 1½ cents. Saldanho guano sold for $45, worth $20.79; Tuffoo sold for $16, worth $6.80; pondrette $20, worth $14. In view of these facts the Legislature is to be petitioned for the appointment of a Commissioner for the inspection of guano and artificial manures.

Timber Growing in the West.

J. S. MERRILL, Onawa, Iowa, says in a late number of the Iowa Homestead:—"Two years ago a neighbor of his and a hired man drove twelve miles to a sand-bar on the Missouri River, got fourteen thousand cottonwood trees, returned home and heeled them in the same day. They planted three thousand per day, with a spade, till all were in, and they have since grown finely. Last year he went to the Little Sioux, eight miles distant, with a scoop shovel, and quickly filled his wagon with maple seed and planted them. They promise well." He says that in seven years these will make three rails each, as he has tried them and knows whereof he affirms. They will grow, planted 4½ feet one way and 26 inches the other, 1,300 to the acre, producing an aggregate of about 13,000 to the acre in seven years from planting out. For confirmation of this estimate reference is made to Judge C. E. WHITING, West Fork, Monona Co., who has thousands of living witnesses of what is affirmed of timber growing in the prairie regions of the West.

Good if Practicable.

THE Maine Farmer has an article on the subject of meat for the Atlantic cities which has some important bearings. It is based on a proposition to slaughter the animals in the west and forward the meat east for consumption instead of transporting the cattle alive as is now done. If the change is feasible, and it is believed to be so, we think it would diminish the cost of meat considerably while saving the poor animals, designed for the shambles, from much suffering and deterioration in value. Sending live stock forward by railroad from five to fifteen hundred miles, with the best of care in severely cold or hot weather, is what should be avoided if possible. Changing the point of slaughter; providing cars specially adapted to the purpose of meat transportation and a free use of ice it is believed will accomplish the result aimed at. This plan would prevent the falling away of stock as it does in transit now; prevent injury to the flesh from severe and inconsiderate treatment; allow the meat to cool, before being served up as food and promote the healthfulness of those who consume it. Let experiment test the practicability of the proposed change.

Care of Farming Implements.

WANT of care, on the part of farmers, in cleaning and housing implements, adds materially to the cost of their farm operations, and, of course, impairs their cash balance at the end of the year. In the report of the trial of reapers and mowers at Auburn last season, occurs this timely and suggestive passage on the carelessness of many farmers with respect to their farm implements:—"It is unjust to the maker, whose reputation suffers in consequence; it is unjust to the agricultural interests, because the rapid deterioration in value of the machine lessens the real economy in its use; it is unjust to the consumer, because everything that enhances the cost of production necessarily adds to the price of the product." With reference to machines and their treatment, the report continues:—"As soon as the last work is done, the journals and bearings should be wiped, and all dust removed from the exterior, and the machine should be placed under cover, in a level position, where no part is subjected to strain. We are surprised that such advice should be needed, but as it clearly is, we can assure our readers that they will profit greatly by taking heed to it." When one sees valuable machines exposed to the weather for months, as they are in many instances, this rebuke of the practice cannot be regarded as untimely or impertinent.

SEVERAL communications in type are necessarily deferred for want of space.

Rural Notes and Items.

THE SEASON, CROPS, PROSPECTS, &c.— At the date of this present writing (May 20th) we are having what the farmers would gladly forego, *i. e.* another very "wet rain." In Western New York vegetation is not more advanced than it ordinarily is by the 25th of April, or the 1st of May. Grass is yet a "short bite," the maples, beeches, boxwood, apple trees, etc., are just putting forth the first leaves, cherries are not fully in blossom, and strawberries hardly show a sprinkling of white on the beds. Much barley and oats remain to be sown; a small breadth of potatoes and corn is planted, but the great bulk of these crops is yet to be got in the ground. Wheat is looking well, though the cold and wet of the last two weeks has been unfavorable, causing it to turn slightly yellow and show rusty looking spots. Oats and barley sown one month ago, on dry land, but just tinge the fields with green.

From our exchanges and letters we gather and condense a statement of the crops in the country. Over the larger portion the season has been equally as backward as here, and in many localities as wet. The wheat crop is reported as looking finely. In New England winter wheat looks well, and there is a larger breadth than usual on the ground; a large quantity of spring wheat has been sown. A good crop of fruit is also expected. In the Western States from Michigan to Minnesota and Nebraska, we receive the same favorable accounts of the winter wheat. An unusual breadth of spring wheat has been sown, also more oats than usual. Corn is being planted very largely. The high prices of all grains stimulates to increased efforts to produce them, and nothing is needed more by the country than large crops. The fruit crop also generally promises well. From New Jersey, Delaware, Pennsylvania and Maryland, come the same good reports of the wheat crop, spring grains and fruit. The peach crop in Delaware, New Jersey and Maryland promises to be a full one. Strawberries are being shipped from Norfolk to New York. In the Southern States an unusual breadth of corn has been planted. Complaints come from some States that cotton seed is scarce, because it was fed to stock, owing to the scarcity of other food. But if there is less cotton there will be more corn. In short, the country is making a big effort to grow a full supply of food, and the prospects for the complete attainment of the object are largely favorable.

Mr. MOORE advises us in a letter, dated, Cave City, Ky., May 15th, that "the crops generally look well, though the season is late, in all the regions I have visited. A frost last week injured the cotton crop and vegetables in Georgia, but it is not regarded as very serious. In Central Georgia the wheat crop is injured by rust; in all other sections I have visited it looks and promises well—especially in Virginia, North Carolina and Kentucky. Fruit is generally promising, though the peaches were injured by frost in Georgia."

IOWA—SEASON AND CROPS.—A correspondent, Iowa City, May 13th, writes that so late a season has not been known there for years. On the night of the 5th ice formed a quarter of an inch thick. Not much damage done, as vegetation was so backward. Seeding is very late; much ground yet to be plowed. Flax is reported to be quite a leading feature with some farmers. Fields of thirty, forty and even eighty acres are mentioned. Last year a field of thirty acres yielded $850 worth of seed, and $300 worth of lint—a trifle over $28 per acre. "Spring wheat looks splendid. A lack of seed restricted sowing somewhat—the farmers having sold close in consequence of the high prices ruling in the market. Seed wheat was scarce in consequence at $2.80 per bushel. One miller imported wheat from Chicago to supply his customers. A large breadth of corn is being planted this season.

MARYLAND AGRICULTURAL COLLEGE.—This institution, according to a notice in Maryland Farmer, has recently been organized under the direction of an intelligent Board of Trustees and a competent corps of Professors supplied. Agricultural instruction will be afforded to those who desire it—a farm and garden being supplied and under cultivation for the purpose of testing and exhibiting the best modes of cultivation. The College is located on the Washington branch of the Baltimore and Ohio Railroad—a half hour's ride from Washington and about twice that distance from Baltimore.

WHEAT GERMS VITAL FOR 2,600 YEARS.—A head of Egyptian seven-headed wheat, grown in Essex, England, from seed found in the wrappings of an Egyptian Mummy, *twenty-six hundred years old*, was shown us last week by JOHN PARK of Gates, Monroe Co. It was like the pictures we see of this curious grain produced in the days of JOSEPH and PHARAOH, and just brought from England by Mr. PARK. He also showed a peek of splendid Essex wheat, of full, round golden berry, bursting with its snowy contents, which he proposes to sow for seed.

CORN IN THE SOUTH.—The Griffin Star, (Ga.,) says the demand for corn, in that section, is very emphatic and prices are advancing. It advises the farmers to pay less attention to cotton and more to the production of breadstuffs. When the South becomes self-sustaining as to bread it will be the better able to extend the business of raising cotton if desirable. The Star is right whether its advice is heeded or not.

STUMP MACHINES—CORRECTION.—In our notice of the stump machine trial at Wayland last week an error occurred with reference to the numbering of the competing machines. The one from Corning was named as No. 4, and as having been tested last. It should have been the Parish Machine, Michigan.

A NOTED HORSE DEAD.—The Ovid Bee announces the death of the famous horse "Old Henry Clay" at the age of over 43¾ years. He held a high position on the stock list in the estimation of breeders—as remarkable for good qualities as for his longevity.

A LARGE EGG.—H. L. WILSON of Gates, in this county, has a young hen which commenced the egg season by laying some of the largest class. A sample one, shown to us, weighed 8¾ ounces. This will do for a beginning.

CROWDING CROPS.—A farmer, in Oneida county, writes the Utica Herald that he raises one hundred and fifty bushels of turnips per acre by sowing among his corn. He did not think they affected the yield of corn at all.

ÆRATING MACHINE AND EGG BEATER.—The attention of house-keepers is directed to an advertisement in our columns headed "Honorable Employment." It performs all it promises, as a trial of it has proved.

HORTICULTURAL.

THE TREE CURCULIO.

In the April number of the Practical Entomologist there was a long and interesting article from the editor, BENJ. D. WALSH, in reference to the common curculio and its allies. The family of American snout-beetles is divided into three groups, each of which is specifically described, its form, mode of propagation and habits delineated. Neither of these is known in the Pacific States. The snout-beetles, as a family, says Mr. W., are distinguished from almost all other beetles by the front part of the head being more or less prolonged into a snout, which, in some genera, is as fine as a hair, and in others about as wide as the head itself, and at the tip of which the jaws are placed. This snout, being part and parcel of the head, is consequently immovable, except along with the head; so that it cannot be confounded with the beak or proboscis of the true bugs and the two-winged flies, or with the tongue of the butterflies and moths.

The true curculio—the one especially destructive to fruits—may be distinguished from the other snout-beetle by having on the middle of each of its wing-cases an elongate, knife-edged hump, which is black and shining, so as to resemble a piece of black sealing-wax. Behind these two humps there is usually placed a broad clay-yellow band, marked in the middle with white; but sometimes this entire band is white.

The female makes her appearance about the time the plums are the size of a hazel-nut. She fastens upon the young fruit, and with the minute jaws on the tip of her snout makes the crescent-shaped slit in the skin of the fruit which has secured to her the popular name of the "little Turk." In this slit, with the same instrument which made it, she makes a hole, such as a pin would do, to a depth corresponding with the length of the snout, enlarging the bottom of the cavity somewhat. In this hole she deposites a single egg, and crowds it downward into the cavity at the bottom. Sometimes two or three excavations and depositions are made on a single plum, but she is generally satisfied with one perforation and deposite. This process is repeated on others till her stock of eggs is exhausted—about twenty or twenty-five in all. These eggs, in a few days, hatch a whitish legless grub with a scaly head, which eats its way through the plum causing it to drop prematurely from the tree, the gum being seen to exude from the original puncture. Having reached the ground, with the fallen fruit, the larva bores its way out and penetrates the soil a few inches and in a cavity there changes into the pupa state. A few weeks thereafter it emerges in the form of a perfect beetle—ready to carry on the work of destruction as its predecessor had done.

Though naturally inclining to prefer the plum, it attacks all other garden and orchard fruits with the exception of pears and quinces. These it rarely attempts to molest. Apples are much injured many times by being perforated or bored out by the labors of this pest of the fruit grower. It is supposed that a large proportion of these beetles perish in the ground in the pupa state for the lack of the necessary moisture to perfect their growth. This is supposed to explain the reason why fair crops of plums are obtained on clayey soils almost every year without taking the precautions essential to success on moister ones. These precautions, according to the article from which the preceding is condensed, are:

1st. Gather up and destroy all the wormy fruit, as fast as it falls from the tree, and before the larva has had time to leave the fruit and retire under-ground. Thus you nip the evil in the bud. The cheapest and easiest and most "Western" method, is to allow a gang of hogs the range of the orchard—hogs being very fond of green fruit and not having any squeamish scruples about the worms contained in it. This is the practice adopted by Dr. HULL of Alton, Illinois, one of the most successful plum-growers in the West. Sheep and cows will also eat green fruit; but then they will also browse upon the trees, and perhaps occasionally bark them. Where hogs are objectionable, either because other crops are grown under the same fence with the fruit-trees, or because the sense of propriety and neatness is offended by the habits of these animals, all that remains to be done is to hire that work done by human hands, which the hogs will do gratuitously and thank you for the chance. In any case, the work must be done systematically and regularly. It will be no earthly use to pick up and destroy the fallen fruit, *after the larva has left it and gone under-ground.*

By destroying the worm-eaten fruit as it falls, the crop of curculios for the succeeding year is, by so much, diminished.

"2d. Jar your trees regularly every day, catching and destroying all the curculios that fall therefrom. But recollect that the tree must be *suddenly* jarred, not *slowly and gradually* shaken; for the wind shakes the boughs of every tree continually, and yet the curculios do not fall to the ground in consequence. But how are we to catch the "little Turk," after he has fallen to the ground? TRIMBLE recommends a large square sheet to be prepared, with a straight strip of wood sewed along the whole length of its edges, by way of stretcher, and two shorter stretchers, each sewed to one-half of the opposite edge, the sheet being slit from between these two stretchers to its central point, to receive the trunk of the tree. By this means the sheet is more easily spread out, and the wind is prevented from roughing it up. But so long as the whole surface under the boughs of the infested tree is covered by white cloth, so that no curculios shall be likely to fall outside and escape observation, it is immaterial for the success of the process what fashion of cloth be adopted.

THE MOSS ROSE.

"Where the tree is not very large, and a limb of an inch or two in diameter can be conveniently spared, it is a good plan to saw off such a limb so as to leave a short stump to strike with the mallet in the jarring process. Otherwise, if the trunk itself has to be struck, it becomes necessary to pad the mallet to prevent injuring the bark. Where trees are quite large, Dr. TRIMBLE recommends that a common mop-stick be padded at the end and applied successively to the leading limbs, one after the other."

The conclusion of the whole matter seems to be this: If we want fruit we must fight for it; not by fits and starts, but constantly, during the proper seasons, and *fight to kill.*

WASHES FOR FRUIT TREES.

SEVERAL correspondents have answered the query, "What is a good wash for trees?"

"Chemung" recommends "soft soap, thinned so that it will run easily. Use an old broom and wash the upper side of the limbs thoroughly. If the trees are old, spread manure under them and over a space as the limbs extend. This wash is also good for the borer; to prevent its attacks I have sometimes wound young trees with brown paper and rags, tied on with twine close to the ground. Saturate these with the liquid and no borers will trouble the trees."

"E. O. H." has tried strong lye, with all the salt thrown in it which it will dissolve. The effect was good.

J. S. TIBBITS says, "a wash made of strong ashes, mixed with water from the barn yard, and made to the consistency of common whitewash and applied with a broom, is the cheapest and best wash for fruit trees that I have ever used."

HINTS ABOUT ROSES.

YOUNG SEEDLINGS which are up should be protected both from excessive wet or drouth. Budded or grafted roses should be looked after and diligence used to prevent stocks growing from their own wood instead of throwing their strength into the buds or grafts. Look out for sorts you wish to bud with; the latter part of June this work may be begun on strong-growing branches. Plant roses out in borders for summer blooming, and watch for the green fly and rose bug. Support strong-growing shoots so the wind will not break them, and pinch in and rub off superfluous branches, so as to form properly shaped bushes.

POMOLOGICAL GOSSIP.

Fruit Prospects — Illinois.—According to the Springfield (Ill.) Register the fruit orchards of Central and Southern Illinois were never before laden with so rich a bloom. The apple, peach and pear are alike clad in robes of white and pink, while the smaller fruits afford equally flattering hopes of a successful fruitage each in their season.

Grape Vines.—Amateur grape growers can enlarge their sphere of operations very materially, if desirable, in a very cheap way, according to the statement of "B. T." in the Cultivator. He says:—"Pin a long branch down into a shallow trench, and when all the buds have made a growth of several inches, gradually fill the trench up with earth; checking, by pinching, any disposition of some shoots to out-grow the others."

Strawberry—Productiveness Prolonged.—A correspondent of the Cultivator and Country Gentlemen says the productiveness of strawberry beds may be greatly prolonged in this way:—After the fruit is gathered, take good, rich compost and lay it around the plants to the depth of an inch or more. By this means the soil is brought up to meet the wants of the plants, insuring their productiveness for a number of years longer. Experiment vindicated the effectiveness of this mode of treatment.

The Wine Plant Again.—We learn from the Farmer's Advertiser that the Chillicothe Spectator—we do not see this journal—on the authority of a Mr. WILLIAMS, quotes the RURAL NEW-YORKER as an indorser of the "Wine Plant" enterprise. This the former paper calls a "joke on the RURAL." Were it worth while we could characterize it by a more emphatic name. The wine plant affair was referred to in these columns in terms suited to the impostnre sought to be palmed off on the public by the parties interested in the sale of a miserably poor imitation of wine.

Hedging.—The Prairie Farmer states that owing to the high prices of fencing materials and the difficulty of getting them, it must lead, and is leading, to a general adoption of the hedge for all outside farm enclosures. For this purpose the Osage is the main reliance in the prairie region south and southwest of 42° N., and in some cases still higher than this. Most of the seed now used is brought from Texas and Arkansas, and is obtained by peeling the orange as we do an apple—passing them through a roller-mill, when the pulp floats off and the seeds sink to the bottom. The seeds are dried and run through a fanning mill, when they are ready to market.

Grapes — Over-cropping.—The Magazine of Horticulture for May contains some readable "notes on grapes," by J. F. C. HYDE, from which we quote the following:—"One great evil is over-cropping the vines, and all cultivators should be careful to thin the fruit, when too many bunches set. It needs courage to do it, but the good of the vines requires it. There will be seasons, like the last, when the grape grower will loose courage, and feel that there are too many difficulties to be overcome to make the crop a reliable one for persons of only ordinary attainments in grape culture. But the horticulturist, of all others, should exercise faith and perseverance and he will overcome all obstacles."

Grafting.—The Germantown Telegraph says every farmer should learn to do his own grafting—an easy operation when one knows how. A sharp knife and a fine saw are prerequisites to the operation. Saw off the limb to be grafted and split the stock so as not to bruise it. Shape the scion wedge-fashion, both ways, with the bark uninjured. Place the rim of the wood of stock and scion exactly together that the sap may intermingle, and wax the section of contact well over. Two buds to a graft are sufficient. In making wax, take four parts of rosin, one of beeswax, and one of the best kind of tallow. Melt and mix well together, and when wanted, heat and apply to the point of junction of the stock and graft. The heating can be done on a portable stove or by a small fire made upon the ground where the labor is to be performed.

Evergreen Screens.—A writer in Colman's Rural World gives many weighty reasons for giving western homesteads the benefit of evergreen screens as a protection against the sweeping blasts of winter. The writer says:—"How easy it is to set a row of trees about the house, or at least where the cold winds come from—and no trees are so good as evergreens. They hug closely to the ground and prevent the wind from rushing in below, as is the case with other trees; and they will soon grow so as to ward it off higher." There is no doubt about the propriety of such protection, and it would pay well for every prairie farmer to supply himself with it. This is a good time to plant evergreens, and the Norway Spruce, White Pine, Scotch Pine, American Arborvitæ and Hemlock Spruce will answer for the purpose intended.

Every Child that eats fruit should be taught the importance of saving and sowing seeds and rearing them up to fruit bearing.

Horticultural Notes and Queries.

QUICKENING VEGETATION.—As the season has been so backward, it may be an object to farmers to accelerate the vegetation of their garden stuff by a little extra labor. This may be done by placing boards over the rows or hills where seeds are planted, as this prevents the ammonia from escaping and confines its power to the germination of the seed at the point most needed. As the plants push up through the soil the covering should be raised a little, and soon free scope given to them.

TARDY BLOOMING OF TREES.—This has been a very backward season for fruit trees. Ordinarily the cherry trees are full-robed by the first of May, while now, on the 17th of the month, not more than half the buds have expanded into blossoms. This tardiness may be atoned for in fruit, as the chances of injury by frost are thereby diminished.

APPLE TREE CATERPILLARS.—Several correspondents have favored us with communications respecting these pests. They recommend various ways for destroying them, but all agree in urging a vigilant warfare. Now is the time to kill them while in the nest; later in the season, when they spread, it will be impossible to destroy them.

HELLEBORE FOR THE CURRANT WORM.—The currant and gooseberry bushes will richly repay good care No fruit is more grateful in hot summer weather. Where the currant worm infests them remember that the *best* remedy is white Hellebore, powdered and sifted on the bushes when wet with dew. It can be obtained at any of the druggists, and should be applied as often as the worms appear.

DRYING FRUIT.—"Yorick" wants some person, having the requisite information, to write out for the RURAL some good plan for drying cherries, plums, berries, &c., on an extended scale, and thus oblige him and many others seeking like information. Who will respond?

APPLE TREE WASH.—(W. J. P., Pa.) Some of our correspondents recommend pure, strong lye as a wash for the bark of apple trees. Others soft soap, diluted so as to be applied easily. Whale oil soap suds is a good wash.

PROCEEDINGS OF THE ALTON HORTICULTURAL SOCIETY.—We are indebted to JAMES E. STARR, Esq., Secretary of the above named Society, for proof sheets, from the local press, of their proceedings.

SAWDUST as a mulch for strawberries sometimes lessens their value in market.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

EDS. RURAL:—As you appear, by the last RURAL, to be deeply solicitous to know how to make bread, "of best quality, light, sweet, *so* good"—and, as you yourself added, "alas so rare!" I will tell you:

At night take 3 pints of new milk, ½ teacup of good, sweet hop yeast, (enough for two large loaves,) stir in flour enough to make a thick batter. In the morning stir in more flour, and let it rise again. When light, knead it briskly ten minutes, (be careful and not get it too hard,) and put it on tins to bake. Set it where it will be rather cool till light, then bake 30 minutes.

ANOTHER WAY.—When milk is scarce, nearly as good bread may be made in the following manner:—At noon, (for two large loaves,) boil four large potatoes soft; mash them very fine; mix with them enough of the water in which they were boiled to make them as thin as yeast; when cool, add the hop yeast and let it stand till evening; then add more water, and flour to make a sponge. In the morning knead in a piece of butter the size of a butternut.

NICE FRIED CAKES.—Take 1 pint of buttermilk; 1 egg; 1 cup sugar; a piece of butter as large as a hen's egg; a little ginger; 1 teaspoon soda. Knead as soft as you can roll out.

GINGER SNAPS.—1½ cups molasses; ½ cup sugar; ⅔ cup butter; 1 teaspoon soda, dissolved in a half-cup of hot water; 1 teaspoon ginger. Mix stiff; roll thin.

EXCELLENT COOKIES.—1 cup sour cream; 1½ cups sugar; a piece of butter nearly as large as a hen's egg; 1 teaspoon soda. Season with caraway seed or nutmeg.—H. H. H., *Perry Center, N. Y.*

EDS. RURAL:—Please accept a young housekeeper's "mite" for the "Domestic Economy" of your valuable paper. The following receipes I *know* to be good:

YEAST.—2 large potatoes; 1 large handful of hops; put the hops in a bag and boil them with the potatoes in two quarts of water; take the potatoes out and mash in an earthen dish; strain the hop water on them; then add 2 tablespoons flour; 1 tablespoon ginger; ½ cup salt; 1 cup sugar or molasses; when cool add the yeast and set in a warm place.

TEA RUSK.—1 cup butter; 1 cup sugar; 1 pint of milk; 2 eggs; 1 teacup yeast.

WINE SAUCE.—Piece of butter the size of an egg; 1 cup of pulverized sugar; 1 wine-glass of wine. Set it on the stove and let it foam.

HOP BEER.—1 gallon of water; 3 handsful of hops; 1½ pints molasses; boil the hops in the water; strain; to one quart of this add the molasses and three tablespoons ginger; boil five minutes and then add the balance; take out a quart and let it cool; add a teacup of yeast; let it stand until it foams; add the rest, and then bottle or put in a keg ready for use next day.

LEMON PIE—THE BEST.—1 cup sugar; 1 egg; 1 cup water; 1 lemon; 1 tablespoon flour; when nearly done spread with the white of an egg well beaten, with a very little sugar.

SNOW CAKE.—Whites of 10 eggs; 1½ goblets sugar; 1 goblet flour; 1 teaspoon cream tartar.

COOKIES.—Two cups butter; 3 cups flour; 4 eggs; ½ teaspoon saleratus; flour to roll thin.

I would thank some of your readers for a good receipe for pie crust. MRS. F. L. P., *Canandaigua, N. Y.*

WHY NOT.—We can see no reason why D. B. De Land & Co.'s *Best Chemical Saleratus* should not be used in all cases, as it has no superior, and weighs more than other Saleratus.

SOFT SOAP FOR FIVE CENTS A GALLON.—Dissolve one pound of Pyle's O K Soap in three gallons of hot water, according to directions on each bar, and you have it. Sold by grocers generally.

A WOMAN'S TRIBUTE TO A POET.

In 1864, on the 70th birthday of Wm. C. Bryant, a choice company of friends met at his home, each bringing some tribute of poem or song, or fit present for the occasion. A number of contributions came from those unable to be present, and a pleasant volume was made up of these offerings of friendship, of which but a small edition was printed rather for private than for public circulation. A kind friend grants the privilege of selecting therefrom this beautiful poem, than which no purer gem can be found in that cabinet of jewels. It is by Mrs. Mary H. C. Booth, from Wisconsin years ago, but whose last years on earth were spent with a noble German woman, her firm friend, in Switzerland.

The Edelweiss is a rare flower held in well-nigh sacred regard by the Swiss.

TO WILLIAM C. BRYANT,

With a blossom of the Edelweiss, from the Swiss Alps, 11,000 feet above the sea:

Not from the cultured gardens,
And not from the daisied sod
Do I bring my little offering,
But down from the hills of God.

Down from the chrystal mountains
Where never a flower was sown,
Save the flowers that God hath planted,
In sight of the Great White Throne.

From over the nests of the eagles,
And under the Angel's feet,
Where the opal airs of summer,
And the winds of winter meet,

A flower I bring, an offering
From the snow hill's spotless crest,
And leave sweet songs, and silver crowns,
And earth-songs to the rest.

The Alpine hunters tell us
That when a Poet dies
God meets him at the Golden Gate,
Crowned with the Edelweiss.

But only those who worshipped Him
In singing Nature's praise,
And walked beside Him on the hills,
And through life's lonely ways.

Oh! King of Nature's songsters!
And thus I bring to thee
This blossom from the Alpine hills,
The glorious, and the free.

That, when the Angels bid thee pause,
Where oft thy soul hath trod;
To crown thee on the mountain tops
Upon thy way to God—

Thou then may'st recognize the flower
As one, while yet below,
And walking in the earthly ways,
Thou first hadst learned to know.

Thus, from no cultured garden
And not from the daisied sod,
Do I bring my little offering,
But down from the hills of God.

November 5th, 1864.

RHYMES—TEN OHIO GIRLS.

A letter came to the Rural editorial sanctum a few days since, from an Ohio post-office, written in a delicate ladies' hand, on the nicest paper, and in most bewitching style, asking the publication of a poem enclosed therewith.

The fair writer asked in behalf of "ten young ladies—all friends of the Rural." What music of pleasant voices, what ripple of laughter, what flashes and glances of soulful eyes—blue, hazel, and black—what consciousness of the joyful presence of gladsome maidenhood came up in our thoughts!

Dear girls, we are young in spirit yet, thank Heaven! even if older in years than your sweet selves. How *could* such request be refused? How resist a *ten-girl power?* The rhyme, by a young man, was smooth, and in easy and fit language. Its purport was, that on the banks of some beautiful river, with the usual allowance of moonlight, &c., he was accepted by a lovely girl; they parted, with plighted vows, and a year after came a letter saying she had met another whom she *really* loved, that she truly *thought* she loved him, but her heart told her she did not, and asking a release;—from all which he rounds out his last verse by declaring he shall never again put faith in woman!

Well, he wont die. He'll live and learn,—and get married too, we *guess*. The young woman who, without fickleness, but simply true to her own heart, finds that what in girlhood she thought was love, pales before a deeper feeling, and says so frankly to her friend, as in this case, saves both a life of pitiful suffering. If not heartless such word will be painful to say, but how weak to leave it unsaid. He ought to have more faith in woman, not less.

But the letter is lost—of course the rhymes are gone—and their author will be glad of it in due time. Perhaps they would not have been published, for we must look broadly at the needs of our great public, and the quality of what we give them;—its thought and benefit, as well as its easy words. Even this group of girls are few beside the thousands of their sisters, from Maine to California, whose growth to a true womanhood we would fain help. Here's the waste-basket, full of articles, good, bad and indifferent, for which we have no room. With a world of patient care we seek to give the best, impartially, and our ample pages run over constantly.

But come all around us, girls, and hear a word from our venerable chair. We see you standing, all-expectant, with arms twined around each other, and raven curls and sunny ringlets mingling, as you lean your heads, each toward her dearest friend, in that winsome way girls have. It's all well and natural to think and talk of marrying. Earnestly we hope you may all have true and noble husbands, and so live as to hold fast the love you have won. But it is *not* well to make this the one great matter of life, from the day you enter your teens. That dims the beauty and freshness of your souls, and puts affectation and restraint in the place of that natural ease and frankness that should exist in your social intercourse with young men.

Seek first to *be* something and *do* something. Let your education be complete and varied. You can get it in school, and you can drill yourselves to reading and study at home. Many a boy has been a ripe scholar from his study in his chamber or work-room. Why not girls as well? Never fail of your part in the home-work, that perhaps weighs on the falling strength of your good mothers more than you think. Rich or poor, know all about house-work, and be proud and happy in it, as young men (of any sense) are in theirs. If there be any useful occupation by which you can be self-supporting, enter it, for more or less time. It will be a good lesson; will give strength, and command the respect of the best people. The field of occupations which woman can fitly fill is growing broader, which is well.

If you have special wish and taste for Art, Literature, or some fit profession, and circumstances allow, put soul and strength into it, for good brave work, such as will win success. Thus the grace and glory of true womanhood will grow all the richer.

If marriage comes, some manly husband will reverence you all the more; and whatever life may have in store for you, the rich resources of your own natures, called into action by your devoted and resolute efforts, will be equal to your work, and be a means of enjoyment therein, winning the reverent and cordial affection of many loving friends.

Good bye, dear girls; we must turn to our work. Remember the old adage, "The gods help those who help themselves."

WHIPPING CHILDREN.

The great mass of parents have yet to learn that their displeasure with a child is no reason and no excuse for beating it. Nor does the simple fact that it has done wrong give them warrant to subject it to physical torture. Here, for instance, is a child of from five to ten years, who, in the hope thereby of attaining enjoyment or escaping punishment, has told a lie. Can you rationally expect it to love and speak the truth because you have mauled it? Is it not far more likely to hate and loathe you? That child will be a good deal more apt henceforth to tell one lie to hide another than to abhor and shun lying altogether.

"But may not a parent justifiably use force 'to restrain a child from evil-doing?'"

Certainly. If the child insists on throwing the hammer at the looking-glass, or doing any wanton, malicious mischief, the requisite force may be employed to constrain it into better behavior. But to restrain from evil-doing is one thing; to inflict pain because evil has been done, is quite another. Many a child has been hardened into inveterate depravity by chastisements inflicted under the mistaken notion that its evil propensities might thus be subdued and eradicated.

We beg parents prone to beating children to recall the experiences of their own childhood, and consider what were the effects of any and every penal infliction endured. We doubt that so many as one in ten can fairly say that all the parental beating did as much moral good as harm.

We are not pleading for indulgence. Every child should be taught to know the right and do it. What we urge is, that the rod, the whip, the cudgel, are implements of parental discipline which have, on the whole, done far more evil than good—that more children have been confirmed and strengthened in wrong doing than rescued therefrom by the infliction of physical pain. How many have been bludgeoned into idiocy or permanent mental infirmity by misjudging fathers, can never be known till the sea shall give up her dead. There are abundant means whereby a parent may evince his displeasure, or his sorrow in view of the faults of his child, without mauling it. Withdraw or withhold indulgences which you would gladly have accorded, had not your past confidence been abused—let your child realize that your love for it constrains you, most reluctantly, to render it less happy because of its transgressions—but keep the lash for unreasoning brutes, and beware of employing it to defend and disfigure the image of God.

HIGHER GRADE OF SOCIAL RECREATIONS.

The New York Evening Gazette says "in many families, this season, dancing has been discarded. In its place more elegant and intellectual diversions have been given, and with great success. Fine readings and recitations, ending in some cases with delicious suppers, the whole entertainment being over by midnight, have been the novelty. Such entertainments threaten to leave dancing a little in the background for a season or two."

They are cheering proofs, too, of a growth toward a higher social life,—a truer culture, in which there shall be no asceticism, but the recreations shall call into play mental and spiritual qualities now too much neglected.

The fact that costly silver presents to brides are giving way to presents of engravings and paintings, points in the same direction.

Wife Whipping in England.—The London Spectator says that of all the offenses, the one which in England is most difficult to check is that of torturing wives. "What with the reluctance of wives to imprison their bread-winners, the brutality of the population, the blunted feeling of magistrates brought into hourly contact with ruffianism, and the existence of a secret belief that wives must be kept in order somehow, it is safer to beat a wife nearly to death than to steal a hare."

Choice Miscellany.

SOMEBODY'S DARLING.

The following Poem, by Miss Marie Lacoste, is from a collection of Southern poetry lately published:

"Into a ward of the whitewashed walls,
Where the dead and the dying lay—
Wounded by bayonets, shells, and balls—
Somebody's darling was borne one day.
Somebody's darling! So young and so brave,
Wearing still on his pale, sweet face,
Soon to be hid by the dust of the grave,
The lingering light of his boyhood's grace.

"Matted and damp are the curls of gold
Kissing the snow of that fair young brow;
Pale are the lips of delicate mould—
Somebody's darling is dying now.
Back from the beautiful, blue-veined face
Brush every wandering silken thread;
Cross his hands as a sign of grace—
Somebody's darling is still and dead.

"Kiss him once for *Somebody's* sake,
Murmur a prayer soft and low,
One bright curl from the cluster take—
They were somebody's pride you know.
Somebody's hand hath rested there:
Was it a mother's, soft and white?
And have the lips of a sister fair
Been baptized in those waves of light?

"God knows best. He was somebody's love;
Somebody's heart enshrined him there;
Somebody wafted his name above,
Night and morn, on the wings of prayer.
Somebody wept when he marched away.
Looking so handsome, brave, and grand;
Somebody's kiss on his forehead lay;
Somebody clung to his parting hand.

"Somebody's watching and waiting for him,
Yearning to hold him again to her heart:
There he lies—with the blue eyes dim,
And smiling, childlike lips apart.
Tenderly bury the fair young dead,
Pausing to drop on his grave a tear;
Carve on the wooden slab at its head—
'*Somebody's darling lies buried here!*'"

Written for Moore's Rural New-Yorker.

LOOK WITHOUT.

BY H. BENNING.

The home of Mrs. Archer was in one of those New England villages upon which the sun rose in almost unclouded splendor on the last day of 1865. From Mrs. A., a happy loving wife and mother, that beautiful day received warm greeting, and as she thought of the year dying, her quick mind turned back the leaves written over with so many pleasant words that would soon be sealed away forever. And thinking thus, she determined that the only day of the year still left should be given to serious reflection, and looking into the motives and springs of her religious life, she would seek whether or not it was in all things fit and becoming, and wherein it lacked.

With this resolve she rose at once to perform her usual duties and gain the time she longed for. But the tasks of a busy housewife are never completed, and when Willie's "good morning, mamma," sounded through a hoarse throat, and baby was cross and fretful, the mother's heart asserted itself, and she could give them no less, but even more than usual care.

She could not go to church, but perhaps, bye-and-bye, the little ones would give her quiet. Not so; Willie clamored for the big book with Moses and Samuel in it, and baby opened her great eyes and pointed her tiny finger at those scenes so dear to the hearts of children in all ages. When Mr. A. came from church he told of a sad accident that had laid Bennie B——, the errand boy, upon a bed of suffering, and possible death, and again the kind heart spoke, and wrapping up a few dainty bits, and taking a book, Mrs. A. made her way to the miserable home of suffering Bennie. She moistened his lips with lemonade, spoke kind words of hope, and left him at last, with the book in his hand, and a blessing from lip and eye that she might not soon forget. On her way home she called for a few minutes at the house of a poor blind woman, and read a favorite chapter and sung a hymn.

The short winter's day was fading when she passed her own threshold, and the little ones needed mamma. And so it came to pass, that the day whose closing had fulfilled the morning's promise, was over, and Mrs. A. was too weary in body and mind for connected thought.

As she laid her tired head upon the pillow, her heart grew sad in view of the day she had promised to her own soul given only to the earthly life, yet even as she slept one of the ministering angels brought to her a message of peace and the words were, "Inasmuch as ye have done it unto one of the least of these, ye have done it unto me."

The voice of the Divine Master says not alone, "Seek within," but "Look at the fields ready for harvest." Do His work and He will take care of the motive.

AMERICAN BOYS.

Probably in every age since the time of poor Adam and Eve's trouble with their willful son, the world has been supposed to be near its end on account of the naughtiness of boys. We confess that, for ourselves, in moments of wrath at the impish perversity, or sorrow at the precocious wickedness of noted specimens of American boyhood, we have sometimes been tempted to that supposition, and certainly we could not much wonder if Young America furnished more food for the prophet's avenging bears than Young Israel supplied. Yet the world has continued to be so, and generation after generation has risen from petticoats to jackets and trousers, and from jackets and trousers to coats and pantaloons, without any utter extinction of masculine succession. That succession will probably be kept up in this hemisphere, and here, as of old, the folly of youth will, in due time, be subdued by the wisdom of age.

Our daughters are constitutionally more marked by sensibility, and our sons are more marked by willfulness. The consequence is that we are more anxious what will happen to our daughters, and what will happen from our sons—the daughter's sensitiveness exposing her to receive harm, and the son's willfulness exposing him to do harm. We are not wise to quarrel with Nature, and we must expect that boys will be more noisy and mischievous than girls; nay, we may count it a good sign of a lad's force of character if there is a good share of aggressive, fun-loving pluck in his composition. Well managed, his animal spirits will give him all the more manly loyalty, and when true to the right cause, he will be all the more true; because so much living sap has gone up into the fruit of his obedience.

Yet what is more sad than force of will perverted to base uses, and the strength of manhood sunk into the service of base lusts or fiendish passions? What is more sad than the sight presented every day in our streets—the scores of precocious manikins, with the worst vices of men written over features almost infantile in their mould—boys who are hardly old enough to be beyond their mother's watch, now swaggering with all the airs of experienced bloods, and polluting the air of God's heaven with the vocabulary of hell? Where such monstrous excesses are not found, how frequent is the utter repudiation of the proper reverence of age and authority! How many a stripling among us seems to think it the very first proof of manly spirit to break the Divine law which gives the home its blessedness and the State its security, and to be proud to show that he is above all such obsolete notions as giving honor to father or mother.—*Samuel Osgood.*

MISTAKEN DUTY.

Many a noble and useful life is actually wrecked for the sake of some self-created or, at best, strongly exaggerated duty, into which circumstances had drifted the individual, and for which all other duties (including the one, not to man but to God, to preserve for His utmost service the mind and body which He bestowed) are completely neglected. A mother will sacrifice all her children, and herself, upon whom her whole family depends, to save some one child who happens to have more influence over her than the rest; a sister will strip herself of every penny, and perhaps come to subsist upon charity in her old age, to supply the wanton extravagance of some scapegrace brother, for whom a workhouse crust or his own earning would be a salutary lesson; or—though of this evil let us speak with tenderness, for it verges on the noblest good—a daughter will waste her health, her strength, all the lawful enjoyments of her youth, perhaps even sacrifice woman's holiest right, love and marriage—for the sake of some exacting parent or parents, who consider that the mere fact of having given life constitutes the claim to absorb into themselves everything that makes life pleasant or desirable. These are hard words, but they are true words; and though it may be a touching and beautiful sight to see one human life devoted—nay, even sacrificed—to another, woe be to that other—aye, even if it were a parent—who compels the sacrifice!—*Author of "John Halifax."*

Common Tools Noble.—How we prize the relics of exceptional men,—an inkstand of Byron, a pen of Scott, the sword of Cromwell. But the tools which a man works with have a certain sanctity and nobleness; the hoe or hod of the laborer, the smith's hammer, partake of these. A wheelwright's son in England became Archbishop of Canterbury; and in his library he kept a wagon wheel, his own hand had made in his youth—counted it as an honorable escutcheon. He never did a wiser or better thing. The civilized world, with its palaces, libraries, academies of science, and galleries of art, rests on the solid shoulders of farmers and mechanics.—*Parker.*

WIT AND WISDOM.

Beauty lives with order.

A fool's weight is a simple-ton.

Sparrowgrass says that he prefers a quiet Hamlet to a noisy Othello.

Why dost wonder that Zion yields thee no refreshing, when thy cistern is bottomless, and the pitcher of thy faith is much cracked, if not broken in bits?

An Irish gentleman thus accounts for the fact of his countrymen making so many bulls:—"I cannot tell if it is not the effect of the climate. I fancy, if an Englishman was born in Ireland, he would make just as many."

An ingenious Parisian has invented a window that will shut by means of a lump of sugar whenever it rains. The rain melts the sugar, which holds a spring while it is hard. It is of no use when there are children in the family.

Dr. Johnson was one day dining at the house of an English lady, when she asked him if he did not think her pudding very good. "Yes," growled the moralist, "it is good enough for hogs." "Shall I help you to another plateful?" was her instant reply.

An Irishman, meeting another just landed from an emigrant ship, shook hands with him, and then, looking him in the face for a moment, exclaimed, "Faith, an' I thought it was you, an' you thought it was me; but, be jabbers, it's naither of us!"

Coventry Patmore gives the following advice:

So let no man, in desperate mood,
Wed a young girl because she's good.

To which one might add:

And let no woman in her plight,
Wed a bad man because he's bright.

CHEER UP SAD HEART.

BY R. RAYMOND.

God sends, alike, both sun and rain,
To beautify the earth;
Shall rays of joy and shades of pain,
Leave in our hearts but dearth?
He leads the way, though dark and dim,
He minds us all the day:
And if we fully trust in Him,
We can not lose that way.

Cheer up sad heart, and count it gain,
That many sorrows come.
In patience bear the ceaseless pain
That draws us nearer home.
A brighter day awaits above,
Our night of sorrow here;
Then let us trust a Father's love,
'Till morning shall appear.

May 7th, 1867.

DEATH AND SLEEP.

TRANSLATED FROM THE GERMAN.

With the intimacy of brothers, walked through the earth the angel of sleep and the angel of death. Evening drew near; they laid down upon a hill not far from the dwellings of men. A melancholy stillness reigned around; even the vesper-bell sounded not in the distant village. Still and silent as was their manner, both these beneficent spirits were locked in cordial embrace, and now it was night. Then arose the angel of sleep from his mossy couch, and scattered, with his left hand, the invisible seeds of slumber. The evening wind bore them to the quiet dwelling of the weary peasant. Now, sweet sleep encircled the inhabitants of the rural cottages, from the old man who walks with a staff, to the infant in the cradle. The sick forgot his pain, the mourner his sorrow, the poor their care. All eyes were closed. Now, after finishing his business, the beneficent angel of sleep laid down again with his more serious brother.

When the morning light appeared, he cried out with joyous innocence, "Then will men commend me as their friend and benefactor. O, what joy to do good unseen and privately! How happpy are we, the invisible messengers of the good Spirit! How beautiful our silent vocation!" Thus spake the joyous angel of sleep. Upon him the angel of death looked with silent sadness, and a tear, such as the immortal weep, entered his large, dark eye. "Alas!" said he, "that I cannot, like you, rejoice with joyful thanks. The earth calls me her enemy, and the destroyer of her joy." "O, my brother," replied the angel of sleep, "will not the good, upon awakening, recognize in thee a friend and benefactor, and gratefully bless thee? Are we not brothers and messengers of one father?" This he spake, when the eye of the death-angel glistened, and the fraternal spirits tenderly embraced each other.

COMMUNION WITH CHRIST.

The apostle Paul, who probably never saw Jesus except in the scene of his conversion, who declares that he did not know Him according to the flesh, is, among all the New Testament writers, the one who stands in most constant intimate communion with his Master. How he exhausts language to express the entire union of his soul with that of his Saviour! "I am crucified with Christ; nevertheless, I live; yet not I, but Christ liveth within me; and the life which I now live in the flesh, I live by the faith of the Son of God." "Of Him are ye in Christ Jesus, who of God is made unto wisdom, and righteousness, and sanctification, and redemption." "God hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ." "Who shall separate us from the love of Christ? Shall tribulation, or distress, or peril, or nakedness, or sword?" "I am persuaded that neither life, nor death, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any creature, shall be able to separate us from the love of God which is in Christ Jesus our Lord." The apostle Paul, outwardly, was separated from Christ just as we are, by the whole interval between time and eternity. Yet the most intimate friendships of earth pale before the glowing ardor of his love to his Master. Need there be anything essentially different between our relation to Christ and his?—*J. F. Clarke.*

Joy of Faithfulness.—"You know how preachers often speak of the joys of this life. I think they are apt to undervalue them. They make light of success, of riches, of comfort, of the joys of a happy home. I love these joys, and daily would thank God, by a constant cheerfulness, for what of them I have received or won. And yet they may be estimated too high. But the joys of goodness, of charity, of love to man and love to God, that faith which never wavers,—no man ever exaggerated these, or can; as no painter can ever portray the sparkle of a star, or paint the varied beauty of a rose, or the sweet fragrance in a lily's cup; for man's imagination cannot come up to the fact, and his speech delays behind. All this joy comes to men and women from personal faithfulness to God's higher law.—*Selected.*

As a man binds a tender sapling to a stake, that the wind may not wrench it, or throws out an anchor into the boiling sea, that the ship may be held by it, so must we bind our wavering hearts to the support of the Word of God, and stay the storm-tossed ship of our souls with the anchor of hope, that they may not sink.

The Reviewer.

"A WOMAN'S SECRET." By Mrs. C. F. CORBIN. From "Central Publishing House," Chicago, Ill.

THIS is no commmon book, but the fruit of long and earnest purpose to teach, in the guise of story, some lessons of the sanctity of maternity, the mutual reverence of husband and wife, and the base depravity of fashionable sensualism. The heroine, REBECCA MARCH, the daughter of a clergyman, is married, as she believes, to a man of elegant manners and ample wealth. She discovers the marriage was a sham, and that he intends to make her the victim of his selfish passion in the city. Summoning up all her strength she escapes with her child, gets it adopted in a kind family in a country town, follows as a stranger and gets a place as nurse in the home of Mrs. Darrell, the wife of a rich merchant. By her skill and sympathy in the sickness of a child she wins the friendship of Mrs. Darrell, they become like sisters, she reluctantly takes a place in Mr. Darrell's counting room, and goes into society somewhat, although avoiding display and notoriety, and commanding great respect. An eminent lawyer becomes attached to her and they are to marry, as she supposes her betrayer dead or in a distant land. She finds he is a relative of Mr. Gladstone, her affianced, and in an interview full of tender affection, eloquent feeling and sublime strength of self-sacrifice, she tells him they must part, but keeps her "woman's secret" close in her heart. At last Gladstone learns, not from her, the facts, drives the wretch from the country, and marries her.

The story is written with an ease and beauty of style rarely equalled, and is eloquent with the womanly aims of its author. Her ideal of womanhood is nobly beautiful. Her teachings of marriage and maternity are of most religious purity. An intelligent woman calls it the "Uncle Tom's Cabin" on the questions it treats, and its reading must be of signal benefit, as well as most absorbing interest.

Mrs. CORBIN has been known by a few poems of a high order, and was nurse in the army and freedmen's teacher in the war. For sale by DEWEY.

NED NEVINS, THE NEWS BOY. Rev. HENRY MORGAN, No. 9 Gorton St., Boston, Author and Publisher. Sold only by agents.

A VOLUME of 400 pages well illustrated and of interest not only to young folks, but to older people as well. Its author is the head of a mission enterprise for the poor, and the Boston Journal says, "has devoted himself to the work of reclaiming and benefiting them with great earnestness and much practical wisdom." He has woven *real* incidents and characters met in his eight years work into this eloquent and touching story; written not only with frank naturalness of description, so that the rude speech and quaint ways and earnest pathos of life among the young folks of the neglected and dangerous classes is clearly seen, but with earnest faith in the power of true christian effort in their behalf.

HOMESPUN; OR, FIVE-AND-TWENTY YEARS AGO. By THOMAS LACKLAND. [Pp. 350.] New York: Hurd & Houghton.

THE unknown author's *nom de plume* may mean that he lacks land, but cannot that he lacks genius or soul. This is a book full of interest,—a series of sketches of the simple scenes and marked characters of life in the quiet country. The Preface says—"It has fallen to the lot of royal families to have their historians and chroniclers, but to farmers and plain country people never;" and the aim is to help supply this deficiency. "Thresholds, Barn-Life, Town Meeting, Country Store, Farmer's Wives and Daughters, A Day's Work on the Farm," are topics of some of its chapters. Its descriptions are fascinating in their fresh *naturalness;* many a quaint lesson in manners and morals can be found too. Sold by DEWEY.

SORGHUM AND ITS PRODUCTS. By F. L. STEWART. (12mo.—pp. 249.) Philadelphia: J. B. Lippincott & Co.—1867.

THIS is a neatly printed volume on a subject which is attracting a large share of public attention in the northern, middle and western sections of the Union. The author appears to have well informed himself upon all points connected with the culture and manufacture of sorghum and, if we are not mistaken, has produced a volume that will be eagerly consulted by all interested in the subject of which it treats. It is prefaced with a perspective view of an evaporating range which seems to combine all the essentials of such an aid in the manufacture of sorghum products. For sale by STEELE & AVERY.

OUR NEW STATES AND TERRITORIES. Notes of a recent tour through Colorado, Utah, Idaho, Nevada, Oregon, Montana, Washington Territory and California. By A. D. RICHARDSON. New York: Beadle & Co.

THE author is a good observer, and tells well of what he sees. He is well known as a Tribune correspondent, and a prisoner for eighteen months in rebel *durance vile*. A great amount of interest and value is packed in the eighty double-column pages of this fifty cent pamphlet. The plates of BRIGHAM YOUNG and of his residence, in the RURAL of May 4th, are samples of the many excellent illustrations which add to its interest.

CHAMBER'S ENCYCLOPEDIA. A Dictionary of Universal Knowledge for the People. Illustrated by Wood Engravings and Maps. Parts 117 and 118. Philadelphia: J. B. Lippincott & Co.

A REPRINT of a useful work by these famed Edinburgh publishers, who have done so much and well to spread information before the people in Great Britain, and our own country also. It is a compedium of knowledge on all subjects, handsomely printed, as well as carefully prepared, and the monthly numbers, of over sixty double-column pages, are sold at 25 cts. The full sett will be most valuable, and probably some dozen numbers more will complete it. Sold by J. RATCLIFFE, No. 9 Smith's Arcade.

NICHOLAS NICKLEBY. Globe Edition. Illustrated from Designs by DARLEY & GILBERT. New York: Hurd & Houghton.

ONE of DICKENS' best stories in new and attractive dress, larger type than the diamond edition from Boston, yet portable and tasteful. Its illustrations are excellent, and the "Globe" style of this enterprising firm of publishers must be wanted by the public. The story is too well known to need comment. Sold by ADAMS & ELLIS.

DAVID COPPERFIELD. Diamond Edition. Boston: Ticknor & Fields.

ONE of DICKENS' charming stories in the fine, clear type and tasteful dress of this "diamond" style. The cost of the plain edition is $1.25; illustrated, $1.50 per volume.

LADY'S ALMANAC, for 1867. Boston: G. Coolidge and Lee & Shepard.

A *bijou* of 100 pages—Croquet, Poems, Stories, Anecdotes, Pictures, and no *trash*. A poem on "Peace" is excellent. Sold by DARROW & KEMPSHALL.

Educational.

UNIVERSITY EDUCATION OF WOMAN.

WOMEN of highest character are asking for a better and broader education, and the demand seems just. The old custom of separate education of the sexes in colleges seems yielding. Indeed, it would be an odd *query* for learned and grave gentlemen to answer, *when* the boy and girl, that studied together in school, with manifest benefit to conduct and manners, and no perceptible injury to their studies, should be separated. Still more difficult, perhaps, to show that while men and women, young and old, meet and mingle in family, travel, business and social life, such meeting in college classes would be a disaster.

Cambridge University, England, old, favored and rich, passed for admission, after due examination, 1,338 young men and 202 young women, but a few weeks ago. A great change, indeed! At Oxford, its great rival, the ablest men are discussing the matter, and giving eloquent reasons for woman's higher education, to help her to self-sustaining and noble success in after life.

The great University of London has a new charter admitting women to degrees in law and medicine, and they are entering for both departments already.

The Regents of the Michigan State University, at Ann Arbor, where are over 1,200 young men, in classical, law, medical and engineering departments, with twenty professors, at a late meeting unanimously passed a resolution to examine the question during the coming season; giving as a reason these changes in educational matters in Europe, the petitions of women in their own State for admission, and the passage of this resolution by the Legislature last winter:

Resolved, That it is the deliberate opinion of this Legislature that the high objects for which the University of Michigan was organized will never be fully attained until women are admitted to all its rights and privileges.

The great "Cornell University," now building at Ithaca, on which $1,000,000 is to be spent, is to be opened impartially to men and women.

NEWSPAPERS AS SCHOOL EXERCISES.

B. F. S. GRIFFIN, a teacher in Charlestown, Mass., has adopted, with excellent results, the practice which the Edinboro Journal also suggests, as follows:

If the children in our schools are kept at their lessons every day without any change, the school seems dull, monotonous and lifeless. Something out of the usual round of duties is needed to excite and stimulate the pupils. An exercise from the newspapers has been recommended for this purpose. On some afternoon let the books be quietly laid aside, and the scholars give attention while the teacher takes up the paper and reads some of the items. Perhaps the telegraphic column will be read first. It may be that the loss of the Evening Star will be noticed. The scholars will immediately want to know how large the ship must be to carry three hundred passengers. Where the passengers were going. Why so many persons were going South at this time of year, and how long it takes to make a voyage to New Orleans. They will inquire what a life-boat is, and how it happened that a small boat could reach the land in safety when a large ship was disabled and sunk by the storm. Perhaps the column will be headed, Burning of Quebec. Two thousand five hundred houses burned. They will ask, Where is Quebec? What is a convent? How came there to be convents in Quebec and none in this vicinity? If there is not time to answer all these questions, some of the pupils will take these thoughts home with them and press them there. It will form a topic of interesting conversation, and probably interest the parents in the school.

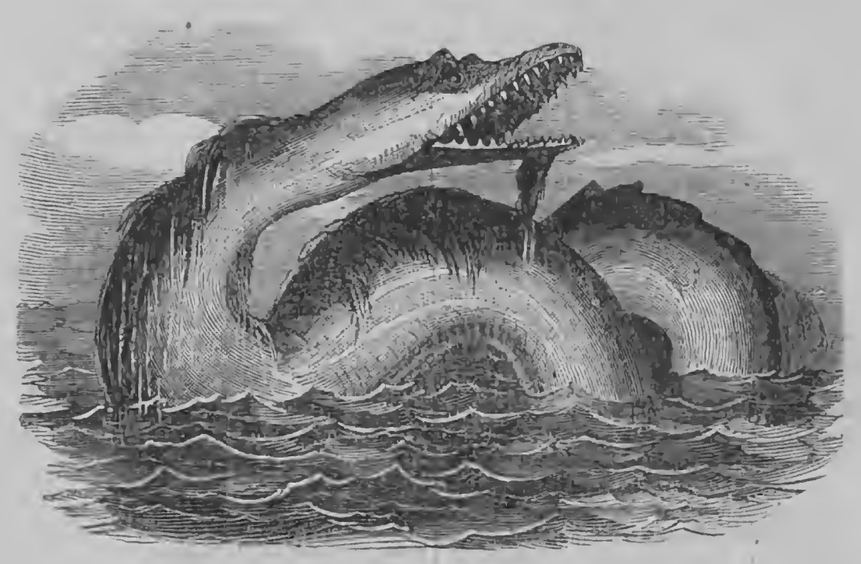
Perhaps next will come a report of a mass meeting at the Cooper Institute, New York, and the names of the speakers. The teacher can question the pupils upon the location, size and characteristics of New York, explain the design of the Institute, and the plan of the Cooper Union in connection with it. He can give a brief sketch of the life of some of the speakers, and the difficulties they have overcome. The nature of a mass meeting, and the design of the particular one in question, may form a profitable topic for discussion.

Perhaps he will read some of the advertisements, and the pupils will want to know how the goods are manufactured, and how one man finds it profitable to advertise in all the papers while others do not advertise, or how one man can sell goods cheaper than another, or the signification of the letters at the foot of some of the advertisements, as for example:—D&w6w, deod, 3tos&4tis, my6tf, deod&eotf, oct9*.

Perhaps the teacher will read the shipping list, and the scholars will want to know from what countries and by what route the vessels have come, with what they are loaded and how long they were on the passage. These questions once started will lead to a profitable and most interesting discussion. The pupils will arouse themselves from their stupor, they will take hold of their studies with more earnestness, and carry home a spirit of inquiry which will make the family circle more pleasant. There may be an almost endless number of interesting questions thus stated, and the pupils will feel that they are learning something of value. Such an exercise may be given every morning at or just before the opening of school, and it will have a tendency to make all the scholars prompt at school.

I HOLD that seeking the good of others gives a man tact, and makes him amiable, and fills him with the most exquisite sense of propriety. He knows how to do good in the right way. There is ever so much Scripture against doing good with noise and racket.

TWO VIEWS OF THE GREAT SEA-MONSTER.



THE FIRST APPEARANCE.

A WRITER in Beadle's Monthly, in November last, describes *his own sight* of this monster, and the illustration is engraved from his drawing taken on the spot.

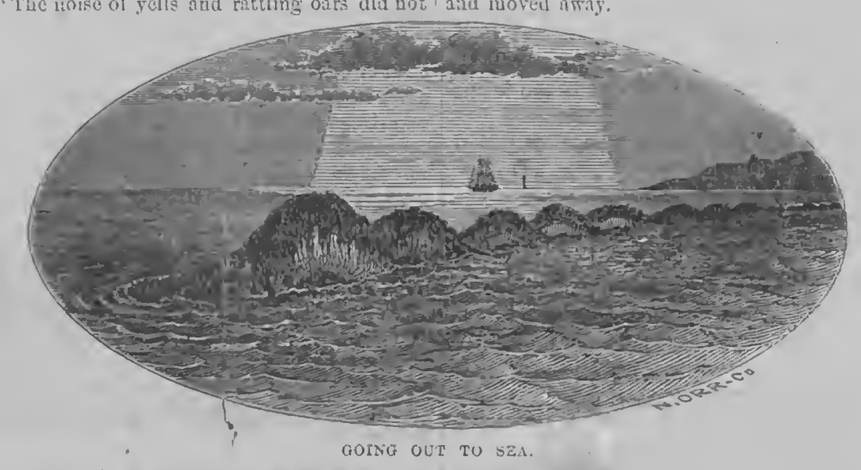
In 1855 he spent some months in Nova Scotia, and at the little village of Green Harbor, on one of the bays of that rough coast, saw what we give his own description of. Standing among the group of men and women on shore, watching the fleet of fishing boats eagerly moving shoreward from some unseen danger, a woman beside him shrieked and pointed to the farthest boat. He says:

"I looked, and sure enough, there was a monster within a stone's throw of that two-masted boat, whose crew of a man and two boys were struggling to escape. I can never forget that horrible sight! Slowly and majestically moved that hideous length of undulating terror, but fast enough to keep pace with the boat. Near what might be a head, rose a hump or crest, crowned with a waving mass of long, pendulous hair, like a mane, while behind, for 40 or 50 feet, slowly rolled the spirals of his immense snake-like body.

"The noise of yells and rattling oars did not disturb him, but he came so near that I believe I could have shot him from where I stood. In a moment he raised his head, from which the water poured in showers, and opening horrid jaws screamed like the hissing sound of steam from a boiler's escape-pipe.

"Although safe, it made me shudder. He turned his head and displayed the jaws, armed with rows of glistening teeth, with a long tuft of hair, like a goat's beard, hanging from the lower jaw. The head and upper portion of the body was a dark, dingy blue, fading to a yellowish white on the belly. Under the mane I could see glittering scales. The head appeared smooth and horny, and perhaps five or six feet long. I could see no fins or gills. Seeing from a moderate distance, I describe thus minutely. The monster turned and moved slowly seaward, in full view for ten minutes, giving ample time for me to take two rough sketches, and slowly sank while moving north."

The next day, when on a boat, he saw him again, by looking over the boat side, some fifteen feet below the surface, and he rose to the top and moved away.



GOING OUT TO SEA.

Various Topics.

SOUTHERN EDITORIAL CORRESPONDENCE.

MY old friends will expect sometimes to hear from me, although if they could know how little time I get they would not wonder that I write so rarely. If I have my health, and make myself well acquainted with the South, and feel that I can make myself interesting for an evening, it's quite possible they can have me among them next winter. If I fail to interest it will not be for the lack of material, for my mission has been one of very great interest, and a great mass of valuable facts have been gathered. It is astonishing how little of the true condition of the people and of this country is understood by the Northern people. With a genial climate and most fruitful soil, they ought to be prosperous and happy. They are just now starving and suffering. It must be hard when people go for days and weeks without meat, and only a scanty supply of meal, and no prospect for any under at least six weeks. They are anxiously looking forward to the ripening of blackberries to get something to alleviate their hunger, if but in a small degree. From a careful examination of the country from Richmond, via Charleston and Augusta, to this place, and from facts which are reliable that have come to my knowledge, I am satisfied that there are not twenty families in a hundred who are able to eat three full meals a day. Nor do I believe there are ten which are not compelled to scrimp in their food arrangements. In about six weeks the wheat harvest will bring relief for those who can pay for flour, but there are thousands who must suffer till the corn crop begins to mature. It is true some relief will come from the early fruits, and a small amount of good will be done by the distribution of seeds—turnip and cabbage in particular,—but there will be a vast number who will starve, or only keep alive by the most common food in the fields. The sufferers can be counted by millions of both races. Starvation just now has no respect for color. Much has been and is being done, but it falls far short of the actual need.

My mission meets with great favor among the people, while military authorities render me the utmost aid in their power. Both the people and the Department will be under great obligations to the several Department Commanders for their most judicious aid and counsel. So far as I have been able to judge, the country is most fortunate in the selection of its Department Commanders, as well as their subordinates.

But I sat down to write of Atlanta, a marvel of a town,—unlike any other I ever saw. Imagine a tract of hilly land about four miles square, with a town built up with about the regularity of a last year's potato patch when the field had been plowed, and the potatoes harrowed out. A house here, and a block there; streets running everywhere, and nowhere in particular—up hill and down hill,—about as definite as the old nursery rhyme of "Up stairs, down stairs, in my lady's chamber." No main street, no business street, no fashionable street, everybody on his own hook, and the town to match. A busy, thriving population, no water power, no great manufacturing, "no nothing" to make a town—and yet one of the most active and thriving towns, North or South, that can be found. I can only understand its prosperity from the fact that it stands on the dividing line between the cotton and grain regions, with a magnificent system of railroads ramifying over each. Its population is a cross between the active, energetic, wide-awake, young South, and the ingenious, equally active, universal, young North, both bent on making a fortune out of somebody, or one another. It has one of the finest climates in spring, summer and autumn, and the most detestable in winter; and yet if I were a young man with some capital, I do not know a town in the United States, or *its Territories*, that I would sooner settle in. Commend me to Atlanta as the "*livest*" town yet seen.

Atlanta, April 29, 1867. T. C. P.

WHAT IT COSTS TO TELL THE TRUTH IN PARIS.—On the day after the street sale of La Liberte had been prohibited in Paris, M. Girardin published an article headed "What it Costs to Tell the Truth," referring to the costs of his own trial. In the course of his remarks M de Girardin said that, "If you tell a Sovereign how to be great, he will treat you as Louis XIV treated Vauban, or Louis XVI Turgot; he will say you are perverse and a charlatan. But tell him he has never committed a single fault, and he will overwhelm you with favors and repose in you his entire confidence." For these words the Government has commenced fresh actions against La Liberte.

PEAT FOR SMELTING IRON.—The Fishkill Iron Company have used peat in their furnace for eleven weeks, at a saving of about twenty-five per cent. over charcoal or anthracite, and less use of limestone for flux. The Ontario furnace is about to use peat, and in Wisconsin it has been tried with good results. In that State peat is plenty. This success, if permanent, will b of great value.

WE learn, from lately published returns of the new census in the State of New York, the rather startling facts that there are now living in that State 262 mothers, who have each had 18 children and upwards. The number of those who have had 20 children is 39; 10 have had 23 children, while a peerless 6 have contributed 25.

Reading for the Young.

BOYS.

WHAT *lots* of boys read the RURAL—acres of them, if they all stood together! *Ever so many* boys, living on farms all over the country—sturdy, bright, wide-awake little fellows—going to be men one of these days, too. Begin right, boys, and you'll come out right, if you only keep on. You would all like to be first rate men. I don't mean famous and widely-known, for men are sometimes famous and yet not good, but honorable, healthy, capable, brave, gentle and true. That's the kind you want to be, and then it's no great matter whether you're famous or not. Don't make a great bluster and be rough and hard, thinking to be manly. Kick up your heels and have lots of fun out-of-doors, when your work is over, and it's the right time for sport; but be a little quiet in the house, gentle with your little sisters, and not tiring mother with a great noise. Do your work *well* and *in time*, and learn how to do things just right—little things as well as great ones—and that will make your work easier and better all your life.

Don't chew tobacco or smoke, because somebody you like does. If any one else, who may be good in many respects, gets a bad habit, that's no reason why you should. Of course, you won't drink liquor or swear. Pitiful business for men, and worse for boys. Just have a good time, by being good and pure, and you'll find it the best way.

I know all about being a boy, *just how it feels*, for I've not got over being one yet, although I can find gray hairs. But this must stop, for the column is full and the great press will soon be rattling off the RURAL, and the folding machine catching the open sheets in its iron fingers and doubling them all nice for wrapping, and the boys (we have several capital boys working here) will be putting them in wrappers, and the clerks marking them, and the men putting them up in great canvas bags, to go, in wagon loads, to the post-office, and the cars and steamboats and stages will carry them in the mail bags, to your post-offices, and you'll be catching the horses—black, white, roan, and so on—in the pastures, to have a bare-back ride, or a buggy-ride, after your father's mail, and then *such a time*, when you bring home the letters and other matter, and the RURAL.

A BEAUTIFUL PLEASURE CRAFT.

IN the yard attached to the Rensselaer Iron Works, is to be seen a beautiful model of a propeller, of the mosquito class, which has been constructed and is now being fitted up under the personal supervision of Mr. John A. Griswold, Jr. The craft is about twenty feet in length, and six feet beam. An engine, of three-horse power, from Starbuck's establishment, is now being adjusted in her. The craft is to be called the "Monitor"—an appropriate name, certainly—and it is to be used by its owner as a pleasure boat—*Troy Whig*.

The young gentleman to whom the above allusion is made, furnishes a model example to youth. Blessed with the advantages of wealth and leisure, and those opportunities which so many pervert to their ruin, he employs his time and talents with an assiduity that is very remarkable, for self-cultivation and development. Though still in his teens, there are probably few persons in this section better versed in the laws of mechanics. He understands thoroughly every branch of the immense iron works under the management of his father, and has originated, we understand, several marked improvements in machinery. The pleasure craft alluded to was built upon plans all of which were made by himself, and much of it is the work of his own hands.

AN INTELLIGENT HEN.

THE Washington (Ga.) Gazette has the following:

DANBURG, March 28, 1867.

MR. EDITOR:—I warrant that I have the most intelligent and peculiar fowl. She is quite a large sized hen, between the common fowl and the Shanghai. My little daughter can take the hen upon her knees and pat her on the back, and say, "Sing, Betsy," and she will sing as requested. She will then say, "Sing loud, Betsy," and she will sing at the top of her voice, which is very loud. She will say, "Sing soft, Betsy," and she will change from the loud tone to a very soft one. And to cap the climax in the way of obeying and pleasing the children, my little niece put Betsy in a chair the other day, and began to pat her on the back, saying at the same time, "Lay me an egg, Betsy." Betsy sung a very short, soft song, and then stood up in the chair, and to the great delight of the children there lay in the chair an egg. She will follow my wife all over the house and yard and garden, just like a pet dog, and will sing or not, as she is directed to do. JAS. W. BARKSDALE.

THE BRIGHT SIDE.—At the close of a dull, rainy day a little girl pointed to the west and cried, "Look! O look, papa! the sun's brightening all it can." "So it is," replied her father, "and you can be like the sun if you please, looking happy, smiling, and never letting the tearful rain come into those blue eyes." The next day the music of the child's voice rang through the house from sunrise till dark, and she seemed as happy as she could be. "What makes you so happy?" asked her father. "Why, don't you see I'm the sun, papa! I'm brightening all I can!"

IF you crack jokes at other people's expense, you may get your head cracked at your own.

A YOUNG man, with a pair of fast horses, soon gallops through a fortune.

SPRING CAMPAIGN
OF THE
RURAL BRIGADE!

A NEW QUARTER OF THE RURAL

Began April 6.—a good time for new clubs or additions to old ones to commence, though we can still furnish back numbers from Jan., or subscriptions may date from Feb. or March 1st. March is a good month in which to fill up Premium Clubs already begun, and also to form new ones. There are hundreds of localities in which clubs may yet be organized and Rewards of Merit secured. Our former Premiums are continued, and several new ones added.

ANOTHER SEWING MACHINE PREMIUM!—*Take Your Choice!*—Since our Spring Campaign Premium List was issued we have made an arrangement by which we can give the celebrated HOWE SEWING MACHINE (Cash price $60) for Fifty-Five yearly Subscribers to the RURAL (40 of them being *new*) at our club rate—$2.50 per copy. This offer extends to July 1st, and subscriptions can commence Jan. 1st or July 1st, or any time between those dates. Our offer of the Wheeler & Wilson Machine (price $55) for Fifty Subscribers (40 of them *new*) is still continued.

ANOTHER SPLENDID PREMIUM!—By request we have added LAMB'S FAMILY KNITTING MACHINE to our list of Premiums. For 65 Yearly Subscribers (at least 50 of them being *new*) at club rate, $2.50 per copy, we will give a Lamb Knitting Machine, the Cash Price of which is $65.00.

MORE YET.—We have also added BOTY'S WASHING MACHINE, price $14, and will give it to every person remitting for 30 subscribers (20 of them *new*,) at club rate;—and the CHAMPION CLOTHES WRINGER, price $9, which we will give for a club of 15 subscribers (10 of them *new*,) at club rate.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., MAY 25, 1867.

NEWS OF THE WEEK.

From Washington.

GEORGE BANCROFT is appointed Minister to Berlin, vice J. A. Wright, deceased.

The Registers of Bankruptcy have not yet been appointed. The intention is to officially inform the Judges of the respective Courts from time to time of the appointments, while withholding the information from the press.

The Commissioner of Internal Revenue has decided that wagons, carts and drays, made to be used for farming or lumbering purposes, and baggage or express wagons made for carrying freight exclusively, and not to be used as pleasure carriages, are, by the act of March 2, 1867, exempt from taxation.

Gen. Grant has ordered that a company of cavalry shall accompany a number of professors from Bloomington, Illinois, on a scientific tour to the west slope of the Rocky Mountains. The expedition will be gone about three months, and furnished with transportation and subsistence.

John C. Breckenridge and Judge Thomas of Virginia, have not been indicted for treason at Richmond.

The case of the State of Mississippi *vs.* E. M. Stanton, Gen. Grant and Gen. Ord, was decided against that State by the Supreme Court.

The Judges were divided, but their views are not made known. The Court is adjourned until the first Monday of next December.

Western Matters.

A PRODUCE EXCHANGE has been opened in San Francisco, in view of the growing grain exports.

A railroad from Sacramento, Cal., to Stockton, will be finished in ninety days.

At St. Louis, last week, a steamboat Convention with delegates from Louisville, New Orleans, Wheeling, Cincinnati, and other cities, met to consider navigation interests.

Marsh's grain dry-house at Chicago was destroyed by fire on the 15th inst. Loss $80,000, with small insurance.

The Michigan Convention to amend the State Constitution, met at Lansing the 15th. Hon. C. A. Croswell of Adrian, is President.

The St. Louis Democrat correspondent with Gen. Hancock, writes from Fort Hayes that the march has been of 450 miles; the Sioux and Cheyennes, warlike tribes, have been separated from the Kiowas, Arapahoes and Camanches, more peaceful.

Kansas is free of hostile Indians, and Smoky Hill routes well guarded.

Gen. Custar waits at Fort Hayes for grass for his cavalry, and then goes on against the Sioux and Cheyennes.

In the last eleven years the California mines have produced eight hundred millions of dollars in gold. This immense treasure could be compressed into a space 12 by 15 feet, and 12 feet 4 inches high, weighing 1,327 tons.

A letter from Springfield, Illinois, says wheat is growing magnificently,—an immense breadth of land will be planted in corn. Fruit of all kinds will be abundant.

The colored men of Ohio have called a Convention on the 3d of July to help on the work of striking the word "white" from the State Constitution.

Gen. Sherman, just from Kansas, says "we can have Indian war or not, as we choose."

A "Woman's Suffrage Association" has been formed in St. Louis.

From the South.

JEFF. DAVIS' plantation, with that of his brother Joe, have been sold to a former slave of Jeff's for four hundred thousand dollars, on ten years' lease, and the colored man, it is said, will make eighty thousand dollars this year.

A Baptist Convention in Mobile, largely attended, passed resolves in favor of education of freedmen, and preparing fit persons among them for ministers.

The Democratic majority in the late Congressional elections in Kentucky is about 42,000.

A serious riot occurred at Brownville, Tenn., the 14th, charged by some to rebel whites, by others to negroes.

At Mobile the 15th, Judge Kelly of Philadelphia was speaking out of doors to a large audience, when pistols and guns were fired, and two men, one white and one colored, killed, and several men and boys and three policemen wounded. The meeting was broken up. Orderly meetings were held the next day by the whites and blacks.

Horace Greeley and Gerritt Smith addressed large audiences at Richmond last week, advising the colored people not to look to confiscation for farms, but to be industrious and earn means to buy them. Riots were discouraged.

Gladstone's Resignation.

THE circumstances of Mr. Gladstone's resignation of the leadership of the English Liberal party are these:—The question of going into Committee of the Whole on the Reform Bill being before the House of Commons, the Liberals introduced an amendment that the Committee at the same time take up the law of rating property holders, upon which, by the proposed bill, the franchise is based, and adopt a standard above which every rate-payer shall vote, the object being a still further extension of the franchise. A fraction of their party, numbering 48, refused to vote for this amendment, and it was withdrawn, greatly to the disgust of the great body of the Liberals in the House. The severe criticism of Mr. Gladstone that followed this, induced his resignation.

He is a man of noble qualities and generous culture, but the habits and feelings of his aristocratic education, for the hour, overcame his sympathy with popular rights, and thus the sturdy Commoner, John Bright, steps naturally into the place of the great leader in the elevation and enfranchisement of the English people.

Foreign Intelligence.

AN imposing Reformers' meeting in St. James Hall, London, in favor of still greater franchise extension, was addressed by John Bright on the 15th inst.

Orders were issued from London the 17th for measures to restrict the rinderpest, which has again appeared.

Omar Pashu has lost 3,000 men in two battles with the Cretes.

The European powers have again asked Turkey to cede the Island of Crete to Greece. The Sultan refuses.

The King of Prussia, at the opening of the Diet, made a speech in favor of the national unity of the South German States as well as those of North Germany, which only are in the Confederation. He was loudly applauded.

Orders from Paris have gone out to disband reserves and stop military preparations. Luxemburg will soon be evacuated.

Frederick William, Crown Prince of Russia, goes to the Paris Exposition.

Fenian prisoners are on trial at Dublin. A vessel has been chartered at Liverpool to lay a cable from Florida to Cuba.

The Russian-American treaty has been ratified at St. Petersburg.

NEW YORK ITEMS.—Rev. F. Young, D. D., of Trinity Church, is chosen Bishop of Florida.

A monument to fallen soldiers of the 7th N. Y. regiment is to be built in Central Park.

The steam ram Dunderburg has been sold to France for $3,000,000.

Jefferson Davis and family passed through the city last week on their way to Canada.

The American Homeopathic Institute has its 20th Annual Session on the 5th of June.

THE LINCOLN MONUMENT.—The fund for the erection of a suitable monument to the late President Lincoln, has now reached a sum sufficiently large to warrant the Committee in commencing the work, and they will shortly be prepared to receive plans and specifications for such a monument, from the artists of the country at large. The ample resources of this fund should secure a work which shall stand not alone as a memorial of the illustrious man, sleeping in its shadow, but also as a crowning work of American art, worthy to go down to the ages.

TRAVEL TO EUROPE.—The travel to Europe from the United States, to visit the Great Exposition, is far less than was expected three months ago. The Great Eastern has been withdrawn, after sinking several thousand dollars in one trip. Other vessels which were chartered have also been withdrawn on account of insufficient passengers. The truth is, the Great Exposition was a sensation before it was opened, but it is not destined to draw as it was expected it would. We think it is fortunate that Americans have determined to remain at home.

ABOLITION OF SLAVERY IN BRAZIL.—Don Pedro II. has ordered all slaves free in twenty years, and all born after April 1st to be free at birth. With a territory somewhat larger than ours, Brazil has a population of eight millions, one-fourth white; the rest negroes, Indians and mixed. Two millions five hundred thousand are slaves.

IRON-CLADS FOR SALE.—It is reported that Russia may be willing to take iron-clads for her Northwest possessions, and that the Japanese may wish to buy. We have more than are wanted, and have shown the world "how to do it." Let us sell the surplus now.

MEXICO.—Late reports from Mexico state that the Imperialists are hard pressed in the cities of Mexico and Queretaro, and the Liberalists are refusing to entertain proposals of settlement made by Miramon.

NEWS PARAGRAPHS.

THE largest paper mill in the world is about to go into operation at Greenville, Conn. It will turn out 35,000 pounds of printing paper per day.

THE exercises of the "Rochester Theological Seminary" have occupied most of three days, the past week, and have been very satisfactory.

IT is proposed to establish union churches in fifty places in New Hampshire, where no one denomination is strong enough alone to support a church.

THE Methodist Church in the United States has upwards of 50,000 German members, more than half of whom have preaching in their own language.

THE protest of the London clergy against ritualistic practices is now complete. It contains 423 signatures, representing 1,101,600 parishioners.

A SCOTCHMAN being asked to say what he thought "real music," answered "Real music! hoot man, 'gin ye wad hear *reel* music, listen to the bag-pipes!"

ONE of the most remarkable things connected with the opening of the canals is the shipment of large quantities of wheat from Albany to Oswego and Rochester.

THE Washington Young Men's Christian Association have bought a lot on the Avenue, for $40,000, and will erect a building, with lecture-hall, reading-room and library.

IN a heavy thunder storm last week, Mr. Warren Stewart's barn at Cherry Creek, Chautauqua county, was struck by lightning, and a pair of horses valued at $350, were killed.

KOSSUTH still resides in Turin. He has grown prematurely old, and bears in his person the marks of the cruel disappointments and vicissitudes which have marked his life.

THE Eight Hour Law is signed by Governor Fenton, as it has been supposed it would be. Where no agreement is made eight hours is a day's work, but does not apply to farm labor.

THE contribution of New York to the South has thus far reached $175,000; Boston, nearly $44,000; San Francisco, over $40,000 (in gold;) Philadelphia, $38,000; Cincinnati, $7,000.

FIFTY cent stamps are being extensively counterfeited and "shoved" in Philadelphia. The engravings are well executed, but the notes are one-eighth of an inch narrower than the genuine ones.

THE Ellis Locomotive Works at Schenectady are now employing 480 men, and turning out a finished locomotive every week, having a contract for twelve from the Union Pacific Railroad Company.

THE new Franco-American Telegraph Company, which proposes to lay an electric cable between Brest and Halifax, has been promised the support and assistance of the Imperial Government.

IMPRISONMENT FOR DEBT has been at last abolished in France by a vote of 136 to 92 in the *Corps Legislatiff*. A step forward. Let England abolish her law, now greatly modified, but still allowing such imprisonment.

IT is stated that the Erie Railway Company are about doing away with the use of wood on their locomotives, and have commenced selling off the wood they have on hand. This will be good news to those who burn wood, as it will tend to reduce the price.

IT is in contemplation to erect no less than one hundred and twenty-five public drinking fountains in New York during the present season, besides a number of fountains fitted for supplying dogs and other small animals with water, which will be erected by the society for the prevention of cruelty to animals.

ONE of the craters on the surface of the moon situated on the eastern part of the Mare Sereni, tatis, has vanished. The hypothesis is that it has been filled up by an eruption of mud, which would prevent the appearance of the shadows which indicated that there was a crater there. This shows that the surface of the moon is undergoing alterations.

DURING the process of extinguishing the fire in the colliery of Claekmannan, near Stirling, Scotland, in 1851, about 8,000,000 cubic feet of carbonic acid gas were required to fill the mine, and a continuous stream of impure carbonic acid was kept up night and day for about three weeks. The mine extended over a surface of twenty-six acres, and had been thirty years on fire.

KAUFFMAN of New York, has just finished a picture which represents Abraham Lincoln earning his first dollar. The incident is that which was often told by the late President when he ferried passengers across a river and received a silver dollar for his services. In this picture he is seen in his small flat boat, resting upon his oars, looking earnestly at the silver coin which he holds in the palm of his hand.

DU CHAILLU, the African explorer, will deliver two lectures in New York before the Association for the Advancement of Science and Art. His subjects will be "The Physical Geography and the Inhabitants of Equatorial Africa," and "The Gorilla, the Chimpanzees, and the Dwarfs." He will also lecture in Brooklyn before the Long Island Historical Society. M. Du Chaillu returns to Europe in June.

THE pendulum experiments connected with the great trigonometrical survey in India have shown that, contrary to previous theory, gravitation is less powerful as we approach the Himalaya Mountains; corroborating the Astronomer Royal's opinion that the strata below the mountains are less dense than those beneath the depressed portions of the surface. Nothing could be more probable than that the upheaved portions of the coast should be the weakest.

FARMERS AND BOOK AGENTS.—Attention is directed to an advertisement in another column addressed to Book Agents. We have examined the Farmer's Journal and do not hesitate to pronounce it just the thing for every farmer. Its simplicity and completeness does away with all the objections and difficulties which farmers find in keeping accounts, and by the use of this book they may save many times its price every year. We learn from the publisher that it meets with a ready sale. This is as it should be.

THE MASON AND HAMLIN CABINET ORGANS.—The extraordinary success of Messrs. Mason & Hamlin in introducing the Cabinet Organ is based, without doubt, on the excellence of the instrument. They are not content, however, with what they have already accomplished, and with the bushels of testimonials and pecks of medals which they have received, but are constantly investigating what inventors consider improvements, and purchasing and using them if they are found of value.—*Boston Advertiser.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, May 21, 1867.

THE past week has witnessed no change worthy of note in the financial aspects of the country. The money market is reported to be easy, and the supply of money abundant at 4 to 5 ₩ cent., according to the character of the paper offered. In London on the 18th, equal quietude prevailed. American stocks were without quotable change. The war cloud, having blown over for the present, the fluctuations in the market, which characterized the earlier days of the month, have ceased.

The Banking House of D. W. POWERS of this city, sent forward to-day, by the American Express Company, over half a million of dollars in Compound Interest Notes to the U. S. Assistant Treasurer, New York, for the purpose of conversion into the new Five-Twenty Bonds.

WOOL.—The wool market is without quotable change, but transactions have increased during the past week, the advantage tending to the side of the purchaser.

WHEAT AND FLOUR.—These remain without material change, though the tendency, if any thing, seems rather upward.

BEEF.—This has advanced from two to four cents per pound within a few days, and many predict that the apex has not yet been reached. Mutton has also gone up in a corresponding degree. Dressed hogs show no change. A slight advance in salted pork is perceptible. Dairy products remain at about former quotations.

HAY AND STRAW.—These articles have advanced rapidly during the week, and from the appearance of the market the former will be likely to reach $40 per ton before the close of the week. Business on the canal is very dull—the ice in Buffalo harbor still impeding lake operations.

THE AMERICAN NATURALIST,

A POPULAR, ILLUSTRATED,

Monthly Magazine of Natural History,

Published by the

ESSEX INSTITUTE, SALEM, MASS.

Terms: $3 a Year. Single Numbers 25 cts.

From the appreciative notices of the press, and letters received from eminent teachers and practical scientific men, as well as persons of general culture, the Editors feel assured that the publication of the American Naturalist, which covers a new field in this country, will be a decided success.

The circulation of the first number of the Naturalist has already reached two thousand during the first month of its existence, and is rapidly increasing, showing the demand for a popular Natural History Journal adapted both for family reading, and as a medium of interchange between all lovers of Nature, who already can be counted by thousands in our country.

For the small subscription price of $3,00 we give a handsomely printed yearly volume of *over six hundred* pages with upwards of fifteen *full page illustrations* and many wood cuts, illustrating the Animals, Plants and Geology of our Country. It thus affords a rich fund of facts about the Haunts and Habits of the Inhabitants of our Fields, Woodlands and Waters; with timely warnings of the attack of Animals injurious to crops, and practical hints regarding Fish Culture and Bee-keeping, thus embodying facts of interest to every Farmer, Physician and Teacher, and all others wishing to keep informed of the latest discoveries in Natural History.

☞ Send for Information and a Prospectus. See our List of Contributors, which embraces the best scientific talent of the country.

WILLIS' STUMP MACHINE.—This machine, which has now been in use for more than ten years, and over 200 have been sold and distributed in various States of the Union, South America and the far West, is being manufactured at Rochester, N. Y., under the supervision of the patentee. It possesses almost unlimited power, and is so simple in construction that should any portion or part be broken, it can readily be repaired by a common blacksmith or carpenter.

With one span of horses or oxen, it will extract the largest stumps—standing green trees—large rocks and boulders, and move the largest buildings; it also operates on side hills, as well as on level ground, which no other machine can do that I have seen. It is so simple and compact that the whole apparatus can be loaded on a wagon in 10 minutes and set to work again in the same period of time. The usual amount of work is about 10 tumps per hour, and with a sufficient length of chain and rods, can clear an acre without moving the machine. It is about the only machine that drops the earth and removes the stump from its bed and turns it over.

It is the true Archemedian lever, and its power irresistable and only limited by the strength of the chains and rods. The patentee has a large number of certificates of its performances, from various persons, testifying to its powers in all its uses; among which is one stating, that at Ogdensburgh, with his small machine, five men without a team of any kind, drew out a pine stump 3½ feet in diameter in 8 minutes, and with the large one, drew 11 pine stumps, mostly large ones, in 37 minutes, which will be shown, together with a machine to all inquirers. Holland Gay of Orange, (Mass.,) pulled 56 large stumps in a single day without any one to aid him in the work.

It becomes a profitable investment, for an energetic person to travel and job the country with. Mr. WILLIS manufactures his machines at South River, N. J.; Orange, Mass., and Rochester, N. Y. Letters, asking information, should enclose a stamp. Any person wishing to see this machine work can do so by calling on Mr. WILLIS, Rochester, N. Y. For further particulars as to sale of rights and machines, apply to the undersigned at Rochester, N. Y. W. W. WILLIS.

MOORE'S RURAL NEW-YORKER, D. D. T. Moore, Editor and Proprietor.

THE METHODIST,—Geo. R. Crooks, Editor.

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists in former editions of the leading papers of the country.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessaries at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Extract from the commercial column of the New York Daily World of May 9, 1867:

Teas.—The ship George Shotten, which arrived at this port recently from Foochow, brought 12,831 packages of Tea to the Great American Tea Company.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ lb.

All goods sold are warranted to give satisfaction.

These Teas are chosen for their intrinsic worth, keeping in mind health, economy, and a high degree of pleasure in drinking them.

Our Black and Green Mixed Teas will give universal satisfaction and suit all tastes, being composed of the best Foo Chow Blacks and Moyune Greens. English Breakfast is not recommended, excepting to those who have acquired a taste for that kind of Tea, although it is the finest imported.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,

Post-Office Box, 5643 New York City.
No. 640 BROADWAY, corner Bleecker street.
No. 461 EIGHTH AVE., north corner 34th street.
No. 299 SPRING STREET.
No. 205 FULTON STREET, Brooklyn, cor. Concord St.
No. 123 GRAND STREET, Williamsburg.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-office money orders, or by Express, as may suit the convenience of the club. Or, if the amount ordered exceed thirty dollars, we will, if desired, send the goods by Express, to "*collection delivery.*"

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to us.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name. The numbers of our Houses are advertised above.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. Howe, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

SEND FOR CIRCULAR.

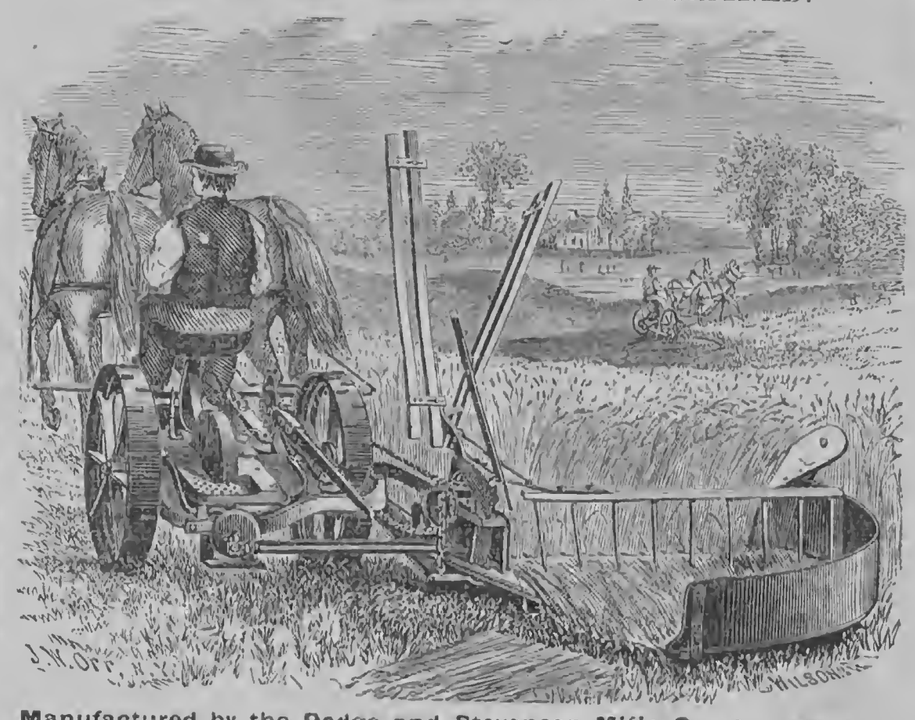
DODGE'S PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal, as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some Great Improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

1867.

The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED

HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly forty years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by Wm. Sansom, and general agencies as follows:—J. D. Easten, Chicago, Ills., Richard Cromwell, Baltimore, Md., Jones & Hewlett, Stockton, Cal., and Wm. Lyne, San Francisco, Cal.

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Put'd Aug. 1863, Improvements Put'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (25 bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

FLAX AND HEMP CULTURE.

$25 A DAY!—FIFTEEN New Articles for Agents. O. T. GAREY, Biddeford, Maine.

THE LESSON OF THE WATER-MILL.

LISTEN to the water-mill
Through the live-long day.
How the clicking of its wheel
Wears the hours away.
Languidly the autumn wind
Stirs the greenwood leaves;
From the field the reapers sing,
Binding up their sheaves.
And a proverb haunts my mind
As a spell is cast—
"The mill cannot grind
With the water that is past."

Autumn winds revive no more
Leaves that once are shed;
And the sickle cannot reap
Corn once gathered.
And the ruffled stream flows on,
Tranquil, deep, and still,
Never gilding back again
To the water-mill.
Truly speaks the proverb old,
With a meaning vast—
"The mill cannot grind
With the water that is past."

Take the lesson to thyself,
Loving heart, and true!
Golden years are fleeting by,
Youth is passing too.
Learn to make the most of life,
Lose no happy day;
Time will never bring thee back
Chances thrown away.
Leave no tender word unsaid,
Love while love shall last—
"The mill cannot grind
With the water that is past."

Work while the daylight shines,
Man of strength and will!
Never does the streamlet glide
Useless by the mill.
Wait not till to-morrow's sun
Beams upon thy way;
All that thou can'st call thine own
Lives in thy "to-day."
Power, and intellect, and health
May not always last—
"The mill cannot grind
With the water that is past."

Oh, the wasted hours of life
That have drifted by!
Oh, the good *that might have been*,
Lost without a sigh!
Love that we might once have saved
By a single word;
Thoughts conceived, but never penned;
Perishing unheard.
Take the proverb to thine heart,
Take, and hold it fast—
"The mill cannot grind
With the water that is past."

The Story Teller.

Written for MooreRural New-Yorker.

MR. WEST'S VISIT TO NEW YORK.

Moore—Why, how are you, neighbor West, and when did you return from New York?

West—Good evening Mr. MOORE, walk in, glad to see you, take a chair. Well sir, I got home yesterday, safe and sound.

M.—How did you find the markets, as well as all of your friends?

W.—Well sir, I found butter and cheese extremely low, and that made me feel so dull that I did not make any inquiry about fruit or produce.

M.—I suppose you saw many interesting sights during your visit.

W.—Yes sir; the fact is there is so much to see that a man forgets what he has seen, and you know that a stranger don't always know where to go to see the most interesting objects.

M.—That has always been my difficulty when I went to New York, I did not know where to go, and my friends were so busy that they could not go with me, consequently I never enjoyed myself.

W.—That's so, friend MOORE, and there is another difficulty in a countryman going to the city, the confounded sharpers that are always loafing around to swindle everybody they can, making believe they are so very kind to show you all around and then rob you.

M.—Yes. That just reminds me of a story I heard of an adventure that you met with; do tell me about it, for I confess I cannot understand it.

W.—A story you heard about me? Guess not. What do you mean?

M.—Why, something about your buying a pocket book.

W.—Well, if that don't beat the nation: how under the sun did that get out?

M.—I don't know, indeed; but it did seem curious that a man of your shrewdness could have been so deceived.

W.—Well, you see Mr. MOORE, I don't like to say much about that adventure, for some folks would say that I was green to be fooled so completely. What bothers me the most is to know who told about it.

M.—Never mind about that—give us the true version.

W.—Well, you see neighbor MOORE it is not always advisable to tell the truth, particularly when the truth concerns only yourself; but I guess I will tell you all about it. You see, one day as I was walking up West street—that's the street on the west side of the city next to the water, and just on the corner of Dey street, I felt something strike my leg, and in an instant a fellow picked up a pocket book just at my feet, and off he went. Well, before I had time to think, a well dressed man stepped up to me and said, "that man has got your pocket book." "Oh no, said I, I guess not," for you see I clapped my hand on my pocket book immediately and found it was safe. "Yes he has," said the man, and he insisted upon it. So thought I, he is an honest man and I will humor him. I said where did he go? Said he, "come with me and I will find him, and make him give it up." So off we started and found the dropper only a few feet off behind a country market wagon. My friend walked right up to him and seized him by the collar, and said he, "give me that pocket book, it belongs to this gentleman for I saw him drop it." "No you did'nt," said the dropper; "its mine, for I found it." "That's played out," said my friend, "and if you will give it up this gentleman will reward you." "How much will you give," said the dropper. Now, you see Mr. MOORE, I knew it wan't mine, but I thought I might just as well have it as him, and if it should be advertised get the reward, for you see as I came up to the fellow he had the book open and I could see lots of bills in it: I thought about two thousand dollars' worth; so I offered him twenty-five dollars for it and he refused that, and at last I gave him fifty dollars and off he went, and I thought I had made a big thing.

M.—How much money did it contain?

W.—Well, sir, not one dollar. You see the bills that I got a peep at proved to be all counterfeit, and the inside of the rolls was only waste paper. When I found that out I guess I was wrathy. There was my good fifty dollars gone in the pockets of those miserable scoundrels.

M.—Why did you not go back and have them arrested and recover you money?

W.—Well, I did go back with that intention, but when I got there I thought I would just step over to one of those market stands and make some inquiry in regard to them before I began. I had no sooner got there than sure enough there were the identical rascals at work at another countryman; and during the forenoon that I remained there I should think they tried over twenty persons, and in many cases their victims went off with them.

M.—Where were the police all this time? Most certainly they did not stand quietly by and see it going on.

W.—Well, sir, they did—and did not offer to interfere with them, and I was told that the cause of it was, that when a dropper made a good haul the policeman could always find out the amount from their victim, and make the dropper give him a portion of it, or arrest him. One policeman, whose beat included Washington Market, was offered thirty dollars per week to let those scamps operate on his beat, but being an honorable man he refused the offer.

M.—How many of these men operate in the locality you speak of?

W.—Well, sir, I counted six, one of them being an old gray headed man—I should think over sixty years of age; the others are young men.

M.—Then you did not try to recover your money?

W.—No sir. I found it was no use. The money was gone, and I had paid well for my experience; but I don't care as much about loosing the money as I do to know how the story leaked out.

M.—Do these men make money at this business?

M.—Make money! I should think so from what I saw and heard. Why, sir, that evening while sitting in the Hotel talking to a gentleman that looked kind of domestic like, I happened to speak of these villians, and said he, "have the pocket book droppers been at you too?" Said I, "I guess they have." Said he, "shake hands brother, that's my case exactly." "What kind of a game did they play on you?" said I. "I will tell you," said he: "As I was standing on the corner of Fulton and West streets, looking at old Washington Market, I felt something strike my leg. I looked down and saw an old gray headed man pick up a pocket book and off he went. Almost instantly a man stepped up to me and said he, 'stranger have you seen anything of a pocket book laying around here?' Says I, 'yes, I just saw a man pick one up and go down the street.' Says he, 'I wish you would go with me and show me the man.' 'I will do so,' said I; and off we went: so just as we got to the corner of Dey street I saw the fellow going across the street, and we put after him and caught him on the dock. The stranger said to him, 'where is my pocket book?' 'I hain't got your pocket book,' said he. Said I, 'you have got it, it, for I saw you pick it up.' 'What kind of a book was it,' said the dropper. 'Why, so and so,' says the stranger, giving a description of it. Still the dropper denied having it. 'You have got it and I will make you give it up mighty soon,' says the stranger, seizing the dropper by the throat. Well, that was rather rough play for him, so said he, 'what reward will you give me if I will give it up.' Said the stranger, 'I will give you one hundred dollars.' 'Well,' said he, 'give me the money and you shall have it.' So the stranger said to me, 'my friend I find that all the money I have with me is in that pocket book, and that's five one thousand dollar bills, and if you will lend me the money to pay this man you can take the book and take it up to the Hotel, and then I will get one of the bills changed and you take your pay out and give the balance to me.' Well, you see, I thought I was all safe. So I pulled out the greenbacks and gave the dropper a one hundred dollar bill, receiving the pocket book in return. We then went up to the Hotel, and the stranger said, 'take a drink?' Said I, 'I don't care if I do;' and just as our drinks were handed to us, said the stranger, 'excuse me a moment, I see a friend in the hall that I wish to speak to.' 'Certainly,' said I; and took a drink and sat down to wait for the stranger; but I soon got tired and went to my room; and I thought while there I would just look at the thousand dollar bills, for its not every day I get a peep at them. So I opened the book, but will you believe me sir, there was not one dollar there, only some blank paper rolled up to make the book look large."

West—Well, what did you do about it?

Stranger—Why, I went right down to the bar and inquired of the bar keeper if he noticed the man that came up to take a drink with me and left before drinking. 'O, yes,' said he, 'but I don't know him.' Well, thinks I, that beats all creation. I have often heard the various modes of swindling here in New York, but I never dreamed that was one of them.

West—I don't wonder the New York Legislature makes laws for this city, and I wish they would make a law to hang every pocket book dropper in it. NOW AND THEN.

New York, May, 1867.

AN OLD STORY.

MANY years ago a celebrated Italian artist was walking along the streets of his native city, perplexed and desponding in consequence of some irritating circumstance or misfortune, when he beheld a little boy of such surprising and surpassing beauty that he forgot his own trouble and gloom in looking upon the almost angel face before him.

"That face I must have," said the artist, "for my studio. Will you come to my room and sit for a picture, my little man?"

The little boy was glad to go and see the pictures, and pencils, and curious things in the artist's room; and he was still more pleased when he saw what seemed to be another boy looking just like himself smiling from the artist's canvas.

The artist took a great deal of pleasure in looking at that sweet, innocent face. When he was troubled, or irritated, or perplexed, he lifted his eyes to that lovely image on the wall, and its beautiful, hopeful features and expression calmed his heart and made him happy again. Many a visitor to his studio wished to purchase that lovely face; but, though poor, and often in want of money to buy food and clothes, he would not sell his good angel, as he called this portrait.

So the years went on. Oftentimes as he looked up to the face on the glowing canvas he wondered what had become of that boy.

"How I should like to see how he looks now! I wonder if I should know him? Is he a good man and true, or wicked and abandoned? Or has he died and gone to a better land?"

One day the artist was strolling down one of the fine walks of the city, when he beheld a young man whose face and mien were so vicious, so depraved, so almost fiend-like, that he involuntarily stopped and gazed at him.

"What a spectacle! I should like to paint that figure, and hang it in my studio opposite the angel-boy," said the artist to himself.

The young man asked the painter for money, for he was a beggar as well as a thief.

"Come to my room and let me paint your portrait and I will give all you ask," said the artist.

The young man followed the painter, and sat for a sketch. When it was finished, and he had received a few coins for his trouble, he turned to go; but his eye rested upon the picture of the boy; he looked at it, turned pale, and then burst into tears.

"What troubles you, man?" said the painter.

It was long before the young man could speak; he sobbed aloud, and seemed pierced with agony. At last he pointed up to the picture on the wall, and, in broken tones which seemed to come from a broken heart, said:

"Twenty years ago you asked me to come up here and sit for a picture, and that angel-face is the portrait. Behold me now, a ruined man; so bloated, so hideous, that women and children turn away their faces from me; so fiend-like that you wanted my picture to show how ugly a man could look. Ah! I see now what vice and crime have done for me."

The artist was amazed. He could scarcely believe his own eyes and ears. "How did this happen?" he asked.

The young man then told him his sad and dreadful history; how, being an only son and very beautiful, his parents petted and spoiled him; how he went with bad boys, and learned all their bad habits and vices and came to love them; how, having plenty of money, he was enticed to wicked places till all was lost, and then, unable to work and ashamed to beg, he began to steal, was caught and imprisoned with the worst criminals; came out still more depraved to commit worse crimes than before; how every bad deed he performed seemed to drive him to commit a worse one, till it seemed to him that he could not stop till brought to the gallows.

It was a fearful tale, and brought tears into the artist's eyes. He besought the young man to stop, offered to help him, and tried his best to save him. But, alas! it was too late. Disease, contracted by dissipation, soon prostrated the young man, and he died before he could reform. The painter hung his portait opposite that of the beautiful boy; and when visitors asked him why he allowed such a hideous looking face to be there, he told them the story, saying as he closed, "Between the angel and the demon there is only twenty years of vice."

The lesson of this tale is in the tale itself. You who read it can tell what it is. Think of it often, and heed it always.

WASHINGTON'S HAIR.—Among the curiosities to be disposed of at the Charity Fair at Union Square, New York, for the benefit of the Protectorate for Homeless Little Girls, is a lock of hair of George Washington, set in a velvet and carved oak frame. The following letter accompanied the relic:

"MY DEAR MRS. WHITE:—I send you in the interest of the noble work you have in hand, a lock of General Washington's hair. It is in wood which was grown at Mount Vernon. You may rely on both hair and wood being genuine. I hope they may prove of some interest or value at your table, and wishing every success to your generous efforts, I am, very sincerely yours,

"P. G. WASHINGTON."

WIT AND HUMOR.

MRS. K., after expressing her love for the young children, added, tenderly, "And how do you like babies, Mr. Lamb?" His answer, immediate, almost precipitate was, "Boi-boi-boiled, madam."

MRS. CHIBBLES has great ideas of her husband's military powers. "For two years," says she, "he was a lieutenant in the horse-marines, after which he was promoted to the captaincy of a regular squad of sapheads and minors."

A SUBSCRIBER to the Manitowoc Pilot stopped his paper, but soon after sent the following note to the publisher:

"*Dear Sir*:—I received a severe curtain lecture for stopping the Pilot. Please continue sending it, and oblige, Yours truly."

"SIR," said an indignant husband to his reckless friend, "you have abused my hospitality, you have kicked me down stairs, and you have kissed my wife before my face. Beware, sir! A few more such outrages, and, by Jove, you'll rouse the British lion!"

AT an evening party, Foote, the humorist, was reminded by the master of the house that his handkerchief was hanging out from his coat pocket. "I thank you, sir," said the humorist, as he thrust the embroidered cambric out of sight, "you know the company better than I do."

A GENIUS living in California made a nerve and bone all-healing salve, and thought he would experiment a little with it. He first cut off his dogs's tail and applied some of the salve to the stump. A new tail grew out immediately. He then applied some to the piece of tail which he cut off, and a new dog grew out. He did not know which dog was which.

Corner for the Young.

ILLUSTRATED REBUS.

ANSWERS TO ENIGMAS, &c., IN No. 903.

Answer to Illustrated Rebus:—Hope ne'er can leave the human heart.

Answer to Miscellaneous Enigma:—Honor thy father and thy mother.

Answer to Anagram:

The course of evil
Begins so slowly and from such slight source
An infant's hand might stem the breach with clay.
But let the stream get deeper, and philosophy,
Aye, and religion too, shall strive in vain
To turn the headlong current.

We have received several solutions of the Arithmetical Problem, but have only room for the following from H. L. WOODWORTH of Huntley, Ill.:—Fore quarters, 140.39 lbs. at 3.5616 cts. per lb. Hind quarters, 109.61 lbs. at 4.5616 cts. per lb.

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

GOOD AND CHEAP BOOKS FOR
Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the RURAL NEW-YORKER. We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.
HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.
GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

Roots.—Turnips, sugar beets, carrots, etc., may all be sown this month; the beets and carrots should have been planted earlier, but a good crop may yet be grown.

Potatoes.—Work in these as soon as the rows can be followed. Throw fresh dirt over the young plants with the cultivator as soon as they break through and cover them; this is the easiest way of hoeing them. They will break through again in a day or two with increased vigor, and the first hoeing will be done. With land in the proper condition, good tools and horses, and skill, the hand hoe has little business in the potato field.

Corn.—Keep the cultivator going. After the heavy spring rains the soil is compacted and needs much stirring. From three to five bushels of corn per acre ride on your cultivator and are added to the yield each time you faithfully use it over the field. Plant missing hills with early varieties. Plaster pays on corn, ashes also.

The Compost Heap—Should be made this month. The stock yards should be cleaned; sods from fence corners and road sides mixed with the manure; muck and rotten leaves hauled, and ashes and plaster sprinkled in. The compost heap will make wheat when nothing else will, and wheat brings $3.50 per bushel.

Implements.—Look to the rakes, forks, mowing and reaping machines. Put the wagons and the racks in repair. Clean out the sheds and barns.

Stacking.—If lack of barn room imposes the necessity of stacking, select the sites for each one before commencing the harvest, being careful to prepare all the materials necessary to the stacking process. If judiciously built, stacks may be made to play an important part in the sheltering of stock from the rigors of winter. This point is worthy of consideration.

Haying—Should be begun this month in the clover fields. Cut clover *before* it is in full blossom rather than *after*. Clover needs less curing than timothy or red-top, in the same stage of ripeness, to make it fit for the stack or mow. Far more damage is done from over-drying clover for hay than from not curing it enough.

Working Roads.—Sometimes the highways are made worse rather than better by the way they are worked. We have seen hills made higher by turnpiking them on the top, and hard, firm tracks softened by hauling in mucky earth. Although more work, yet better roads could be made on hills by scraping the track until smooth, and deepening the side ditches by removing the earth to the bottom of the hill.

Pastures—Are flush this month. There is plenty of fragrant grass for the stock; but there may not be in August. If you are likely to be pinched, sow corn in drills to be cut and fed to stock on their pastures when the "dry spell" comes on.

Cabbage.—Plant an acre to cabbage for late, fall and winter feed.

Weeds.—Finish weeding the wheat and pull the thistles from the spring grain. Keep weeds from seeding.

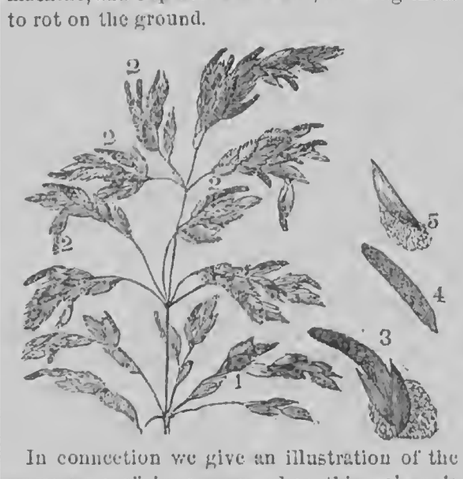
Summer Fallow.—Plow under as heavy a growth of clover or grass as you can get. That is the gain of summer-fallowing; it is a cheap and good way of manuring land. Plow well and harrow quickly and thoroughly; harrow and gang-plow as much as possible until the 25th of August, then plow again deeper than at first. Spread on fine manure and cultivate for seeding. The first plowing should be done between the 10th of June and 1st of July.

Poultry.—Chickens fit for the spit will bring a good price this month. Very young chickens and turkeys need good care and shelter in rainy weather. It is cheaper to confine the poultry in a yard and feed, than to allow them to help themselves in the grain fields.

ERGOT IN JUNE GRASS.

THAT ergot is produced on many varieties of grass is a well proved fact, and in moist climates and seasons it is generally found most abundant. How serious the effect it may have on stock, grazing infested pastures, is a mooted question, though some attribute abortions in cows chiefly to its influence. It has also been asserted to be the cause of disease in the feet of cattle, causing them to freeze and rot away, in consequence of its lowering the circulation of the blood, and thus lessening the vital heat in the extremities.

The formation of seed is essential to the production of ergot, and in pastures this is most likely to take place in the common June grass. A moist season predisposes the seed to favor the development of ergot. If, at the proper season, the grass in the pasture should be extensively ergotised, it would be well for the graziers to take precautions against injurious effects therefrom. Breeding stock should be removed to other pasture, and we think it would be well to pass over the infected grass with the mowing machine, and clip the seed stalks, allowing them to rot on the ground.



In connection we give an illustration of the appearance of June grass when this poison is prevalent. The engraving represents a head of *Poa pratensis*, natural size, infected with ergot. 1, spikelets in natural condition: 2, 2, 2, 2, ergotised spikelets; 3, ergot magnified, surrounded with the glumes at the base; 4, ergot detached from the glumes; 5, glume with cottony substance attached, which is doubtless fungoid.

WHAT TO PLANT AND SOW.

OWING to the remarkable character of the present season, its low temperature and humidity, much ground designed for barley, oats and corn, is yet unprepared for the seed. Oats may do yet, though the chances for a remunerative yield are, to say the least, rather dubious, while those of barley are still worse. Corn has a better chance of success than either, should warm, dry weather commence soon and continue till September, as the general impression seems to be that it will. But the variety to be planted is a matter of much importance, as on this may depend a matured crop, or a partial and non-remunerating one. It would be hazardous to plant, at this late day, any of the slow maturing varieties, for, though they might succeed by the aid of a favorable autumn, the chances are that they would not.

The alternative then is to grow no corn or to plant the old fashioned eight-rowed variety which matures several weeks earlier than those of stronger growth, but of tardy maturity. With an ordinarily warm season the eight-rowed yellow will mature by the last of August, though the planting be delayed till the first of June. This we have seen verified in several instances. In one case, on new ground, the crop ripened, though the planting was not done till the third day of July. There is a chance for corn yet, and it should be improved where practicable.

Assuming that oats and barley, not yet in the ground, are pretty much out of the question, potatoes, peas, beans and buckwheat will do to fall back upon, with a fair prospect of remunerative results. Though some people have an antipathy to beans equal to that of the celebrated JOHN RANDOLPH towards sheep, still, they are a profitable crop to raise, either for the household or stock purposes, and should be liberally planted as a substitute for other products less likely to mature. Peas, too, are in time, and may be found a great help in carrying the farmer through the coming winter. Buckwheat makes good winter food, and may well occupy ground designed for oats and barley, where these have failed to be got in seasonably. The potato, small as is its proportion of pabulum compared with its bulk, is a family necessity, and should be liberally planted, because it will mature, though got in late, if suitable varieties for seed are selected. In a word: if too late to sow and plant what was designed for certain fields or portions of the farm, substitute something else that is in season, that the requisite volume of food for man and beast may crown the *labors* of the summer.

SCIENTIFIC FARMING.

STRICTLY speaking, to farm scientifically implies such a knowledge of chemistry as enables the cultivator to analyze his soil and determine the relative force and quantities of the materials comprising it. The ability to do this is restricted to comparatively few of those engaged in cultivating the soil, but this deficiency is measurably supplied by practical knowledge, obtained from experience in farm management, on the part of the many. They know, by the appearance of growing crops whether under-draining is needful to secure more ample returns; whether sub-soiling will enhance productiveness, or the application of clay to soils apparently rich enough is desirable. It is experience, systematized, which governs such farmers in their operations, and this is, at least, as near scientific farming as a first consinship. It is science in a crude form, and valuable for the result flowing from it. If the ability and time are at command, to secure a nearer relationship to scientific farming, use them by all means; but if not, husband well the resources in possession and add to the store as experience and observation shall supply the materials. Much useful information may be gained in this way, though the possessor of it may be at a loss how to give it a scientific designation.

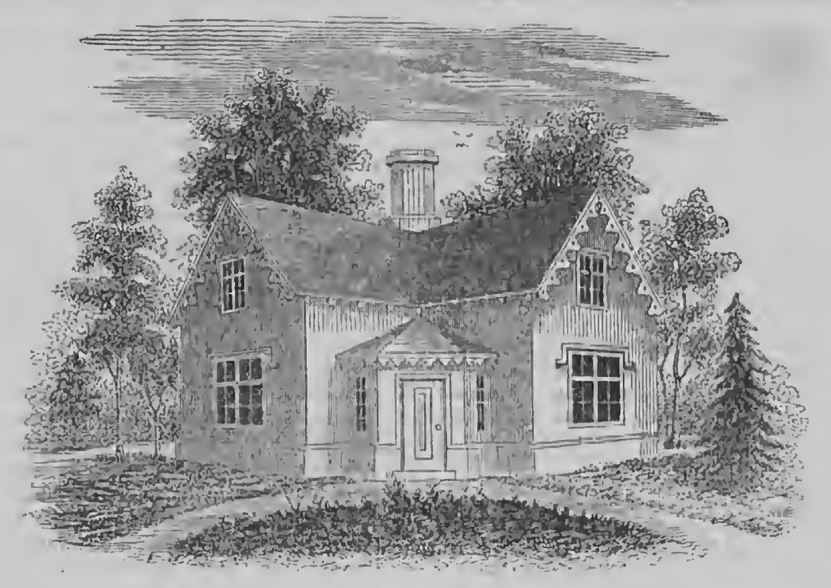
LOSSES INCIDENTAL TO BAD FARMING.

EDS. RURAL:—Last fall a farmer, who has now removed to Virginia to better his fortune, brought me a load of clover hay that was cut after wheat harvest, although he denied it. It was a dark brown mass of stalks and decomposed leaves, but some of the blossoms were intact and contained seed; and the hay, poor and wasting as it was, evidently contained more soluble matter than straw, and would do well to feed with roots and bran, as it would support combustion in cold weather. I gave him $8 a ton for it—had it only been cut in June and cured in small cocks, it would have been worth double. What a pity this *soi disant* farmer is going to poor old effete Virginia, where, instead of having the benefit of good example, he will only add one more to the genus of shiftless farmers, and help to put the day of regenerate farming there still further off.

Last week I paid $15 a ton for clover hay when I was offered timothy at the same price. It was fine, early-cut clover, the blossoms still red, cured, but not overheated, in cock. This man knew how to save a crop after it was grown. He said farming was too hard work to lose its profits by neglect. His cows were as sleek as though they had been slopped, but they had only been fed clover hay. When my cow made what the experts call an approximate analysis of this last hay, I was convinced that I paid too much for the first; instead of throwing it about in the manger to get the best parts, and wasting both stalks and decayed blossoms, she eats it quietly, and licks up the last mouthful—there is no waste to it, and it dispenses with much messing without decreasing the yield of milk.

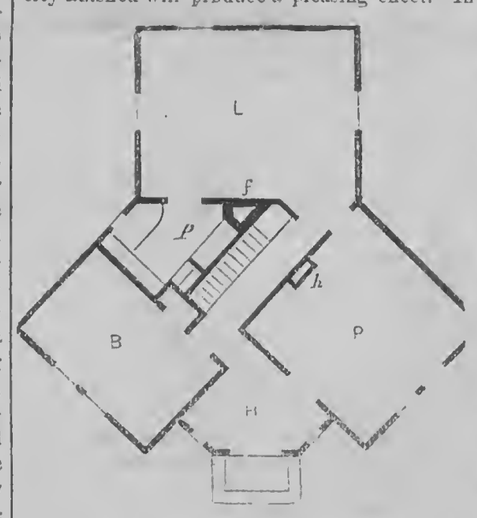
How often we see a farmer so ambitious of a large field of corn that he plants twice as much land to get the same crop, if all the manure and little more than half the labor was applied to half the land. As bad a season as the last was, even the Ohio dent corn ripened well under the best manuring and culture. 'Tis true that a good season helps a slack farmer more than it does a thorough one; hence it is that so many trust to the season for a crop, and if it fails the season bears the blame. I have never seen Indian corn fail in the garden since the year of the great eclipse.

There would probably be as many bad mechanics as there are bad farmers, if they could only live by their trades. As a slovenly farmer lives chiefly on his own products, he need not quite starve; but the mechanic who depends on his customers, must do his work well or starve for want of an employer. I once knew a wagon-maker who undertook to make a very nice covered sleigh for a man in a western city; he was so great a botch that the sleigh, when finished, tipped down forward so that a man had to set on the back seat to keep the sleigh on even keel. The result was, that when he took it to its destination, the man gave him $40 to take it back, and he then sold it at a great sacrifice and returned home; he is now a farmer in the Peninsular State. LXXVI.

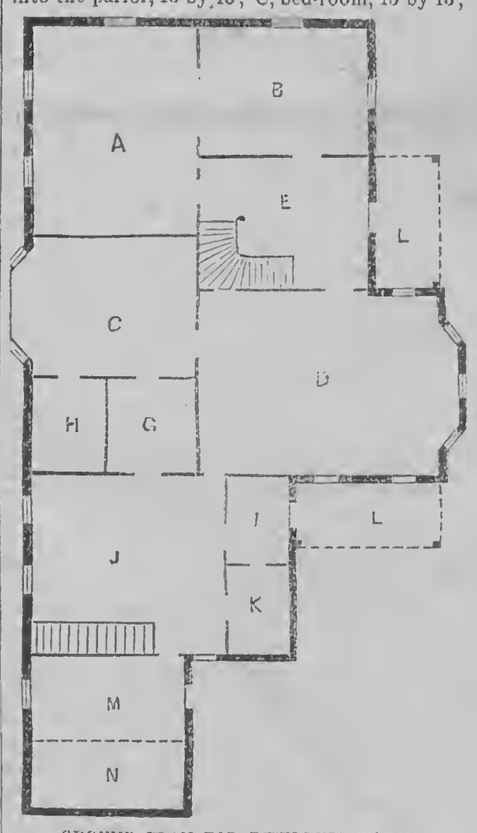


PLAN OF A FARM COTTAGE.

THE accompanying plan of a farm or suburban cottage is somewhat novel, and presents a neat appearance for the amount it costs; but neat, cheap, well-arranged cottages are in greater demand than costly, palace-like dwellings. The arrangement is odd, yet convenient, and if properly finished will produce a pleasing effect. In this design the parlor, P, is 13½ feet square; the kitchen, L, 13½ by 16½; the bed-room, B, which has a small closet, 13½ by 9; the pantry, P, 6½ by 8½; the hall, H, 7½ by 7½. The bed-rooms in the second story are of the same size as the three lower rooms, and directly over them. The space over the pantry affords room for two good-sized closets. The rear gable is of the same height as the two front ones, but the roof is less steep, inasmuch as the back part is wider than the front.



We also give herewith the ground plan of a dwelling which may furnish some practical hints to those who need such. It was furnished by a friend in this city and seems well adapted to city, village or farm. Its apartments are, A, parlor, 15 by 20; B, library with sliding doors opening into the parlor, 15 by 13; C, bed-room, 15 by 13;



GROUND PLAN FOR DWELLING HOUSE.

D, living-room, 21 by 17; E, hall, 12 by 15; G, bath-room, 9 by 7½; H, closet, 9 by 7½; I and K, pantry and china closet; J, kitchen, 14 by 19; L, L, verandas; M, wood house.

PLOWS—BETTER WORK NEEDED.

EDS. RURAL NEW-YORKER:—I want to inquire through your columns why it is that some of the good plows, we frequently hear and read of, do not find their way to this part of the country. Within the past sixteen months I have tried *six* plows, each and every one of which was "warranted to scour," and so they did while I had them in the sand patch, but as soon as I took them to my field the case was very different. I almost despair of getting a plow that will do its work perfectly, and yet it seems to me such can be made as will operate satisfactorily. The pattern and build of the plows tried were all that could be desired, the main thing lacking being *hardness of all the wearing parts.* In each case this was the prime cause of failure. Some of the plows were what I term "surface-hardened," that is, on the outside they are at first so hard that a file will not scratch them, but after from one to four or five days use this hard surface wears off, and exposes a plate of soft steel that can easily be marked with a common knife.

Now, what we need is a plow made of the best steel, the mold-board and land-side as hard as possible all through, and the lay, or share, but a little lower tempered. It seems to me that American artisans are fully equal to this. There may be difficulties in the way that my not being an expert prevents me from seeing, but I do know that once in a while such a plow is found, and then it works to the satisfaction of all concerned. I hope that some of your readers who are engaged in the plow business will get up a few suited to the soil of Central Iowa, and send them out here. If they "fill the bill" he is sure of a "good thing." We have to pay from twenty-five to thirty-five dollars for a stubble plow, and it seems that for so much money we ought to get a good article. GOPHER.

Story Co., Iowa, May 14, 1867.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

INFANTADO RAM "GOLD FINDER."

JOHN L. BUTTOLPH, Middlebury, Vt., writes us: — My ram teg Gold Finder was got by Col. E. S. STOWELL'S Golden Fleece out of a ewe bred by Mr. HAMMOND and got by his Sweepstakes. In 1859 I purchased twelve ewes of J. T. & V. RICH, and in 1860 and 1861, fourteen ewes of HENRY HAMMOND. I used Mr. HAMMOND'S stock rams until 1863, when I commenced using Col. STOWELL'S. These I have used to this time, (Oct., 1866,) and am now relying on Gold Finder. I have thus bred my Infantado stock pure, and my Paular stock has been crossed with it. My present flock of ewes numbers forty-five.

MR. RANDALL ABSENT.—Mr. RANDALL has been absent a few days in Boston, discharging his duty as Chairman of the Wool Growers' Committee authorized by the Secretary of the Treasury to examine the samples of wool, hair, &c., which under the provisions of the new wool tariff are to be placed as standards in the Custom Houses,—and he did not return home in time to furnish us editorial matter for his department this week.

RECENT LOCAL SHEEP SHEARINGS.

SHEEP SHOW AND SHEARING AT CANADICE, N. Y.—The Second Annual Sheep Show of the Sheep Breeders' and Wool Growers' Association of the town of Canadice, Ontario Co., N. Y., came off on Saturday, May 18th, at Canadice Center. The principal exhibitors were Jas. Hoagland, A. B. Norton, H. McCrossen, B. P. Hoppough, Hoagland & Ogden, Andruss & Eldridge, D. Knowles, Seneca Swan, Jno. R. Hicks, Isaac Struble, Milo Thorp, A. Leach and Nathan Short. A Committee, consisting of B. M. Morris, A. Wheaton and B. Wetmore, were appointed to award on weight of carcass after shearing, weight of fleece and breeding qualities combined, and reported as follows:

Three year old Rams.—1st, Thos. Eldridge, Geo. Andruss—Weight of carcass, 102 lbs.; weight of fleece, 19¼ lbs. 2d, H. McCrossen—Weight of carcass, 125 lbs.; weight of fleece, 17¼ lbs. 3d, B. P. Hoppough—Weight of carcass, 106 lbs.; weight of fleece, 14 lbs.

Two year old Rams.—1st, John R. Hicks—Weight of carcass, 95 lbs.; weight of fleece, 15¾ lbs.

Yearling Rams.—1st, Seneca Swan—Weight of carcass, 84 lbs.; weight, of fleece, 15 lbs.

Two year old Ewes.—1st, B. P. Hoppough—Weight of carcass, 71 lbs.; weight of fleece, 12¾ lbs.

Yearling Ewes.—1st, A. B. Norton—weight of carcass, 62 lbs; weight of fleece, 13¼ lbs. 2d, Isaac Struble—Weight of carcass 49 lbs.; weight of fleece, 8¾ lbs.

On sheep not shorn—breeding qualities:

Two year old Ewes.—Henry McCrossen. 2d, James Hoagland. 3d, A. B. Nortou.

Yearling Ewes.—1st, Ogden & Hoagland. 2d, H. McCrossen. 3d, Milo Thorp.

Sheep specially noticed from other towns were, a 3 year old, a 2 year old, and a yearling ram, by A. Leach of Richmond, and a yearling ram and yearling ewe, by Nathan Short of Livonia.

A committee consisting of D. B. Hoppough, John Parcel and N. S. Gould, reported on shearers—time and quality of work considered—as follows:

Sisco, best on a 3 year old ram	—time,	57	minutes.
Marratt, " 1 " ram	— "	58	"
Persons, " ewes,	"	47	"

The weather was cold and disagreeable, but we had a fair turn-out, with a good proportion of ladies to arrange the dinner table, which was well arranged and amply furnished.

The officers of the Society are JOSHUA SWAN, President; B. H. BURCH, Secretary, JOSEPH TAGUE, Treasurer; and D. B. WAITE, *Cor. Secy.*

SHEEP SHEARING AT HONEOYE, N. Y.—Inclosed please find report of a Shearing Festival, held at this place on Wednesday, May 15th, participated in by a large number of towns in this vicinity—quite a number of the names of which do not appear in the report, owing to the fact that the weather was so cold and rainy they dared not have their sheep shorn. Although the report is not as large as the one I sent you last year, still the shearing was quite a success, and the report compares very favorably with any yet published from Vermont, both as to weight of fleeces and their proportion to weight of carcass. The nucleus of a Union Wool Growers' Association has been formed here, which will embrace the principal wool growing towns of Ontario and Livingston counties, and will doubtless prove in a few years a large auxiliary to the Annual State Exhibitions.

Encouraged by the favor shown last year in the publication of our report in the columns of your valuable paper, we send you this, hoping it may be thought worthy of notice and prove interesting to many readers. E. W. GILBERT, *Rec. Sec'y.*

" "	R	1	68	8 7	—	8

Your Committee, to whom was referred the weighing of the above named Sheep and Wool, would report that the weather having been cool before the shearing, but little oil was up in the fleeces, and the wool was of a very superior quality.

N. HAYDEN,
B. D. DOWNEY,
J. M. WORCESTER,
Committee.

MR. BUTTOLPH'S INFANTADO RAM "GOLD FINDER."

Dairy Department.

WHAT WAS THE DISEASE?

MESSRS. EDITORS:—As almost every one is putting their complaints and troubles into your paper, I thought I would join in too. In the first place, I am engaged in dairying, and have recently lost a valuable cow, and want to see if any of your readers can tell me what ailed her. She wintered in very fine order, and previous to dropping her calf gave promise of doing great things in the milk line. Her bag was so large and full of milk that I was afraid it would cake, and let a calf suck her once a day for a week previous to her coming in. She did well, and the first time I milked her, (which was immediately after she came in,) I found her left hind teat perefectly closed—could not get a drop of milk from it, and that quarter of her bag appeared to be very sore. I took a large knitting-needle and inserted it into the teat, and found the passage entirely obstructed at the roots. I applied some force to the needle and it went through into the udder, and on withdrawing it a little blood followed. I then milked the teat, but could get only a very small stream. From that time that quarter of her bag kept on swelling until it reached clear up to the roots of her tail, and completely absorbing all the rest of her bag. She appeared to be in great pain, and walked as though her limbs were stiff and sore. The third day after calving she refused to eat, but would drink some water. Her milk almost ceased to flow, and she would groan and moan dreadfully. I gave her saltpetre and blood root, poulticed her bag with everything I could hear of that was cooling, but all to no avail. She kept on getting worse, and in seven days after calving died. A day or two previous to her death, her neck and one fore leg swelled considerably and there appeared canker-sores in her nostrils from which came a very bad smell. On examination after death there was found to be large quantities of yellow, clear looking water accumulated under the skin, on all parts of her body that were swelled. Did any one ever lose a cow in that way before, and can any one tell how to cure another. WM. H. MACOMBER.

Potsdam, May 6, 1867.

DAIRY ITEMS.

Rather too Late.—We thank Mrs. E. L. A., Coventryville, N. Y., for her communication. By reference to the Dairy Department in the RURAL of May 18th, she will see that others had anticipated her with reference to butter making. With respect to the other matter spoken of, we hope she may prove successful.

Salt for Butter.—It would be well for farmers, at the commencement of the season, to provide themselves with salt suited to the preservation of butter. A cheap article, such as is produced from the saline springs of the country generally, is not suited to making butter designed for the Atlantic markets. The best Ashton salt, though more costly, will more than make up the difference in price by its superior preservative power, and the enhanced value it will give to this dairy product.

Adulteration of Milk.—The Eighth Annual Report of the Boston Milk Inspector has been published. The number of samples of milk inspected during the year was 1,851. Thirty cases were analyzed by a chemist, and an average adulteration of 31.40 detected. The largest adulteration was by water being 51.17 in 100 parts. The least was 6.98. Several convictions, under the laws against adulteration, have been secured, and others are still before the courts. Such swindling is so important an article ought to be severely punished.

Cows—Treatment.—A. W. T., Troy, writes concerning the treatment of cows at the season of parturition, with special reference to the after-birth. He says he has kept from fifteen to twenty cows for the last fifteen years, and never lost one, and adds:—"I would say never, without *special* reasons, disturb the cow after she has selected her place for calving, nor for some three hours afterward, except to see that nothing serious is happening to her,—avoiding her observation as far as practicable. If she does not get rid of the after-birth in that time, she will usually go some seven or ten days before all will be right. If anything is given to expedite matters, try a tablespoonful of saltpetre once a day, in her first feeds, three or four times. By all means give the value of what you would have to pay a 'farrier,' for forcing it away, in extra feed, not of course *immediately* after calving."

Dairy Stock—Holland.—It is recommended to farmers, in some quarters, to try the Dutch breed of cows for dairying purposes, in consequence of their imputed superiority as milkers. A statement, emanating from the Royal Academy of Agriculture in Prussia, gives the milk yield of nine Dutch cows for the season of 1865, showing an average of more than 4,500 quarts—or 42,870 quarts for the whole. These cows were stall-fed, and the manner of feeding as follows: In the winter clover hay, &c., with roots,—occasionally potatoes. In the summer they are supplied with green clover and the like, oil cake, and from eight to ten pounds of rye bran daily—the latter in a dry state. The annual expense per cow, for feeding, was $30 by this mode, and her products about $76. The average product of cheese per cow was 800 pounds, or one pound of cheese to 9½ quarts of milk. These were doubtless an exceptional lot of cows—the best probably that could be found—still the results do not warrant the assumption of superiority claimed for them. Quite as good returns are frequently made from cows that never saw Holland.

A Milk Suit at Herkimer.—A rather novel case, as we learn from the Utica Herald, was recently tried before the Circuit Court at Herkimer. The suit was instituted by the Treasurer of the Frankfort Cheese Factory against one of its patrons for the penalty attaching to the adulteration of milk by the addition of water. The article delivered, when tested by the hydrometer and cream gauges, indicated from 12 to 15 per cent. less specific gravity than pure milk—hence the inference of an infusion of water, on which the suit was based. The prosecution relied on the tests made by the lactometer: the defense—not disputing the accuracy of the testing instruments—on the variance there was in milk, tested in the same way, where no chance of deterioration, by extraneous infusions, was possible.

The trial excited much interest, and attracted a large crowd to witness it, during the two days of its continuance. Both sides were represented by the best legal talent in that section of the State, and the examination was of a searching character—resulting in a verdict for the defendant. This was not from want of accuracy in the measuring instruments used, but rather in consequence of their conceded reliability in proving, in twelve distinct instances, a variance of from two to ten per cent. in milk, where no possible chance of adulteration existed. This difference in quality may be imputed to a variance in the breed of cows; their food and the manner of its preparation; the quantity given; the health of the animals, or to a combination of all the circumstances likely to affect the purity and value of milk.

Communications, Etc.

PLOWING FOR CORN.

EDS. RURAL:—In your issue of May 4th were some very interesting remarks about the corn crop, which induced me to give you a description of the way that the farmers here plow their land for corn. Take for example a field twenty rods wide and forty rods long. Pace off ten rods from each end in the center of the field lengthwise, and set a stake at each place. Then commence at each corner and turn a double furrow to the nearest stake; then turn a double furrow between the stakes, and continue to back-furrow until your field is plowed.

The advantages are that there are no dead furrows or corner furrows in the field, and the horses do not step on the plowed ground.

Cayuga Co., N. Y. D. M. BACON.

"RECLAIMING WORN OUT LAND."

EDS. RURAL.—A writer in the Country Gent., No. 737, asks:—"Am I correct in saying 'worn out [land]'?" I answer in the affirmative. He says:—"A *thing* is worn out when it is past repair." To this I demur. It may be true of furniture, clothes or implements, but not of land. Land may be entirely worn out by continued tillage, and washed into gullies by the action of rains, and yet not past repair. On the subject of repairing land see Am. F. Ency., pp. 454 and 824. The writer says that he "has seen some [land] that was *pretty poor*." This grade of poverty in the soil is defined as—"the soil was *merely* exhausted of a portion of the elements necessary to the support of vegetation." "Pretty poor" soil is *merely* deficient of a portion of the inorganic food of plants. It may be a slight matter to our friend, but a serious one to those that have such land to do with. The profit of crops depends on the fertility of the soil on which they are grown. When that soil declines in fertility it is a very serious matter. Reflect upon Egypt as it was in contrast to what it is. See Rel. Ency., p. 491. According to the ratio of impoverishment of the soil, so is the annihilation of the community hastened.

He says:—"That there is a considerable quantity of land that has become exhausted of plant food because adequate returns have not been made in the shape of fertilizers." This is true beyond all question. Our friend says:—"How to RECLAIM such lands and *make them productive* is the question with many who own such." *Reclaim* what? *Unproductive* lands. How became they unproductive? By a continued course of tillage with persistent indifference to the renewal system. What is this but wearing out the soil? And when it ceases to yield it is worn out. If in the course of a few years some pines should spring up, it is no proof that the land was not worn out, any more than a worn out coat being suitable for shoddy is proof that it was fit to wear in "good" society.

There is a difference between barren lands and worn out lands, though both may be unproductive. Much land is barren because it contains qualities or mineral ingredients that are injurious to vegetation. Some barren land contains all the elements of fertility, and yet is unsuitable for cultivation. They contain iron-rust concretions. Humic acid combines with those concretions and forms a compound that renders the absorbent quality of clay nugatory for tillage. Such lands can be reclaimed. Others, barren, can only be reclaimed at vast expense, and only by men of like grit with ARTHUR YOUNG. It is a misnomer to speak of *reclaiming* worn out lands. To reclaim is to reform—to correct. To renovate is to renew. Some barren lands can be reclaimed, by removing the injurious qualties by draining or by mixing the soil, like the go-ahead vinters of Vineland, N. J. They are reclaimers of soil. Worn out land must be renovated. That is, *renewed*, with similar elements of fertility to that which it lost by cropping. We shall never feel guilty—with our present light on the subject—of a misnomer in calling lands worn out that have been exhausted by the wear and tear of the plow, after many years of tillage.

GEO. F. A. SPILLER.

West Tennessee, March, 1867.

Rural Spirit of the Press.

Farming.

A WRITER in the "Farmers' Advertiser" says that those who know little or nothing of farming invest it with a kind of halo. They think that on a farm—

"Everything is lovely,
And the goose hangs high."

but it is only by peering through deceptive glasses that such a coloring is imparted to the drudgery of farming life. "A farmer, to thrive," he adds, "must be up at work early, very early. He must work hard and late; not eight hours, not ten, but twelve to fifteen except in winter," and even then there is no poetic leisure for him. This is all true, but it is a consolation to know that the farmers "goose" is ready when wanted for the spit.

Horses—Fast and Farm.

COMMENTING on the mania for fast horses, the Farmer's Advertiser counsels its farming readers to turn their attention to raising those "that are of some use, large enough and strong enough to do the work of the farm, and fast enough to carry the produce to market or the family to church." This is sensible advice, and seasonable withal, since the clearing up of the country has rendered the use of oxen less common and necessary than was formerly the case. Serviceable horses should be the main consideration with farmers, unless they breed expressly for other than farm purposes. It is not expected that fast horses or fast men will become obsolete very soon, but it should be the aim of the mass of farmers to prevent the strong and useful race of horses from becoming so.

Hogs—Crisping of the Bristle.

SINCE the subject of diseased hogs has been under discussion, increased attention has been paid to their appearance when suffering from disease. It has been supposed that when the hair or bristles of an ailing hog crisp or curl up it is an indication of the presence of trichinæ in the animal. A case of this kind is reported in the Wisconsin Farmer where three of a litter of shoats were taken sick — grew stiff in the legs and scarcely able to walk. Previous to the lameness the hair became crisped over their entire bodies. The owner killed one of the lot and took portions of muscular fiber from the surloin and ham, and submitted them to the scrutiny of Dr. CARR of the Madison University, for examination. No traces of trichinæ were discoverable in either. Curling or crisping hair, therefore, is no indication of the existence of this swine pest.

North—South—Wheat.

JUDGE ROBINSON of Louisiana, having stated that the South is a better wheat country than the Northwest, and that the former will yet supply the latter with wheat, draws from the Wisconsin Farmer rather a sarcastic retort. It refers to the destitute situation of the Southern population; to the meager yield of wheat in the South generally, and the little chance there is of improvement in the growing of this cereal in that direction. The Farmer closes its comments thus:—"Let the South stick to her trade of raising cotton, rice and sugar, and we Yankees will have to knock under in spite of sorghum and sugar beets. Louisiana can raise a barrel of sugar cheaper than she can a barrel of flour, and Wisconsin can raise a barrel of flour a good deal cheaper than a barrel of sugar. Let each raise that which it can the easiest and in the greatest abundance, and then dicker and they will do much towards settling each other's stomachs." This is sensible and timely advice, and if followed on both sides there can be no doubt that the result will be reciprocally advantageous.

FREQUENT mowing makes the green, smooth lawn. Common farm scythes are hardly fit for lawn use; short, broad scythes are best.

Rural Notes and Items.

"AT HOME," AGAIN.—After a prolonged absence the Editor hereof returned last week, and gladly greets RURAL readers again. During our trip we passed through Virginia, the Carolinas, Georgia, Tennessee, Kentucky, &c.; and, though in pursuit of health and recreation, neither eyes nor ears were closed to the condition of the country and people, and we saw and heard much that was novel and interesting—concerning which some notes may be given ere long. Meantime we desire to gratefully acknowledge the cordiality and courtesy of many whom we had the pleasure of visiting, with the assurance that their hospitality and kindness to a comparative stranger will long be appreciatively remembered. We return to our northern home with many former prejudices removed, opinions modified, and, we trust, a juster appreciation of the people of the South, their condition, prospects and ultimate destiny,—for, though our sojourn among them was brief, by meeting if not intimately mingling with all classes, we had opportunities of learning much that is little known or understood by the masses at the North.

As already stated in the RURAL the crops throughout the South are generally promising, and the people *of all classes* seem earnestly endeavoring to reconstruct and augment the industry and productiveness of the country. Indeed, the crop prospects are generally favorable in all of the fifteen States through which we passed, though in each we saw evidences or heard complaints of the severe winter and backward spring.

—For the information of personal friends, and others interested, we may add that our recent vacation and recreation has proved somewhat beneficial,—but we do not anticipate a speedy restoration from a debility caused by years of uninterrupted labor and overwork.

AMERICAN DAIRYMEN'S ASSOCIATION—REPORT.—We have received from the Secretary, GARDNER B. WEEKS, Esq., the second Annual Report of the American Dairymen's Association — embracing its doings for the year 1866, to which is appended that of the Ohio Association for the same time. These reports contain a great amount of well digested matter of interest to farmers and the public, of which we shall avail ourselves as opportunity offers. Full reports are furnished from forty-two factories, having an aggregate of 19,779 cows, from which were produced 6,256,412 pounds of cheese. The average quantity of milk for one pound of cured cheese was 9.86 pounds. The average price of cheese sold during the season, 17.02 cents per pound.

The "Third Annual Report" of the Ohio Dairymen's Association shows the progress of the Factory system in that State, the capital invested in products there, and the increasing interest attaching to this department of agricultural industry.

HAY RAKE SWINDLERS.—The Orange County Press issues an extra, headed, "Hay Rake Swindlers Come to Grief," detailing some of their operations in that and adjoining counties, and the arrest of a portion of the gang of swindlers and their incarceration in jail. Before the gang was broken up they had swindled parties in a single county to the amount of $25,000 to $30,000. They show a model of the hay rake and sell a right for $100 cash—if they can get it—if not, a note for the amount is taken, with the assurance that nothing will be required till the party purchasing shall have sold rights to the vale of $200. The note secured, it is speedily disposed of and other dupes sought out. The swindle has probably received a quietus, for a time at least.

CATTLE RAISING IN FLORIDA.—It is stated, by those cognizant of the facts, that a considerable portion of the population of Florida is of an migratory character. They are herdsmen, and pay particular attention to the raising of cattle. The savannas there afford a wide range of rich grass ground, and when one section is pretty well fed down the herds are removed to a new location, and so on till the beasts are ready for market. There is a tinge of the patriarchal about this system, and, considering the salubrity of the climate—a perpetual spring and summer — the life of a herdsman must be dreamy rather than exciting.

CAST IRON PATENT CHIMNEY.—J. T. BUSH, East Durham, N. Y., writes us concerning cast iron patent chimneys, which parties in his section are vending. He says they have proved a great damage where tried that the use of them is "very dangerous" to the dwellings in which they are used, and that insurance companies decline to take risks on buildings to which they are attached. The writer has tried this patent affair and pronounces it a nuisance.

N. Y. STATE AG. SOCIETY.—We are in receipt of a pamphlet copy of the "List of Premiums and Regulations for the 27th Annual Fair, to be held at the City of Buffalo, Oct., 1, 2, 3, 4, 1867." So far as observed from a cursory examination, the Premiums and Regulations are about the same as those of preceding years. Copies of the pamphlet can be obtained by addressing the Secretary, Col. B. P. JOHNSON, Albany, N. Y.

WILLIS' STUMP MACHINE.—In last week's RURAL there was an advertisement of this machine, to which we intended to direct the attention of the public, but inadvertently omitted to do so. We will say now that the machine is probably the most effective of its class, and admirably adapted to the work of removing stumps, trees, rocks and buildings.

MASSACHUSETTS AG'L COLLEGE.—At a recent annual meeting of the Trustees of this College the following officers were chosen: *Pres't*—ALEXANDER H. BULLOCK. *Vice Pres't*—Paul A. Chadbourne. *Sec'y*—Charles L. Flint. *Treas.*—Nathan Durfee. *Auditor*—D. Waldo Lincoln. *Executive Com.*—Messrs. Chadbourne, Durfee, Lincoln, Hills and Washburn.

ILLINOIS INDUSTRIAL UNIVERSITY.—The Trustees of this Institution that is to be, have accepted the proposition of Champaign county, and the Industrial University will be located in the town of the same name. The vote in favor of this was unanimous.

WOODCHUCK SKINS.—C. M. G., Savona, is informed that woodchuck skins are deemed to be good for tanning about the commencement of summer. For the process of tanning the skins of "chucks" see a communication in the RURAL of last week.

A SHEEP SHOW and general Agricultural Exhibition is announced by the Thorn Hill Farmers' Club, to be held at Thorn Hill, Onondaga Co., on Thursday next, June 6th. It will be the 5th annual show of the Club.

BARREN CO. (KY.) AG. SOCIETY FAIR.—The 3d annual Fair of this Society will be held on their grounds near Glasgow on the 14th and 15th days of June.

HORTICULTURAL.

THE SEASON—FRUITS, FLOWERS, &c.

GARDENERS and fruit growers find their operations as much delayed by the wet, cold season as the farmers. Vegetables out of doors come forward very slowly. Asparagus has hardly afforded one good cutting; the earliest peas are but five or six inches high, and other spring-planted vegetables, except lettuce, are yet mostly below ground.

At this date, May 25th, no fruit trees hereabouts are yet fully in leaf; apples show no blossoms; cherries come out feeble and slowly; pears are just opening, and of peaches we have not yet seen a blossom in the orchards, though here and there a tree may be found, sheltered in city yards, that shows a few. The peach orchards look as bare and dead as a forest of oak trees in March. In Western New York, at least, there will be few peaches, but from the larger portion of the peach-growing localities in the country the reports are favorable.

Strawberries are struggling slowly into blossom, and were it not for the half swollen buds grape vines would look as dormant as in the dead of winter.

Much rain, cloudy skies, and persistent cool weather do not bring flowers into rich and profuse bloom, but may prolong their season. The spring flowering bulbs are showing well; the gorgeous magnolias are opening and the pansies and many of the early spring flowers are in the height of bloom.

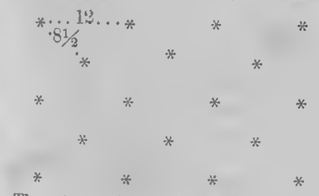
DWARF PEAR TREES—MANAGEMENT.

B. T., Burlington, Iowa, writing the Country Gentleman about the management of dwarf pear trees, says:—"I would not allow a branch to grow nearer the ground than 18 inches. When planted out I would see that all the limbs, if there were any, were symmetrical and proportioned to the tree. I would watch carefully that no one branch monopolized more than its share of nutriment, or grew too rapidly, or got ahead of the others, and each limb should be made to grow exactly where it was wanted, and nowhere else. I would not allow the tree to grow too far out of reach. It is not a good plan to allow these trees to shoot up 18 or 20 feet high. They are much better half that height."

With reference to grafting the pear on white thorn the same correspondent says:—"The slips or quicks of the thorn are taken off in autumn and buried in the ground. In the spring they are set out in rows and cultivated one season. The next spring are set out to remain, and summer-grafted or budded, very close to the ground, with a shoot containing two or three buds, after growth has fairly commenced, say in June or July. The thorn is headed down after the pear graft has properly taken, and the result is not a very handsome or thrifty tree, but one remarkably prolific, and bearing fruit of extraordinary size and beauty, much exceeding that on quince bottoms."

TRELLISING GRAPE VINES.

DEAR RURAL:—Being somewhat interested in grape raising, I always look for something on the subject in your columns; but if all would look, and never give their views as I have done, there would be nothing to be seen. I have a plan for laying out ground for trellis, and if you deem it worthy of a place in your paper you are welcome to it. If not there will be no harm done. My vines are 12 ft. apart in the rows and the rows 6 ft. apart. Allowing the trellis to be six feet high, we have as much ground for the roots as trellis for the vines. And the vines are so situated as to be 8½ ft. from each other, thus taking strength from the ground all alike.



The stars show the direction of the trellis, which is across the column, and the relative position of the vines in the rows. The advantage of this plan over others can be seen at once. If planted in the ordinary way the vines would be within 6 ft. of each other. If trellis run diagonally it would have to be 8½ ft. high to give the same amount of surface—taking longer and stronger posts, beside the inconvenience of gathering grapes, &c. DAVID WAUGH.

Wellsburg, W. Va.

THE INSECTS ON RASPBERRIES.

EDS. RURAL:—The insect mentioned by Dr. GUIWITS as perforating and destroying his raspberry vines is the *acanthus nivous*, or climbing cricket. It is very generally diffused, and for several years has been very destructive in Northern Ohio, and quite numerous here in the West. The male of this species is of a white color, slightly tinged with green, except on the front of the head and the first joint of the attennæ which are of a yellowish color. The female is larger than the male, wing-covers narrow, and color much darker, approaching a dusky brown. There are three dark stripes on the head and thorax. They remain hid during the day and on the approach of evening they can be seen, and known by a shrill, incessant chirping of the male, produced by the friction of his wings. The body is nearly half an inch in length, and from the head to the end of the wing-covers about three-fourths of an inch. They may be found from midsummer until autumn on shrubbery and vegetation in which their eggs are deposited and hatched about the middle of July. A solution of chloride of lime has been recommended as a good application, but as yet I have found no effectual remedy.

Grinnell, Iowa. DR. C. A. PERDUE.

DUCHESS OF OLDENBURGH.

THIS apple is of Russian origin, and is attracting considerable attention on account of its ability to withstand the severe winters of the most Northern climates in which apples are grown. The tree grows upright, is vigorous and healthy, the young shoots are dark colored, and the leaves broad, dark-green, and coarsely serrated. It bears well, the fruit being valuable for marketing or cooking. The tree flourishes in a variety of soils and situations.

The size of the fruit is medium to large; its form roundish, flattened; the skin is smooth, with light, bluish bloom; the color is light and deep, rich red, striped and splashed on a yellow ground; flesh nearly white, sharp, sub-acid, juicy and well ripened, pretty rich; stem short; basin deep, wide, even and regular; calyx large, nearly closed. Season for ripening, August and September, keeping till October and November.

PEACHES IN NEW JERSEY.

EDS. RURAL:—On May 16th I visited the White House, Henderson Co., N. J., to look among the peach orchards. This county is one of the best for peach growing in that State. I found the trees loaded with blossoms, with every prospect of a fine crop of fruit, and during a ride of of thirty miles did not find one orchard that was injured. This county has a fine rolling surface, and in many parts of it the soil is composed of a red shale, which proves to be the most valuable for peaches. There are many very fine orchards which have proved very profitable to their owners.

One of the best that I visited was owned by S. WEARTS, Esq. This gentleman spends more time and money on his orchard than any other man in the county. He has some peculiar views in regard to the pruning and cultivation of trees. His orchard at present contains 3,000 trees planted on 20 acres. He makes use of bone dust entirely to stimulate his trees, using four tons each year, about the first of June, sowing it broadcast. He was pruning his trees when I visited him, and the plan he adopts is this: Always cut a trifle beyond the joint or seam next to the body of the tree. This, he says, permits the sap to continue its course directly upwards, and prevents bleeding, and the wound soon closes. To illustrate the use of frequent plowing and good cultivation, he showed me one row of trees planted next to a stone wall, on which side he could not plow, the other side receiving the same cultivation as the rest of the orchard, and the headland the same amount of bone-dust. This row was about one-third in size less at the trunk, and the top about half the size, and not so prolific in proportion.

In each corner of this orchard, next the road, I noticed that a number of the trees were dead, and inquired the cause, when he informed me that for a number of years previous to the planting of his orchard those places were used for potatoes, which caused the trees to die very soon after planting. He thinks planting potatoes in young orchards very injurious.

I questioned him in regard to the yield of the different varieties, when he gave the following statement: The Early Reds he found to be the most profitable of all. The Mary's Choice was one of the poorest bearers in his orchard, never averaging one basket to a tree. At the age of six years, his Early Crawfords had not yielded him one basket to a tree, while the Old Mixon in the fourth year yielded him three, and the fifth year four baskets. His other varieties were all good bearers. His soil is a chestnut sandy loam with a clay bottom. The orchard has a northern exposure.

He has his peaches picked in pails, then carts them to his barn, where the women select and basket them. The baskets are all filled rounding full, and contain three pecks. The fruit is of a beautiful color, and always commands ready sale at the highest market price.

NOW AND THEN.

New York City, May 10, 1867.

HORTICULTURAL FAIR.—A Horticultural Fair is to be held at Bloomington, Indiana, on the 7th and 8th days of June. It is attracting general attention in that section and promises to be well attended. An address by Dr. BLAND of the Northwestern Farmer, on the occasion, is expected.

PLOWING UP OLD ORCHARDS.

A QUESTION frequently arises as to the best course to be pursued with an old neglected orchard, which has become covered with a dense sod of grass, and thus often of an inferior character, and full of disagreeable weeds. Orchards that have been widely planted, and which have gaps from the decay of trees, especially when these have been trimmed up with high stems and long, naked branches, do not cast sufficient shade upon the ground to prevent the growth of grass and weeds. These intruders occupy the surface soil to the disadvantage of the roots of the fruit trees, and we may wonderfully improve the health of such orchard by plowing the ground, and at the same time severely pruning the branches and cleansing the bark of these old trees. These good results may be continued by shallow culture of the soil, with suitable applications of manure where needed. By giving a dose of lime, or marl and ashes, we shall infuse a new life and growth and productiveness that will astonish and delight us, and reward us for our labors and outlay.

It may be urged as an objection to breaking up the sod, that the most careful plowman will unavoidably damage some of the roots that approach the surface, but this is an injury that must be submitted to; and after all, it is not such a serious affair, and is overbalanced by the advantages of renewing the productiveness of the exhausted orchard.—*Warder's American Pomology.*

HORTICULTURAL GLEANINGS.

A Shrub—Name Wanted.—"H. F., BERGEN, N. Y." The twig and flowers forwarded by you is known by the name of *Amelanchior Canadiensis*. Popularly, as "Shad berry, June berry, and Wild Service berry."

Kentucky Horticultural Society.—This Society, with its headquarters at Louisville, seems to be a live institution. Arrangements have been made for holding weekly exhibitions of fruit and flowers during the season. These displays will take place every Saturday in the Masonic Temple building.

Fruit Killed.—The Terre Haute (Ill.) Express states that a severe frost occurred in that section on the 7th of May doing great damage to all kinds of fruit. The loss in that county alone is estimated at $100,000. Further south the reports are still favorable.

Too Much Vegetable.—At a vegetable exhibition in California there was a mangel-wurtzel which weighed 118 lbs., a cabbage 53 lbs., a turnip 26 lbs., a sweet potato 15 lbs., and a carrot 10 lbs. This is rather crowding business in the vegetable line.

Cut Worms.—These pests are a great annoyance anywhere, but especially offensive in the garden. They may be headed off by encircling plants with refuse tin cups, basins and and the like, or by white birch bark where this is available. Press these circlets into the ground and the worms will not be able to surmount the barrier. They will not seek access to plants by mining, very often, if at all.

A Winter Apple.—At a recent gathering of pomologists in Jefferson county, Ky., on the 8th of May, samples of the Maxey apple were exhibited in a state of excellent preservation. The Tasting Committee decided them to be a good sub-acid fruit, and worthy to occupy the place made by the failure of the Pryor's Red.

Horticultural Notes and Queries.

BUCK-THORN FOR HEDGES.—A correspondent wants to know the best time and mode of planting the Buck-thorn for hedges. Will some one posted in the business respond to the inquiry?

WORMS ON CURRANT BUSHES.—A friend states that air-slaked lime, sprinkled over currant bushes, will prove a perfect preventive to the ravages of the currant worm. It is certain, effective and cheap.

FLOWERS.—Annuals should be transplanted before they are too large; a dull, showery day should be chosen for the work. If the weather is dry give the plants a good soaking after they are set. The watering pot without the rose jet answers admirably for this. Remove as much soil as possible with the roots of the plants.

PEAR BLIGHT—THE SECKEL.—In the RURAL of May 18th the Editor, writing from the South, asked if any of the readers of the RURAL had observed blight in the Seckel in their localities. An affirmative answer comes from G. S. CONOVER, Esq., West Fayette, Seneca Co. He says:—"Of some 150 varieties which I have the Seckel has suffered as bad as any other, and 1 fine tree, seven or eight years planted, growing and bearing fruit, died outright in spite of all the doctoring I could do for it."

GRAND STRAWBERRY AND GRAPE EXHIBITION—The Managers of the American Institute announce that an attractive exhibition of Strawberries and Hot House Grapes will be held at the Rooms of the Institute, in the Cooper Building, Fourth Avenue and Eighth Street, New York City, on Tuesday and Wednesday, June 18th and 19th. Liberal premiums are offered, in amounts from $2 to $50. For premium list, etc., address JOHN W. CHAMBERS, No. 22 Cooper Building, New York.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

BUTTERNUT PIE.—Take 1 cup of pulverized meats, 1 cup of sugar and 1 egg, and beat well together; then pour in 1 pint of milk, ½ a teaspoonful of cinnamon. N. B. The meats should have (if dried) boiling water poured over them, and stand fifteen or twenty minutes, when they can be easily peeled; then mash with a knife or rolling pin.

LEMON PIE.—Take 1 large sized lemon, peel and slice it; add 2 cups of sugar and stew fifteen minutes; when cool, put in 1 beaten egg and 4 spoonsful of cream. Stir it up, and put into a tin lined with paste. Two crusts may be used.

SPONGE CAKE.—Take 3 eggs; 2 cups of sugar—beat together; ½ cup buttermilk; ½ cup sour cream; 1 teaspoon of saleratus; 3 cups of flour.

GOOD VINEGAR.—Take 1 gallon molasses; 3 gallons of soft water (warm;) when dissolved, pour in a keg, and put in a piece of clean white paper, and set in a warm place. Cider is very good mixed with it.

TO MAKE BEER.—Take ½ lb. of the inside bark of pine; ½ lb. of spruce bows; the same of Princes Pine; 4 oz. of wintergreens; the same of hops; 2 oz. of burdock; 1 lb. of bran. Boil four hours; then strain, and when temperate put in a cup of yeast and 2 lbs. sugar. Set undisturbed till it works. This will make three gallons.

TO MAKE BLUE INK.—Take 1 box of bluing (price 5 cents,) and mix with 1 pint of soft water.—MRS. S. A. EAMES.

WINDOW SHADES.—M. L. C., Mendon Center, N. Y., says:—The Botanical Transparency is easy to make, and requires only taste in arranging the flowers and leaves. First, procure some well pressed, handsome flowers or bright autumn leaves. If varnished, they will be more beautiful. Select corresponding colors. These prepared, take a piece of white, unruled letter paper, the size of a window pane; arrange the flowers or leaves in a bouquet or wreath, and stitch neatly on the paper. Take a piece of thin Bristol board the same size; mark, either in oblong or round form, the size of the bouquet; cut out neatly with a sharp pen-knife on glass. Place thin turletan or fine lace over the hole, and fasten with thin mucilage. Lay over the flowers; stitch the edges nicely together, and bind with ribbon. Make a loop in the center to suspend from. The effect of this little affair, when completed, compensates for the trouble in preparing it.

VEAL CAKE.—Boil six or eight eggs hard; cut the yolks in two, and lay some of the pieces in the bottom of the pot; shake in a little chopped parsley; some slices of veal and ham, and then eggs again; shaking in after each some chopped parsley, with pepper and salt, till the pot is full; then put it in water enough to cover it, and lay on it about an ounce of butter; tie it over with a double paper, and bake it about an hour; then press it down together with a spoon, and let it stand till cold. It may be put into a small mould, and then it will turn out beautifully for a supper or side-dish.

GOOD BROWN BREAD.—Take hot water, not scalding, and stir in corn meal until half thick enough for batter; cool it with cold water; put in Graham flour to make a thick batter; then stir it all; put in pans two or three inches deep; let it stand an hour or two, and bake in a hot oven two and a-half hours. Cool under thick cloths an hour or two when taken out, and it is good,—hot or cold,—light, moist and sweet.

GRAHAM PUDDING.—Sprinkle Graham flour, from the hand, into fast-boiling water, and stir slowly enough to make a thin pudding. Boil five or ten minutes, and it is done. Set from the fire just before taking up, and it will easily cleave from the kettle. Much depends on care in making,—when well done it is very nice and wholesome. Let what is left cool for next meal, or it can be dissolved in water for the next pudding, or browned in slices on a griddle.—*Health Cook Book.*

CHINESE MOTH TINCTURE.—The season fast approaches when it will become necessary to lay furs aside and preserve them from their ravishers—the moths. The following hints may be useful to our readers:—One ounce of gum camphor and one ounce of powdered shell of red pepper are macerated in eight ounces of strong alcohol for seven days, and then strained. With this tincture the furs and cloths are sprinkled over and rolled up in sheets. This remedy is used in Russia, under the name of "Chinese Tincture for Moths," and is found very effective.

WORTH CONSIDERING.—Good diet makes healthy children and healthy adults. Good Saleratus helps to make nutritious, healthy diet. Hence use D. B. De Land & Co.'s *Best Chemical Saleratus*, as it is perfectly pure, and better than Soda for all purposes.

"THE TRUTH IN A NUT-SHELL."—The many kinds of common Saleratus found in market are weak, impure and unhealthy, and defraud the purchaser of his money. Pyle's Saleratus is entirely free from all those objections. Its great sale proves its popularity. Sold by grocers everywhere, in pound packages.

SMALL FRUIT CULTURIST.

By Andrew S. Fuller,

PRACTICAL HORTICULTURIST, RIDGEWOOD, BERGEN CO., N. J.

A new work, and the only one devoted to Small Fruits. Special treatises of this kind have the advantage that the author can more thoroughly discuss his subject, and go into greater detail, than in a work embracing both large and small fruits. The work covers the whole ground of Propagation, Culture, Varieties, Packing for Market, etc.

We predict that this work will bring Mr. Fuller many enemies, as he has given his opinion about varieties without reserve. On the other hand it will the more strongly endear him to all true lovers of horticulture, as these wish to have the merits of fruit given without reference to the persons who introduce them.

While very full on all the small fruits, the Currants and Raspberries have been more carefully elaborated than ever before, and in this important part of his book, the author has had the invaluable counsel of Charles Downing. The chapter on gathering and packing fruit is a valuable one, and in it are figured all the baskets and boxes now in common use. The book is very finely and thoroughly illustrated, and makes an admirable companion to his Grape Culturist.

AMERICAN POMOLOGY.

APPLES.

BY DOCT. JOHN A. WARDER,

PRESIDENT OHIO POMOLOGICAL SOCIETY, VICE-PRESIDENT AMERICAN POMOLOGICAL SOCIETY, ETC.

202 ILLUSTRATIONS.

To pomologists a work by Dr. Warder will need no commendation. Though a citizen of Ohio, he is so sure to be at any pomological gathering, be it East or West, that the whole country claims him, and if any one has a right to entitle his work *American Pomology* it is certainly Dr. Warder. In this work the author has attempted the difficult task of bringing apples into something like order.

This volume has about 750 pages, the first 375 of which are devoted to the discussion of the general subjects of propagation, nursery culture, selection and planting, cultivation of orchards, care of fruit, insects, and the like; the remainder is occupied with descriptions of apples. With the richness of material at hand, the trouble was to decide what to leave out. It will be found that while the old and standard varieties are not neglected, the new and promising sorts, especially those of the South and West, have prominence. A list of selections for different localities by eminent orchardists is a valuable portion of the volume, while the Analytical Index or *Catalogue Raisonne*, as the French would say, is the most extended American fruit list ever published, and gives evidence of a fearful amount of labor.

CONTENTS: I. Introductory.—II. History of the Apple. III. Propagation, Buds and Cuttings, Grafting, Budding, The Nursery.—IV. Dwarfing. V. Diseases.—VI. The Site for an Orchard.—VII. Preparation of the Soil for an Orchard.—VIII. Selection and Planting.—IX. Culture, etc.—X. Philosophy of Pruning.—XI. Thinning.—XII. Ripening and Preserving Fruits.—XIII. and XIV. Insects.—XV. Characters of Fruits and Their Value—Terms Used.—XVI. Classification. Necessity for, Basis of, Characters, Shape, Its Regularity, Flavor, Color, Their Several Values, etc., Description of Apples.—XVII. Fruit Lists—Catalogue and Index of Apples.

Ladies' Olio.

A SUBLIME LESSON.

A LESSON in itself sublime,
A lesson worth enshrining,
Is this: "I take no note of time,
Save when the sun is shining."
These motto-words a dial bore,
And wisdom never preaches
To human hearts a better lore
Than this short sentence teaches;
As life is sometimes bright and fair,
And sometimes dark and lonely,
Let us forget its pain and care,
And note its bright hours only.

There is no grave on earth's broad chart,
But has some bird to cheer it;
So hope sings on in every heart,
Although we may not hear it;
And if to-day the heavy wing
Of sorrow is oppressing,
Perchance to-morrow's sun will bring
The weary heart a blessing.
For life is sometimes bright and fair,
And sometimes dark and lonely;
Then let's forget its toil and care,
And note its bright hours only.

The darkest shadows of the night
Are just before the morning;
Then let us wait the coming light,
All bodeless phantoms scorning;
And while we're passing on the tide
Of Time's fast ebbing river,
Let's pluck the blossoms by its side
And bless the gracious Giver;
As life is sometimes bright and fair,
And sometimes dark and lonely,
We should forget its pain and care,
And note its bright hours only.

THE CROQUET GROUNDS AND GAME.

Our illustration, for which we are indebted to Madame Demorest's Magazine, gives the best ideal of a space of smoothly kept grass, in a yard or lawn,—an oblong of one hundred by sixty-five feet, in which this cheerful game, for ladies and gentlemen, or children, can be played. There may be gravel walks and shrubbery around it, if desired. A sloping bank of a foot high is well, yet not necessary.

Balls and mallets can be bought, or made from samples found in every town, the balls about 3¼ inches in diameter, and mallets in due proportion. The hoops or arches should be of round three-eighths inch wire, standing a foot or a little over, above the ground, and ten inches across. They show plainer, if painted white.

The arrangement of the arches, their number and distance apart, as shown in the diagram, is the best. Of course all can be varied, with size of ground, &c. Not over eight persons should play at a time, and four or six is best. If there be but two, each can use two balls.

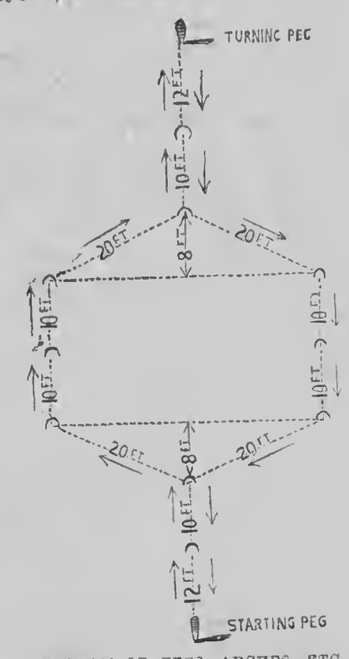

DIAGRAM OF PEGS, ARCHES, ETC.

The game consists in striking the balls from the starting peg through all the hoops to the peg at the other end, which must be struck. This is called "pegging." The balls are then driven back to the starting peg; as shown in the plan, by the direction of the arrows.

When all the balls on one side have gone around and hit the starting peg, that side has won. It is a light, active, and social recreation, combining good exercise with much enjoyment, both to actors and spectators, and is much in vogue.

FIG. 1.—SIDE STROKE.

Our figure, No. 1, gives the attitude in what is called the "side stroke." The "straight stroke" is given in figure 2.

FIG. 2.—STRAIGHT STROKE.

Both strokes are allowed. The rules of this cheery game, so beneficial in our deficiency of good out-of-door amusements, can easily be learned.

DOMESTIC BLISS.

BY MRS. H. M. LINCOLN.

It's a mysterious familiarity, this domestic unity. Study closely as we may, its hidden things are not revealed to us when we fancy ourselves most familiar therewith.

When the close companionship of wedded life begins, there begins also this familiarity,—mysterious not alone to the world, but to those thus intimately connected. Long years of domestic unity may fail to reveal the real character, and some new phase of life bring to light strange revelations. This could hardly be different, when each day brought new conflicts and cares, and consequently new discipline. Is it any wonder, then, that domestic life while bringing in the closest unity two beings, should at the same time admit of this great and fathomless distance?

To-day we may dine with a friend. The serene and sunny atmosphere of affection makes every one happy, and we say this is indeed a model home. Another day finds us with our friends again; we miss at once the sunlight of love, and see instead clouds; the brow of both husband and wife overshadowed, and no attempt we make at conversation or pleasantry can wholly dissipate the gloom. We discover, too, a spirit of strife (guarded by courtesy,) and study closely as we may, we cannot learn the cause of this sad change. The same evening we meet our friends at a social gathering, and they are happy as ever.

Mysterious life, bringing happiness one moment and wretchedness the next; and stranger still, five minutes conference made the clouds scatter and the sunlight of love look out again! Perhaps the words were simple that wrought this change. They might have been, "Forgive me—I spoke so hastily it has made us both wretched;" or some mysterious action may have been explained,—no matter, if to the purpose. This is but one trifling instance of domestic variance, yet the peace of hundreds is destroyed for nothing more.

There are days together when the curtain of gloom is drawn over aching hearts, concealing from the world this pain, or betraying most plainly their abiding grief. Sensitive hearts find in looks, words and actions a change from affection to coldness; and those closely united, and bearing the name of husband and wife, may be as far from knowing the cause of such estrangements as though they had never met. How sad to see families growing indifferent to all that makes life blessed, and becoming strangers in everything but form, and getting further and further away, until the frank and fearless confession—easily given at the first—becomes an insurmountable barrier. People living thus can hardly be expected to appear themselves, and how many are cruelly censured by observers for the cold and heartless words they speak, and the actions they commit, under the bondage of absorbing grief. With thought intent on one thing—trying to solve the mysteries of domestic infelicity—how can they appear natural? We are often thrown into the company of just such persons, and should we hasten to pronounce them disagreeable and selfish and churlish, when they are so wretched they scarcely heed anything? Let us meet the same persons a week hence and how different our opinion,—as different, indeed, as their prospects. The mystery of which they were so long ignorant is explained at last: *right* triumphed, and the husband and wife are saved untold misery by a few words of frank open-heartedness. How sad that the sacred relations of husband and wife should so often be subject to unfathomable mystery. Nothing but constant frankness can ever reveal what both should know to make them, even after long years of domestic unity, thoroughly acquainted.

Canandaigua, May, 1867.

WHEN a lady laces her waist a third less than nature made it, I wonder if her pretty figure will not shorten life a dozen years or more, besides making her miserable while she does live.

OUR SPICE BOX.

WHY are good husbands like dough? Because women need them.

WHEN is a lady's neck not a neck? When it is a little bear (bare.)

WHY are old maids and doubtful propositions alike? Because they are neither of them a parent (apparent) to anybody.

"AM I not a little pale?" inquired a lady, who was short and corpulent, of a crusty old bachelor. "You look more like a big tub!" was the blunt reply.

A FEMALE school-teacher, in her advertisement, stated that she was "complete mistress of her own tongue." "If that's the case," said a caustic old bachelor, "she can't ask too much for her services."

A CYNICAL journalist says the reason so many marriages occur immediately after a great war is that bachelors become so accustomed to strife that they learn to like it, and after the return of peace they enlist in matrimony as the next thing to war.

THE Lorain (Ohio) News says that the young ladies of that place walk on their tip-toes, and can't help it, as their waterfalls on the top of their heads draw up their back hair so tightly that they can't put their heels down squarely without great pain.

IN Massachusetts there is a place called Sanberry, where Mr. Nehemiah Blackberry married Miss Susan Elderberry, a niece of Deacon Dusenberry of Danberry. The ceremony was performed by Rev. Mr. Cranberry, at the house of Mr. Huckleberry.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

THE RIGHT PATH.

Too often do we see lads and young men walking our streets with the swing and utter abandon of the professed loafer, or passing in and out of the low grog-shops, which, alas! are much too prevalent now-a-days. And what a lesson it ought to be to parents, to try and guide the children given them in the right path.

The young child stands at the parting of two ways and can, with its simple faith and purity, be moulded to suit our minds. Youth comes, with all its freshness, its ambitions and its ready confidence in the goodness of all, and if guided aright these gala days of our lives will glide peacefuly into manhood, where golden opportunities are spread out before us, inviting *onward* and *upward*. To be sure, it is not for all to reach the goal of their ambition. But they can live a pure, noble and exalted life, and scatter such bright and lasting gems along the path that the journey of many a poor and sorrowing one may be smoother and more easy, while the thorns that seemed to pierce them at every step may be passed over without a murmur.

Meanwhile we swiftly pass the mid-day of life, and slowly descend the slope toward age; every day growing richer in the love of the good and true, and far more precious in the love of our families. We can, in memory, live over again the sunny day of childhood, can review our happy youth and earnest manhood, with a blessing on those who first guided us in the path of right.

There are great and noble works to be performed, and we should seek to be able and willing to perform them. There are millions to be trained to a higher life; there are duties we owe to society. We can not, we should not, shun responsibility or question the influence of a wise and loving life, which may be felt long after you and I, dear reader, have looked our last upon the green fields and wood-crowned hills of earth.

O! would all could understand the poet's meaning:

"Sculptors of life are we, as we stand
With our souls uncarved before us,
Waiting the hour, when at God's command
Our life-dream passes o'er us."

Crawford Co., Pa. E. H.

THE NATURAL WORLD.

This natural world is "a cupboard of food and a cabinet of pleasure," as the old poet quaintly puts it. All sorts of things are therein stored up for present and future use. On the lower shelves, which the savage man can reach to, are the rudest things,—acorns, roots, berries, wild apples, fish and flesh. Higher up there are corn, salt, wool, stones with fire to be beaten out by striking together; then live animals of various sorts; next metals, iron, copper, silver, gold, and the like, where he can reach up to them and take them down. A little further up are things to adorn the body,—ochre to paint the cheeks, feathers to trim the head, rubies and diamonds and many a twisted shell, still more to ornament the world; all sorts of finery for the Nootka Sound female and the Parisian woman. Still higher up are laid the winds to grind man's corn, waters to sift his meal; and above these are coals, waiting to become fire, and to be made the force of oxen, winds, rivers and men. Yet higher up lie the gases, which are to light a city, or take away the grief of a wound and make a man invulnerable and invincible to pain. Higher still are things which no man has yet climbed up to and looked at. There they lie, shelf above shelf, gallery above gallery, and the ceiling is far out of the telescopic sight of the farthest-sighted man.

A short savage, like KING PHILIP of Pokanoket, looks on the lower shelves and takes what he wants,—a club, a stone chip, shells or ears of corn,—and is content and thanks GOD for the world we live in. But the civilized man, who has grown as tall as ERICSSON, reaches higher and takes down wind power, steam power, lightning power, and hands them to us smaller boys who cannot yet reach so high. Some of the tallest-minded men stand on tip-toe and look up as high as they can see, and then report to us the great machinery and astronomical wheelwork which keep sun and moon in place, or report of the nice chemical and electrical gearing which holds the atoms of a pebble together, and whereby the great world grows grass for oxen, and corn for men.—*Selected.*

TENNYSON'S GARDEN.

BAYARD TAYLOR, in his last letter, says:—"At Farringford, Mr. Tennyson has two specimens of the ilex, which, for luxuriant beauty of form, I have never seen surpassed in Italy. Among his trees I also found a splendid *magnolia grandiflora*, the Italian umbrella pine, cypress, and a variety of the araucaria. The fan-palm of China (*chamerops excelsa*) has been planted in the Queen's gardens at Osborne, and has grown, thus far, without requiring any protection during the winter.

"Mr. Tennyson's *sequoia* (the giant of California,) which was planted by the hand of Garibaldi, is now thriving vigorously. His gardener was obliged to protect it by a wire cage, and, I suspect, is still a little nervous whenever a stranger approaches the illustrous tree. In all the sheltered nooks of the park, snowdrops, cowslips and daffodils are blooming, and one rhododendron already lit up with rosy fires the dark green of the 'dry-tongued laurel.' I shall not offend the Lares of Farringford by any details of the life they guard; but the many friends of the poet, beyond the Atlantic, will be satisfied to know that not one inch of his six feet of stature has yet been beat by time. He is still erect, vigorous and full of creative life. Many a golden note will yet flow from that full-voiced fountain of song."

GIVING JOY TO A CHILD.

BLESSED be the hand that prepares a pleasure for a child, for there is no saying when and where it may again bloom forth. Does not almost everybody remember some kind-hearted man who showed him a kindness in the dulcet days of childhood? The writer of this recollects himself at this moment, as a barefooted lad, standing at the wooden fence of a poor little garden in his native village, while with longing eyes he gazed on the flowers which were blooming there quietly in the brightness of a Sunday morning. The possessor came forth from his little cottage; he was a wood-cutter by trade, and spent the whole week at work in the woods. He had come into the garden to gather flowers to stick into his coat when he went to church. He saw the boy, and breaking off one of his carnations—it was streaked with red and white—he gave it to him. Neither the giver nor the receiver spoke a word, and with bounding steps the boy ran home. And now here, at a vast distance from that home, after so many events of so many years, the feeling of gratitude which agitated the breast of that boy expresses itself on paper. The carnation has long since withered, but now it blooms afresh.—*Douglas Jerrold.*

PERHAPS angels are less blessed than man from being able to remember no childhood.

Sabbath Reading.

THE OTHER WORLD.

BY MRS. HARRIET BEECHER STOWE.

It lies around us like a cloud,
A world we do not see;
Yet the sweet closing of an eye
May bring us there to be.

Its gentle breezes fan our cheek;
Amid our worldly cares,
Its gentle voices whisper love.
And mingle with our prayers.

Sweet hearts around us throb and beat,
Sweet helping hands are stirred,
And palpitates the veil between
With breathings almost heard.

The silence, awful, sweet, and calm,
They have no power to break;
For mortal words are not for them
To utter or partake.

So thin, so soft, so sweet they glide,
So near to press they seem.
They lull us gently to our rest,
They melt into our dream.

And in the hush of rest they bring,
'Tis easy now to see
How lovely and how sweet a pass
The hour of death may be;—

To close the eye, and close the ear,
Wrapped in a trance of bliss.
And, gently drawn in loving arms,
To swoon to that—from this—

Scarce knowing if we wake or sleep,
Scarce asking where we are.
To feel all evil sink away,
All sorrow and all care.

Sweet souls around us! watch us still:
Press nearer to our side:
Into our thoughts, into our prayers,
With gentle helpings glide.

Let death between us be as naught,
A dried and vanished stream;
Your joy be the reality,
Our suffering life the dream.

ROWLAND HILL'S LAST SERMON.

I HEARD poor old Rowland Hill's last sermon on Sunday morning. It was very affecting when he used the painful word "Farewell." He reminded all those who were the true followers of Christ that their separation was but temporary—that they should all meet again in heaven. The sobs in the church could then be heard, and they were very general. There was a magnificent sermon in the evening, in allusion to the last sermon of their venerable pastor in the morning. The text was very applicable—our Saviour's words to the apostles when He was about to quit this earth—"I will not leave you comfortless." The good old man used this remarkable sentence in the morning:—"I do think," said he, "a young, idle clergyman to be numbered among the most wicked upon earth; and to tell you the truth, I should have been ashamed to live so long (eighty-eight years) if I had not worked hard and done my utmost, and used all my strength in God's service. I am now in the valley; but in all my travels I could never see the top of the mountains until I got into the valley."—*My Note Book.*

"FEAR NOTHING BUT SIN."

A GROUP had gathered around the couch of a dying mother. In an hour least expected, the summons had come, bidding her depart to the spirit land. She had but a moment to think—to say farewell to the loved ones of her household. Hastily calling them together, they were only in time to hear her dying message—"Fear nothing but sin." It was all that she could say. Upon the sound of the last word, the cord of life snapped, and "she was not; for God took her." The children were motherless, but what a legacy she had left them! In that single moment of her life she had given them advice of a priceless nature. Through all their days it might remain with them, and serve as a safe guide on life's pilgrimage.

Few indeed are they who improve their last moments as did that pious mother. Had she been permitted to speak for hours, she could not have said more, or more to the purpose, than she said in that single moment. Surely, "Words fitly spoken are like apples of gold in pictures of silver."

HOW TO DO GOOD.

DR. JOHNSON wisely said, "He who waits to do a great deal at once, will never do anything." Life is made up of little things. It is but once in an age that occasion is offered for doing a great deed. True greatness consists in being great in little things. How are railroads built? By one shovel of dirt after another; one shovel at a time. Thus, drops make the ocean. Hence we should be willing to do a little good at a time, and never wait to do a great deal of good at once. If we would do much good in the world, we must be willing to do good in little things, little acts one after another; speaking a word here, giving a tract there, and setting a good example all the time; we must do the first thing we can, and the next, and then the next, and so keep on doing good. This is the way to accomplish anything. Thus only shall we do all the good in our power.

WHY should'st thou think hardly of thy barrenness and punishment of conscience, when thou art hugging many wedges of gold and dross with thee, and trying to keep the favor of Israel as well?

How long may it take a man to embrace CHRIST as his Saviour? As long as it takes a drowning man to let go a straw and lay hold of an offered rope.

Useful, Scientific, &c.

BESSEMER STEEL.

A COMPANY of gentlemen visited the works of WINSLOW & GRISWOLD, at Troy, a few days since, to see the process of making steel direct from pig iron, and were greatly pleased with both process and result—the economy of the first, and the excellence of the last. This invention of a Prussian—BESSEMER—is in use in England, and several kindred processes have been devised in this country, the owners of which have adjusted their conflicting claims, and chosen an agent to sell the right to manufacture.

At Troy the work is beginning on a large scale; also at the great Cambria Iron Works, Johnstown, Pa., at Wyandotte, Mich., and perhaps at some other places.

An article, excellent for railroad bars, and even for edged-tools, can be made at a cost less than double that of iron. Steel rails are used in England, and their use is beginning here. It is thought they will last more than five times as long as iron, and are safer from breakage. This is to be a vast business in this country, and of great benefit.

A few years ago, cast steel, for which we had always relied on England, was made of equal excellence in Pittsburg, just in time to save us from foreign dependence through the war. And the making it in this country reduced the price, and saved us millions of dollars during that great struggle. The mills have made about a third of what we use, and could supply our whole consumption; and here comes another great invention, by which we trust both inventors and the people will be large gainers.

SENSIBILITY OF FLAME.

A LECTURE on the sensibility between a flame under certain conditions, and certain sounds, was recently delivered at the Royal Institute of Great Britain. Illustrating these phenomena, Prof. Tyndall said:

"Some of these flames are of marvelous sensibility; one such is at present burning before you. It is nearly twenty inches long; but the slightest tap on a distant anvil knocks it down to eight. I shake this bunch of keys, or these few copper coins, in my hand; the flame responds to every tinkle. I may stand at a distance of twenty yards from this flame; the dropping of a sixpence from a height of a couple of inches into a hand already containing coin, knocks the flame down. I cannot walk across the floor without affecting the flame. The creaking of my boots sets it in a violent commotion. The crumpling of a bit of paper, or the rustle of a silk dress, does the same. It is startled by the plashing of a rain-drop. I speak to the flame, repeating a few lines of poetry; the flame jumps at intervals, apparently picking certain sounds from my utterance to which it can respond, while it is unaffected by others."

THE ANILINE DYES.

A NEW red has been obtained by Coupier, by a combination of two of the hydro-carbine bases of coal tar, which he has decided to be incapable of yielding a color in their separate condition. It is named Toluen Red, and is pronounced the richest red yet known. The so-called aniline dyes are among the most beautiful results of chemistry. The series already includes and rivals the colors of the rainbow, and Coupier's analysis promises indefinite varieties of beauties to come. Beginning with the admired varieties of purple and red, such as mauve, magenta, etc., additions like that above named have followed, including the splendid green called verdine, unchanged by candle light, a blue as clear as opal or the Italian sky, a good yellow, and a fair black. The intensity of these colors is shown in the fact that one grain of magenta in a million of water gives a good red, one in ten millions a rose-pink, one in twenty millions gives a blush to the water, and one in fifty millions a reddish glow.

DEODORIZERS.

THE following list of cheap and valuable disinfectants has heretofore appeared in print, but its republication may be productive of good at this season of the year:

Two pounds of sulphate of iron (copperas) dissolved in a pailful of water, and poured into a vault, will prevent the formation of sulphureted hydrogen gas for some time, and will generally be sufficient to remove all nuisance.

A layer of charcoal dust will prevent the escape of all offensive odor from any decomposed substance.

One pound of nitrate of lead dissolved in a pailful of water, is excellent for sinks, sink drains and vaults.

If other things fail, chloride of lime is always effectual, and may be freely used in vaults and upon other collections of filth, but is considered unhealthy to be used in dwellings, where its odors are inhaled during sleep.

COPPER alloyed so as to come under the term bronze has been made hard enough to receive and retain an edge so as to be used for cutting instruments, yet it is softened by being heated and plunged in cold water, while iron and steel are hardened by precisely the same process.

PURE paraffine is a good preservative for the polished surface of iron and steel. The paraffine should be warmed, rubbed on, and then wiped off with a woolen rag. It will not change the color, whether bright or blue, and will protect the surface better than any varnish.

CURIOUS PROPERTY OF IRON.

IN 1850, Mr. Marsh, an able chemist of the royal arsenal, England, discovered that it is invariable with iron which has remained a considerable time under water, when reduced to small grains or an impalpable powder, to become red-hot, and ignite any substance with which it comes in contact. This he found by scraping some corroded metal from a gun, which ignited the paper containing it, and burnt a hole in his pocket. The knowledge of this fact is of immense importance, as it may account for many spontaneous fires and explosions, the origin of which has not been traced. A piece of rusty iron, brought in contact with a bale of cotton in a warehouse or on shipboard, may occasion extensive conflagration and the loss of many lives. The tendency of molstened particles of iron to ignite was discovered by the French chemist, Lemary, as far back as 1670.

VEGETABLE SILK.—The Department of State has received information from the United States Consul at Lambayeque, Peru, that an important discovery has recently been made in Peru, of the silk plant. Preparations are being made to cultivate it upon an extensive scale. The shrub is three or four feet in height. The silk is inclosed in a pod, of which each plant gives a great number, and is declared to be superior in fineness and quality to the production of the silk worm. It is a wild perennial, the seed small and easily separated from the fiber. The stems of the plant produce a long and very brilliant fiber, superior in strength and beauty to the finest linen thread. Small quantities have been woven in the rude manner of the Indians, and the texture and brilliancy is said to be unsurpassed.

FIRE-PROOF WASH FOR SHINGLES.—A wash, composed of lime, salt, and fine sand or wood ashes, put on in the ordinary way of white-washing, renders the roof fifty per cent. more secure against taking fire from falling cinders, in case of fire in the vicinity. It pays the expense a hundred fold in its preserving influence against the effects of the weather. The older and more weather-beaten the shingles, the more benefit derived. Such shingles generally become more or less warped, rough and cracked; the application of the wash, by wetting the upper surface, restores them at once to their original or first form, thereby closing up the space between the shingles; and the lime and sand, by filling up the cracks and pores in the shingle itself, prevent it from warping.—*Mirror & Farmer.*

CEMENT FOR KNIFE HANDLES.—1. Lay a piece of alum on the stove, and when melted roll the knife shank in it, and immediately thrust it firmly into the handle. It will soon be ready for use.

2. Fine brick dust stirred into melted rosin and used hot will fix knife and fork handles very firmly.

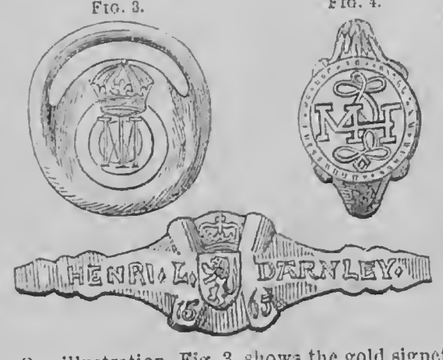
3. Mix equal parts of wood ashes and common salt with water enough to make a mortar. Fill the handle with this, and then drive in the shank and let it dry. I also fixed a stove spud in this way and it is very tight.—*Am. Agriculturist.*

Various Topics.

HISTORIC SIGNET RINGS.

THE finger-ring has long been worn, by both men and women, and in Europe are choice collections of *antiques*, even from the days of old Rome, and the times of CHARLEMAGNE and Queen ELIZABETH. Signet rings, with the "mark" of the owner, were used by royalty, nobility, and leading tradesmen, and are often curious and rich in their devices.

FIG. 3. FIG. 4.



Our illustration, Fig. 3, shows the gold signet ring of MARY Queen of Scots, now in the British museum. On the face is engraved the royal arms of Scotland, the motto, IN DEFENS, and her initials, M. R. The cut shows the inner side—a crowned monogram formed of the letters M and A, for MARY and the Duke of Albany, Lord DARNLEY—her unfortunate husband. Sir HENRY ALLIS thinks this ring was sent to ELIZABETH, who was much opposed to the DARNLEY marriage.

The Waterton collection has the ring of HENRY, Lord DARNLEY, the husband of Queen MARY; of which Fig. 4, shows the face, with M. & H. (MARY and HENRY,) joined by a lover's knot; and the cut below is the inner side of the ring. We give also another of sad interest;—the signet ring given by Queen ELIZABETH to her favorite, the Earl of Essex. The Queen, when passionately attached to him, gave him the ring with the earnest assurance that she would pardon any fault, or save from any peril, whenever he sent it to her.

Years after he was judged guilty of treason, she signed his death warrant with great agony, but expected the ring would reach her so that she could grant a pardon. It did not come, and in pitiful despair she heard, in her palace, the cannon that announced his death on the block. Essex had sent the ring by the Countess of Nottingham, wife of the Lord Admiral, who was an enemy to the unfortunate Earl, and compelled her to secrete it. On her death bed, the Countess sent for her royal mistress, "and humbly implored mercy from GOD and forgiveness from her earthly sovereign, who did not only refuse to give it, but having shook her, as she laid in bed, sent her with most awful curses, to a higher tribunal."

Such is FRANCIS OSBORNE'S account of this terrible scene. Dr. BIRCH says ELIZABETH'S words were "GOD may forgive you but I never can." The Queen soon died, melancholy and broken-hearted.

It is but a few days since we saw, and heard, and can never forget, the wonderful and life-like rendering of this scene by the great RISTORI. The cameo head of ELIZABETH (Fig. 5,) is cut in onyx with great accuracy and excellence.

FIGURE 5.

We give also a seal ring found by a laborer's wife in the mill near Stratford-on-Avon church yard, in 1810, now in the collection of Shakspearean relics of that town. (Fig. 6.) It is of gold, weighs 12 dwts., and bears the initials, W. S,—doubtless the poet's ring.

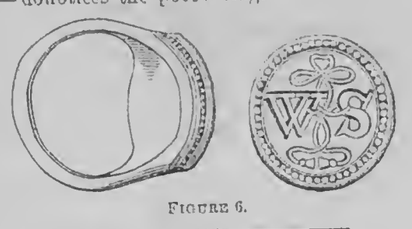


FIGURE 6.

THE SOUTH—ITS RESOURCES.

WHAT HAS BEEN DONE—WHAT CAN BE.

THE RURAL NEW-YORKER is devoted to the discussion of the best modes of farming, and the pursuits connected therewith, and to the giving such mental and moral food, such aid and suggestion in the wise conduct of life, as may help to a higher standard of manhood and womanhood, and make country life cheerful and healthful. Intimately interlinked as are all industrial pursuits, we devote some share of attention to the great world of inventive genius, and skill, and labor, in workshops, and mills, and factories, in which so many of the people live. All these sink or swim together, and we should be broad enough of vision to see that there is no real antagonism of interests, but that all should thrive, for the common weal. The interests of labor are one all over the land; and, with our growing home demand, and extended commerce, there will be ample call for all the products of our soil from Maine to California.

A word, in this catholic spirit, on the resources of the South—premising that word by an expression of belief that the industrial triumph which her people can achieve, in developing the wealth of soil, and mine, and forest, and putting farm and factory side by side, will be the opening way to concord, unity and enjoyment. Let us see what has been done, and surely still more can be accomplished. Of rice, from 1850 to 1860, some 200,000,000 pounds was the yearly product, and experiments have proved that it can be raised on a wider area; not only on the irrigated fields of South Carolina and Georgia, but in other regions. In 1860, the yield of sugar was 221,726,000 pounds, or about a third of our importation. As the cane can be grown, not alone in Louisiana, but in parts of Alabama, Georgia, Mississippi and Texas; this can be largely increased. The 5,000,000 bales of 400 pounds each, of cotton raised in 1860 can be largely added to, over the wide range of the nine States that produce this great staple. The experiments in India seem to indicate that taking quantity and quality together, we have the vantage ground, which is of vast importance in the world's great marts. The long staple cotton, like the high priced Sea Island variety, can be grown in extensive districts, too. Years ago our Government was officially informed by our Consul at Naples, that Italian cotton lands yielding less than ours, were held at $450 per acre. Tobacco has been, and can be, grown in great quantities.

But our Northern products flourish South also, in every State, more or less. Tennessee is a great corn granary; the wheat of Virginia is abundant and of fine quality; fine fruits, apples, peaches, &c., can be produced far more than in the past. The product of food, per head, in 1860 was larger than in New England, or even the Middle States, or any part of the world save the North-Western States. In 1860, 230,000,000 bushels of corn, 26,000,000 bushels of wheat, 17,000,000 bushels of oats, 5,500,000 bushels of potatoes, and 48,000,000 pounds of butter were the fruits of Southern industry.

The mild winters make stock raising advantageous, and the 1,500,000 horses, 700,000 mules, 10,000,000 cattle, 4,000,000 sheep, and 13,000,000 swine, all valued at some $331,567,176 in 1860, made up a larger supply per head, than in any part of our country except on the Pacific.

These are but glimpses of past results, and all these while a careless system, quaintly described by a Southern orator, HENRY A. WISE of Virginia, in a speech at a political meeting in his own State in 1855, was far too prevalent. He said:—"Commerce has long ago spread her sails and sailed away from you. You have not, as yet, dug more than coal enough to warm yourselves at your own hearths; you have set no tilt hammer of Vulcan to strike blows worthy of gods in your own iron foundries; you have not yet spun more than coarse cotton enough, in the way of manufacture, to clothe your own slaves. You have had no commerce, no mining, no manufactures. You have relied on the single power of agriculture. Your sedge patches outshine the sun. Your inattention to your only source of wealth has scared the very bosom of mother earth. Instead of having to feed cattle on a thousand hills, you have had to chase the stump-tailed steer through the sedge patches to procure a tough beef steak."

All this can and will be changed, in the fast-coming future, and it is the noble task of Southern men of ability, intelligence, breadth of views and leading influence, to accept this golden opportunity for carrying *on* and *up* the condition of the people. Whatever the RURAL can do in this shall be cheerfully undertaken, and in all fraternity of spirit we would say to the men wise and strong enough to enter this rich field, in the words of GERALD MASSEY, the poet of England's workmen:

"Work, Brothers mine; work hand and brain;
We'll win the Golden Age again,
And Love's Millenial morn shall rise
In happy hearts and blessed eyes.
Hurrah! Hurrah! true Knights are we
In Labor's lordlier chivalry."

ARMED PEACE IN EUROPE.

THE Belgian war office having instituted an inquiry respecting the armaments which are going on in Europe, the following information has been obtained:

FRANCE.—480,000 Chassepot rifles are in course of manufacture, the greatest portion to be finished before the first of March, 1868.

PRUSSIA.—The needle gun and rifled cannon system to be maintained. The gun manufactories are very busy in completing the stores for the arsenals; 1,100,000 breech-loading steel barrels have been ordered since the war.

AUSTRIA.—The alteration of 600,000 guns on the Wanzl principle; 300,000 to be completed by the end of the year.

SOUTH GERMANY.—Bavaria, Wertemberg, Baden and Hesse-Darmstadt adopt the breech-loading gun, on the understanding that the system may be changed if the experiments which are going on at Munich are not found to be satisfactory. The Prussian rifled cannon is preferred, and large orders are in course of execution.

ENGLAND.—150,000 Enfield rifles are already converted on the Snider principle; 350,000 guns of the same kind will be ready in the course of the year; 1,000 guns are being converted every day in the government factories; 426 rifled cannon of various calibre will be manufactured by the end of the year.

RUSSIA.—600,000 guns are being converted on the Carle principle (a modification of the needle gun.) 300,000 will be ready by the beginning of next year. Nine hundred breech-loading cannon are in the course of construction to complete the field batteries.

DENMARK.—The Chambers have voted a large sum for the conversion of the present guns into breech-loaders, but the model gun has not yet been decided upon.

HOLLAND.—The conversion of the present arm into guns on the Snider principle.

ITALY, SPAIN, PORTUGAL, GREECE.—The breech-loading gun adopted. Spain and Greece have ordered cannon from the manufactory of M. Krupp of Essen, in Prussia.

BELGIUM.—Will continue the use of the rifled Prussian cannons adopted in 1864, and will bring into use the breech-loading small arm.

WELL DESCRIBED.

A CORRESPONDENT of a Philadelphia paper describes the Paris Exposition building as follows:—Take a round of gingerbread with a hole in the middle. The hole represents a garden. Around the hole describe, with a knife, eight or ten circles; each of these is an aisle running quite round the Exhibition. Across these concentric circles draw, from the hole to the circumference of your gingerbread, 30 or 40 straight lines or radii. These separate the nations. Now, if you want to look at machinery, being a machinist yourself, begin with the great outer ring or circle, and you will pass, in their order, the machineries of every nation. The second interior ring is devoted entirely to furniture. Go round it and you can study the upholstery of mankind. The third ring is devoted to clothing. Follow this round and all the fashions of the world and the wearers will be demonstrated.

GOLD AND SILVER FOR 1866.—Well-informed persons estimate the product as follows:—California, $25,000,000; Montana, $18,000,000; Idaho, $17,000,000; Colorado, $17,000,000; Nevada, $16,000,000; Oregon, $8,000,000; Other sources, $5,000,000. Total, $106,000,000. This is four times as great as the total product of the world less than thirty years ago. For the last thirteen years the yield of gold in California has been decreasing, but the yield of the quartz mines on the Pacific coast is increasing slowly. But it drifts away to Europe and leaves us—even with our rich mines—poor in specie. We must produce and make more at home, and buy less abroad.

A MODEL ADVERTISEMENT.—The following, posted on the outside of a house in Chicago, is a specimen of terse, direct and comprehensive advertising:

"This house is $40 per month—two parlors, dining-room and kitchen below; above, four bedrooms, with closets. The whole in a wretched condition; the paint worn off, the paper in the parlors torn and smoky, that of the dining-room entirely falling off. The landlord makes no repairs, not even a pane of glass. No gas; very cold in winter. A back way for fuel but none for groceries. This is to prevent questions and bell pulling. No one shown through the house."

POLITICIANS by trade should be confined to unseasoned food, for they don't earn their salt.

Reading for the Young.

ORIGIN AND SEALS OF THE STATES

NUMBER SIX.

FLORIDA.

FLORIDA was named by JUAN PONCE DE LEON, its Spanish discoverer, in 1512, from *Pasqua, Florida*, the Catholic Palm Sunday. In 1763, the Spanish ceded it to England, in 1783 it was ceded back to Spain, and in 1821 it was made over to the United States by Spain.

The territory reached west to the Mississippi; but the western part is now included in Alabama and the States west. Florida is a peninsula reaching South between the Atlantic on the east and the Gulf of Mexico west, 400 miles, and some 140 miles wide, with an extent of 50,000 square miles. Its shores are flat and sandy; inland we find barrens of large extent, covered with pitch and yellow pine, wiry grass which is food for cattle, and interspersed with hummocks or hills, on which cane, cotton and indigo can be easily raised.

The river swamps yield rice, and often the best cotton. Its forest trees—pines, palms, cedars and live oaks, grow to great size, and the flowering shrubs are magnificent.

The great *Magnolia, Grandiflora* grows 100 feet high, its glossy green leaves showing off the beautiful flowers, often eight inches in diameter, with their delicate white petals and rich fragrance filling the air for a mile around—a marvel of glorious beauty. Olives, oranges and lemons grow abundantly. Sick people from the North often spend the winters on the coast where the air is very mild and even.

St. Augustine is the oldest town in the United States. Population of the State in 1860, 140,424.

Its Seal has the thirteen stars for the original States, the eagle, with laurel, arrows, and the *cactus*, and, on either side, the everglades, an Indian and a soldier.

MISSISSIPPI.

Mississippi was settled by the French, who founded Natchez in 1716; but was ceded to the English in 1763, made a Territory of the United States in 1798, and a State in 1817.

Along the Mississippi River, which is its western boundary, are swamps, often flooded by the river, in which the singular Spanish moss hangs from the branches of great cypress trees, giving all a gloomy aspect.

Bluffs reach to the river occasionally, and the interior is rolling land, hills and bluffs, with heavy forests, and soil yielding large crops of cotton, and in which figs, peaches, plums, sweet potatoes and corn can be raised abundantly.

Its extent is 45,700 square miles, and the population in 1860, 791,305.

Its Seal has the eagle in its center, and on either side the cotton press, mailed soldiers and Indians.

ALABAMA.

In 1800 the country including Alabama and Mississippi was taken from Georgia and made a Territory. In 1819 Alabama was made a State, with its present limits.

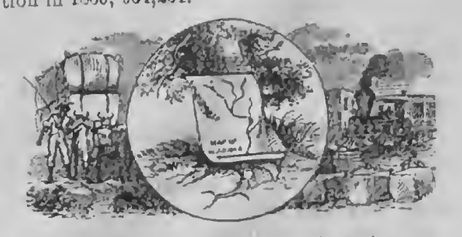
Its southern part bordering on the Gulf of Mexico and Florida, for 50 miles, is low and level, with pine and cypress trees on the sandy and light soil. The middle of the State is hilly, with fine prairies and level plains, some open and some heavily timbered, with black oak, post oak, hickory, &c., and a rich, deep soil.

Along the rivers are swamps and cane bottoms, some of which are very rich.

The northern region is mountainous, yet rich where not too broken. The Alleghany mountains touch the north-east front. Its growth in population has been rapid,—the fine soil and healthy climate of the interior being attractive.

Cotton is the great staple, but wheat, corn, rice and oats grow abundantly.

It has 51,000 square miles, and is over three hundred miles long, North and South. Population in 1860, 964,201.



Its Seal is simply the live oak and a map, with cotton bales, workmen and railroad cars on either side.

"JUST A FEW WORDS to fill up this corner."—So say the printers, and they must be obeyed. Cant find anything short enough. Plenty of "long yarns," but just a little short piece is wanted. Boys and girls, it *is* some trouble to get the RURAL just right. But then, it's some trouble, if you choose to fret about it, to do anything. Take things quietly, and do the best we can, and the trouble goes as a cloud passes from the sky. This just fills the corner, and its all done.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JUNE 1, 1867.

NEWS OF THE WEEK.

From New York.

THE Nicaragua steamship Santiago de Cuba was wrecked near Atlantic City, N. J., with 400 persons on board. Only seven were lost.

Whiskey is so keenly hunted for by revenue officers that but few distilleries are in operation in the city.

The adjourned conference of the friends of American industry was held at the Astor House. Peter Cooper, Esq., was in the chair, and a good representation of the various industrial interests of the country.

After the adoption of the Constitution the following list of officers was accepted, the names of Secretaries omitted, to be filled by Executive Council. Temporary officers:

President—Peter Cooper. Vice-Presidents—E. B. Ward, Michigan; D. J. Morrell, Pennsylvania; Judge Cauldwell, Tennessee; Gov. Pierpont, Virginia; J. M. Edmonds, Texas; Gov. Davis, Georgia; John B. Walker, Georgia; Gov. Holden, North Carolina; Gen. Johnson, Arkansas; Judge Smith, Alabama; Judge Field, Mississippi; Judge H. L. Bond, Maryland; Ex-Lieut. Gov. Alvord, New York, and John Nazro, Wisconsin. Treasurer—Fisher Howe, New York. An Executive Council has also been formed of gentlemen from every section of the country.

On the 16th of May $2,831,500 in specie went to Europe from New York.

Ristori has sailed to Europe.

Presbyterian N. S. General Assembly.

THIS large and influential assemblage closed its sessions of almost two weeks at the Brick Church in this city, this week. Two hundred and thirty delegates, clergy and laymen, were present from New England to California—*one more* than ever met before.

H. A. NELSON, D. D., of St. Louis, acted as Moderator. Rev. JOHN HALL and JAMES DENHAM, D. D., were delegates from Ireland, and Rev. JAMES WELLS and P. FAIRBAIRN, D. D., of Glasgow, represented the Free Church of Scotland.

Reports on various subjects, meetings for business, prayer, and the presentation of various subjects, filled three sessions each day.

From the large number present, most of the addresses were brief, yet all the more of interest and ability, such as reach an audience, was packed into them. Home and Foreign Missions, Education, Sabbath Schools, Publications, and Church Erection, were leading subjects; and the proposed union of the Old and New Schools was discussed, with a strong feeling in favor of such step.

The audiences were large and the interest unabated.

From the West.

DETROIT sends $5,000 to the poor of the Southern States.

Temperance petitions against licenses are going into the Constitutional Convention at Lansing, Michigan, numerously.

Mining stocks in San Francisco are active, and rich gold leads are reported, found around Nevada.

One hundred and twelve thousand and twenty-seven acres of public lands were disposed of at the Ionia (Mich.) office in April, and twelve thousand acres in March, at Olympia, Washington Territory.

Indian troubles on the plains still continue, but the Sioux are divided—some for peace, some for war—and there seems some prospects of settlement, yet no certainty. The military forces are active.

A party of eastern capitalists and railroad men, W. B. Astor, Peter Cooper, Isaac Hinckley of Philadelphia, &c., have been to St. Joseph and St. Louis, Mo., and a part of them to Leavenworth, and the end of the Kansas branch of the Pacific Railroad.

Losses of cattle by cold and want of food have been great in Texas and parts of Nebraska, reaching to a tenth of all the stock. Much of this could have been avoided by care and foresight.

Latest European News.

THE famous Derby race, near London the 22d of May, was won by Hermit. There were 250,000 spectators, and the stakes were $40,000.

Flood and Duffy, Fenians, were sentenced at Dublin to hard labor for life in prison.

The Atlantic cable of 1866 will be all right again in a fortnight.

At midnight, May 20th, the House of Commons voted on an amendment to the Reform Bill, granting woman suffrage, rejecting it by 123 majority.

Earl Derby says the American question will be amicably settled.

Frazer Trenholm & Co., cotton dealers in Liverpool, failed with large debts.

They were rebel government agents in the war, and our Government has claims against them, which, however, are secured.

BERLIN, May 21st.—A plot at Hanover to assassinate King William and Bismarck has been discovered and several arrests were made.

LONDON, May 21.—Earl Derby says, officially, that the Fenian Burke is to be hung, but it is thought he will not.

Luxemburg is to remain in the Zoll-Verein. The Czar of Russia, King William of Prussia, Emperor Francis Joseph of Austria and the Sultan of Turkey, will be in Paris about the 8th of June. Denmark complains that Prussia disregards the Schleswig treaty of 1865.

In a Fenian riot at Kilkenny 13 policemen were stoned and badly hurt, but the turmoil was subdued.

The Cretans seem not to fear the heavy Turkish preparations against them. Reports come of terrible cruelties against women and children by the Turks.

From the South.

GEN. POPE has removed the Mayor and Chief of Police at Mobile, and put other men in their places.

The Louisiana Supreme Court has decided that notes given for slaves sold before the war are worthless. This affects at least $100,000,000 worth of paper.

Divorces in New Orleans are ten times more frequent than before the war—mostly of those married during or after the struggle.

The leading manufacturing city of the South, by next fall, will be Columbus, Ga., as the cotton mills burned there are rebuilding.

The Richmond Enquirer says that it has made careful examination of its exchanges from all parts of Virginia, and has come to the conclusion that the wheat crop promises to be an unusual success, and it feels encouraged to hope that oats, corn and tobacco will be at least equal to the average.

A gentleman who has lately passed over the inundated country between the Mississippi and the Atchafalaya, thinks that not less than five thousand cattle, horses and mules have been drowned this year in that region of country, besides large numbers of hogs and sheep.

MEXICO.—The city of Mexico is still closely besieged, and it is said Miramon and Maximilian will be shot if captured. Miramon was repulsed with heavy loss by the Liberals, and driven back into Queretaro.

LATER.—A telegram dated San Luis Potosi, May 15th, has been received at the State Department at Washington, as follows:—"Queretaro has fallen this morning at eight o'clock. Maximillian, Mejia, Costello, and Miramon are prisoners." We learn by telegraph that President Juarez has ordered the prisoners to be shot.

CAPITAL AND LABOR.—There are now in England between two thousand and three thousand shareholders in companies founded upon the principle of uniting the interests of the capitalists with the interests of the workers, and at least eight thousand to ten thousand work people are employed by these companies. These numbers are daily increasing. In view of the frequency of "strikes" with us, their bad influence on all, and the discussions as to hours of labor, these signs from over the ocean are of special interest.

TRADE WITH RUSSIAN AMERICA.—The San Francisco papers, in noticing the steam communication with the new American territory, state that New Archangel is the center of a fur trade that employs some fifty vessels, and gives the Russians a profit of $500,000 annually, whilst with Victoria a trade of $50,000 yearly profit is had by the inhabitants of New Archangel. The harbor of that city is a fine one.

CANADA.—The "Dominion of Canada," by the Queen's proclamation, is made up by the union of Upper and Lower Canada, Nova Scotia and New Brunswick. The N. Y. Herald has reports of 30,000 Fenians to concentrate on the borders in June, of arms stored at St. Albans, and guns being largely made in New York. The Canadians are awake and preparing, it is said.

FROM WASHINGTON.—The Judiciary Committee are sitting five or six hours a day on various subjects, and expect to close early this month. Gen. Fullerton, and the Washington agent of the N. Y. Associated Press, were examined, the latter about the last year's Presidential Excursion. Internal revenue receipts from June 1st, 1866, to May 25th, $240,798,808.

"THE AMERICA"—A locomotive from the Grant Company, Patterson, N. J., had the first prize at the Paris Exposition. There were some twenty or thirty others of French, Austrian, Russian and English make, and the Committee were hardly able to decide, but the candor of an Englishman, one of the members, turned the scale in favor of the "America."

INCREASE OF THE PUBLIC DEBT.—A Washton dispatch says, statements of the public debt for some time to come will show an increase. The coin and currency needed to meet interest due in May, June and July will be large. This is probably owing to interest on some species of bonds due just now and will be temporary.

HAYTI.—Intelligence from Hayti is to the effect that another attempt at revolution had been made at Jacmel. Salnave was everywhere accepted as Dictator General, but the council of Generals who elected him were each one of them aiming to start a revolution in his own interest.

SUSPENSION BRIDGE AT NIAGARA FALLS.—A bridge to start from the American side, just below the falls, and reach Canada near the Clifton House, is soon to be built, and will be a great convenience to pleasure tourists and to others.

THE CABINET ORGAN.—The single house of Mason & Hamlin has succeeded in so far outstripping its rivals that the question, "Who makes the best reed organs?" is no longer an open one. Of the excellence of these instruments we have, for our own part, become perfectly satisfied by frequent personal trials of the Mason & Hamlin instruments, and of various others. It is patent and undeniable.—*N. Y. Evening Post.*

The News Condenser.

— Chili and Peru have settled their disputes.

— Wheat in Kansas has sold at $3 per bushel.

— California has 398 saw-mills costing $2,500,000.

— Thousands of children, under 15, are trained to theft in New York; so says the Post.

— 100 feet depth of snow laid in a ravine on Thos. Bryant's farm in Worthington, Mass.

— Reports of the massacre of people on the steamer Miner on Missouri river are untrue.

— Seventeen newly married couples were at the International Hotel, Niagara, May 10th.

COMMERCIAL ENTERPRISE.—Among the many things for which New York Merchants are famous, is the magnitude of their enterprises, and the far-reaching character of their ventures. The operations of the present day throw those of a few years past quite into the shade, and often equal those of a similar kind in the commercial marts of the Old World. The recent large operations by THE GREAT AMERICAN TEA COMPANY have taken the trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 15,331 packages Black, and 22,849 packages of Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands. The consumption of Tea in this Country is largely on the increase.—*Shipping and Commercial List, New York, May 15, 1867.*

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, May 28, 1867.

THE money market at the East is without material change. For a few days last week there was a tendency to increased rates of interest, and first-class collaterals were only acceptable. Domestic exchange is still largely in favor of New York, and money continues to flow to that point from country institutions. At Chicago, Cincinnati and other large towns West, the market is close, and in some places exceedingly tight, in consequence of the prevailing dullness in business. Money is very scarce at the South, and planters are paying in some instances 10 per cent. a month, and see no way of relief until the proceeds of their growing crops are available.

The great Liverpool cotton merchants, Frazier, Trenholm & Co., failed last week. This firm was well known during the progress of the Rebellion as the aiders and abettors of the Confederacy. Their liabilities are reported at £4,000,000, or about $20,000,000. At New York, and at the South, their bills were extensively held. This failure had some effect on the price of gold, which advanced. The shipments of gold last week were unusually large. Government sold gold freely during the week, putting from two to three hundred thousand dollars on the market daily.

Since the first of January the exports of specie from New York have been something over $15,000,000. The receipts of gold from California continue large. The receipts at New York since January 1st amount to over $35,000,000—being some $10,000,000 over the receipts for the corresponding time last year.

All the leading stocks continue depressed. The "good time coming" for brokers and stock operators does not seem to arrive yet.

The Western Railroads, notwithstanding the reported dullness in trade, seem to be doing a good business. The aggregate receipts of seventeen of the leading Western Roads, for the month of April, were over $1,500,000 in excess of the amount received for the corresponding time in 1866.

WHEAT AND FLOUR.—The prices of wheat and flour continue high, and the supply does not increase. All accounts concur in representing the prospects of the growing wheat crop as very promising. The crop in Kentucky and Tennessee will be unusually large this season, and the cutting will commence by the first of June.

WOOL.—The market at the East continues dull, and manufacturers are buying sparingly. It is uncertain yet what will be the opening price for the new clip.

DRY GOODS.—For the last ten days there has been very great anxiety on the part of eastern jobbers to press sales, and prices have declined. Manufacturers have large stocks of goods on hand, and they will probably be compelled to dispose of them at prices much less than the cost of production.

Rochester Wholesale Prices Current.

437 Broadway, New York.
906-13t] Sole Proprietor of the Howe Sewing Machines.

IMPORTANT TO CIDER MAKERS.

BUTTERWORTH'S PATENT

JERSEY POWER APPLE GRINDER, OR CIDER MILL.

For Grinding Apples, Peaches, Sugar Beets, and other kinds of Fruit and Vegetables. This machine, on account of its intrinsic merit and great utility, is rapidly growing in favor among the Cider makers and farmers of our country, and is destined soon to supersede all other mills used in the manufacture of Cider. It has during the last two or three years been well and thoroughly tried in different sections of the country, always eliciting wherever used, the highest recommendations and is warranted to be both in point of economy and durability greatly superior to every other kind of Cider Mill. With an ordinary two-horse power, it will grind, fine and uniform, one hundred bushels and upwards of apples per hour—less constructed that it cannot be injured by the stones—needs very little if any repairs, and by the superior manner in which it does its work one month's use will pay for the Mill. Circulars sent free. For Illustrated Pamphlet address, enclosing 2ct. stamp, R. BUTTERWORTH, Trenton, N. J., Patentee and sole Manufacturer, D. R. BARTON & CO., Rochester, N. Y., and J. F. VAN DEBANTER, Sturgis, Michigan.

The Stump Machines again—W W Willis.
Normal Academy of Music—N Coe Stewart.
Coe's Dyspepsia Cure.

Special Notices.

THE STUMP MACHINES AGAIN—ANOTHER TRIAL PROPOSED.

THE subscriber having, as he considers, beaten the several stump machines brought in competition with his, single-handed on two occasions, now proposes to attempt beating them in the aggregate or in combination. For this purpose he will, on any day named within two weeks from the date of this notice, meet his competitors, the owners of the Glover, the Empire and the Parish machines, on the grounds of the late trial near Wayland—three men to each machine, and work from four to six hours, as may be agreed upon by the parties interested, in pulling stumps. If, in this time, he does not pull out and turn down, ready for handling, more stumps than the three machines combined can do, he will pay them severally ten dollars by way of remuneration for their labor. If he does pull more they shall remunerate him in a like amount. As an umpire in the business he proposes a committee of three or five persons, members of the "Institute Farmers' Club of New York," several of whom are resident at or near the place proposed for the trial. Any of these gentlemen, not interested in a machine, will be acceptable to him.

I have a machine ready for examination by any one interested. Any calls on me at the Exchange Hotel, Rochester, N. Y., will be promptly attended to.

Rochester, May 22d, 1867. W. W. WILLIS.

Musical.—*The Normal Academy of Music* at Painesville, Ohio, commences its next session July 2, 1867. *Rare advantages* are offered to teachers and students to spend the summer months at this DELIGHTFUL RESORT. For circular, address

N. COE STEWART, Cleveland, O.

THE PREMIUM MACHINE!

BUCKEYE MOWER & REAPER

Extract from Official Report of Great National Field Trial, held at Auburn, in July, 1866:—"The record of the Buckeye is interesting in view of the fact that it was the pioneer in the path of the great improvements which have popularized Mowing Machines and made them an absolute necessity of every farmer. It took the prize at the Great National Trial of Mowers and Reapers, at Syracuse, (in 1857,) and at once sprang into a great popularity. In the hands of Mr. J. P. ALTHANGE it met with an enormous sale. The result of this trial clearly shows that it still keeps the forward rank which it won at Syracuse, and at many other subsequent trials, and that it is still as worthy the patronage and confidence of the public as it has been in any preceding portion of its history."

Beware of mongrel machines, which attempt to steal the reputation of the Buckeye to cover their own imperfections. Descriptive Circulars and Synopsis of Official Report of Auburn Trial forwarded by mail.

Manufacturers—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. THIS MEDALLION IS EMBODIED IN EVERY GENUINE HOWE SEWING MACHINE.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

THE BEST IN AMERICA!—J. BRINKERHOFF'S CORN SHELLER, SEPARATOR AND CLEANER. Patented April 12, 1864 and February 28, 1865. This Machine has been selected, by the Advisory Committee, for J. C. Derby, U. S. Agent, as the best in America, and sent to Paris to the Universal Exposition. Has also taken the first premium at the New York State Fair in 1866—the Committee pronouncing it the *best Corn Sheller they ever saw*. It shells, separates and cleanses, rapidly and easily, at one operation, as fast as the ears can be put in the hopper. For territory or agencies in Pennsylvania and Maryland, address

TRUE'S IMPROVED POTATO PLANTER. No labor-saving machine, devoted to agriculture, at all comparable to it!

Saves the Labor of Twelve Men!

Makes its own furrow, on any ground that can be plowed,—cuts, drops and covers potatoes as fast as a horse can walk,—and does it better, because with greater regularity, than possible by the hand method. Rights and machines for sale. Send for Circulars. Address J. L. TRUE, 30 Exchange St., Portland, Me., P. O. Box 1,885.

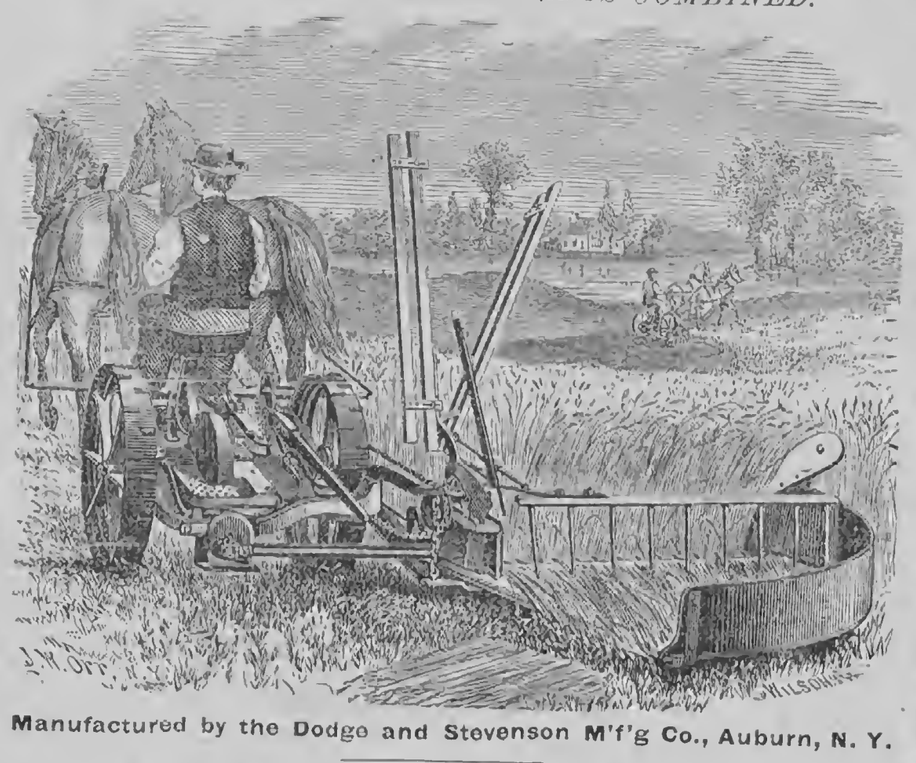
THE McKAY SEWING MACHINE, the only machine in existence by which a sewed boot or shoe can be made. Adapted to all kinds, styles and sizes of boots and shoes. 200 pairs can be made with ease by one man, with one machine, in ten hours. These shoes take precedence of all others in the market, and are made substantially at the cost of pegging. In use by all the leading manufacturers. Machines, with competent men to set them in operation, furnished at one day's notice. For particulars of license apply to GORDON McKAY, Agent, 6 Bath street, Boston, Mass. 901-13t

PROF. JOHNSON'S FERTILIZER will more than double your crop 20 to 30 days sooner. Corn at 80 bushels per acre, where five were produced; oats sixty bushels, pumpkins 96 to 170 lbs., one watermelon weighing 55 lbs., 3 weighing 225 lbs.; also all other vegetables, which greatly surpassed anything ever exhibited on poor land, in Saratoga Co. Agents wanted. Send post stamp for Circular. I. T. JOHNSON, 316 Greenwich St., N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, Illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

500 AGENTS WANTED IN A NEW business. H. B. SHAW, Alfred, Maine.

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, whether tangled or sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 5th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

1867.

The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED
HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal.

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-8 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag't Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 903-tf

TOIL AND PARADISE.

No more beautiful lesson has been taught by a modern poet than in these stanzas by WHITTIER.

ADAM and EVE exiled from the Garden, had sat down disconsolate on the outer side of the wall of Paradise, and there an angel found them bewailing their fate. Thereupon the radiant presence spoke:

"ADAM," he said, "why look behind
When hope is all before.
And patient hand and willing mind.
Your loss may yet restore?

"I leave with you a spell whose powers
Can make the desert glad,
And call around you fruit and flowers
As fair as Eden had.

"I clothe your hands with power to lift
The curse from off your soil,
Your very doom shall seem a gift,
Your loss a gain, through TOIL.

"Go, cheerful as your humming bees,
To labor as to play."
While gleaming over Eden's trees
The angel passed away.

The pilgrims of the world went forth
Obedient to the word,
And found, where'er they tilled the earth,
A garden of the Lord.

Once more, oh white-winged Angel, stand
Where man still pines and grieves,
And lead, through Toil, to Eden-land,
New Adams and new Eves!

The Story Teller.

WHAT AN ENGINEER TOLD.

I AM an engineer. Ever since the C. road was laid, I've traveled over it every day, or nearly every day of my life.

For a good while I've had the same engine in charge—the San Francisco—the prettiest engine on the road, and as well managed, if I say it, as the best.

It was a southwestern road, running, we will say, from A. to Z. At A. my good old mother lived; at Z. I had the sweetest little wife under the sun, and a baby; and I always had a dollar or two put by for a rainy day. I was an odd kind of a man. Being shut up with the engine, watching with all your eyes and heart and soul, inside and out, don't make a man talkative.

My wife's name was Josephene, and I called her Joe. Some people called me unsociable, and couldn't understand how a man could feel friendly without saying ten words an hour. So, though I had a few old friends—dear ones, too—I did not have so many acquaintances as most people, and did not care to have. The house which held my wife and baby was the dearest place on earth to me, except the old house which held my mother up in A.

I never belonged to a club, or mixed myself up with strangers in any such way, and never should if it had not been for Granby. You see, Granby was one of the shareholders, a handsome, showy fellow. I liked to talk with him, and we were friends. He often rode from Z. to A., and back again, and once he said:

"You ought to belong to the Scientific Club, Gueldon."

"Never heard of it," said I.

"I am a member," said he. "We meet once a fortnight, and have a jolly good time. We want thinking men like you. We have some among us now. I'll propose you, if you like."

I was fond of such things, and I had ideas that I fancied might be worth something. But then, an engineer don't have nights and days to himself, and the club would have one evening in a fortnight from Joe. I said:

"I'll ask her. If she likes it, yes."

"Ask whom?" said he.

"Joe," said I.

"If every man had asked his wife, every man's wife would have said, 'can't spare you, my dear,' and we should have had no club at all," said Granby.

But I made no answer. At home I told Joe. She said:—"Then if Granby belongs to it they must be superior men."

"No doubt," said I.

"It isn't everybody who could be made a member," said Joe. "Why, of course, you must say yes."

So I said yes, and Granby proposed me. Thursday, fortnight, I went with him to the rooms. There were some men there with brains, and some without. The real business of the evening was the supper; and so it was every evening.

I'd always been a temperate man. I actually did not know what effect wine would have upon me; but coming to drink more of it than I ever had, at the club-table, I found it put the steam on. After so many glasses, I wanted to talk; after so many more, I did.

I seemed like somebody else, the words were so ready. My little ideas came out and were listened to; I made sharp hits; I indulged in repartee; I told stories; I even came to puns. I heard one say to Granby:

"By George, that's a man worth knowing. I thought him dull at first."

Yet I knew it was better to be quiet Ned Guelden, with his ten words an hour, than the wine-made wit I was.

I was sure of it when, three hours after, I stumbled up stairs to find Joe waiting for me, with her babe on her breast.

"You've been deceiving me," said Joe. "I suspected it, but I wasn't sure. A scientific club couldn't smell like a bar-room."

"Which means I do," said I, waving in the middle of the room, like a signal flag at a station, and seeing two Joes.

"And look like one," said Joe; and she went and locked herself and the baby up in the spare bed-room together.

"Ned," said she, "do you think a thing so much like a bottled-up and strapped-down demon as steam is, is fit to put into the hands of a drunken man? And some day, mark my words, the time will come when not only Thursday night, but all the days of the week will be the same. I've often heard you wonder what the feelings of an engineer who has about the same as murdered a train full of people must be, and you will know if you don't stop where you are. A steady hand and a clear head have been your blessings all these years. Don't throw them away, Ned. If you don't care for my love, don't ruin yourself."

My little Joe! She spoke from her heart, and I bent over and kissed her.

One club night, as I was dressed to go, Joe stood before me.

"Ned," said she, "I never had a fault to find with you before. You've been kind, and good, and loving, always; but I shall be sorry we ever met if you go on in this way. Don't ask me what I mean? You know."

"Joe," said I, "it's only one club night."

"It will grow," said she.

Then she put her arms around my neck.

"Don't be afraid, child. I'll never pain you so again."

And I meant it; but at 12 o'clock that night I felt that I had forgotten my promise and my resolution.

I couldn't go home to Joe. I made up my mind to sleep on the club sofa and leave the place for good next day. Already I felt my brain reel as I never had before. In an hour I was in a land of stupor.

It was morning. A waiter stood ready to brush my coat. I saw a grin upon his face. My head seemed ready to burst; my hand trembled! I looked at my watch; I saw that I had only five minutes left to reach the depot!

Joe's words came to my mind. Was I fit to take charge of an engine? I was not fit to answer. I ought to have asked some sober man. As it was, I only caught up my hat and rushed away. I was just in time.

The San Francisco glittered in the morning sun. The cars were filling rapidly. From my post I could hear the talking—bidding each other good-by, promising to write and come again. Among them was an old gentleman I knew by sight—one of the shareholders; he was bidding two timid girls adieu.

"Good-by Kitty—good-by Lue," I heard him say, "don't be nervous. The San Francisco is the safest engine on the line, and Guelden the most careful engineer. I wouldn't be afraid to trust every mortal I love in a batch to their keeping. Nothing could happen wrong with the two together."

I said, "I'll get through it somehow, and Joe shall never talk to me again." After all, it was easy enough. I reeled as I spoke. I heard the signal. We were off.

Five hours from L. to D.; five hours back. On the last I should be myself again, I knew. I saw a red flutter, and never guessed what it was until we were past the down train at the wrong place. Two minutes more and we should have had a collision. Somebody told me I laughed. I heard him say respectfully:

"Of course, Mr. Guelden, you know what you are about?"

Then I was alone, and wondering whether I should go slower or faster, I did something, and the cars rushed on at a fearful rate.

The same man who had spoken to me before was standing near me. I heard some questions.

How many miles an hour were we making? I did not know.

Rattle, rattle, rattle. I was trying to slacken the speed of the San Francisco. I could not remember what I should do. Was it this or that? Faster—only faster. I was playing with the engine like a child.

Suddenly there was a horrible roar—a crash; I flung somewhere. It was into the water. By a miricle I was only sobered—not hurt. I gained the shore. I stood upon the ground between the track and the river's edge, and there gazed at my own work.

The engine was in fragments, the cars in splinters; dead, dying and wounded were strewn around—men, women and children, old age and tender youth. There were groans and shrieks of despair. The maimed cried out in pain; the uninjured bewailed their dead; and a voice, unheard by any other, was in my ear, whispering "Murderer."

The news had gone back to A., and people came thronging down to find their lost ones. Searching for an old man's daughter, I came to a place under the trees, and five bodies were lying there in all their rigid horror—an old woman, a young one, a baby and two little children. It was fancy—it was pure fancy, born to my anguish—they looked like—oh! great Heaven!—there were my old mother, my wife, my children! all cold and dead.

How did they come on the train? What chance had brought this about? I gazed on the good old face of her who had given me birth, on the lovely features of my wife, on the innocent children. I called them by name; there was no answer. There never could be—there never would be. And as I comprehended this, onward up the track thundered another train. Its red eye glared on me; I flung myself before it; I felt it crush me to atoms!

"His head is very hot," said somebody.

I opened my eyes and saw my wife.

"How do you feel?" she said, "a little better?"

I was so rejoiced and astonished by the sight of her that I could not speak at first. She repeated the question.

"I must be crushed to pieces," said I, for the train went over me; but I feel no pain."

"There he goes about the train again," remarked my wife. "Why Ned!"

I tried to move; there was something the matter with me; I sat up. I was in my own room, opposite the crib in which two children were asleep.

My wife and children were safe?—Was I delirious, or could it be—?

"Joe," cried I, "tell me what has happened."

"It's 9 o'clock," said Joe. "You came home in such a dreadful state from the club that I couldn't wake you. You were not fit to manage steam and risk people's lives. The *San Francisco* is half way to A., I suppose, and you have been frightening me to death with your dreadful talk."

And Joe began to cry.

It was a dream—only an awful dream. But I had lived through it all as though it was reality.

"Is there a Bible in the house, Joe?" said I.

"Are we heathens?" said Joe.

"Give it to me this moment, Joe."

She brought it, and I put my hand on it and took an oath, (too solemn to be repeated here,) that what had happened never should occur again. It never has. And if the San Francisco ever comes to grief, the verdict will not be, as it ought to be so often—*the engineer got drunk.*

Wit and Humor.

ACCIDENTS OF SPEECH.

PAT has long labored under the imputation of making more "accidents" with the tongue than any of his fellow mortals, but it can be very readily shown that the "bull" is not necessarily indigenous to Irish soil.

A Frenchman named Callon, who died in Paris not many years ago, was remarkable for a bovine tendency. There is a letter of his in existence as follows:—"My dear friend: I left my knife at your lodgings yesterday. Pray send it to me if you find it. Yours, Callon. P. S. Never mind sending the knife; I have found it."

There is a note to his wife, which he sent home with a basket of provisions, the postscript to which read:—"You will find my letter at the bottom of the basket. If you should fail to do so, let me know as soon as possible."

It is said of this same character that on one occasion he took a lighted taper to find his way down stairs without accident, and after getting down brought it back with thanks, leaving himself at the top of the stairs in the dark as at first.

A lady once asked the Abbe de Matignon how old he was. "Why, I am only thirty-two," said he, "but I count myself thirty-three, because a little boy was born a year before I was and died, evidently keeping me back a whole year by accident."

It was a Scotch woman who said that the butcher of her town only killed half a beast at a time.

It was a Dutchman who said a pig had no ear marks except a short tail; and it was a British magistrate who, being told by a vagabond that he was not married, responded, "That's a good thing for your wife."

At a prayer meeting in New Hampshire, a worthy layman spoke of a poor boy whose father was a drunkard and whose mother was a widow.

At a negro ball, in lieu of "Not transferable" on the tickets, a notice was posted over the door, "No gentleman admitted unless he comes hisself."

An American lecturer of note solemnly said one evening, "Parents, you have children, or if you have not, your daughters may have."

A Western editor once wrote:—"A correspondent asks whether the battle of Waterloo occurred before or after the commencement of the Christian era. We answer it did."

Those two observing men, one of whom said he had always noticed that when he lived through the month of May he lived through the year, and the other of whom said at a wedding he had remarked that more women than men had been married that year, were neither of them Irishmen.

THE Utica Observer says that the young lady who does us the honor to preside over things domestic in our kitchen anticipates but one result of the trouble between Greece and Turkey. In her dominions, she says, grease *bastes* the turkey, and so it will be over the water. It appears that the girl's mind has a *range* outside the kitchen.

"DICK," inquired a maid, "have you been after that saleratus?" "No, I hain't." "If you don't go quick, I'll tell your mistress." "Well, tell mistress as soon as you please. I don't know Sally Ratus, and won't go near her. You know I am engaged to Deb."

TOUCHING.—A love-born poet writes:

"When Sally's arms her dog imprison
Oh! don't I wish my neck was his'n;
And when she kisses Towser's nose,
Oh! don't I wish that I was those!"

A LITTLE boy asked his mother what blood relations meant. She explained that it meant near relatives, etc. After thinking a moment, he said, "Then, mother, you must be the bloodiest relation I've got."

AN Irish servant being asked whether his master was within, replied, "No." "When will he return?" "Oh, when master gives orders to say that he is not at home, we never know when he will come in."

PREJUDICES are like rats, and a man's mind like a trap; they get in easily, and then perhaps can't get out at all.

TOPERS should bear in mind that what they quaff from the goblet afterwards appears in the "mug."

A CHARLESTON paper thinks all the rights the South obtained by the war were funeral rites.

BE temperate in diet. Our first parents ate themselves out of house and home.

IF twenty grains make a scruple, how many will make a doubt?

WHAT is better than a promising young man? A paying one.

A CALM man is like a schoolmaster because he keeps cool.

Corner for the Young.

For Moore's Rural New-Yorker.

HISTORICAL ENIGMA.

I AM composed of 20 letters.
My 20, 14, 3, 9, 10, 11 was buried under the temple of Dagon.
My 1, 18, 16, 6, 17, 2 was a Judge of Israel that sacrificed a daughter.
My 14, 6, 17, 4, 11, 5 was a city that contended for Homer's birth.
My 1, 18, 5, 19, 20 retired to a desert in Peraea.
My 3, 8, 5, 20, 18, 11, 4 was a city built by Epaminondas.
My 1, 12, 11, 2, 7 visited Ninevah in 825.
My 6, 17, 2, 15, 18, 5 was a Philosopher of Miletus.
My 9, 12, 13, 2, 15, 14 was where Solomon obtained gold and stone.
My whole was a chosen disciple.

ALGEBRAICAL PROBLEM.

THERE are four numbers in geometrical progression whose sum is 203, and the sum of their squares 18589. What are the numbers? C. CHURCH.

Neenah, Wis.

☞ Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 904.

Answer to Poetical Enigma:
All that you do, do with your might;
Things done by halves are never done right.

Answer to Anagram:
Sweetly as rolls the placid stream
Amid the meadows gay,
When lighted by the moon's pale beam,
It ripples on the way—
May life's smooth tide roll on with thee,
Home to a blest eternity.

Answer to Mathematical Problem:—8 ft. 3 inches.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year. To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper.* Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

THE SHIP GOLDEN STATE
HAS ARRIVED WITH
22,000 HALF CHESTS
OF THE
FINEST
JAPAN TEAS
OF THE
GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey Street.

These Teas by the ship Golden State were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation, the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

ALSO,

The Ship George Shotton
Has arrived with
12,000 HALF CHESTS
Of the
FINEST FOOCHOW
OOLONG TEAS.

The cargo of the ship George Shotton is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China.) These are the "*finest first-picking contract Teas*"—rich, fresh, and full-flavored.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *N. Y. Shipping and Commercial List*—which says:—"The Trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY—the ship Golden State, from Japan, with 22,000 half chests; and the ship George Shotton, from Foochow, with 12,000 packages." And in another place it says:—"The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages of Black and 22,819 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (previous to the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 20 to 50 per cent. in many cases.

Fourth. On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₩ lb.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER (Green,) $1,25, best $1,50 ₩ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,

TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDER.

ST. CHARLES, WINONA CO., MINN., March 22, 1867.
TO THE GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey Street, N. Y.

I send you a fifth order for Tea. My neighbors think I have "learned the road," and insist on my doing the business for them. I will simply say that all kinds of Tea received from your company have given complete satisfaction. Your Teas are fresh—well flavored—strong. The Merchants can furnish for $2,25 to $2,50 per pound no better article than you give us at $1,25.

Truly yours, in behalf of Tea-drinkers,
SAMUEL S. BEMAN.

4	lb.	best Uncolored Japan, Joseph Dewy, at $1,25	$5,00
4		best Green, C B Randall, at $1,25	5,00
4		do do Andrew Main, at $1,25	5,00
4		do do Wm H D, at $1,25	5,00
2		do Uncolored Japan, Henry Hall, at $1,25	2,50
2		Gunpowder, A Brown, at $1,50	3,00
1		best English Breakfast, N H Swift, at $1,20	1,20
2		Green, Wm Smith, at $1,25	2,50
2		do Geo Smith, at $1,25	2,50
2		Young Hyson, John L Downing, at $1,25	2,50
2		best Oolong, James Roan, at $1	2,00
4		Uncolored Japan, Jacob Beman, at $1,25	5,00
4		best Oolong, H Talbot, at $1	4,00
2		do Mixed, A Turner, at $1	2,00
2		Green, Geo Watson, at $1,25	2,50
2		best Oolong, G B Pratt, at $1	2,00
2		Green, Charles Grube, at $1,25	2,50
4		do A W Bingham, at $1,25	5,00
1		best Gunpowder, H C Parrott, at $1,50	1,50
1		English Breakfast, do at $1,20	1,20
1		Young Hyson, do at $1	1,00
		Total	$61,90

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations.* We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,

MOORE'S RURAL NEW-YORKER.

AGRICULTURE · HORTICULTURE · RURAL LIFE · EXCELSIOR · LITERATURE · SCIENCE · ARTS · NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS.

VOL. XVIII. NO. 23.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, JUNE 8, 1867. [WHOLE NO. 907.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

RURAL FARMERS' CLUB.

Yield of Corn.

G. F. W., Muscatine, Iowa, writes:—"In the RURAL of May 11th, is an article on growing corn, by a "Western Pennsylvania Farmer." He mentions raising 200 bushels of ears of corn per acre. In Iowa three heaping half bushels are counted equivalent to 70 lbs., or one bushel of shelled corn. I wish to ascertain the number of bushels of shelled corn which is equivalent to his measurement of ear corn."

Best Horses for Farm Use.

J. H. L., Shortsville, N. Y., discusses the relative merits of light and heavy horses for farm work in this wise:—"The hardest work on the farm for horses is breaking up sod which certainly is not one-eighth of the whole work. Light horses, weighing 1,100 or 1,200 are best for most of the other work; they are best on the road, and before the harrow, (not before the mower and reaper, we think.) At cross-plowing and harrowing a coach horse will do one-fourth more than a heavy draft horse. Beside it costs much more to keep the heavy horse, and on sandy, or wet soil, he sinks so much as to worry him. For all uses which the farmer has for horses, the medium-sized or coach horses are the best."

Remedy for Cut-Worm—Bells on Sheep.

E. R. D., Ontario Co., N. Y., writes that "an acquaintance informs me that last year he used kerosene on part of his seed with perfect success against the cut-worms. The corn from the seed not thus treated was much injured." It may be well to try this remedy, but it should be tried very cautiously, or the seed might be injured. We should have more faith in the application of the kerosene to the hill, before the corn came up.

Our correspondent also suggests that "It will pay every owner of a flock of sheep to put a bell on one of them, that can be heard on any part of the farm as they will be sure to run and rattle the bell if disturbed by dogs, I have never had a sheep killed by dogs when there was a bell on one of the flock; a sheep-killing dog does his mischief when all is still."

Cheap Paint.

C. S., Darien, N. Y., writes that he has "tried water lime and milk as a cheap paint, and though it may answer very well for some old fence or rough outbuilding, yet it should not be used on buildings that have once been painted as it soon flakes off and reminds one of the appearance of a flock of sheep that have the scab in the spring."

We think crude petroleum, thickened with some mineral paint, will be found as good a preservative for wood as can be had at the same rate of cost. The use of crude petroleum in its pure state as a paint or wash for the preservation of timber is the subject of a patent, and the "rights" thereof are being extensively sold. There are many patents issued that are wholly invalid when tested by the courts, though they answer the purposes of the patentees very well, which is to get all the money they can for "rights." This patent on the use of crude petroleum may or may not be legal; we would not give much for a State right and run the risk of an adverse decision if brought to the test. And if we thought it advisable to use crude petroleum as a preservative for fence stakes or barn boards, and made a compound by adding some other ingredient, we don't see how the patent would be infringed, though it be as legal as lawyers can make it.

Items for Plowmen.

"PLOW-MAKER" sends us the following sensible hints:

1. While plowing always carry a wrench along that will fit every nut in your plow. In order to do this take the leather from an old boot leg and tack it on the handle of your plow so as to make a pocket just large enough to admit the wrench.

2. When you put on a new point don't lay out your whole strength in screwing up the nut. It only wants to be snug. A hard point may be strained so as to break when it strikes the first stone.

3. A long evener makes a plow take more land than a short one.

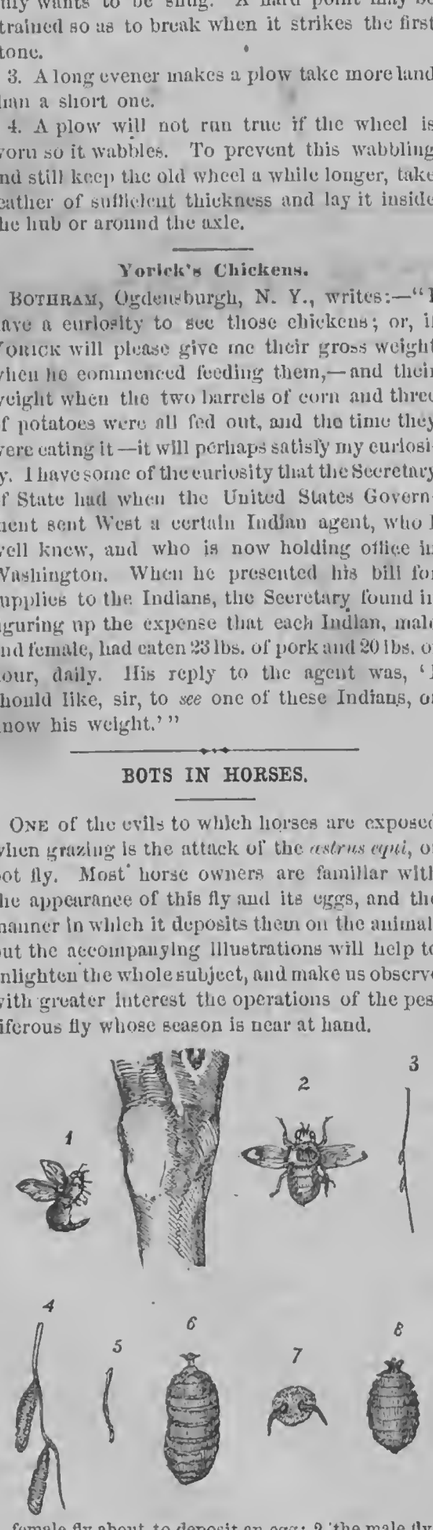
4. A plow will not run true if the wheel is worn so it wabbles. To prevent this wabbling and still keep the old wheel a while longer, take leather of sufficient thickness and lay it inside the hub or around the axle.

Yorick's Chickens.

BOTHRAM, Ogdensburgh, N. Y., writes:—"I have a curiosity to see those chickens; or, if YORICK will please give me their gross weight when he commenced feeding them,—and their weight when the two barrels of corn and three of potatoes were all fed out, and the time they were eating it—it will perhaps satisfy my curiosity. I have some of the curiosity that the Secretary of State had when the United States Government sent West a certain Indian agent, who I well knew, and who is now holding office in Washington. When he presented his bill for supplies to the Indians, the Secretary found in figuring up the expense that each Indian, male and female, had eaten 23 lbs. of pork and 20 lbs. of flour, daily. His reply to the agent was, 'I should like, sir, to *see* one of these Indians, or know his weight.'"

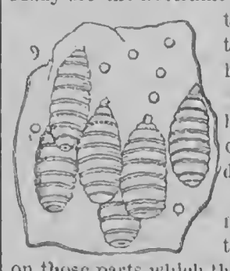
BOTS IN HORSES.

ONE of the evils to which horses are exposed when grazing is the attack of the *œstrus equi*, or bot fly. Most horse owners are familiar with the appearance of this fly and its eggs, and the manner in which it deposits them on the animal, but the accompanying illustrations will help to enlighten the whole subject, and make us observe with greater interest the operations of the pestiferous fly whose season is near at hand.



1, female fly about to deposit an egg; 2, the male fly; 3, the egg, natural size; 4, the egg magnified; 5, the newly hatched bot; 6, the bot full grown; 7, the head of a bot magnified; 8, the chrysalis; 9, bots adhering to the stomach by their hooked mouths.

The egg of the bot is made to adhere to the hair of the horse by means of a glutinous fluid secreted with it, and it becomes so firmly glued as to require considerable force to detach it. It is generally supposed that in licking himself the horse loosens the eggs and conveys them to his stomach; but the fact is, that after remaining a few days on the hair the eggs become ripe, so to speak, and the slightest application of warmth and moisture brings forth the larva. Thus when the tongue of the horse touches the egg it bursts open, a small, active worm is produced, which clings to the tongue and is thus conveyed to the stomach. Here they fasten themselves and maintain their hold very strongly by means of two dark-brown hooks as the engraving shows. Many are the nostrums administered to remove



the bot, but no medicine that is innoxious to the horse will expedite their removal; some doubtless have found that it is easier to kill the animal than detach the parasite.

The bot fly possesses an instinct which leads it to deposit its eggs mostly on those parts which the horse is accustomed to lick, and which are easily accessible to the animal's tongue; and the great and apparently causeless irritability which the horse exhibits when beset by its tormentor seems to spring from an intuitive knowledge of its nature.

THE USES OF ANALYTICAL CHEMISTRY TO AGRICULTURE.

MANY believe, and some *soi disant* professors of chemistry have asserted that they could, by analyzing a part of the soil, find out its manurial deficiencies so as to prescribe the the mineral and organic elements it needs to make it productive.

To show the fallacy of such bold pretension, it is only necessary to state the fact that 100 lbs. of phosphoric acid applied to an acre of land has increased the yield of turnips more than nine tons over the yield of an acre in like condition without the phosphate.

As an acre of soil six inches deep weighs about two thousand tons, 100 lbs. of super-phosphate, mixed with it would be less than one part in twenty thousand, and such minute quantity is far beyond the limits of chemical analysis. A chemist in determining the amount of phosphoric acid in the material he analyzes, feels well satisfied if a duplicate analysis agrees within one part in a thousand. BOUSSINGAULT has well said that soil analysis "was more curious than useful."*

But when we come to the analysis of manures, the simple elements of plant food being there in smaller compass and almost free from the sand and clay of the soil, analysis can now come near enough to the exact quantity of the manurial elements to determine the real commercial value of the article. Hence it is that the venders of commercial manures in England, guano, super-phosphate of lime, &c., are under the necessity of having an analysis made of it in order that their farmer customers may know what they buy. A few years ago, an analysis was made of the fertile soil of the Sclota bottoms, which have been so long successfully tilled without manuring. The result was that the elements of fertility were so sparsely and generally distributed throughout the finely pulverized soil, that the chemist found them to be too minute to come within the reach of quantitative analysis. He therefore decided that its fertility was due to the "extreme fineness of its particles," which gave it a mechanical structure of great absorptive power. This soil being of alluvial formation, is, of course, very rich in every kind of soluble plant food, and its absorptiveness enables it to hold water by capillary attraction to supply the growing crop through the droughts of summer.

It is said that, on hearing of the above experiment, HORACE GREELEY bought him a quartz crusher, to reduce the rocky soil of his Westchester farm to powder. But I vouch not for the tale. S. W.

* "Plus bizarre que utile."

SOILING WHEN PASTURE IS SHORT.

HOWEVER much farmers may cling to their good old habits and look with suspicious distrust upon all new and untried systems of feeding, which would turn all their pasture into corn, or grain fields, or meadows; still they have found, by experience, that a thrifty patch of green corn fodder is a great help in August, September, and even October, when pastures are short and cows shrink their milk. Since dairying has become so important a part of our agriculture, greater attention is paid to giving the cow a more uniform feed through the season, than the pastures alone furnish. Few localities are blessed with pastures that yield a uniformly abundant feed through the whole season, and unless cows get other food, their general product will not enrich the feeder.

When cows shrink their milk from deficiency of food in a dry season, it is not easy again to recover the full flow of milk. It often happens that a deficiency of food for only a few weeks, reduces the yield of milk through the season so materially as to render the result of the year a failure instead of a success. The cardinal principle of the dairyman should be to supply his cows, at all seasons, with an abundant, nutricious and milk-producing diet. There should be no departure from this rule. Any want of liberality here will be punished, seven-fold, in the balance-sheet at the end of the year.

It is now time for all dairymen to make provision for this contingency. The best crop for early soiling is clover; and every farmer should have a small piece of ground near the barn, in clover, to be used for this purpose, if needed; if not it will make excellent winter food. One acre of good clover fed green is equal to four and sometimes even six acres of pasture. But corn, sown for fodder, will meet the most usual necessity of the dairyman—food for a dry August and September. This may be sown, say the 20th of May and the 10th of June. Sow early, so as to be used in August and the remainder for use at any time in the fall. And it should not be looked upon as an additional expense in keeping the dairy, for it is the greatest economy in feeding.

One acre of good corn fodder is equal to from six to to ten acres of pasture, and worth much more fed green than dry. If any one thinks the last figure extravagrant, let him measure off forty square rods of ground in heavy corn fodder, and feed it to his cows, noting the length of time it will keep them, and compare this with two and a half acres of pasture. Some large crops of corn fodder have been weighed green, and found to yield at the rate of sixty tons to the acre, equal to about seven tons of dry fodder. This is, no doubt, a large crop, but it demonstrates that corn is one of the cheapest foods for the cow. It would be the best economy for farmers to reduce their pastures and increase their green clover and corn to be fed instead. They would soon find their farms too large for their stock, and their profit in increasing their stock and not their land.

About one acre to eight or ten cows will be sufficient to help out the pasture in a dry time. It will also well repay the dairyman to feed small quantities of pea meal, oil meal and bran during the summer to his cows. It will more than pay back the outlay in milk, besides the better condition of the cow. The great study should be to keep the greatest number of animals on the smallest quantity of land. Every additional animal, well kept, will, by increasing the manure, enlarge the capacity to keep more. E. A. S.

MADAGASCAR, OR LOP-EARED RABBITS.

THESE beautiful animals we consider the most profitable and desirable of all pets; and, as we have had some experience in the rearing and management of them, propose giving a little information on the subject.

They are of several different colors—black, blue, fawn, yellow, grey and white, and the various mixtures of these colors. Where attention is paid to rearing them for exhibition, great regard is had for a proper admixture of colors, and first-class "markings," and size, and length of ears also being important considerations. They are hardy, easily reared, and thrive well in the limited quarters generally assigned them by fanciers. They carry their young one month, and the young ones are weaned when two or three months old. Their principal food is good hay and oats, with a variety of food in *small* quantities, clover, plantain leaves, dandelion, cabbage, and the various root crops, especially turnips, for winter food. Skimmed milk is a valuable addition to their daily fare. We lost ten very fine young "lops" last summer by an immoderate quantity of green food. Hay, oats and milk will keep them in the finest condition. They are easily confined, and we have kept them in pens made of lath of hard wood (beech) without any difficulty from their gnawing. Soft wood they soon destroy. They will do well in any out-building, with a good roof and floor; as they should be kept from the damp ground. They are generally kept in hutches or cages, described in books as rabbit rooks. An old dry-goods box makes a roomy hutch for a breeding doe or for two bucks. Each breeding rabbit should be kept alone to prevent fighting. The young ones may run together until six months old, when they begin to show their belligerent propensities, and should be separated.

We purchased three fine animals in New York City in July last, which were shipped during the excessively hot weather of that month, and all died on the passage. They were perhaps improperly exposed to the heat, although they appear to be affected more by excessively hot than by severely cold weather.

They produce from five to ten at one litter, but generally raise only from three to six, and the less the number the better they thrive. They are much larger than common rabbits, weighing from 9 to 12 lbs.—and occasionally heavier. Their ears being long and pendulous give them a peculiar appearance. The ears of my best buck measure 18 inches from tip to tip.

They are quite an ornament to any homestead, and are one of the many little additions which may be made to render home more pleasant for the younger inmates; and even older persons find much to interest and amuse in their various characteristics and management generally. Rabbit keeping in England is quite a business—and indulged in by the wealthy for amusement. We have none for sale, but simply offer these remarks upon a subject as deserving as the keeping of poultry or canaries. ROCKPORT.

Cuyahoga Co., Ohio.

TEXAS CATTLE FEVER.—The Southern Cultivator is of the opinion that the cause of the fever in cattle from Texas is owing solely or mainly to a change of climate. Cattle taken from the upland regions to low ones, will generally have the fever and die, while those bred and reared there will not be affected by the fever but rarely if at all. Cattle taken from a warm section to a cold one would be likely to suffer in the same way.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

THE TARIFF WOOL SAMPLES.

A CORRESPONDENCE, it will be remembered, was published a few weeks since in these columns, in which the Secretary of the Treasury authorized the appointment of committees on the part of the National Wool Growers' Association and the National Association of Wool Manufacturers, to examine the samples of wool, hair, &c., provided for by the Tariff Act of March 2d, 1867.

The committee appointed to represent the National Wool Growers' Association consisted of the following persons:—HENRY S. RANDALL of New York, Hon. NORTON S. TOWNSHEND of Ohio, Hon. EDWIN HAMMOND of Vermont, SAMUEL THORNE, Esq. of New York, A. M. GARLAND, Esq. of Illinois, BURDETT LOOMIS, Esq. of Connecticut, and JOSHUA WRIGHT, Esq. of Pennsylvania.

The Committees met, by the appointment of the Secretary of the Treasury, in Boston, May 22d. The Wool Growers' Committee were present with the exception of Messrs. THORNE and WRIGHT. The former was detained at home by necessary business, and the latter unfortunately did not, owing to a delay in the mails, receive his appointment in time to attend. The Manufacturers' Committee consisted of Hon. J. WILEY EDMANDS, Chairman of the Executive Committee of the National Manufacturers' Association, N. KINGSBURY, Esq. of Connecticut, and JOHN L. HAYS, Esq. of Massachusetts. Neither of these gentlemen had previously seen the samples. The Government was represented by AUGUSTUS EDWARDS, Esq. of the Treasury Department, who was accompanied by Messrs. BAUSH and RICE, appraisers in the Custom Houses of New York and Boston.

The samples were found to be put up with great neatness, and in a mode highly convenient for use in the Custom Houses. Each is contained in a cylinder of glass something over a foot long and four or five inches in diameter, holding say half a pound of wool. Each end of the cylinders is numbered and marked with the name of the wool and the class in which it falls according to the provisions of the tariff. A movable India rubber cover at one end of each, allows it to be readily opened for a more minute examination of its contents. Each set of samples is placed horizontally in pigeon holes in a substantial cabinet which has a door and lock. On opening this, the name, classification, etc., of every sample is seen at a glance. No better arrangement could, we think, be devised.

The number of the varieties of wool thus classified is eighty-four. Mr. BOND stated that he had collected as many varieties as he could find now properly represented in our markets, but there were still numerous deficiencies in the list, especially in the wools imported from France, Spain, Germany, and portions of Africa. But of those wools which chiefly compete with American ones, and particularly those which are near the dividing line between the tariff classifications, the collection is quite full—sufficiently so probably for any present exigency.

On motion of Mr. EDMANDS, Mr. RANDALL was appointed chairman of the joint committees. The members of the committees and the Government officers then took their places round a table, and the samples marked with the same name and number were taken from all the cabinets and placed together before them. Having disposed of these, another set was brought on, and so on to the end. Each person examined the samples as long as he chose. Whether they truly represented the class and variety marked on them, and whether each corresponded accurately with all the rest of the same designation and number, were naturally the first subjects of examination. More or less of the covers were removed in every instance, and when a shade of doubt arose the cylinders were emptied and the wool carefully inspected lock by lock. When information was requested in regard to where and under what circumstances each sample was obtained, Mr. BOND furnished the most explicit information. Members of the Growers' Committee had provided themselves with numerous specimens of American wools for comparison. Wool staplers and manufacturers were in some instances called in to give information—not so much to settle any real doubts as to render assurance doubly sure on the points under investigation. On all these points, and especially in obtaining an undoubted identification of varieties, the testimony of Mr. BAUSH, based on long experience and given with obvious frankness and impartiality, was particularly valuable.

In a great majority of cases, there was no room left for doubt that Mr. BOND had discharged his duty, in selecting the samples, with the greatest accuracy. In only one instance was there found any appreciable difference in the samples of the same designation and number, and this variation from the standard was found in only one sample. This error was immediately conceded and rectified. In a very few instances small locks of a character different from the body of the sample, but which obviously had been imported in it, were, with his equally ready assent, thrown out. In but a single case was his classification regarded as erroneous—but this chanced to occur in respect to a kind of wool the true indentification of which was all important because, as Mr. BOND himself stated, it more nearly than any other variety touched the dividing line between two classes on which the highest and lowest duties are imposed. Mr. BOND frankly declared that his opportunities for selection in this variety had not been very good, and after some discussion, informed the committees that he had just received some imported bales of wool of the same designation, and that, if it was desired, he would bring specimens of it for examination. This was done, and the new bales furnished samples, in the judgment of the committees, decidedly more characteristic and better calculated to mark the distinction between the classes in danger of being confounded with each other, than those previously selected. Mr. BOND assented to this conclusion, and the exchange of samples was decided on.

We state these facts because they belong to a full and fair history of the proceedings. It is, however, but just to say that if any member of the Growers' Committee entered upon the examination of the samples prepared by Mr. BOND with any doubts of his intention to discharge his trust with strict impartiality, all those doubts had vanished when the examination closed. His task was a difficult one. Considering the opportunities within his reach, and the time given him to complete his duties, he exhibited great diligence and skill in his selections. There are very few persons who, under the same circumstances, would not have committed far greater errors.

Throughout the entire proceeding the two committees and the Government officers acted in the most perfect harmony. In everything pertaining to the adoption of the samples, there was not in a single instance a difference of opinion expressed. And in some collateral discussions raised about the proper construction of the law, Mr. EDWARDS evinced a spirit which, if it reflects that of the Treasury Department—of which there is no reasonable doubt—the wool tariff will, so far as that Department is concerned, be justly interpreted and faithfully executed.

After the close of the examinations, the following resolution was offered by Mr. TOWNSHEND of Ohio:

Resolved, By the committees of the National Wool Growers' Association and the National Association of Wool Manufacturers, convened in Boston, May 22d, 1867, under the authority of the Hon'ble the Secretary of the Treasury, to examine the samples of wool, hair, &c., collected and prepared by Mr. GEORGE W. BOND to be used as standards of comparison in the Custom Houses of the United States under the provisions of the Act of March 2d, 1867, that they have carefully examined and compared all the said samples now prepared, and that, as finally agreed on, they are suitable for the objects for which they are intended.

The resolution passed unanimously, the signatures of both committees were attached to it, and it was forwarded by the chairman to the Secretary of the Treasury.

THE COMMITTEE ON TARIFF SAMPLES.

THE subjoined letter discloses facts the publication of which we consider alike due to the writer of it and to ourselves:

YOUNGSTOWN, Mahoning Co., Ohio,
May 2, 1867.

HON. HENRY S. RANDALL—SIR: Your letter of the 26th, appointing me one of the Committee to inspect "Samples of Wool," under the new tariff is before me. I fully appreciate the importance of this work, under the form which the subject has now assumed, and I am not insensible to the honor conferred by such an appointment. Did I not know that there were names of other gentlemen on your list, entirely competent to the task, I would not feel at liberty to decline, but knowing this, and feeling that the writers attention to the subject has left a gap in my private affairs, which I must hasten to fill, I beg to be relieved from this present responsibility. Yours, very truly,
R. M. MONTGOMERY.

Communications, Etc.

WHEAT GROWING ON THE PRAIRIES.

IN my last, under the above title, I was, perhaps, too fast in attributing the good effects of burned straw on a worn prairie soil to the exhaustion of the potash and the mineral elements in the earth, as the nitrogen of such a soil is exhausted by cropping long before its mineral elements fail. I am inclined to believe that the fertilizing effect of the ashes from so large a pile of straw on such a soil, was mainly due to the action of the potash of the ashes, which it is said has power to decompose the atmosphere and form nitrate of potash (saltpetre) in the soil; and that it was this organic nitric acid, and not the inorganic potash that added to the growth of the next crop of wheat.

It is said among the pioneer farmers of Western New York, that wherever old asheries and large piles of poorly leached ashes have stood the soil is still remarkably fertile. A few miles east of Aurora, Cayuga Co., you will see even at this day a very luxuriant spot of growing grain, where an old ashery stood fifty years ago; and it is said that the older the pile of ashes the better was its manurial effect on the soil. This I think shows conclusively that the potash of the ashes had year after year fixed a portion of the nitrogen of the air into the nitrate of potash. Although the composition of the atmosphere is four-fifths nitrogen, yet this element is so opposed to chemical reactions, that very little of it has thus far been made available for the wants of growing plants.

*.

PLASTER—WHEN TO SOW IT.

A CORRESPONDENT of the N. Y. American Institute Farmer's Club, writes to that *grave* body, that "plaster should not be sown after the sun has risen sufficiently to produce strong evaporation of the night dews, as then a large per centage of the fertilizing properties of the plaster is carried off in the air!" He also suggests that "the best time to sow it is probably after sunset, on a still evening, when the dew is falling fast."

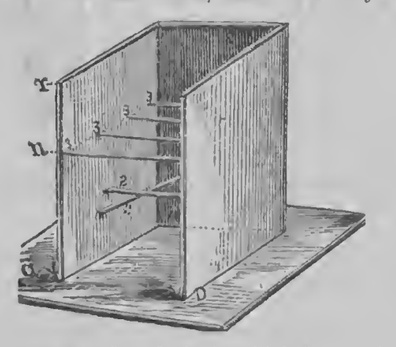
Now it is very possible that the wag of a Secretary, when he read the article, substituted *plaster* for Peruvian *guano*, for the mischievous purpose of finding out whether there was an individual present who could detect the interpolation; and it seems there was not!

Plaster is a mineral substance, composed of lime and sulphur, and only soluble by four hundred times its weight of water; hence the impossibility of losing any of its fertilizing matter by the evaporation of the dews of a single night; it cannot, like an organic substance, be converted into a volatile gas and go off in the air; its office is rather to combine with organic matter and hold it to the soil for plant food. LIEBIG is of the opinion that plaster collects ammonia from the atmosphere, by which it is converted into the sulphate of ammonia in the soil, an insoluble salt which is again slowly converted into a carbonate by the carbonate of lime in the soil, which is taken up by the roots of plants. BOUSSINGAULT, on the other hand, without disputing LIEBIG's theory, gives great importance to the lime of the gypsum, which he says is in a soluble state, very necessary even to grapes and leguminous plants on a limestone soil when the lime is in an insoluble state. He says as the result of many experiments:—"It appears highly probable that calcareous matter is chiefly beneficial from the particular action it exercises on the fixed amononiacal salts of the manure, transferring these successively, slowly, and as they may be wanted, into carbonate of ammonia! In corroboration of BOUSSINGAULT's theory, it may be proper to state that a crop of clover which is so much benefited by an application of plaster, takes 70 lbs. of lime from an acre of soil, while wheat takes but 16 lbs., and oats only 6 lbs.

LXXVI.

BEES AND BEE-HIVES.

EDS. RURAL NEW-YORKER:—The objection I have to LANGSTROTH'S, MEDCALF'S and some other hives is, that the lid of the hive is taken off on a level with the honey-board which leaves a crack for the cold air to come in directly over where the bees cluster in cold winter weather. This destroys many that might otherwise be saved. The accompanying sketch represents a hive as I now make them, and in which my bees



do very well. It is 21 inches high from *a*, to *r*, 6 inches from *n* to *r*, and 14 inches from *a* to *d*, outside and inside 12 inches each way, giving a space for the hive proper of 12 by 12 and 15 inches high. The drawing represents the hive with one side taken out. On the slats, 3, 3, 3, 3, are placed the honey boxes with the bottoms nearly cut out. 2, 2, are strips put across to hold up the combs. The reader will readily perceive that this arrangement leaves the bees in the center of the hive where they ought to be in cold winter weather. There is no honey board but the strips 3, 3, 3, 3. At the approach of winter take out the honey boxes and fill up the space with dry corn cobs; these can be removed in spring, and the honey boxes replaced. For a lid to this hive take a board 18 inches each way, lay it on the hive, then nail 4 cleets on the underside to keep it in place. For further protection against cold make a box large enough to slip down over the outside of the hive, put on the lid and your bees will be safe.

Grand Rapids, Mich., 1867. E. M. BULLARD.

Rural Spirit of the Press.

Plaster and its Uses.

AT a meeting of the Herkimer Farmers' Club, May 10th, the subject of "Plaster and its uses" was discussed. One member said he had tried plaster—a spoonful to a hill of corn—and found a marked difference between the hills thus served and those to which none was applied. It was a question, among farmers, whether the effect was produced from the air or by the absorption of the soil. It was generally supposed that the gas or ammonia, originating from the decomposition of vegetable or other substances, floated in the air, and that the plaster took up these gases and conducted them to the grain or grasses to which it was applied. A mixture of leached ashes and plaster produced a good effect on vegetation. The experience of the other members of the Club, with respect to plaster and ashes, was of a like character. Some thought the use of plaster on low lands was not of much benefit, but on uplands the advantage was readily perceptible. Early spring sowing—about one hundred pounds to the acre—was deemed about right, but applied to corn in the hill, in small quantities, will pay well.

The Potato—Its History.

AN English paper states that a Mr. CRAWFORD recently read a paper before the Ethnological Society in London, which embraced a history of the potato as far as known. It was cultivated by the Indians before the arrival of Europeans in America, but was a very small tuber. It was taken to Ireland in 1656, and to Spain and Portugal some years previously. It is said to be a well authenticated fact that Col. MURE of Caldwell, in the west of Scotland, within the present century, had some indurated clay soil, taken from a coal pit being sunk on his estate, forty feet beneath the surface, which he carefully treated so as to prevent its being impregnated by any floating germs of seed; and that from this piece of clay several exotic plants unknown to the local botany came up, and also one which turned out to be a species of the *Solanum tuberosum*, or potato. The produce of that plant (which in four years after its discovery bore large white potatoes) is now cultivated extensively in the west of Scotland.

Improved Condition of Farmers.

As a rule, there is undeniably, says a contemporary, more education, intelligence and refinement among farmers than existed a generation since. These, of course, call for the enjoyment of a greater measure of the luxuries of life—in fact, the two go hand in hand, the enhanced means affording facilities for better education, and the increase of intelligence and refinement calling for a style of living different from that which satisfied the uneducated mind. Be this as it may, the farmers, as a class, have (with many exceptions of course) a thousand fold more of the comforts and luxuries of life than were enjoyed by their fathers. They live in better houses, with better furniture—they ride in better carriages, wear better clothing, go more regularly to church, enjoy more social intercourse, exhibit a greater degree of intelligence and more refined manners—in short, come nearer the standard of gentlemen, than did their ancestors, as a class, thirty years ago.—*Ex.*

Diminution of Productiveness.

A WRITER in the Cultivator asks:—"What are the reasons why our lands produce less than formerly, and what is to be the probable result?" This reminds us of another query, to wit:—"Why a gallon of water, in a pail, will weigh no more with a two-pound live fish in it than without?" These questions may be disposed of by asking another:—"Are either of the statements true?" If the first is, all crops taken into the account, it is a poor compliment to "scientific farming," and the advancement claimed to have been made in the cultivation of the soil within the last quarter of a century. Except the potato, we do not know of crop that has diminished in yield, while many of the cultivated ones have increased in quantity. If there is a falling off anywhere, it must be in consequence of not making reparation to the land, in the shape of manure, for what is taken from it in the shape of crops. Give back what is taken, and there will be no diminution in production.

Foot-Rot in Cows—Cure.

AT a recent meeting of the Herkimer Co. Farmers' Club, a member, Mr. WHITMAN, said he had found out a certain and speedy cure for that pest to dairy-herds, foot-rot. It is reputed to be very damaging to cows, causing a loss of flesh and a partial and sometimes an entire cessation of the flow of milk. An ointment made of lard and red precipitate, in the proportion of one to four, mixed and applied to the sore, will prove effectual. He usually melts a quarter of a pound of lard and lets it cool until it begins to thicken, and then adds an ounce of precipitate and mixes thoroughly. Apply to the parts affected, and rub in well twice or three times, and a cure will be the result. Before making the application, clean the feet well with soap and soft water. Sometimes it is necessary to draw a rope between the claws—a hair one, if attainable, is the best.

Plaster and Ashes on Barley.

A CORRESPONDENT of the Canada Farmer, remarking on the sowing and management of barley, says:—"I have experimented more or less on sowing plaster and unleached ashes on barley, after it was about two inches out of the ground, sowing broadcast, following after with the roller to press it down. It is my opinion that if there are any wire-worms attacking it at the time, the roller alone will drive them down a peg or two, but the ashes and plaster will set them back further yet." As barley is very late this year, time will be afforded to test the efficacy of this treatment where wire-worms are found at work on this grain.

Fodder for Stock.

IT is probable that considerable land designed for corn the present spring will fail to be planted on account of the prevalence of wet weather. In such cases it would be a good plan to sow corn for fodder purposes. Good land will produce a heavy burthen of this kind of food for cattle. It is especially good for dairy stock, and may be fed in a green or in a dry state. The sweet variety is considered the best, as it is richer and eaten more readily than any other. What is not used in a green state may be cut and dried for winter use. It may be fed whole, or cut up and mixed with something else, as circumstances shall dictate.

Old Cows—When to Kill.

IT is a question, among farmers, as to what age cows can be properly used for dairy purposes, and when it is best to dispose of them on account of age. This will depend somewhat on the breed of the animals, and the usage they have received. As a general rule, when a cow has entered her teens she has approximated closely the limit of her usefulness in the dairy line. A good farmer once remarked that a cow was never worn out so long as there was room on her horns for a new wrinkle!

Saving the Honey.

A CORRESPONDENT of the Wisconsin Farmer, giving his experience in bee management, refers to various kinds of hives, and among them the one denominated the "Pirate." He had a good swarm of bees in one in the fall, with a full stock of honey for winter keeping. In January he examined the hive, and was surprised to find about twenty-five pounds of excellent honey and four quarts of dead bees!

SLOW PREMIUM.—The young farmers of Carroll Co., Ill., propose a premium of $25 for the slowest mule, to be awarded at the time of the County Fair.

Rural Notes and Items.

PROSPECTS IMPROVING.—May was a wet and generally cold month—rain being the rule and sunshine the exception. June, the first summer month according to the almanac, came in more favorably—far less lacrymose than its immediate predecessor. There is a decided improvement, as the descending showers are less nearly allied to ice than were those supplied during the preceding month. The air feels balmy and affords promise that the farmer may yet have a chance to plant his ground, if he is wide awake and not disheartened by the long quarantine to which he has been subjected by an adverse season. Faith and works, acting promptly and harmoniously together, may yet produce remunerative farm results. The confidence implied in the phrase, "Never say die," has rarely been more necessary to the farmer than now. Plow, plant, sow, live and hope, should be the motto on the flag of every farmer.

CROP PROSPECTS SOUTH.—The Augusta Sentinel, (Ga.,) of the 29th ult., condenses from the journals in that section, an account of crop prospects there. In Laurens county cotton promises well—a large breadth of land is planted. Corn enough for home consumption is expected. Pike county—cotton less promising, but corn and potatoes doing well; oats looking sorry. Berrien county presents the same aspects—cotton poor; corn good. In Cobb and adjoining counties wheat never looked better and other crops promise well. A hail storm swept over Calhoun county recently, destroying both corn and cotton. Corn is being replanted there on both grounds. The Monroe Advertiser, May 21st, states that the wheat in that section is about ready to harvest and promises a bountiful yield.

COFFEE OR WHAT?—We recently received from L. A. R., Wyoming, a box containing sundry pods grown from seed said to have been procured in the East by the wife of a Missionary some years since. It was reputed to be pure Java coffee, and our correspondent wants to know what we think about it. That it is not any of the varieties of coffee, known to commerce, is evident from its appearance, and we presume a taste would not indicate any nearer relationship. It manifestly belongs to the pea or bean family which is its nearest approximation to the coffee mentioned.

AS to the other inquiry, about newspapers, we would say that we do not know of any publication containing the full information sought.

FILM ON THE EYE—REMOVAL.—At a meeting of the Institute Farmers' Club, a member mentioned a successful process for removing film from the eyes of cattle and horses. A small quantity of melted butter should be poured into the ear of the beast, opposite the eye affected. If the head of the animal is properly turned up the application of the melted butter will be an easy operation. The butter should not be so hot as to render the animal uncomfortable. After an interval of a few days repeat the operation. Three applications will be ample for a cure in most if not in all cases.

STARVATION OF STOCK.—The monthly report of the Department of Agriculture for April says the loss of stock from actual starvation and exposure the past winter has been extraordinary. In Texas the loss has been heavy, one-tenth of the stock dying. In the Territories similar losses are reported. In Nebraska and Arkansas many perished. In Minnesota fodder was short and stock died. It has been a severe winter in all North America, and the aggregate loss of stock from exposure and want of feed is immense. This might have been avoided by foresight and industry.

SHEEP SHEARING AT ALEXANDER.—There was a large gathering of sheep breeders at Alexander, on the 24th ult., to participate in a sheep shearing festival. A participant, writing to the Attica Atlas, refers to the sheep sheared in this wise:—"They were, in no sense, *white as wool*, but black as an Ethiop, looking for all the world like sacks moving along without any *apparent* means of locomotion." It is hardly necessary to add that these "sacks" were the real Vermont Merinos. The average weight of wool on the sheep shorn, was 1 lb. to 3 13-16 lbs. of carcass.

BUFFALO CLIMATOLOGY FOR MAY.—From a record kept at the Library of the Young Men's Association, Buffalo, for the month of May, we obtain the results following:—The coldest day was on the 2d—the mean being 33°; entire clear days, 5; entirely cloudy days, 15; number of days on which rain fell, 15; amount of rain, 4.25 inches. The temperature for the month was 3½ degrees below the mean for the same time for the last nine years.

HORSE FAIR AT BUFFALO.—A meeting of parties interested in holding a second Annual Horse Fair at Buffalo was held in that city last week. A complete programme for the occasion was agreed upon. The officers are:—*Pres't*—HON. J. C. WELLS; *Treas.*—C. J. HAMLIN; *Sec'y*—H. MILLARD. The Fair will open August 13th and continue four days. The premiums offered aggregate $12,000

AGRICULTURAL FAIRS.—Our friends who send notices of Agricultural and other Fairs to be held the coming autumn must not think themselves slighted if their favors do not appear at once in the RURAL. They will be published, in due time, in a regular list which will be prepared for that purpose. Send us the particulars, about the Fairs, that our list may be as complete as possible when it appears.

MINNESOTA—ADVANTAGES.—We are under obligations to M. F. JAMES Esq., St. Paul, Minnesota for a pamphlet setting forth the peculiar advantages which Minnesota offers to the emigrant who may be seeking a home in the west. A succinct description of the soil, climate, facilities for travel, manufacturing development is given, coupled with remarks on the future prospects of the State.

SORGHUM IN ONEIDA COUNTY.—It is stated in the Utica Herald that several parties in Oneida county, in the region of Paris Hill and Clinton, are engaged in preparations for sorghum planting. They deem that section well adapted to the business and indulge in sanguine hopes of a profitable result to their enterprise.

NEW JERSEY HORSE FAIR.—A National Horse Fair is to be held on the grounds of the Central Agricultural Society, N. J., near Trenton, on the 11th, 12th and 13th days of June. The premiums are quite large, and the competition is expected to be quite animated.

STOCK RAISING.—Many of the Southern people are changing, it is said, from cotton to stock raising, as being more certain and profitable.

HORTICULTURAL.

REPLY TO "PENN YAN."—GRAPES, WINE, &C.

EDS. RURAL NEW-YORKER:—I am always sorry to see in your excellent journal—the cheapest and best agricultural paper we have — an unfair article. Such I cannot but regard "Penn Yan's," in your issue of May 27th. I dread to see a writer like "Reuben" of the Horticulturist, and "Talks About the Farm," No. 39, or 69, or 109, of the Agriculturist. They are like a picture in Harper's Magazine of a spider, fastened by a forked board, and a reel pulling his spider-threads out of the *tail*, not *brain*, of the unfortunate insect. Now the position is not a very graceful one, nor very healthy, and the process may be good for spiders, but a contemptible one for a writer; even if he has not the good sense to see it. So "Penn Yan," poor hanger-on to dead committees, like "Reuben," and that other —— near Rochester "on a farm," doles out over a column; relieved only now and then by a line of common sense, and a few independent thoughts.

Now, I do not like to talk in this way, but how shall we correct old offenders without some plain words. The truth is, committees and business meetings, often make the best men "man-monkies," like several in Boston; but the public moves on regardless of them. Skillful advertising may sell to raw beginners poor grapes, but soon we leave advertisements and committees in the forgotten past.

The remarks on Dr. JACKSON'S analysis are very unjust. For example we did not know till Dr. J., in 1859 determined it, what acid we had in our grapes. That was a step onward, that *poor* "Penn Yan" does not appreciate. Again, in 1859 we knew nothing of the real reasons of the value of Catawba, that "Penn Yan," who does not give his own name, but stabs in the dark better men than himself, says has "made good wine."

Now, examine the analysis of Dr. J., p. 45, Report, 1859, of Catawba. It is: specific gravity 1.0715, pg. 57, acid 1 per cent. Now, to the common wine maker this is all Chinese or Hebrew, as it seems to be to "Penn Yan." Let us translate it. BEAUME'S hydrometer is one any person may use, and get everywhere. By this the 1.0715, translated in rough language, means, *Catawba juice, as ordinarily ripened, stands, by Beaume's hydrometer, at ten degrees.* This I have myself verified by at least fifty samples from various parts of the country. And it is not precisely accurate, but is near enough to guide any man. Next—any half-witted man, in the use of wine-testing instruments, knows that no wine, such as Americans will use can be made without grape sugar enough to have the hydrometer referred to stand *at fifteen degrees.* Now, "Penn Yan" can get one eye open if he has half an eye for wine. But pg. 57 says the acids are 10 lbs. in 1,000 lbs. of juice, or one per cent. Now, "Penn Yan," look, and open your other dull eye. You know, or if you do not you ought not to write on wine, *that only four to six pounds of acid in one thousand pounds of juice can be allowed, and good wine be made of any grape. Call it five pounds in one thousand, or one-half of one per cent.*

My own tests of Catawba, in 50 specimens as above, give nearer 14 lbs. in 1,000 of juice than the 10 lbs. of Dr. JACKSON. And on that I make my Catawba wine. I bring these facts together by reducing the acids to 5 lbs. in 1000, and sugar to fifteen degrees BEAUME, and good wine always is made. I rather think Dr. JACKSON, though full of the silly "Bostonese" of unfortunate Boston, did do some good, even if "Penn Yan" is so stupid as not to know or value it. For had he used it, he would have been a wine maker and a good one, too. So I might translate Clinton, Hartford Prolific, Isabella, Concord, and other grapes in the repudiated analysis, and show "Penn Yan" and others too lazy to understand what they read, that no wine can be made that was not made in accordance with the very facts of these analyses of Dr. JACKSON, and I would do so, if it were not too long and too simple a story.

But "Penn Yan," with his eyes even half open, says, "Delaware has made true wine." Now, is not that "right smart," as self-wise Southerner would say? Tell us when and where? I have tasted over 100 samples, and made Delaware scores of times, and never yet saw the "true" in any Delaware wine. And the best judges say Delaware is good only to sweeten other wines. I can make a beverage with a woody, leafy taste of Delaware, but nothing else. I have in my cellar samples of Delaware, made by some of our best wine makers, and they are no better. The reason is apparent: and is, that while the acid is about right, the sugar is less than is usually reputed to be in the grape, and the *aroma is insignificant.* The *aroma* of the Catawba is *three times* that necessary, and hence its great value. The truth is, Delaware has been like a petted girl, decked out in all the extravagance possible, and has proven to be unworthy the name she had, grapes, wine and all.

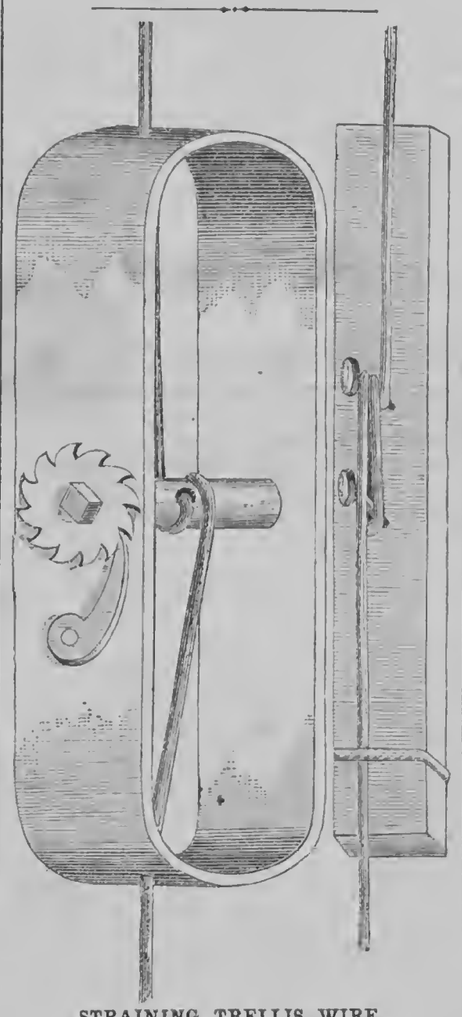
After this random way of "Penn Yan," it need be no surprise that Norton's Virginia wine is condemned by him. I have tasted of three samples of that wine and have some of it in my cellar now, made by myself, and by GEORGE HUSSMAN of Missouri. It is a fine wine, without a particle of foxy taste or smell, and a delightful aroma, that remains long in ones mouth. Yet the Jesuitical "Penn Yan" says "But just try Norton's Virginia (pure and unadulterated) for yourself, Mr. Editor, and excuse me from speaking about it." I say so, Mr. Editor! He dare not come out and declare that Norton's Virginia wine is poor, but he meanly insinuates the falsehood he dare not speak out plainly. Such a writer is beneath ones contempt, were it not that he may do much hurt.

As to Ives' Seedling wine, I cannot speak personally as I have never tasted it. But those who have, tell me that it has no improper smell; and it is too well known to be shaken by any such unsound writer as "Penn Yan." The fact is, it is very unsafe for a man to speak of wines he evidently never saw or tasted. There is more justice in his insinuating that Concord wine is not the best in flavor, for though I have tasted good Concord wine, and made it often, yet I never have seen any that did not give me its peculiar aroma, as if the wine had been scalded. Evidently we shall never make any progress if we have no writers more candid than "Penn Yan."

While on wine, let me say that it is only nine years since any well-founded facts were known on American wines, and it is not strange that we cannot yet have with certainty good wines. Before 1859 we tried making it on SOLON ROBINSON'S hopeless plan, to put grape juice in a cask, with or without sugar, and hoped that by the "Farmers' Club" hocus-pocus, some fortunate scamp would get the luck to make good wine. The plan was as reasonable as to fill a cask with sand and hope to tap it three or four years after and draw out gold dollars. SOLON ROBINSON says, by chance somebody did get good wine. So by chance he might gold dollars—but I don't believe it. Now, our wine making is daily growing better. It takes years for the leaven of wine truth to work, but it is clearing out all trash, and will in the end refine us nice wines everywhere. He is a poor thinker who don't see the way our German friends make wine *without* sugar, when they do use sugar. He is not fit to taste wine in our Agricultural Fairs, "*without sugar,*" "*absolutely pure,*" who cannot taste the etherial spirit (not oil) engendered by that peculiar process, simple as it is. Now, I do not call a German wine, made with sugar—*that is all fermented out of it, so that it has none left in it*—the best wine, and it never will be a popular wine with Americans, I fear. But a wine, made by the hints I have given in this letter, and with a small quantity of free sugar in it, will be the popular American wine, our German friends to the contrary notwithstanding.

The day for wine has dawned, and though I cannot in this letter give a book on wine, yet I have indicated, I hope, the path of our progress.

Yours, &c., S. J. PARKER, M. D.
Ithaca, N. Y., 1867.



STRAINING TRELLIS WIRE.

GRAPE growers are often seriously troubled to strain the trellis wires sufficiently to be firm in supporting the vine, and to make a neat appearance. The wires are generally strained at the end posts, and on long strings of trellis it must be imperfectly done. We herewith illustrate two simple devices for tightening the trellis wires. The larger implement is made wholly of iron and may be put on the wire any where along its length. The wire is seen passing through the ends and through the axle in the center. By applying a wrench to the square head of the axle the wire is strained to any extent and the ratchet-wheel and pawl keep up the tension. The smaller device is simply a bar of hard wood with two spikes driven into one side. In using it the wire is brought between the spikes and the bar twisted over and over—a strong leverage being gained—and when the wire is strained enough the bar of wood is tied to it, as shown, which prevents its loosening.

ROSES.

TO PROPAGATE BY LAYERS OR CUTTINGS.

IN reply to a query by your correspondent, it may be observed that the propagation of the rose is somewhat difficult when shoots do not spring up from the roots. To try *layering*, cut half through a shoot, putting a twig between the separated parts; then peg down the divided joint in the soil. A branch wounded may also be surrounded by moist earth, which is kept in its place by a small oyster keg, having a hole in the center below large enough to admit the branch or shoot. Pitched cloth has answered instead of the keg, a ring of bark having been taken from the plant. Cut off the branch below, when rooted, and pot it.

For *cuttings*, take vigorous branches near the ground; cut them off smoothly, and insert them in flower-pots, so that the ends of the cuttings will touch the side or bottom of the vessel. The two or three inches of soil in the pot should be covered with sand. Bury the cuttings to the second joint, and leave two or three with leaves above the sand. Cover with a large glass tumbler. Some place the cuttings in the shade; (one, who was quite successful, generally placed them in the sun.) The application of "bottom heat," in a bottle, is advisable. Some say, plunge the cutting in a piece of potato, and in this condition plant it. A thorough trial should be given to this singular method. G. H.
Walton, N. Y., May 29.

HORTICULTURAL GLEANINGS.

Fruit Prospects.—The Illinois journals generally concur in the opinion that fruit will be quite abundant in Central and Southern Illinois.

Planting Trees Late.—A writer in the Germantown Telegraph is of opinion that trees may be successfully planted after they have leaved out if the expanded leaves are carefully removed before transplanting the body. If the trees are promptly removed and placed in the ground they will grow quite as readily as if transplanted before the buds expanded into leaves.

How to Raise Plums.—COLMAN'S Rural World states that many people have an impression that it is a very difficult matter to raise plums when it is not so if the right course is pursued. A few trees—a dozen or so—will only supply the plums necessary to feed the curculio, but increase the number of trees to fifty or one hundred on a farm and there will be plenty of plums, both for domestic use and for market. The rule is that large plum orchards are certain to pay well, while a few trees produce little or nothing beyond supplying the plum pests with their fruit.

Disease of Pear Leaves.—A correspondent of the Cultivator suggests that the cause of the blighting and dying of the leaves of the pear tree, frequently noticeable, is owing to the character of the article used for mulching the trees. He mulched some two years ago with bogasse, which was followed by disease of the leaves—blistering and drying up. Last year he treated a portion of them in the same way with a like result. Those not mulched were not injured at all. If cane, thus used, will affect the trees adversely, may it not be true also that mulching with corn-stalks, and kindred refuse stuff, will prove deleterious? At all events it is best to be sure of the effect of mulching material before making a liberal use of it among trees so sensitive as are many varieties of the pear.

Fruit Preserving House.—The N. E. Farmer states that a company in Cambridge, under the Presidency of Dr. GEORGE B. LORING, have erected a building for the preservation of fruits, vegetables, fresh meats, fish and the like, which promises to become popular with the public. It is built on a principle suggested by Prof. NYCE of Cleveland, Ohio. The building is two stories high, walls three feet thick, cased inside and out with sheets of galvanized iron, between which and the wall is a packing of wood shavings. The second story is the ice-room, separated from the fruit-room by a floor of galvanized iron, made water-tight and so inclined as to allow the water from the ice to flow off. The floor of the fruit-room is also of galvanized iron, underlaid with shavings and the like, to prevent the entrance of moisture. The floor is also covered with a compost of some patentable matter for absorbing moisture and infecting the air—securing a uniform dryness and coldness of temperature, the exclusion of light and as far as possible the oxygen of the air. The success of this plan of preservation is deemed to be beyond question.

Where to Plant Orchards.—Colman's Rural World considers the question of orchard planting in a variety of aspects, and comes to the conclusion that an elevated position, with a northern exposure is best for fruit trees. The trees, in such a position, are kept back in the spring from early flowering and not exposed to late spring frosts so much as they would be with a southern exposure and a less elevated position. In the spring-time, when frosts are predominant, they are found to be heaviest on low grounds—the warm air rising and investing the summit of the hills, and preventing the accumulation of frost in such positions. Hence it is inferred that elevated ground is the best for orchard planting. Yet it is but just to say that low planted orchards sometimes do better than elevated ones. This is especially true with regard to the peach in some places the present year, but these may be only exceptions which are said to substantiate the correctness of the general rule. If we were to plant on both high and low ground, success would seem to be certain with one or the other.

Horticultural Notes and Queries.

TEXAS HORTICULTURALLY.—WM. WATSON writes us from Brenham, Wash. Co., Texas, under date of May 21st, that "We have had sweet corn, squashes, beans, cucumbers, etc., on our tables long ago; and as for planting Dahlias, I have some now 5 feet high with over a dozen full-blown flowers. Gladiolas also in bloom. Grapes as large as buck-shot. We will have a short crop of peaches, but a fair one of grapes; the Concord and Delaware look best so far."

HOW TO GROW CUCUMBERS.—"Yorick" tells us how to raise a large crop on a small territory. Spade up a plot ten or twelve feet in diameter, as near the back door as practicable; take an old barrel, both heads out, and sink one end of it six inches in the center of the plot; fill the barrel nearly full of yard manure, any kind, pound it in well; plant a row of seed six inches from and quite around it, and direct the kitchen girl to empty her dish-water, at least once a day, into said barrel, and you will soon have cucumbers at wholesale. No bugs, hum or other, about this.

A GOOD FRUIT PACKER.—A local of the Milwaukee Sentinel describes a fruit packing arrangement which goes far towards the annihilation of space. The writer says that by using this fruit packer eighty quarts of fruit can be transported in a space but little larger than a bushel basket. The boxes are pint ones, hence one hundred and sixty of them would be necessary for the eighty quarts. How these are to be compressed in the space of thirty-two quarts, or a bushel, is a puzzle to the editor of the Wisconsin Farmer.

THE GARDEN SOIL.—Constantly improve this: endeavor to reach the point where its productive power cannot be improved. You will be astonished at the result, and think the land round about you little better than a desert. Sods from old grass land, piled with leaf mould or stable manure and leached ashes, make a compost that will improve any soil. But if the soil be clay add sharp sand also. This is the season to make the compost heap.

CELERY PLANTS should be pricked out in rich beds. Celery for late fall and winter use should not be set in the trenches or rows until July. If the tops are likely to get too large, most of the growth may be cut off once or twice.

STIR THE SOIL frequently in the garden when it gets dry; it will require a good deal of work to get it light and mellow after the heavy spring rains. But the soil must be stirred and air admitted or your garden will fail.

CUCUMBERS.—M. SUTTON, Irondequoit, has furnished us a fine sample of cucumbers, grown under glass, on his premises. They are well developed and have a promising look.

THIN OUT such plants as stand too thick; all plants more than have ample room are no better than weeds, and should be treated as such.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

BEING interested in the Domestic Economy column, I thought perhaps a few of my recipes might not come amiss, if you think them worthy of a place in your most excellent paper:

CURRANT CAKE.—1 cup of butter; 2 of sugar; 3 eggs; 1 cup of water or milk; ½ teaspoonful of saleratus; a little grated nutmeg, and 1 cup of currants; flour to make a thick batter.

OCEAN CAKE.—2 cups of powdered sugar; ½ cup of butter; whites of 5 eggs; 1 cup of sweet milk; 3 cups of flour; 2 teaspoonsful of cream tartar; 1 of soda; flour to the taste.

CORN STARCH CAKE.—One cup each of corn starch, flour and butter, rubbed to a cream; the whites of 7 eggs beat to a froth; mix in 1½ cups of white sugar, and flavor. Stir all thoroughly together.

CALIFORNIA SPONGE CAKE.—1 cup of sweet milk; 1 cup of sugar; 1 egg; 1 spoonful sour cream; 2 teaspoonsful cream tartar; 1 of soda; flour to make a thick batter. Season if you like, and bake twenty minutes.

Will some of the RURAL readers please inform me how to color scarlet red for making flannel; also how to make Corn Starch Cookies, and oblige a—FARMER'S WIFE, *Racine, Wis.*

EDITORS RURAL:—I too am disappointed when I find no Domestic Column in the RURAL; and in company with "M. N. P." most earnestly exhort good housekeepers to forward recipes, as well as practical hints for housekeeping in general.

SPONGE CAKE.—Five eggs; 1 heaping cup of sugar; 1 level cup of flour; beat the yolks and sugar together; then add the whites thoroughly beaten. Bake in long narrow tins.

CUSTARD.—The yolks of 10 eggs; 2 qts. sweet milk; sweeten and flavor to suit the taste; beat the sugar and eggs thoroughly together, then add the milk. These ingredients should be beaten thoroughly in a tin pail, which must be placed in a kettle of boiling water and allowed to cook slightly; stir while cooking. When cool, place in deep dishes, and turn on the whites, having first beaten them to a stiff froth. This is rather pretty dotted over with red sugar sand just before placing upon the table.

INQUIRIES.—Who will send to the RURAL a recipe for making good rolls, nice corn-starch cake, and Tapioca pudding.—FARMER'S DAUGHTER.

WASHING FLUID.—A "Farmer's Wife," Cascade, Mich., referring to washing fluid, writes: "Take 1 lb. soda ash—not sal soda; ¼ do. lime to 4 gals. rain water; boil 30 minutes, then cool it off and put it into jugs or bottles. When preparing to wash fill the boiler half full of water; put in one teacupful of the fluid; soap the clothes the same as if they had been washed; put them in the water while cold. Raise to the boiling point, and continue from twenty to thirty minutes. Take the clothes from the suds and rinse and place on the line to dry. Flannels and calicoes may be cleansed in the same suds by scalding them as above, rendering them clean and pliable and not injuring them in the least. A pound of soda ash costs but little, and will last a family of six or eight persons three months. Try it.

BLEACHING COMMON BEESWAX.—In a late number of the RURAL, a "Reader" asked information for bleaching common beeswax. As I have seen no reply, I will tell her how I do it: I put my wax into a pail or kettle, adding water enough to nearly fill the vessel. When the wax is melted, I wash a pane of glass with suds, and dip it in the wax and get two thin sheets. I then wash and dip the glass again; continuing this process till the wax is all dipped off. I then spread these sheets on boards in the sun near a window. In a short time I have nice, white wax, much better than any I can buy. Bleaching with acid impairs the strength of the the wax.—H. H. H., *Perry Center.*

REPUDIATION ALREADY BEGUN.—The ladies everywhere are repudiating the common yellow soaps, and substituting Pyle's economical, labor-saving, O K Soap, much to the chagrin of grocers that have large stocks of other kinds. Keep on, ladies, and your wardrobe will sustain you.

THE ADVANTAGE.—The advantages in buying D. B. De Land & Co.'s *Best Chemical Saleratus* are numerous. Among them are full weights and perfect goods.

Ladies' Department.

THE FIRE ON THE HEARTH.

BY MRS. FRANCES DANA GAGE.

THERE is luxury rare in the carpet of Brussels,
And splendor in pictures that hang on the wall.
And grace in the curtain, with rainbow-hued tassels,
And brilliance in gas-light, that flashes o'er all;
But give me the glow of the bright-blazing fire,
That sparkles and snaps as it echoes your mirth,
And leaps, in its joy, up the chimney still higher,
When the cold winds without make us draw near the hearth;
The old-fashioned fire, the cheerful wood fire,
The maple-wood fire that burns on the hearth.

As I feel its warm glow, I remember my childhood,
And the circle of loved ones that drew round our board;
The winter eve sports, with the nuts from the wild-wood.
The apples and cider from cellars well stored;
I hear in its roar the wild shout of my brothers,
And the laugh of my sisters, in innocent mirth,
And the voice of my sire, as he reads to my mother,
Who knits by the firelight that glows from the hearth;
The old open fire, the health-giving fire,
The home-cheering fire, that glows on the hearth.

Like the strong and true-hearted, it warms its surroundings,
The jamb and the mantle, the hearth-stone and wall,
And over the household gives out its aboundings,
Till a rose-tinted radiance is spread over all.
If you lay on the fuel, it ever burns brightly,
Till the day's work is done, and we lay by our mirth;
Then we gather the embers and bury them lightly,
At morn to renew the fresh fire on the hearth—
The old-fashined fire, the life-giving fire,
The broad-glowing fire, that burns on the hearth.

It reminds us of friends that we draw to the nearer,
When winds of misfortune blow heavy and chill,
And feel, with each blast, they are warmer and dearer,
And ready to help us and comfort us still—
Friends that never grow cold till the long day is ended,
And the ashes are laid to their rest in the earth,
And the spirit, still glowing, to God hath ascended,
To rekindle new fires, like the coal on the hearth.
Then give me the fire, the fresh-glowing fire,
The bright, open fire, that burns on the hearth.

You will tell me a *stove* heats a room in a minute,
Expels the cold air, and I know it is so;
But open a door, is there anything in it?
Your warmth is all gone—there's not even a glow;
Just like modern friends, one is every day meeting,
All professions and smiles, as the impulse gives birth,
But as black and as cold, at the next hour of greeting
As your stove that has banished the fire from the hearth;
Then give me the fire, the old-fashioned fire,
The bright-glowing fire, that burns on the hearth.

THOROUGH CULTURE AND WORK.

WE are not about to charge all the superficiality and half-doing to women. There are smatterers enough, and persons enough who never do things deftly and well among men. But we venture to suggest that a want of thoroughness is a great fault in woman's education;—using that word not alone as limited to the school or to books, but in its wider range of home and society, and the life-work which is before us all.

Girls jingle at the piano: how many comprehend or call out its wondrous range of expression? Ladies sing pleasantly and sweetly: how many know the wealth of beauty and wondrous feeling in that instrument of widest range and most varied utterance, the human voice? We have French in nice phrases, half spoken, botany in minute skimmings, history in a few bald facts, and so on. Much ground spread over but very thin, and no depth anywhere.

Of course, no one can be an encyclopedia. "Concentrate thyself" was the wise advice of the great GŒTHE. And it is well, no doubt, to look over a wide field, even if it be not very thoroughly explored; but somewhere, in the direction where the mind reaches out instinctively, there should be such depth and thoroughness of culture as shall redeem the whole intellect from all shallowness.

A boy reads by pine knots and makes a sawmill or a noisy work shop his study, building an invisible wall of his own thoughts, within which he sits in quiet seclusion, and works on until he masters the depth of the matter that absorbs him. We remember the psychological differences of the sexes, the intuitions of woman, quick and clear, which are instead of man's slower and more labored research, and would allow for all these; yet some such persistent strength would be a great help to girls.

A young man goes onto his farm, into a workshop, or to some business or profession, masters principles and details thoroughly, (if he *be a man*, that is,) and is proud of his mastery and of his power to work in his chosen field. Are his sisters equally thorough in their field, equally at ease in details and principles, and justly willing to entertain a modest pride in their capacity for useful work, in the house, or wherever it may be?

We know it may be said that if women *are* thoroughly educated they have no scope for their capacities; but the field is widening,—occupations fit for woman, and in which she can and does win eminent success and self-support, are increasing, and a great change in the world's thought is going on about these matters. And there is the rich, wide field of home, where woman is ever to be the influence to harmonize, to ennoble, to refine, to spiritualize. Let all shallowness of mind and heart be banished from those sacred precincts, and more perfect culture, more depth of character, more womanly earnestness take their place.

Conversation is the charm that *lasts* and *grows;* there can be only idle prattle, unless there be breadth of views, and depth of feeling, as well as cheerfulness and grace. Men of sense do *not* dread, but are filled with reverent delight by the talk of women who have soul and sense and thorough information, and a woman need not study surely to please shallow fools clad in pantaloons.

INTERESTING TO DRESS-MAKERS.

THE London Dress-making Company, a coöperative establishment, is thus described by Frances Cobbe, in the London Times:

The hapless girls whose fate suggested Hood's "Song of the Shirt" and "Bridge of Sighs" were martyrs who suffered for all their tribe; and, in like manner, the poor young woman who died three years ago at a fashionable milliner's, served many hundred of her fellow-workers by arousing the care of ladies for their sanitary and moral condition—a care which did not stop even when it became known that in her special case disease, and not hardship, was the cause of death.

It was a good work that ladies then undertook. Two years have since elapsed, and the third report of the "London Dress-making Company," which they established, is before me. The directors are justified in boasting that "the object for which the Company was started—namely, the improvement of the condition of the work-women of London—has been kept steadily in view; the limitation of the hours of work has been strictly observed, and the system adopted by this Company is being gradually carried out by the best houses in the West-End trade." In other words, a sort of normal shop has been set up, whereby it has been demonstrated that well-made bonnets have no inevitable connection with pulmonary consumption, nor graceful ball dresses with rapid decline, and that the principles of commerce and humanity are not severed beyond reconciliation.

How far these various tasks, from the high art of fitting a bodice to the humble mechanism of hemming a seam, were adequately fulfilled, I shall not presume to decide, but one remark I may fearlessly make. The young workers looked as healthy as so many country girls, and were certainly chattering as cheerfully as so many magpies. The peculiar physiognomy which some experience of over-worked girls has taught me to associate with needlewomen, the large bright eye, the thickened skin, a certain degeneration of nose and upper lip, were nowhere to be seen. There were no tokens of sitting fourteen hours a day at a task which, from its nature, can give neither play to the muscles nor thought to the brain, but only monotonous irritation of nerves and ruinous wearing out of eyesight. The young women in Clifford street were visibly leading a life as healthy (perhaps a good deal healthier) than that of ladies whose robes they were manufacturing. I was assured they never work after 8 of an evening, or before 8:30 of a morning, and that they have an hour and a half of leisure for the wholesome meals of the day, and, of course, the Sunday for exercise and rest. In the spare time so secured, their friends, the directors of the Company, and the cheerful, kindly superintendents, have provided for them, at their option, several healthful amusements—singing classes, calisthenic lessons, and abundance of pleasant books."

Above the workrooms I saw the bedrooms of the girls, clean and airy chambers of reasonable size, with white curtains dividing each of the four or five beds, with their dressing tables, one from another.

Assuredly it must be admitted that, compared with what has commonly been the lot of milliners' apprentices hitherto, the unventilated, half-poisonous rooms, the midnight work, the nerve-destroying green tea and coffee in lieu of wholesome food, (and even these fatal stimulants taken at the work-table without a moment for rest)—compared with this lot, the destiny of the young women of the Dress-makers' Company is fortunate indeed.

AMERICAN WOMEN IN PARIS.—Speaking of the Imperial ball, in Paris, the Court Journal remarks:—"One strange novelty was, however, observed—the preponderance of beauty among the American ladies. The English beauties who were wont to carry away the palm of perfection are effaced, this year, by the peculiar style and delicate carnation of the Americans." After acknowledging the fact, the editor tries to account for it in this way:—"The fact has been accounted for in many ways; the supposition that the manner of dress adopted this year harmonizes better with the startled, inquiring expression of the American ladies, than with the calm, pensive melancholy of their English sisters, may be the right one, after all."

FASHIONS IN HAIR.—The Home Journal says: The hair is not worn as high as it was a few weeks ago, and is somewhat relieved by curls or braids being worn underneath the *chignon*. Some ladies are wearing very long braids down the back, tied with ribbon, to match the bonnet. This is odd, yet pretty, although it is a fashion not suited to everybody. Ladies should have more regard to what is becoming, rather than for what is fashion. The present fashion of wearing the hair curled or frizzed over the forehead so as to hide the parting, is very becoming to a full face, but to a delicate, thin face it gives a long, lank expression.

EQUAL RIGHTS.—At the late Equal Rights' Convention in New York, Mrs. E. C. STANTON said:

"With the coming of woman into that higher sphere of influence would come the dawn of the new day when politics would be lifted up into the world of morals and religion; when the polling places would be beautiful temples surrounded by fountains and flowers and triumphal arches, through which young men and maidens would go up in joyful procession to ballot for justice and freedom; when elections would be like the holy feasts of the Jews at Jerusalem."

Whether prophetic or not, this is eloquent.

Choice Miscellany.

THE GREAT ENCHANTER.

SLEEP makes us all Pashas.—*Bedouin Proverb.*

SLEEP is the poor man's warmest cloak;
His treasurer to dispense
His lavish alms, and turn to gold
His scanty pence.

He heals the sick man in a dream,
And sets the fettered free;
He calls the beggar from his den,
To golden luxury.

He crowns the hounded exile-king,
Reverses Fate's decrees;
And bids the briefless pleader rise
Judge of the Common Pleas.

Sleep joins the parted lover's hands;
Wreathes the starved poet's brow;
And calls the hero still unknown,
From lonely village plow.

Sleep holds the resurrection keys,
And from his shadowy plain,
Down Memory's long and cloudy vaults,
The dead come back again.

Sleep comes, like death, alike to all—
Divine equality!
Blesses the monach in his state,
The slave upon the sea.

Sleep brings our childhood back again,
The only Golden Age;
Sleep! O thou blessed alchemist,
Thou holy Archimage.

[*Chamber's Journal.*

Written for Moore's Rural New-Yorker.

MYTHOLOGY AND THE ANCIENTS.

BY CECIL GREY.

WE think it well for our pagan friends who lived when Troy was, and VIRGIL sang of "arms and heroes," that their dominions were not more extensive. If they had been, their imaginative and inventive genius must have been severely taxed, or else their tutelary gods and goddesses would have had their divine hands more than full. Well, indeed, for the deities themselves, that their empire did not extend over all the now known world; for they might have been reduced to the common lot of hard-working mortals.

Had any of the ancient nations lived in the shadow of the Green Mountains, their vivid imaginations would have peopled every glade and glen with sylvan nymphs; and every one of our bright clear streams would have been placed under the care of some guardian deity from the time it burst up from its mountain bed, holding the reins as it dashed wildly over ledges, and finally sobering it down to a steady river, winding its way quietly and properly through green lowlands to the sea. Or, if their domains had extended farther to the west and north, POLYPHEMUS might have dwelt unmolested in the Mammoth Cave, while the forests of the Californian shore would have furnished him with walking sticks in abundance.

And as for the other Cyclops, surely volcanoes enough might have been found, had the country been scoured for that purpose, to set them up in business this side of the Atlantic. Fancy the smoke of a pagan sacrifice going up from some of the numerous *tumuli* in our vicinity, or a boat-race, *a la* VIRGIL, on one of our lakes, or along our coasts, where, by great and heroic deeds, or, perchance a semi-divine origin, the victor had won apotheosis.

What an advantage it must have been, by-the-by, to some of those old-time heroes to have descended from the gods. What an inestimable convenience to some struggling warrior when he found the odds of the strife sadly against him—simply to stretch out his hands and invoke the aid of some deified brother, with the full assurance of immediate victory. Whether the contest was for life, or for a silver cup, it was all the same,—an apotheosized brother ever stood ready to aid his guardian friend.

I wonder if our ancient friends appreciated their advantages in this respect. After all, in what were they so widely different from ourselves? When due allowance has been made for the onward march of civilization and the growth of a higher religious life in these later days, what inconsistencies do we find that may not be overlooked? They, too, saw the action of something beyond chance in the surroundings, and forthwith a Jupiter came forward to meet the demand for a controlling power. They perceived the magnitude of the work and divided it among their divinities. Exalting their chief deity to the highest conceivable station they thought it beneath his dignity to tinge a leaf, or gild the grain, and gave it to a Ceres to guide the plow in its mission and bless the harvest. The god of the heavens must not stoop to mingle in the affairs of men, and a Mars must watch the battle.

It was the task of a Venus to school the heart in love's witcheries—and, as Jupiter could not lay aside his thunder bolts to attend weddings, Juno must preside at the nuptials. The nymphs and naiads were but the predecessors of the fairies of a later day, and although we acknowledge them as myths of the past, the idea still clings to us, and we love to people our favorite rural haunts with these fairy creatures of the imagination. The still beautiful idea of guardian angels finds its parallel in the watchful care of a deified friend or brother over a less fortunate or gifted mortal.

The ancients, like ourselves, knew that finite power could not always prevail, and that there is a limit to human calculations; so, when their own strength and skill failed, where and to what could they turn but to their gods? The traditions and creeds of ages closed about them, until the people knew no other way than to follow in the footsteps of their fathers and go on multiplying demi-gods and traditions till their number was like the stars of heaven or the sand of the sea shore. Now and then a SOCRATES would arise, to whom seemed given a philosophy approaching inspiration, who would thread his way out of the intricate maze of paganism *almost* to the truth. But the world then, as now, scouting theories which have not had the test of ages, and forgetting that everything must some time have been new, stopped the ears of reason with the fingers of unbelief, and drifted on hopelessly to the end. And the end came. The nations that boasted themselves at the head of the world fell from their proud height. But we have the lives of these grand old heroes left us; some of them, in their simple-heartedness and noble sincerity of purpose, reminding us that mankind, in whatever age or clime, forms one grand chain of brotherhood, no links of which may be broken or entirely discarded, though they may trail, but half remembered in the dusky shadows of the Past.

OLD KNAPSACKS.

THE following beautiful extract is from a letter of "a woman in Washington," to the New York Independent:

"I saw a pile of knapsacks the other evening at the cottage on Fourth street; knapsacks and haversacks left behind for safe-keeping by the boys who went to the front and never came back. The eloquence of these worm-eaten and moulded bags cannot be written. Here was a piece of stony bread uneaten, the little paper of coffee, the smoked tin cup in which it had been boiled so often over the hasty fire on the eve of battle. There was the letter, sealed, directed and never sent; for the soldiers could not always get a stamp. Here a letter, half written, commencing, "Dear Wife:—How I want to see you," "Dear Mother:—My time is nearly out." The rusty pen, just as it was laid down on the half-filled sheet by the gallant and loving hand which hoped so soon to finish it. Here tinted with red, white and blue. Here were photographs of the favorite Generals, and photographs of the dear ones at home. Here were letters of heart-breaking love, and loyalty to duty, and holy faith and cheer, written at home; and here was the Testament given him by the woman he loved best, soiled and worn.

For the American soldier, if he rarely reads it, still would carry his Testament as a dear talisman to save him from harm. Here were those mementoes of the brave, living, loving life gone out. They never came back! The mourners at home do not all know where they fell, or whether they were buried. To one unfamiliar with the soldier's life, these relics might mean little. To me they mean all love, all suffering, all heroism. I look on them, and again seem to see the long lines of marching men file past, dust-covered and warm, on their way to battle. I see the roads of Virginia, simmering in the white heat, lined with exhausted men lying down to sleep and to die, after the last defeat; hear the cry of the wounded, the moan of the dying, see the half-filled grave, the unburied dead. All the awful reality of war comes back. So, too, do knightly days and dauntless men. Peace walks amid the May-time flowers, and already our soldiers seem almost forgotten. Days of war and deeds of valor seem like dreams gone by."

THE BEAUTY OF OLD PEOPLE.

MEN and women make their own beauty or their own ugliness. Lord Lytton speaks of a man who "was uglier than he had any business to be;" and if he could but read it, every human being carries his life in his face, and is good-looking or the the reverse, as that life has been good or evil. On our features the fine chisel of thought and emotion is eternally at work.

Beauty is not the monopoly of blooming young men, and of white and pink maidens. There is a slow growing beauty which only comes to perfection in old age. Grace belongs to no period of life, and goodness improves the longer it exists. I have seen sweeter smiles upon a lip of seventy than upon a lip of seventeen. There is the beauty of youth, and there is also the beauty of holiness—a beauty much more seldom met, and more frequently found in the arm-chair by the fire, with the grandchildren round its knees, than in the ball-room or promenade.

Husband and wife, who have fought the world side by side, who have made common stock of joy and sorrow, and grown aged together, are not unfrequently, even curiously alike in personal appearance, and in pitch and tone of voice,—just as twin pebbles on the beach, exposed to the same tidal influences, are each other's second self. He has gained a feminine something, which brings his manhood into full relief. She has gained a masculine something, which acts as a foil to her womanhood.

OLD AGE.

"THE soul's dark cottage, battered and decayed,
Lets in new light, through chinks that Time hath made.
Stronger by weakness, wiser men become,
As they draw near to their eternal home,
Leaving the old, both worlds at once they view,
That stand upon the threshold of the new."

[*Edmund Waller, England, about* 1680.

GOOD ADVICE.—Be reserved, says William Penn, but not sour; grave, but not formal; bold but not rash; humble, but not servile; patient, but not insensible; constant, but not obstinate; cheerful, but not light; rather be sweet-tempered than familiar; familiar rather than intimate, and intimate with very few and upon good grounds.

IT were far better we should not exist than that we should guiltily disappoint the purposes of existence.

Sabbath Reading.

LIFE.

BY R. M. MILNES.

So should we live, that every hour
Should die, as dies a natural flower—
A self-reviving thing of power;

That every thought and every deed,
May hold within itself the seed
Of future good, and future meed;

Esteeming sorrows—whose employ
Is to *develop*, not *destroy*—
Far better than a barren joy.

"WE live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart-throbs.

He most lives
Who thinks most—feels the noblest—acts the best;
And he whose heart beats quickest, lives the longest;
Lives in one hour more than in years do some,
Whose blood sleeps as it slips along their veins."

[*T. J. Bailey.*

THE WRITING ON THE ROCK.

AGES upon ages ago the tide was out, and the muddy beach lay smooth as this sheet of paper before me. A cloud passed over the sky, and a shower of big rain or hail came down and pitted the mud as thick as leaves on trees. A strong wind drove the drops so that the impressions were a little one-sided. They had written their short history as plain as my pen can write; and even the direction from which the wind blew was recorded. Some great frogs and lizards which used to live there, came hopping over the mud, and left their tracks also deeply printed on the shore. By-and-by the great waves came softly stealing up, and covered the whole surface with fine sand, and so the tracks were seen no more for ages upon ages. The clay hardened into solid rock, and so did the sand; and after these thousands of years had passed away, some masons came upon the curious inscription.

Men of science, who are skilled in reading these stony leaves of GOD'S great book, read as plainly as if they had been present the story of that passing shower. It had been written on the softest clay, but it was read on solid rock. So your hearts to-day are like the soft clay. Everything stamps them, but the stamps are not so easy to remove. They will be there when you are grown up to be a man or woman. O, what deep, dark prints the bad words of evil associates make! But how lovely it will be to recall the record which kind and loving actions make upon the soul! There is another place, where all our actions are written down, which we should never forget. It is the book GOD keeps in heaven. We can never bear to meet that record unless we have JESUS CHRIST for our Saviour. Then we shall know that nothing there will appear to condemn us. We shall rejoice when GOD calls us to come and appear before Him.—*Presbyterian.*

THE COBBLER'S PRAYER.

I BELIEVE I never heard a more effective praying man than a cobbler. He had not the grammar, had not the style, nor the many words, but every sentence from the start was a blow in the right place, and drove in the nail. The people loved to hear him pray, and it made a tear start to my eye when I listened to him—he moved the assembly by his fervent prayer. Notwithstanding his want of advantages in other matters, he could still ask, though in feeble words, yet with mighty spirit, for his desires, and could carry the people with him. And why was it? Because he prayed like the publican—straight to the point, without any unnecessary preliminaries of pains-taking to get around it. He said just what he intended to say, and then passed on and said something else. He asked for just those things that his soul needed, and spoke likewise for other souls.

He prayed fervently and pointedly, and with his whole heart opened. He did not make any speech, nor cover all the praying ground; nor yet make a Sabbath morning prayer, (save us from your fine prayers, they are like statues—beautiful, possibly wonderful, but cold as a rock,) but he just *prayed*, and you felt that he was praying and you were praying with him, for he was in earnest and asked as if he wanted an answer, just as your child asks when he wants anything very much. And then, best of all, when he got through praying, he did not go off into exhortation, but stopped. That is half the power of prayer, to stop when you get done.

APPLIED RELIGION.

IT is a shallow and unworthy view of religion, that would so etherealize and spiritualize it, as to dissever it from all interference with a man's secular trade, his political activities, or his very amusements. Plow, and keel, and anvil, and plane, and anger, the child's go-cart, and the grandsire's rocking-chair, are to move under the ken of the Judge above, under the shadow of the Elder Brother's redeeming cross, and in the beaming splendors of the Redeemer's riven tomb. And thus the immaterial, the infinite, and the eternal, take hold on the things of sense and time—the every-day assiduities of common life—the worry and the repose of the nursery, the kitchen, the quarter-deck, the shop and the highway.—*Dr. Williams' Madison Avenue Lecture.*

I WILL gladden the human circle in which I live. I will open my heart to the gospel of life. I will seize on the good the moments bring. No friendly glance, no friendly breeze, shall pass me unenjoyed or unacknowledged. Out of every flower will I suck a drop of honey, and out of every moment a drop of eternal life.—*Selected.*

The Reviewer.

"BACKBONE:" Photographed from "The Scalpel." By EDWARD H. DIXON, M. D., New York [400 pp.] Published by R. M. De Witt, 13 Frankfort-st., N. Y.

HERE is a *live work*, by a physician of ability, large practice, and large independence. He paddles his own canoe, criticises all humbugs of all schools of medical practice, tells incidents of his experience in a spicy, earnest, instructive way, and gives a world of clear common sense on diet, habits, diseases, &c. "A Ride on the Physiological Buffalo,—The Faculty and Scalpel,—Scenes in Western City and Village Practice,—Sabbath in the Country,—An Artist's Reverie.—A Leap with the Dead,—Abortionism.—Watching Your Dignity,—Tobacco,—Nature as Physician,—A Medical Vampire,"—are titles of some of its chapters, gathered from his "Scalpel," a monthly journal, vigorously edited. None will sleep over this book, and much food for thought can be found therein. A portrait of the author is given as frontispiece.

THE SMALL FRUIT CULTURIST. By A. S. FULLER. Ridgewood, N. J. O Judd & Co., 41 Park Row, N. Y. Publishers.

A GOOD book and much needed. The preface says, "With the extended cultivation of small fruits in the past few years has arisen a demand for practical information. Every one who owns a rod of ground in city or country, wishes to know how to cultivate it and what to plant for market or home. No work devoted wholly to this has yet appeared." He gathers up the views of others, and gives his own large experience and skill, on the propagating, culture, best kinds, gathering, marketing, &c., &c., in various places and climates, of Barberry, Strawberry, Raspberry, Blackberry, Dwarf Cherry, Currants, Gooseberry, Cranberry, &c.,—all in the way a man writes who has something to say, and in 270 pages he says a great deal.

THE HEALTH REFORMER'S COOK BOOK; or How to Prepare Food from Grain, Fruits and Vegetables. By Mrs. M. L. JACKSON. Published by F. W. Hurd & Co., office of "Laws of Life," Dansville, N. Y.

LET no one put aside this pamphlet of 70 pages with a sneer at "Graham diet." It is of high importance that bread, &c., and cooked vegetables and fruits, should be healthful and palatable, and to that end this work should be read in every home. It is filled with recipes in a great variety, and with *reasons why* this or that should be prepared as directed,—largely the results of practical housekeeping at the famed water cure of Dr. JACKSON, where they *do* set a fine table of food, *physically healthful*, as well as palatable.

'MAGA" SOCIAL PAPERS. TUCKERMAN'S PAPERS ABOUT PARIS. G. P. Putnam & Son, and American News Co., N. Y., Publishers.

HERE are two of "Putnam's Railway Classics"—nice books of some 250 pages each, in paper covers, intended for railroad and home reading, which shall be food as well as recreation. The best English Magazines, and the admirable Putnam's, (now ceased,) are levied on for choice matter. In "Maga" we find "Are we a Good-looking People?—Boarding Schools,—About Babies," &c., and the Papers About Paris, are full of charming interest. For sale at DEWEY'S.

DEMOREST'S MONTHLY MAGAZINE, Ladies Literary Companion and Mirror of Fashion.

THIS beautiful work is not only unrivaled as a "Mirror of Fashion," with its fine plates of costumes, patterns, &c., but it has the choicest music and engravings, poems and stories by the best writers, with topics of interest and value for kitchen and nursery, as well as parlor. It is brilliant, yet not flashy, but sensible, and reflects credit on the womanly tact, and the genial feelings and taste of Madame DEMOREST, who has large share in its management. Published at 473 Broadway, New York, at $3 per year.

UNIVERSAL PATH-FINDER, and Business Man's Pocket Companion. By M. N. OLMSTEAD. J. Miller, 522 Broadway, Publisher.

LOOKING along the 180 pages of this compact volume we find a great deal. The U. S. Constitution, list of naval vessels, army leaders, events of the war, size of cities on both continents, valuation of the States, &c., &c. A "Vocabulary of Business" is a valuable matter,—pages of definitions of business terms,—for instance:—"*Assets*, Funds of one in business," &c. It is just what its name indicates—a pocketful of information.

MISS RAVENEL'S CONVERSION FROM SECESSION TO LOYALTY. By J. N. DE FOREST. New York: Harper & Brothers.

THIS story of 500 pages will be read, for it deals with events and thoughts fresh in millions of minds and hearts, and is eloquent and vivid in description, piquant yet not shallow, but full of feeling, and healthy in tone. The heroine is a New Orleans girl, and the incidents reach up the Red River and enter the North; with characters and habits such as we are familiar with in the varied phases of life brought before us in the five eventful years just closed. Sold by STEELE & AVERY.

BENEDICITE. Illustrations of the Power, Wisdom and Goodness of GOD, as Manifest is His Works. By G. C. CHILD, M. D. G. P. Putnam & Son, 661 Broadway, Publishers.

A BEAUTIFUL reprint of an English work, the scope of which is explained by its title,—easy in style, accurate in description, broadly catholic in spirit and of much value to the intellect by its scientific information touching the wondrous phenomenon of Nature, and to the spiritual wants by its recognition of the Great Soul of Things.

THE GALAXY. N. C. & F. P. Church, No. 39 Park Row, N. Y., Publishers.

THIS brilliant monthly comes for June with its usual life fully kept up. An excellent biography of BISMARCK, with portrait,—The German Cotillion,—A Norse Love Story,—American Painters,—Drunkenness Among English Women,—are among its articles of most signal value, and the whole 125 pages are well filled.

SOWING THE WIND. By E. LYNN LINTON. New York: Harper & Brothers.

A REPRINT of an English story in a pamphlet of 150 pages. It has the classic finish and graceful ease of the cultured writers of the mother country, and such style gives promise of characters and *morale* of the better type. For sale by STEELE & AVERY.

NATURE'S BEE BOOK. A manual for rearing and Managing the Italian and Native Bee; the result of fifteen years experience. By W. A. FLANDERS, A. M., of Shelby, Ohio.

A PAMPHLET of 70 pages, with cuts of bees, honey, and hives of the author's invention, for which many premiums have been given. Its style is *straight to the mark*, and therefore of value in detail and suggestion.

The Traveler.

NEW ORLEANS.

HOW I GOT THERE, AND SOME THINGS I SAW.

THE events of the last four days have been so varied, the sights so strange, and the sensations created so new, that my mind has hardly yet digested them enough to make a letter as interesting as it might otherwise be to a far off reader.

My business required that I should visit the headquarters of Gen. ORD at Vicksburg, on my way to Gen. SHERIDAN'S at New Orleans. I therefore took the route via Chattanooga to Memphis. At Atlanta the peculiar topography of the eastern slope of the Blue Ridge range, as well as the soil, and forests is first reached, and it continues most of the way to Chattanooga—growing more mountainous till you finally pass through into the valley of the Tennessee, and into the Alleghanian system. After crossing, the Yonah limestone appears, and through the "Cherokee country," all the good qualities of limestone land are manifest. Fields of wheat, red clover, the grasses in fine pastures, well developed stock, and often alongside of a wheat field a field of cotton might be seen, just planted. Some day the upper and southwestern portions of Georgia will rival even the Genesee Valley in extent and variety of products.

This "Cherokee country" is a marvelous tract of land, extending from the upper part of Georgia across Alabama, Mississippi and Arkansas, and into Texas at least. As a farming region probably it has no superior, or even equal in the union—and if the same people who settled Western New York, and from thence the Western States, could have opened it up under the same free institutions it would now be the marvel of the world. The time may come when it will be safe for Northern men to seek these lands; when it does, let the emigrant look at the "Cherokee lands," in this State and Alabama, or further east on either side of the river, before he locates. The time has not yet come when the prejudices and passions of the secession element in the people has got sufficiently calmed to make the residence of a Northern man among them desirable. It will come, however. Let a man who wants to see how good lands can look drop in on Huntsville, Alabama.

I struck the Mississippi River at Memphis. After dinner I walked at once to the bluff near the hotel, and for the first time in my life looked upon the great river. It is full banks now, and spreading destruction over all the lower country. For a long distance on the river the country is submerged from 30 to 40 miles on each side, and for nearly or quite a thousand miles to the Gulf, a tract of country, averaging sixty miles in width, is covered by the waters of this stream. The magnitude of the river is not comprehened at the first view. Like its kindred wonder, Niagara, it will bear acquaintance. Imagine a body of water flowing, when in its banks, at least a mile wide and from 90 to 150 feet deep, and at the rate of from 5 to 7 miles per hour—noiseless as the tread of death, and as irresistible as time, nowhere smooth and placid, but a series of whirls and and eddies, ever pressing on, bearing in its turgid bosom the debris from half a Continent. It is the largest and longest river in the world. The Amazon is often called so, but measured by the surface drained, the volume of water discharged, and the extent of navigable waters drained into its channel, the Mississippi has no equal on the globe. After gazing a long time I turned away tolerably well satisfied that man was rather a small animal in the presence of the mighty river, though he had at times fixed bounds to his vagabond waters, and would have to do so again or the vast country now covered by them would cease to be of value.

There not being any boat at the time which was going below, I sauntered about the town. Memphis looked to me very much like a town built upon Mississippi mud that had got a little ways out of the river and was making a very sickly attempt at hardening. They had some street railroads, but the cars were drawn by hippopotamil, who came to the surface at stated times to snort. The ties were laid on negroes' shoulders, and their heads stuck out along the mud holes which are made in the streets by the amphibious animals and vehicles that ooze around the town. Ladies do their shopping on stilts, and the length generally determines the social status of the wearer. Still, the muddy denizens of this sedimentary town think they have a "right smart" city, and I am inclined to agree with them.

I was just going to bed when a servant gave the word that there was a good boat at the landing going down to New Orleans. I was soon on board, and the boat was coughing and wheezing down the river. It was a clear starlight night, and after enjoying the quiet grandeur of the scene—ever the same, and yet ever changing,—I turned into my state-room, laid myself out on a shelf and slept, dreaming of sailing on a sea of muddy chocolate slate.

The third night I was landed at Vicksburg. On going to my window in the morning I looked out upon the same wide expanse of waters that I had seen during the trip. The little town opposite was submerged. Some of the houses had floated away, others seemed getting ready, and altogether I thought I had some idea of the feelings of a rat which was floating in a huge mud-puddle on a shingle. I had a decided moist *feel*, and did not really enjoy dry land until on the cars for Jackson.

I never had my ideas of a town so completely upset as they have been in regard to New Orleans. I expected to find a dirty, disagreeable town, the principal business of the inhabitants drinking mint juleps, gambling, fighting, and cursing, undertakers about as common as truckmen in other cities, and the business of hackmen to supply teams to attend funerals. It was late when I got to the City Hotel, (which by the way I specially recommend.) I was up early in the morning and took a walk to see the mud holes, and funeral processions. A few steps brought me to Canal street. I rubbed my eyes to be sure I was not dreaming. A broad avenue, handsomely paved and well kept, a beautiful, shaded street, in its center used for a horse-car railroad, and stretching from the river to a long way towards the rear of the city, was the first wonder. No other city has a street that compares with Canal street, New Orleans. It must be seen to be appreciated. In my subsequent rides and walks, I found the business portions of the city well paved, and kept scrupulously clean. No tidy housewife keeps the broom in motion more than the street cleaner, and in this respect it is at least a model town. The little intercourse I had with the people was most friendly and pleasant, and I only regretted that my arrangements would not allow a longer stay. I console myself, however, with the hope of being able to visit the city again when the great Annual Fair of their Agricultural and Mechanical Association is held, in November. Northern men and western men will do well to avail themselves of that occasion to exhibit their machines and implements, for the Fair will be a big thing. Upwards of $20,000 will be offered in premiums, and their accommodations will not be exceeded or equaled in the Union. It will probably be advertised in the RURAL.

May, 1867.

TROUTING.

OFF before your mother
Fairly knows you're out—
Goodness! ain't it jolly
Tramping after trout!
Tripping over mosses,
Slipping over stones,
Creeping through morasses,
Chill'd through blood and bones;
"Dipping" into spring-holes,
Ripping *something* out—
Goodness! but 'tis pleasant,
Whipping after trout.
Stumbling over saw-logs,
Where they've made a jam;
No one can say *this* stream
Isn't worth a dam:
Water, "cold as *blazes*"
Foams your feet about;
Catch your death of—"Whist man!
Did you see that trout?"
Ply him gently—kindly—
Horse-hair is but frail:
"*There's* a speckled "beauty!"
Crook's hooks never fail.
Twenty ounces, plump, Sirs,
(Heft him if you doubt;)
Silver, gold, and garnets—
What can match a trout?
Lightly drops the "hackle,"
Lithely sings the stream,
Brightly burst the foam-bells
Like a poet's dream.
Splash! There goes a "hummer!"
Whir! and he is out!
What school is so charming
As a school of trout?
Rattle-snakes! and 'sketers!—
Wet feet and burnt faces!—
Who says anglers' *lines* are
"Cast in pleasant places?"
Try it in "*Green*" River;
But, before you trout it,
Just ask Mr. Editor
What *he* thinks about it!

Various Topics.

"EARLY TO BED—EARLY TO RISE."

THIS is the motto of Nature, carolled forth in the glad song of birds at early dawn. All Nature gives and takes, and thus keeps the balance. All life is positive and negative by turns, throwing off and taking in vital force.

In his waking and working hours man overflows with positive vitality. Mental and spiritual forces glow and radiate from the brain, vital powers pulse and thrill through the nerves, and the corded muscles swell with vigor for their fit work. As night comes, the system changes its condition, takes in vitality, absorbs magnetic power from without, is negative and receptive, and in sleep this gathering in of vital forces is most perfect.

Delicate experiments by RIECHENBACH, an able German chemist, show that this positive power of the human system culminates about mid-day, and dwindles lowest near midnight. Thus we see that sleep should be at an early hour, that habit may accord with these subtle vital processes, so delicate yet so indispensable to best health. Thus, too, we see why *early sleep rests us most*, coming when the vital powers need to draw into the interior. We need most sleep in winter, because greater vitality is needed and expended in resisting the cold and surmounting the rude obstacles in the way of labor and travel in frigid seasons.

Wakefulness, long protracted, is an undue giving out of vitality, a keeping up of the positive condition so long that the balance is destroyed, and nervousness or insanity follow. Sleep is that negative condition in which body and spirit renew themselves. Fitly did the poet utter his intuitive perception of this,—

"Tired Nature's sweet restorer, balmy sleep."

Thus, too, we see why brain muscle and stomach should be at ease, with no work on hand to prevent their becoming negative and receptive. Tax either, by hard study, or thought at night, by late labor, or late hearty meals, and you demand work, when Nature's command is, *rest, retire, recuperate for to-morrow's work*. You cannot overreach Nature. For a time all may *seem* to go well, especially with powerful constitutions; but the draft must be paid, sometime, in waning power, in pain and shortened life.

The lesson is:—Read, think, work, or eat, little at evening; rather recreate so far as possible, and thus be ready to follow Nature's promptings, that your early sleep may be balmy indeed. To working men and women this is important, for thus can you prolong and increase the power of labor, with hand or brain. If you fail to sleep well, *find out why*—or you are in peril.

Much might be said of the absurdity of turning night into day, by keeping up amusements until very late hours by young folks. Suffice it to say, it is all needless and wrong, and the flush will fade from paled cheeks, the light fade from glassy eyes, and the decay of premature old age be felt, for *none can escape or cheat the eternal laws*.

ARTIFICIAL TEETH, EYES AND EARS.—In the Paris Exposition the Americans, in the department of dentistry, are beyond all competition. The display of artificial teeth, the perfect imitation of nature in gums and palate are wonderful. But the French are equally great in artificial eyes and ears. The eyes are life itself. They not only supply an eye that is lost, but cover a shrunken or injured eye-ball with a shell that perfectly matches the other eye. The ears of delicately rosy gutta-percha are very pretty. If one has an ear cut off, bitten off, frozen off, or eaten away, here is a light and elegant substitute. It is said that ladies with large ears cover them up with their hair, natural or acquired, and annex these pretty little artificial ears, of course with handsome ear-rings.

ORIGIN OF THE NAME OF "NEWSPAPERS."—In old times, (between the year 1595 and 1730,) it was the prevalent practice to put over the periodical publications of the day the initial letters of the compass, thus:

N
W — | — E
S

importing that these papers contained intelligence from the four quarters of the globe: and from this practice is derived the term "newspapers." — *Exchange.*

A VALUABLE addition to the State Geological Rooms at Albany—known as the Gould collection of shells—has just arrived from Boston. The collection consists of 60,000 shells, American and European, marine, fresh water and land. They cost the State $6,000.

Reading for the Young.

BIRD-SONG.

AT early morn, before the light
Has quite dispelled the shades of night,
Delightful music greets my ear—
It is the bird-song, sweet and clear.

O, beauteous birds! your joyful song
Is ne'er for me too loud or long;
Though at my door you oft appear,
You'll ever find a welcome here.

You sing of Spring, of flowrets wild,
Of sunny skies, of air so mild,
Of verdant fields, of shady wood—
Your lays all tell me GOD is good.

Welcome, sweet songsters at my door!
Sing me your cheerful song once more,
I'll learn a lesson from your lay,
And praise my Maker every day.

New Jersey, 1867. S. R. M.

OPTICAL ILLUSION.

TAKE a common tin tunnel of medium size, (say six inches in length.) Immerse the wide end in a vessel of water, at the bottom of which a coin has been placed, the water being deep enough to admit the tunnel being entirely covered with it.

Holding the tunnel by the spout push it down slowly until the water nearly covers the conical part. Holding it thus steadily, bring the right eye close to the spout, and through it look down at the coin, and admitting the light in the proper direction, notice which side of the coin is up. With a quick movement of the hand, suddenly push the tunnel downward to the bottom. A comical change in the appearance of the coin will be the effect; and although the effect on different persons is not the same, all will admit that the illusion is perfect and pleasing.

It is better that a second person hold and operate the tunnel, as the observer may not be able to hold it so steadily, and at the proper depth, and at the same time be ready to push it down suddenly, upon which the success of the experiment very much depends.

Will the young folks, through the RURAL, give their experience with this "Optical Illusion?"

Williamsville, N. Y., 1867. A. B. W.

DOG STORIES.

A GENTLEMAN of Staffordshire, England, used to go twice a year to London on horseback, accompanied by a dog—a terrier; but, for fear of losing it in the metropolis, he always left it in the care of his landlady at St. Albans. Once, however, the large house-dog of the inn and the terrier having a quarrel, the terrier was so much overmatched that it was with difficulty he could crawl. He went silently away out of the yard, and for a week no one knew what had become of him. He then returned, and brought with him a dog both larger and stronger than the one by which he had been beaten, and they both fell upon the inn dog and beat him most unmercifully, leaving him half dead. The terrier and his friend then disappeared; and when the gentleman, on his return from London, called at the inn for his dog and heard an account of the fight, he gave him up for lost. On reaching home, however, he found the terrier safe, and learned that he had come from St. Albans and coaxed away the great house-dog, and then proceeded with him to avenge the injuries he had received; after which he came home in quiet with his companion.

A gentleman who once lived in New London, had a large dog named Jack, which had been a great favorite in the family, but which had lived to such a great age as to be nearly helpless and very troublesome. One morning, as the family were seated at the breakfast table, the gentleman said to one of his sons, "We really must get rid of Jack, and I wish you would take him after breakfast and get some one to kill him."

The dog was lying by the fire when the gentleman spoke, but he immediately got up, limped to the door, and whined to be let out. As soon as the door was opened, he went out, and from that time he was never seen or heard of by the family. No one knew what became of him; but the gentleman always believed that he managed to get away into the country, and died there.

A REMARKABLE FISH STORY.

IN a recent lecture by Prof. Agassiz, on the aquatic animals of the Amazon, he described one fish, of which he said:—"This fish is remarkable for the faculty it enjoys of leaving the water and walking a considerable distance over the land. Sometimes it is found three, four and five miles from the water, and specimens have been brought to me which I have left on the ground for a day, and afterward, when put back into the water, they were as lively as if they had not been disturbed. That fish has another peculiarity: it builds a large nest, about the size of a man's hat, with a hole leading to the interior, in which it deposits its eggs; and it is not only capable of creeping on even land, but it can creep on an inclined plain, and I have been told by very trustworthy persons that they are frequently found many feet above the water, on stumps of trees which have fallen down, the trunks of which are so inclined that the fish has reached the branches of the tree to such a height that the bird and the fish have more than once been brought down by the same shot."

A MAN proves himself fit to go higher, who shows that he is faithful where he is. A man that will not do well in his present place because he longs to be higher, is fit neither to be where he is nor yet above it.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JUNE 8, 1867.

NEWS OF THE WEEK.

From Washington.

THE Brazilian minister informs Mr. Seward that he has no notice of emancipation by the Emperor, but thinks the matter in progress, yet not finished.

Surratt's trial is postponed to June 10th.

Assistant Secretary of the Treasury Chandler will soon resign for his health, but Secretary M'Culloch will leave the vacancy open, hoping for his return, as he is a valuable and honorable officer.

Persons from Lonisiana are presenting charges against Gov. Wells, and seeking Gen. Sheridan's removal.

Two hundred and twenty-one patents were issued the week ending the 1st inst.

It is understood that the Judiciary Committee are opposed to the impeachment project.

From New York.

A HERALD dispatch says contraband trade with Indians on the Northern frontier is carried on by respectable persons in Northern New York and New England.

Subscriptions to buy a home in the South for Davis, are going on.

A Times special says the Japanese have bought the rebel ram Stonewall for $400,000.

The Coast Wrecking Company only wait good weather to raise the Santiago de Cuba.

The telegraph to Cuba is to be opened by July.

News from Hayti says that Salnava is made Provisional President, and will probably be made Geffrard's successor. Later reports show that Salnava is Dictator.

Dexter beat Lady Thorne at the great trotting match for $2,000. Time for a mile, 2:24 and 2:22.

The Yearly meeting of Friends are discussing the holding of Government offices by members of the Society—some opposing and others disinclined to desert State affairs for bad men to manage.

From the Far West.

NEWS at St. Louis, from Montana, reports Sioux Indians warlike and depredating in Gallatin Valley.

Troops are called out. Omaha reports tell of more troubles near Fort Kearney. Five deserters from Fort Hays, Kansas, were scalped. Troops are on the move.

A dispatch from Montana says Gen. Meagher had raised 1,000 men, and has taken the field against the Indians. A small party of troops had been driven back by the Indians while crossing from Ft. Canning to Ft. McKea, New Mexico.

Five thousand Camanches are reported on the war-path in Arkansas.

The St. Louis street car managers decide to carry colored people.

A fight between railroad workmen and Indians in Omaha resulted in the death of one white man and six Indians.

Grass on the plains is six weeks later than usual.

A fire in Idaho City burned 442 houses. Loss $1,000,000.

CLEVELAND, May 29.—The Senatorial excursion party left here for Chicago and Omaha at 8:30 o'clock this evening. The party consists of Senators Wade, Trumbull, Yates, Cattell, Howe, Harlan, Cresswell, Thayer, Chandler, Tipton, Gen. Anson Stager, Col. Seymour, Hon. John Covode, several newspaper correspondents and ladies. The excursion will extend over the main stem of the Union Pacific Railroad west from Omaha and may possibly reach Denver City, Colorado.

From the South.

AN attempt in Texas to collect taxes levied in the war, in Confederate currency, has been stopped by Gen. Griffin.

Judge Reeves, in the 9th Texas District, decides that negroes are not witnesses against white men.

It is reported in Vicksburg that General Ord intends to remove the Mayor and Council as not legally competent. He informs the Mayor of Jackson that the military are ready, if needed, to help collect taxes, as the law must be obeyed.

The North Carolina Episcopal Convention resolve in favor of educating freedmen, and of colored ministers for their own race.

A Republican meeting in the open air at New Orleans was largely attended by colored men and others, in good order.

From Canada.

JEFF. DAVIS keeps secluded in Montreal. At Kingston a crowd were on the wharf to see him as the boat stopped on the way to Toronto.

There is yet great distress from loss of stock and grain east of Montreal, along the gulf and river. Government aid is asked.

Rumors of Fenian raids are not credited at Montreal, but are reported in New York, as from St. Albans.

D'Arcy M'Gee was heartily received at Ottawa in token of approval of his efforts to harmonize all classes, and bring about the Confederation.

From Mexico.

A LETTER from our Consul at Monterey comes to New Orleans, and confirms Maximilian's capture. Juarez justifies previous executions and refuses to promise safety to Maximilian.

Vera Cruz is still besieged. A Herald correspondent from Havana says the Imperial Consul there is still shipping military stores and enlisting men for Maximilian.

President Juarez's Generals protest against any mercy being shown to the fallen Emperor.

Foreign Intelligence.

THE French Government is reducing the standing army.

The Spanish fleet in the Pacific is to be increased.

YOKAHAMA, JAPAN, April 26.—The French, English, Dutch and American ministers visit the Tycoon at Osoca by his invitation, for social and not political purposes.

A fire has destroyed a Japanese Bible just translated by four years' labor.

The Colorado takes over to San Francisco a party of Japanese of high rank, who go for education.

At Cork, (Ireland,) O'Brien was sentenced to death, but it is thought none of the Fenians will die, and the matter is warmly discussed.

Our minister Adams, at London, favors commutation.

Changes in the English Cabinet not yet completed.

At Liverpool, a fine gold chronometer was presented on behalf of the President of the United States, to Capt. Hayes of the British ship Victoria, for rescuing 31 persons from the American ship Aquila.

The cattle plague is again virulent in London.

Victoria's birthday was celebrated by illuminations, &c.

The clause of the Reform Bill for more liberal extension of the franchise passed the House of Commons.

It is denied that Prussia is strengthening the armament of Rastadt.

A St. Petersburg dispatch says the King of Greece is betrothed to the Grand Dutchess Constantinovina.

The Turkish question demands attention, and efforts will be made by leading European powers for its final solution.

LONDON, June 1.—A dispatch from Berlin today, reports that the Prussian Cabinet and the Government of the Czar have come to an understanding on the Eastern Question, and that the policy of either Government in the East will hereafter be identical.

PARIS, June 1.—Alexander, the Czar of Russia, arrived this afternoon from Berlin.

ST. PETERSBURG, June 2.—The Imperial Government has issued a proclamation extending a general amnesty to the Poles engaged in the last insurrection in Russian Poland.

LONDON, June 2.—Dispatches from Constantinople report that the Sublime Porte has consented to entrust the solution of the Cretan question to a commission of the European Governments.

Lake Steamers.

THE amount of business done by lake steamers at Buffalo, is surprising. The following figures show the number of steamers engaged:—The Western Transportation Company will run, this season, twelve screw steamers of an aggregate tonnage of nearly 10,000 tons, between Buffalo, Chicago, Milwaukee and Racine. The Buffalo, Cleveland and Chicago line will run eleven steamers, of about 8,400 tons, between Buffalo, Sheboygan, Milwaukee, Racine and Cleveland. The Buffalo, Cleveland, Toledo and Sandusky line will run thirteen steamers of about 9,800 tons, between Buffalo, Cleveland, Toledo, Sandusky, Detroit and Green Bay. Evans' line will run six steamers, of about 4,000 tons, between Buffalo, Chicago, Milwaukee, Racine and Detroit. Charles W. Ensign will run two new vessels, of 1,200 tons each, between Chicago and Buffalo.

The arrivals at Buffalo number in each season between six and seven thousand, including sail and steam. The inward tonnage is about 3,500,000 tons, and the outward tonnage about the same. There are on all the north-western lakes upwards of 1,800 vessels. Of the business done in each season nearly 50 per cent., destined for tide-water, centers at Buffalo.

REV. JOEL LINDSLEY,—Who was tried at Albion, N. Y., a few months since for whipping his child to death, and sentenced to the State Prison, had a new trial last week, which must have resulted to the satisfaction of the prisoner if not of the public. The jury failed to agree, standing ten for acquittal and two for conviction. They were discharged, and Lindsley then plead guilty to manslaughter in the fourth degree. He was sentenced by the Court to pay a fine of $250.

THE CONSTITUTIONAL CONVENTION—ALBANY, June 3.—The Constitutional Convention will meet to-morrow at the Capitol. Charles J. Folger, Ira Harris and William A. Wheeler, are spoken of for President, and James Terwilliger and Luther Caldwell are candidates for Clerk. Some of the members are in favor of adjourning the Convention to Saratoga.

FROM SOUTH AMERICA.—Rio Janeiro advices of May 9, say that the mediation of the United States has been declined by the Brazilian Government. Cholera prevailed in the allied camp. The revolt in the Argentine provinces is reported to be ended.

SILVER MINE IN ALLEGANY.—It is stated that silver ore has been found—near Cuba, Allegany county, which produced $200 worth of silver to a ton of ore. A company is formed or forming for the "development" of this matter.

LARGE FIRE AT PETROLEUM CENTER.—A dispatch from Petroleum Center the 2d inst., says a terrible fire was then raging in the upper end of the town, and 35 or 40 buildings had been burned. The loss had already been very heavy.

ANNIVERSARY TEMPERANCE MEETING.—BOSTON, May 25.—The Anniversary Meeting of the various Temperance organizations of Massachusetts, was held this evening in Tremont Temple. Henry Wilson presided.

NEWS PARAGRAPHS.

CALIFORNIA FLOUR of the very finest quality, is now being sold in this city (Rochester) for a less sum than that made from the best of Genesee wheat.

JEFFERSON DAVIS (the telegraph says) is at Montreal, at his wife's mother's. It is reported that he has bought a residence at St. Catharines, C. W.

MENOMONEE, an Indian chief, 90 years old, who fought with Tecumseh and at the seige of Fort Mackinaw in 1811, is catching muskrats for a living at Windsor, C. W.

THE Russian Commissioners, Col. Garloff and Capt. Hunnius, sent by the Czar to travel, observe and report on this country, were entertained in New Haven last week.

A PARTY of Pennsylvania capitalists, representing $40,000,000, have made a tour in Virginia to examine coal deposites, manufacturing sites, &c., and are pleased with their observations.

THERE is a domestic paradise in Worcester, Mass. It is a one-story house. In that house two Irish families reside, happy and contented, with twenty-four hogs, twenty-five hens, five ducks and one cow.

STEWART & Co. of New York, have created a stir in trade and feminine circles by going into the bonnet business, and proposing to sell Paris "hats," that the milliners have charged $30 and $40 for, at $10 to $15.

MUCH excitement exists in Springfield, Mass., over the cases of alleged undue severity in corporeal punishment of pupils in the public schools. An indignation meeting of the citizens has been called to take action in the matter.

THE "Quarter" so frequently mentioned in British trade returns in their reports of the movements and consumption of grain, weighs 560 pounds, and is made up of eight bushels of 70 pounds each. It is equivalent to 5 cwt.

THE Chinese Government is about to establish a School of Science at Pekin to the end that the Chinese may not be behind the rest of the world in the construction of machinery, steamers, railroads and fire-arms. The professors are to be imported.

LOMBARD STREET is the "Wall street" of London. Of course property on it is costly. A site for one house was recently let for $23,000 a year; it was sold for a premium of $350,000 and the rental, and there is now building on it a house expected to cost $350,000, and to let for $110,000 a year.

THE Pittsfield manufacturers support a club-room, which is furnished with the best newspapers in the country, billiard saloons, and other means of recreation. They also maintain a fine trotting park. They propose the erection of a massive stone dam for the accommodation of their works.

THE sword which General Putnam carried through the Revolutionary war, is in the possession of Deacon Jonathan Kingsbury of Livonia Station, Livingston county. The deacon has owned it for the last forty years. His father-in-law, Moses Clark of Brooklyn, Conn., bought it of Gen. Putnam.

THE British Anti-Tobacco Society offers £50 for the best approved essay on the history and properties of tobacco, and on its physical action on the human body through its various modes of employment; and £50 for the best approved essay on the moral, social and economical results of the use of tobacco.

IN Chicago real estate is out of the reach of any but the rich. Four or five miles south of the business center of the city real estate is selling at from $30 to $50 per foot. At Hyde Park, six miles south, small two-story houses on small lots sell from $6,000 to 10,000, and rent from $400 to $800 a year.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, June 4, 1867.

MONEY is fairly easy, produce still brings a high price, and yet the business of the country generally is dull. There is more universal suspension of business activity and hesitancy to enter into new engagements than has been known in twenty years, unless during a monetary panic. The shrewdest business men have been aware for some time that the condition of things was peculiar; there might be such a sudden tumbling down of prices as to create a panic, and then no one could predict the result. They have, therefore, been cautious, and few have felt disposed to enter into new engagements. This pause and suspension of business, it is believed, has served mainly to ward off the evils anticipated, and will in the end be productive of great good.

The price of gold dropped down somewhat last week. Sales yesterday were made at 136¾. Five-twenties have recently advanced in the London market. The closing sales on Saturday were made at 73¼. Yesterday's quotations were 73⅛.

The Bank of England, it is thought, will soon make another reduction in its rate of interest. Money is very abundant, and rates low, not only in England but on the continent. Foreigners, therefore, are not active in withdrawing their balances from this side when they can get 6@7 per cent. for the use of it, and only 2½ in London. The total shipment of specie from New York last week was $177,143.

The whole number of railroad and miscellaneous stocks sold at the several Stock Exchange Boards in New York, during the month of May, was 1,682,322; total number of shares sold in April, 2,070,632; decrease in May, 388,310 shares. The total number of shares sold during the month of May, 1866, was 2,514,451. The decrease in the amount of business done, and in prices as well, has not been encouraging to the Wall street brokers.

Secretary McCulloch has written a letter to some Boston gentlemen on the financial condition of the country. He does not seem to see the return to specie payments quite as near as predicted in his former letters and reports. The Journal of Commerce says the letter "contains some sensible things, but appears to contradict itself in several particulars, and also to charge upon Congress or the public at large the responsibility of results which have come legitimately from his own action."

WHEAT AND FLOUR.—The exceedingly favorable reports of the condition of the growing wheat crop are having a decided effect upon the prices of wheat and flour. Farmers see no prospect of higher prices, and are disposing of the surplus on hand. These causes, with the unexpectedly large receipts of wheat from California, have caused a decline, particularly in the medium grades of flour. A Boston paper of Saturday says the eastern flour market is "badly demoralized," and that sales are effected with difficulty, even at a material reduction in rates.

During the month of May the grain markets at the West were greatly excited, and wheat sold at higher figures in Chicago, than at any time since its incorporation as a city. On the first of May, No. 2 spring wheat opened at $2,07; on the 15th it sold at $2,85, and on the 30th of May at $2,25. During the month the fluctuation in flour was from $3 to $4 per barrel.

There has been considerable fluctuation in the prices of corn and oats. A good deal of this has been owing to the gambling operations of the Chicago produce dealers. On the 29th ult., oats under a "corner" sold at 90c.; the day following at 71c.—a decline of 19c. in one day. The changes in the price of corn have not been as great, though considerable.

WOOL.—At New York there is a fair inquiry for small lots of fine fleece, though at reduced prices. In Boston, during the week ending May 31, the sales were fair, amounting to 625,000 lbs., at a range of 15@80c. per lb. for fleece, and 32@60c. for the various grades of pulled.

The wool clip this year will be rather late in coming to market, in consequence of the cold, wet weather during the month of May. The shearing has been actively going on in the Southwestern States for the last week, and we shall very soon see what views buyers entertain at Louisville, St. Louis and Cincinnati. The wool clip was large last year, and it is expected to be much larger the present season. At the West, particularly, farmers are much in want of the avails of their wool, and will doubtless sell early, if anything like a fair price is offered.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		**Fruits, Vegetables, Etc.**

Died.

AT Alden, Erie Co., N. Y., on the 19th May, ALMIRA, wife of MARVIN G. ALGER, aged 38 years.

"But wherefore weep? Her matchless spirit soars
Beyond where splendid shines the orb of day,
And weeping angels lead her to those bowers,
Where endless pleasures virtue's deeds repay."

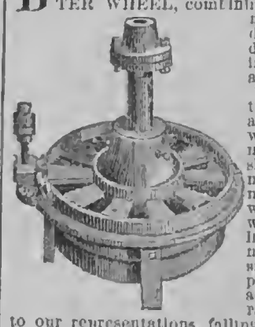
BODINE'S JONVAL TURBINE WATER WHEEL, combining great economy in the use of water, simplicity, durability, and general adaptation to all positions in which water can be used as a motive power.



The undersigned manufacturers of the above wheel are prepared to furnish and warrant the same to give more power than any overshot or other turbine wheel made using the same amount of water. These wheels have been tested with all the wheels of note in the country, and have never failed to prove their superiority. We therefore propose to put them in for any responsible party, warranting them to work up to our representations, failing in which we will take them out at our own expense. The attention of millwrights is invited to this wheel. Agents wanted in every county in the United States and Canadas. Send for descriptive Circular. J. H. BODINE & CO., 907-tf Mount Morris, New York.

CRAWFORD'S GARDEN CULTIVATOR.

THE NEW TRUST COMPANY.

OFFICE OF THE NATIONAL TRUST COMPANY, of the City of New York.
363 Broadway, May 27, 1867.

Notice.—The Trustees of this Company have the satisfaction of announcing that **over Three-quarters** of its Capital Stock of ONE MILLION DOLLARS has been applied for, and over $400,000 of the same formally subscribed during the last four days. The rapidity with which the Stock has been taken up renders it certain that the Commissioners for receiving subscriptions will be able to close the Books in a very few days.

Before doing so, however, they wish to afford further opportunity for investors, particularly SMALL Ones, to obtain some of the Stock.

The Charter is considered exceedingly valuable; there having been but one Trust Company Charter granted during the past five years, and the existing organizations (only four in number) are doing a profitable business,—the stock of all of them selling very much above par. The Company will furnish by mail, or personally, to all applicants full particulars of the nature of the business of this Company, its prospects and the names of its officers and trustees which includes many of the leading Bankers, Merchants, Manufacturers, and Capitalists of City and State of New York.

The Company can loan its Deposits only on United States or State Stocks, or those of Cities and Towns of the State of New York. It cannot loan on business paper, or other personal security, neither can any Trustee borrow any of its funds, making the investment of money unusually safe.

This probabilities are that its Stock will pay liberal dividends besides annually enhancing in value.

OFFICERS.

President—JOSEPH D. ORVIS.
1st. Vice-President—HENRY C. CARTER.
2d Vice-President—BARNET L. SOLOMON.

TRUSTEES.—A Board of Trustees, consisting of Thirty-Nine Stockholders, of not less than $5,000 each,—a list of whom appears in the Circulars of the Company.

☞ The Books are still open at the Ninth National Bank, No. 363 Broadway, corner Franklin St.

DEVONS—TWO YOUNG BULLS AND several Bull Calves, descended from sweepstake animals, and believed by the subscriber to be superior to any in this country. 906-3t WALTER COLE, Batavia, Genesee Co., N. Y.

AGENTS and all Seeking Profitable Employment should secure at once the agency for J. T. Headley's latest and best work. FARRAGUT AND OUR NAVAL COMMANDERS. Just out; very popular; selling rapidly; no competition. Address E. B. TREAT & CO., Publishers, No. 654 Broadway, N. Y. 901-4t-eSw

— Much building is going on at Fredonia.

— Hops are largely planted in Wisconsin.

— Florida crops much better than last year.

— Trout and perch abound near Skaneateles.

— In Canada flour is $8 60, here $18 per barrel.

— Watkins is the County Seat of Schuyler Co.

— Flour from California still comes to New York.

— 364,298 marriages in the United States last year.

— 15,000 Chinese coolies are afloat for Havana, Cuba.

— One divorce to ten marriages in Connecticut last year.

— 2,726 licensed, and 400 unlicensed liquor shops in Chicago.

— "Old Col. Vaughn" is a leading editor at Leavenworth.

— New York and New England emigrants are going to Florida.

— Milwaukee had 2,000 population in 1842, and 70,000 in 1866.

— New Hampshire has $15,674,000 in horses, cattle, sheep and swine.

— Mr. Conway, ex-M. C. from Kansas, is U. S. Consul at Marseilles.

— W. B. Pike of Salem, Mass., is writing a life of Hawthorne, the author.

— $50,000 has been raised by Vermont Universalists for an Academy at Barre.

— 900 barrels western whiskey, not branded, were lately seized in New York.

— Gen. Fremont has bought the home of the late Gen. Webb, on the Hudson.

— H. Clay Pate of "border ruffian" notoriety was killed in confederate service.

— One Frenchman sent 8,000 dozen eggs from Redan to England in eight days.

— Harriet Beecher Stowe has returned from Florida to her home in Hartford, Ct.

— 2,956,000 bushels of grain at Chicago against 4,010,089 last year, at same date.

— In Onondaga Co. a liquor license costs $100 in Syracuse and $50 in the country.

— Neal Dow has a silver tea-service from temperance people in Bursiem, England.

— 150 to 300 bushels of sweet potatoes per acre is the yield of some Texas farmers.

— A Frenchman has invented a paper for instant stoppage of hemorrhage from wounds.

— Hereafter no tobacco chewer or smoker can be a member of the M. E. Church in Vermont.

Special Notices.

Instantly.—Any trouble occasioned by eating cucumbers or unripe fruit will disappear instanter if the sufferer will take one swallow of COE'S DYSPEPSIA CURE. It is perfectly harmless.

WILLIS'S PATENT STUMP EXTRACTOR.

Extracts of Letters from G. K. Trask.

An Engine 30 Tons wt. Raised from the Mud.

INDIANAPOLIS, Ind., March 25th, 1859.

FRIEND WILLIS:—As the Express Train was going out of Indianapolis, on thirty miles speed, the locomotive left the track and plunged down an embankment into the mud, up to the name on the boiler. The railroad posse, about twenty men, spent the better part of two days and nights in righting the passenger cars, which, as they had broken connection, were only jostled from the track, regarding the locomotive "as a forlorn hope," as it lay imbedded in mud, as a duck in water.

My machine was called for. I got it from a distance of four miles, and with little trouble and delay placed it on the track; and in four hours and a half from the first, the engine was high and dry on the track!

I had the aid of four men. Hundreds of men witnessed the admirable working of the machine—many calling it the seventh wonder of the world! It is as good to move houses, massive rocks and locomotives from the mud, as to move stumps; which is saying enough in its praise.

2d EXT.—I have pulled stumps which had six or seven tap roots, which run seven or eight feet into the earth.

3d EXT.—I have not pulled any green stumps as yet; but I have pulled some six feet walnuts, as sound as they ever were. I put up a fifteen feet pair of shears, and had a pair of strong horses. They did their best—up came the stumps, and the Hoosiers were satisfied.

Musical.—*The Normal Academy of Music* at Painesville, Ohio, commences its next session July 2, 1867. *Rare advantages* are offered to teachers and students to spend the summer months at this DELIGHTFUL RESORT. For circular, address

N. COE STEWART, Cleveland, O.

SOMETHING NEW!

THE UNION TELEGRAPH INSTITUTE, OBERLIN, OHIO, has an order to supply a NEW TELEGRAPH LINE with Operators.

Paying Offices are guaranteed by written contracts, to graduates. Salaries from $50.00 to $125.00 per month will be paid to beginners. This is a *rare opportunity* for young and middle-aged men to find *permanent* situations, both *agreeable* and *profitable*. With our *unequaled* facilities for teaching the art, students readily acquire it. There is in connection with the College an Actual Telegraph Line, 37 miles long, which is operated solely by students. For full particulars address C. H. POND, Oberlin, Ohio.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

New Advertisements.

THE SHIP GOLDEN STATE
HAS ARRIVED WITH
22,000 HALF CHESTS
OF THE
FINEST
JAPAN TEAS
OF THE
GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey Street.

These Teas by the ship Golden State were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation, the GREAT AMERICAN TEA COMPANY put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

ALSO,

The Ship George Shotton
Has arrived with
12,000 HALF CHESTS
Of the
FINEST FOOCHOW
OOLONG TEAS.

The cargo of the ship George Shotton is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China.) These are the "*finest first-picking contract Teas*"—rich, fresh, and full-flavored.

The receiving of these two large cargoes by the GREAT AMERICAN TEA COMPANY for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *N. Y. Shipping and Commercial List*—which says:—"The Trade have again been startled by the arrival of two large cargoes of Teas to the GREAT AMERICAN TEA COMPANY—the ship Golden State, from Japan, with 22,000 half chests; and the ship George Shotton, from Foochow, with 12,000 packages." And in another place it says:—"The recent large operations of the GREAT AMERICAN TEA COMPANY have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,331 packages of Black and 22,849 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (previous to the establishment of the GREAT AMERICAN TEA COMPANY,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ lb.

CLUB ORDER.

ST. CHARLES, WINONA CO., MINN., March 28, 1867.
To THE GREAT AMERICAN TEA CO.,
Nos. 31 and 33 Vesey Street, N. Y.

I send you a fifth order for Tea. My neighbors think I have "learned the road," and insist on my doing the business for them. I will simply say that all kinds of Tea received from your company have given complete satisfaction. Your Teas are fresh—well flavored—strong. The Merchants can furnish for $2,25 to $2,50 per pound no better article than you give us at $1,25.

Truly yours, in behalf of Tea-drinkers,
SAMUEL S. BEMAN.

4	lb. best Uncolored Japan, Joseph Dewy, at $1,25..	$5,00

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.
For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

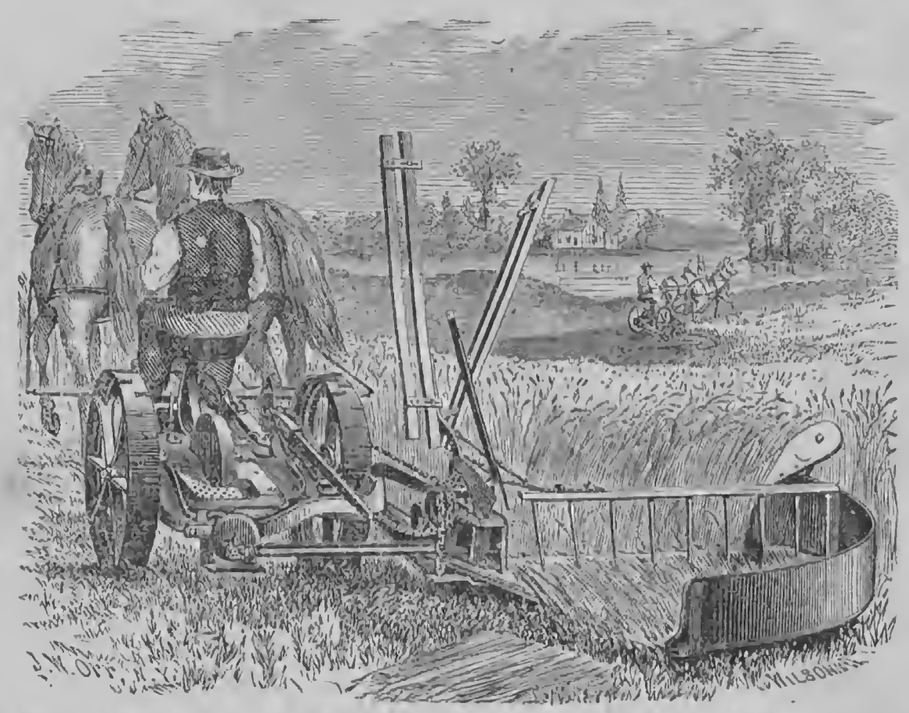
CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

1867.
The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED
HALL THRASHING MACHINES,
With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly eighty years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal.

Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 123 Nassau street, N. Y. 897-tf

THE PREMIUM MACHINE!

BUCKEYE MOWER & REAPER

Two great National Field Trials of Mowers and Reapers have been held in New York State. The first at Syracuse in 1857, and the second at Auburn in July last. At each of these trials the HIGHEST PREMIUM, GRAND GOLD MEDAL, was borne away by the "Buckeye Mower," and the justly merited distinction is endorsed by the leading Agricultural Societies in all sections of the country, and by a large majority of the farming community everywhere. Do not allow yourselves to be deceived by mongrel machines which are offered as the Buckeye, combined with something else. Having no reputation of their own, they try to steal that of the Buckeye.

☞ Descriptive Circulars of the Genuine Buckeye and Synopsis of the Official Report of Auburn Trial forwarded by mail.

Manufacturers.—ADRIANCE, PLATT & CO., (City Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 907-tf

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the cover, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (20 gal.,) $16; No. 2, (¾ bbl.,) $11; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

FLAX AND HEMP CULTURE.

Now Ready, the Sixth Edition of

A Manual of Flax Culture and Manufacture:

Embracing full directions for *Preparing the Ground, Sowing, Harvesting, &c.* Also, an Essay by a Western man, on HEMP AND FLAX IN THE WEST: Modes of Culture, Preparation for Market, &c., with Botanical descriptions and illustrations. Published by D. D. T. MOORE, Editor of Moore's Rural New-Yorker, Rochester, N. Y. Price, Twenty-Five Cents.

☞ Those who wish PRACTICAL INFORMATION on the subjects named above should send for the work, which is sent, post-paid, for 25 cents.

D. D. T. MOORE, Rochester, N. Y.

903-12t EPHRAIM BROWN, Lowell, Mass.

UP IN THE BARN.

BY THOS. LACKLAND, IN "HOMESPUN."

Old Farmer Joe steps through the doors
As wide to him as gates of Thebes;
And thoughtful walks about the floors
Whereon are piled his winter stores,
And counts the profit of his glebes.

Ten tons of timothy up there,
And four of clover in the bay;
Red-top that's cut, well, middlin' fair,
And bins of roots, oblong and square,
To help eke out the crops of hay.

A dozen head of cattle stand
Reflective in the leaf strewn yard;
And stalks are stacked on every hand,
The latest offering of the land
To labor long maintained, and hard.

Cart-loads of pumpkins yonder lie—
The horse is feeding in his stall;
The oats are hunnied scaffold-high,
And peas and beans are heaped hard by,
As if there were some festival.

At length Old Farmer Joe sits down,
A patch across each of his knees;
He crowds his hat back on his crown,
Then clasps his hands—so hard and brown—
And like a farmer, takes his ease.

"How fast the years do go!" says he;
"It seems, in fact, but yesterday,
That in this very barn we three—
David, Ezekiel, and me—
Pitched in the summer loads of hay!

David—he sails in his clipper now;
'Zekel died in Mexico—
Some one must stay and ride the plow,
Get up the horse and milk the cow—
And who, of course, but little Joe?

I might have been—I can't tell what!
Who knows about it till he tries?
I might have settled in some spot
Where money is more easy got:
Perhaps beneath Pacific skies.

I might have preached, like Parson Jones;
Or got a living at the law;
I might have gone to Congress, sure;
I might have kept a Water Cure;
I might have gone and been—oh, pshaw!

Far better is it as it is;
What future waits him, no man knows;
What he has got, that sure is his;
It makes no odds if stocks have riz,
Or politicians come to blows!

Content is rich, and something more—
I think I've heard somebody say;
If it rains, it's apt to pour;
And I am rich on the barn floor,
Where all is mine that I can raise.

I've plowed and mowed this dear old farm,
'Till not a rod but what I know;
I've kept the old folks snug and warm—
And lived without a twinge of harm—
I don't care how the storm might blow.

And on this same old farm I'll stay,
And raise my cattle and my corn;
Here shall these hairs turn wholly gray;
These feet shall never learn to stray:
But I will die where I was born!"

And Farmer Joe pulled down his hat,
And stood upon his feet once more;
He would not argue, after that,
But, like a born aristocrat,
Kept on his walk about the floor.

The Story Teller.

VAN DYCK'S MADONNA.

In one of the splendidly decorated saloons of St. James was assembled a group of young and lovely girls, whose delicate fingers were busily employed in different kinds of ornamental needle-work, which under their skillful arrangement, formed bouquets which rivalled nature in the brilliancy of their colors and accuracy of shades. They were the Queen's maids of honor, and between their gay chattering and busy fingers employed the time while waiting for her rising. The only grave person in the assembly was the Dowager Duchess d'Alby, the chief of the ladies of honor.

Among the blooming group, the youngest was remarkable for the simplicity of dress and the quiet modesty of her whole appearance. Her attire was a dress of black velvet, closed to the throat, but of which the skirt, open in front, disclosed an under-dress of white satin; the sleeves came just below the elbow, and coquettishly disclosed an arm and hand of the most dazzling whiteness. A plaited tucker encircled her graceful neck, on which hung a chain, to which was attached a large cross, and luxuriant hair, simply parted on the forehead, and confined behind by a lace scarf, completed her costume. This was the daughter of one of the most illustrous families of Scotland: her father, Lord Ruthven, united to a princely fortune, a pedigree of which he was more proud than of his wealth. Lucy, his daughter, had secretly arrived at the English Court, on her appointment to a post in the Queen's household—there to complete the education which had been carefully guided by her father. Retired and simple in her tastes, her mind instinctively sought the sublime in the works of Nature and art. She excelled in painting, and her genius had created a world of her own, in the daily contemplation of the productions of the best masters, which adorned the galleries of her father. Paul Veronese, Guido, Rubens, were of the number of her friends, and she vowed them eternal gratitude, for the light their talents had shed on her solitude.

The habits and manners of Lucy contrasted strongly with those of her companions, who had been habituated to more independence and liberty. Gentle and timid to excess, she scarcely attempted to answer the sportive and often mischievous sallies of her companions. The large clock in the saloon chimed the hour of ten; all eyes were directed to it, and several voices exclaimed:—"He's very late!" just as a domestic announced the painter, Van Dyck. The announcement caused a general agitation among the smiling group. Each one changed her position on her velvet seat, rearranged her dress, and, composing he countenance, sought to give additional grace to her aspect. The young pupil of Ruben's, albeit accustomed to the sight of beauty, could not suppress a murmur of admiration at finding himself in the midst of this brilliant circle.

The old Duchess, supposing the young painter's embarrassment to be caused by her own imposing appearance, to encourage him, addressed him in these words:—"I am told you have talent, young man."

"Those who have so informed you do me too much honor, madam; doubtless they judge me by my intentions, but I have, as yet, produced nothing worthy of attention."

There was as much confidence and noble pride in the reply of the painter, as there had been arrogance and impertinence in the address of the noble dame.

Lucy, who possessed the high spirit of her country, was shocked at the insolent tone of the Duchess, and now blushed with pleasure at the reply of Van Dyck. As her soft eyes rested approvingly on his face, he understood her feelings, and thanked her, by a look, for her generous sympathy.

"Well, we shall see. Her Majesty wishes to renew the ornaments of her chapel, so you will be fully employed. A residence will be assigned you in yonder monastery. There you will copy undisturbed. In summer, also, you shall have a fit residence, beside a pension from Government. This, I think, is paying an artist pretty well."

"Art cannot be paid for, my lady Duchess, and, if I possessed the talents to which I aspire, the favor which you boast could not purchase them."

"This is all very well; you are proud and we are noble; but, nevertheless, those honors are conditional—you will be chosen painter to the Queen if you succeed in gaining the prize which is offered for the most perfect head of the Madonna."

"Ah, madam, if the patronage of Her Majesty is offered me only on these conditions, I fear I shall not obtain it."

"And why not?"

"Because I shall not gain the prize," replied he, with an expression of sadness, which was instantly reflected on the face of Lucy.

"Why do you refuse this honor—do you fear to fail?"

"No, madam; but how shall I represent, as she should be represented, the mother of the Saviour? Where shall I find a model?"

As he pronounced these words, his eyes rested on the angelic face of Lucy.

"I have hitherto sought in vain the combination of mildness, sweetness and candor, which should characterize the Virgin."

The fire of genius which illuminated the handsome countenance of Van Dyck elicited the admiration of all observers.

"But I should imagine that there would be no difficulty in obtaining models for painters."

"The models which can be obtained for hire, are undoubtedly beautiful. I have sought in vain for the dignity and purity, which I have never seen united but in a noble lady, who would disdain to sit to a poor artist."

The animated and ardent glance of Van Dyck much embarrassed Lucy; it told her he had at last found the object his fancy had depicted. The Duchess, however, had not observed it, and asked:

"Who is this noble lady?"

"The Virgin herself, madam!" Bowing profoundly, and giving a parting glance at Lucy, he added:—"If I gain the prize, you shall see me again, madam; if not, I leave England."

He took immediate possession of his apartments, where he could, at the same time, paint his Madonna, and copy the frescoes for the chapel. With his mind full of the celestial face he had just seen, he seized his pencil, and endeavored to trace her lineaments. But the extreme sensibility, so useful to art when time has calmed it, was now his chief obstacle. He felt too deeply to succeed in expressing the idea which filled his soul. The day passed in fruitless attempt, and the night surprised him, dissatisfied and desponding.

In the meantime Lucy had suffered severely for the preference shown her by Van Dyck. The envy and jealousy of her companions found vent in impertinent sarcasms; so that, on separating for the night, her mind was filled with his idea, and, after her nightly prayer, his name was the last on her lips.

It was midnight, the heavens shone with a thousand sparkling stars, and a soft light spread itself on the old abbey, which stood solitary and alone among its ruins.

A window of the palace opened, and a shadow passed slowly along the balcony and grand staircase, crossed along the court, and reached the monastery.

It would be difficult to say how this figure had left the palace and penetrated so far; but she must have been well acquainted with all the turnings, for, in a short time, she crossed the long avenues, and, arriving at one of the galleries of the chapel, she found herself in the painter's workroom, and, passing lightly on, seated herself, without looking around her, immediately in front of his easel.

Oh, surprise! oh, joy! this being, so calm, so beautiful, is Lucy! The desponding artist who had been unable to retrace her features on his canvas, now beheld a living model before his eyes.

What could have induced her to come? What idea could have given her the courage and resolution? He threw himself on his knees before her, but Lucy, motioning him to rise, pointed to his pencil. Her look penetrated him with a flame so pure, that he forgot the reality of his vision; his astonishment seemed to him a want of faith. Transported in his imagination to an ethereal sphere, he seemed above the earth, and, in the midst of the sublime concerts of angels, he beheld Mary, environed by divine rays. He was no longer the powerless artist, who had just thrown at his feet his unsuccessful pencil; the artist had replaced the man. Mute and breathless, inspired by mysterious strength, he seized his *palette*. His colors gave the form, and his soul the life—in a few hours he created the most beautiful and most pure of virgins.

When the young girl saw that after tracing her features he was occupied in imparting to his picture the soul which animated him, she rose silently, and, with a calm and assured step left the monastery by the same road she had come.

Van Dyck, with wondering eyes and oppressed breathing, made not the slightest effort to detain her. In his eyes, she was no longer mortal, and, in her departure, he thought he saw the Madonna returning to her native skies. Enchanted by his execution and excitement, he fell asleep in his arm-chair. On awaking, his first thought was to examine his canvas. Transported with joy at his success, he thanked, on his knees, the angel or woman who had so favored him. In vain he endeavored again to impart the ideality which existed in his imagination. He had so combined the thoughts of the Madonna and of Lucy, that he determined to discover the truth, and wrote the following *billet* to the young girl:

"Tell me if you are, indeed, an angel, if you do not wish to deprive of his senses, the poor artist to whom you have condescended to appear this night. Tell me if you are the Virgin or a mortal!"

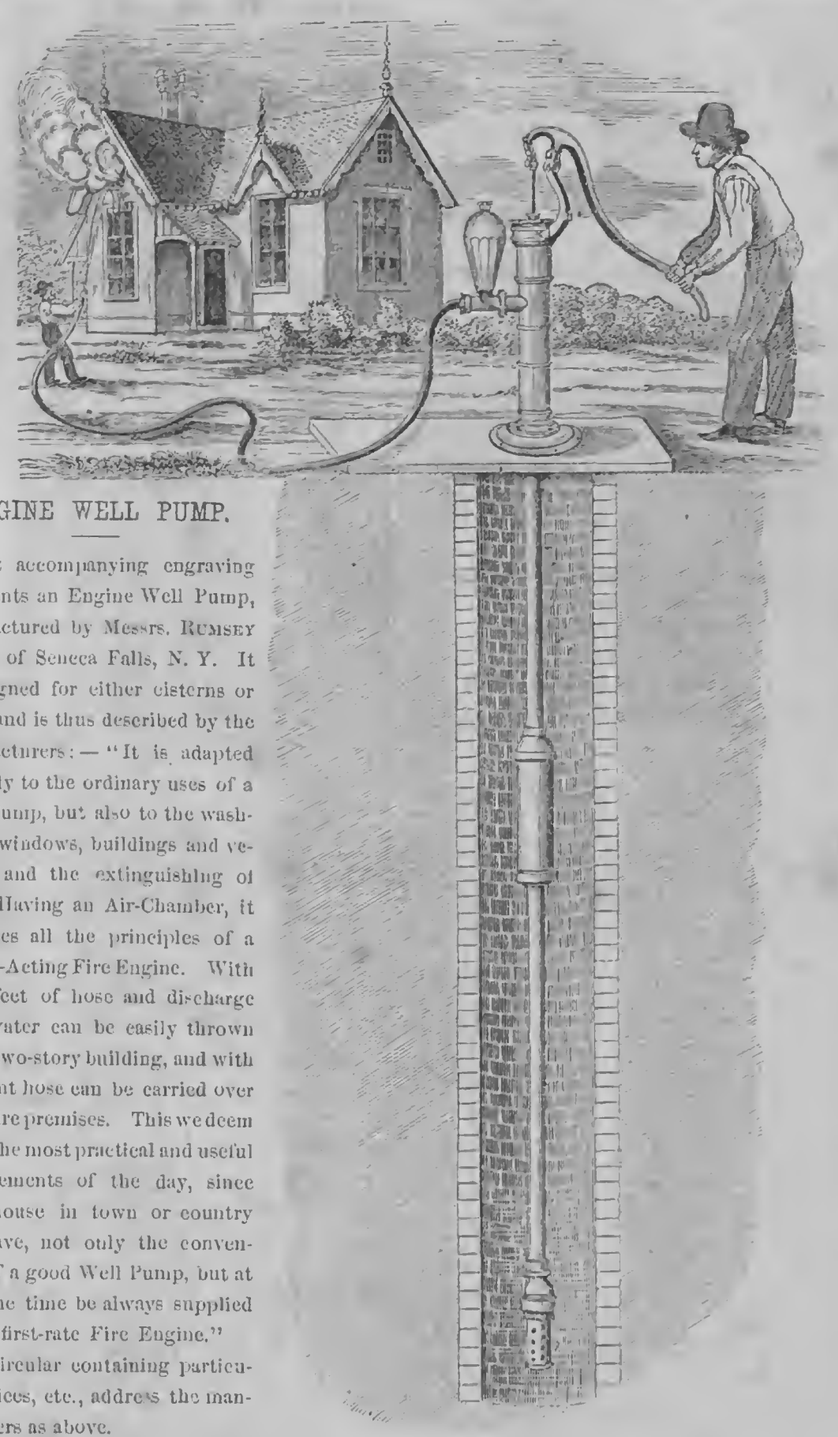
It was a part of the duty of the Dowager Duchess to open the *billets* addressed to the young ladies confided to her charge. What was her astonishment on reading this epistle! "Horror!" cried she, "a child of high family thus to violate her duty, in seeking a painter at midnight." She rung, and sent for the guilty one; but her rage redoubled when Lucy, with her customary gentleness, denied all knowledge of the cause of her reproaches. The Duchess, who expected to witness in her great confusion or a candid avowal, would listen to nothing. The alarm was given in the palace, and it was decided that Lucy, disgraced, should be sent home to her father.

Her prayers were of no avail; a single night of respite was alone accorded her, and she was commanded to sleep in the apartment of the Duchess to avoid further scandal.

At midnight, Lucy rose as before. The Duchess was roused from her unquiet sleep, and called all the ladies to witness the confirmation of her suspicions. With lighted flambeaux, the Duchess, attended by a numerous *suite*, followed Lucy, who traversed again the great hall, the long passages, and arrived at the door of the monastery. Her culpability could be no longer doubted, but they followed her even to the painting room, where she was already seated before the easel. The noise around her, and the brilliancy of the lights, awoke her in affright. She was a somnambulist!

Thus, unconsciously had she served as model to an artist, who fully repaid, in love, what she had given him in renown. He obtained the prize, and was loaded at the court with honors and riches.

A few days afterward, there was celebrated at St. Paul's, the union of Van Dyck and Lucy the daughter of the noble Count Ruthven de Gorry.



ENGINE WELL PUMP.

The accompanying engraving represents an Engine Well Pump, manufactured by Messrs. Rumsey & Co., of Seneca Falls, N. Y. It is designed for either cisterns or wells, and is thus described by the manufacturers:—"It is adapted not only to the ordinary uses of a Well Pump, but also to the washing of windows, buildings and vehicles, and the extinguishing of fires. Having an Air-Chamber, it combines all the principles of a Double-Acting Fire Engine. With three feet of hose and discharge pipe, water can be easily thrown over a two-story building, and with sufficient hose can be carried over the entire premises. This we deem one of the most practical and useful improvements of the day, since every house in town or country may have, not only the convenience of a good Well Pump, but at the same time be always supplied with a first-rate Fire Engine."

For circular containing particulars, prices, etc., address the manufacturers as above.

ANSWERS TO ENIGMAS, &c., IN No. 905.

Answer to Illustrated Rebus:—Competence is the great incentive to industry.

Answer to Geographical Enigma:—Intemperance is the prime minister of death.

Answer to Anagram:

When life as opening buds is sweet,
And golden hopes the spirit greet,
And youth prepares his joys to meet,
Alas! how hard it is to die!

MOORE'S RURAL NEW-YORKER,

THE LARGEST CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, In Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

USE PRATT & BUTCHER'S

CELEBRATED MAGIC OIL,

Warranted in cases of Rheumatism, Neuralgia, Bruises or Pains.

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER

THE GREAT STANDARD MEDICINE

For Horses and Cattle,

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines*.

It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.

The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

AGRICULTURAL.

CULTIVATION OF HOED CROPS.

FARMERS have learned to depend much on the cultivator and but little on the hand hoe, not only to stir and mellow the soil in which their corn and potatoes grow, but also to destroy the grass and weeds in the immediate vicinity of the hills. With the smooth fields and improved implements of the present day the labor of producing a hundred bushels of corn or potatoes is small to that necessary a quarter of a century ago. And we think no farmer should be satisfied with his method of cultivating until he has reached the point where his hoed crops are made clean and the soil mellow without touching a hand hoe to the work. In most instances this can be attained, but success in a great measure depends on the kind of farming to which the field has been subjected for some years previous. The rule with the farmer should be to cultivate every crop thoroughly, fight the weeds on all occasions, and always leave the surface of the land in a smooth condition when the crop is taken from it. This course is not only the best one for the immediate crop, but it is likewise most favorable for the one succeeding.

How would we manage a potato field? Let us see. Suppose it was a crisp, clover sward, well set, clean, smooth and not hilly. First, plow well, using a jointer, and laying the furrows even, and without "balks;" next, harrow fine and mark straight. Do this work as immediately preceding planting as possible. The soil will remain in good condition, and the weeds and grass will only just start—get in the best condition for the cultivator to kill them—by the time the young potato plants can be seen along the rows. Now put in the cultivators and mellow up the soil, throwing little ridges of dirt close along the hills. Where the cultivators stop there will yet be a space around each hill, and among the plants untouched; the weeds will be there, and the rain-formed crust. Your father would, in his time, have taken his hoe and toiled day after day, giving the crop the first hoeing. You can do better. The young potatoes are not tender; they like fresh dirt; so you must contrive some plan to cover them slightly. If the cultivating has been skillfully done, and the fresh dirt ridged up somewhat along the rows, then a good brush harrow drawn by two lively horses will do the work. A harrow might be cheaply made especially designed for this work. The requisites are lightness, and short and thickly set teeth. If, when the work is done, the potatoes are covered out of sight, it is just as well; they will reappear in a day or two fresh and vigorous from contact with mother earth; but the weeds, not so strong rooted, will not appear so quick. Keep the cultivator at work in the field until the vines are tall enough to hill up, and then we have many cultivators, (thanks to the inventors even if they do dabble in patent rights,) that will do the hilling and leave not a weed in sight. After this the crop grows rapidly, the vines lop over and cover the ground, and the cultivation is ended. But towards autumn it is well enough to go over the field and pull out any intruding plants whose vitality has withstood the cultivator.

The corn crop may be managed the same way, only it will not do to use the brush harrow on it. For this reason—the tenderness of the young plant—a crop of potatoes can be kept clean with less trouble than one of corn. You must be careful of the young corn; it is tender and will not flourish if bruised and handled roughly. But it has a different habit of growth from the potato, and soon gets tall enough to allow dirt to be thrown around the base of the stalks. When this time arrives the farmer must be active with the cultivator. He runs a race with the weeds. But riding on his two-horse sulky cultivator which rolls the dirt to the corn rows and screens away the lumps and stone, he wins the race and the corn is clean, without the slashing of a hoe blade around a single hill.

AGRICULTURAL METEOROLOGY.

THE following plan to aid in preventing injury to grain and hay crops from storms during harvest, is offered by A. WATSON of Washington, D. C., for the consideration of farmers, county officials, telegraph companies, boards of trade, agricultural societies, the press, and the public generally. The idea, or plan, is not original, as a similar one was proposed and discussed in the RURAL NEW-YORKER several years ago, by an accomplished Meteorologist—M. F. MAURY, then Superintendent of the National Observatory, Washington. In a series of able articles on the subject of *Meteorology for Farmers*, he invited, through the pages of this journal, the co-operation of farmers and Agricultural Societies in aiding to extend to the Lakes and the Land the beautiful and valuable system of physical research which was proving so beneficial upon the Sea,—and promised the rural population results which should be as valuable to the industrial pursuits on shore as those already obtained had proved to be to commerce and navigation. Connected with this plan of Lieut. M., was a system of *Telegraphic Meteorology*, which has since been adopted to a greater or less extent in other countries. In an article entitled "Meteorology for the Lakes and the Lake Region," published in the RURAL of Feb. 20, 1858, Lieut. MAURY expressed the opinion that, "by a proper use of the magnetic telegraph as a meteorological appliance, warning of the approaching storm might be given to the shipping in port and the laborer in the field, several hours in advance, and quite in time to save annually to the farmer, merchant and mariner, life and property not a little." And in the same article Lieut. M. averred that "with a proper system of *daily weather reports* through the telegraph, the people and the shipping of this country might have *timely warning of every storm that visits our shores.*"

As we believed the subject an important one at that time, and gave its discussion the most prominent position in the RURAL, we are glad to have it again brought before the public, and commend the suggestions of Mr. WATSON to the consideration (with a view to future action,) of the great mass of people who are interested. Though the plan cannot be fully tested the present season—the harvest having already commenced in some regions—a beginning may be made, sufficient to test its utility, preparatory to its more general adoption (in case it proves valuable) throughout the principal rural districts of a country which should be first on the globe in Agricultural Production and Wealth. But to Mr. WATSON'S article, which is entitled

STORM SIGNALS DURING HARVEST.

It is estimated that one-third of the grain and hay crops are on an average injured annually by storms during harvest. Large quantities are cut down, and then a storm comes on suddenly, or as a settled rain, and they get wet to a degree that they are damaged materially, the labor of a year often being lost by a single heavy rain. These storms when of considerable duration generally commence in the Northwest, and frequently extend over several States to the ocean.

If farmers had *warning* of these approaching storms in time to get their grain or hay under cover, or in a situation to shut out the rain, much of this injury would be prevented. By adopting the following general plan it is believed that this may be effected:

When a storm commences in any part of the country and is travelling in a certain direction or is spreading in several directions, the first telegraph station over which it passes is to send the news immediately to all the telegraph stations at county seats, hundreds of miles in advance, in the direction that the storm is travelling. At each county seat a cannon is to be kept ready by the officials, at the Court House, as soon as the news is received of a coming storm it is to be fired *three* times; at intervals of *one* minute if a hurricane is approaching, at intervals of *three* minutes if the storm is traveling rapidly, and at intervals of *six* minutes if it is traveling slowly. And even a *fourth* gun ought to be fired, the interval from the third in *seconds*, giving the distance that the storm is off, *seconds* for *miles*; but this last may not be deemed important. If a county seat has no telegraph, the firing can often be by sound from the next county seat.

As a good sized cannon can be heard distinctly from fifteen to twenty miles in all directions, or over a space of from thirty to forty miles square, (1,600 square miles,) by firing one at each county seat the farmers for hundreds of miles over the whole country could be *warned* in time to get their grain or hay under cover, or in a situation to shut out the rain. And this *warning* would not only aid in preventing damage to hay, wheat, rye, oats, barley, buckwheat, peas, beans, and many other products, but it would also be useful in drying or curing fodder, tobacco and cotton, and in drying brick and many other products and manufactures too numerous to mention. It would be useful in seeding time, spring and fall, as well as in harvest, and might even be useful in winter. It would also be useful to commerce on our extended coasts, and particularly on our numerous bays, rivers and lakes, and especially in severe storms and hurricanes, by *warning* vessels to seek places of safety or prepare for the coming storm. And, finally, it would be useful in all seasons, and to every business, city or country, and to every individual in the entire community.

It may be remarked that this plan is in direct imitation of nature as exhibited in storms during summer, the thunder being often heard long before the clouds are even seen. The telegraph represents the lightning, and the cannon the thunder, but nature is vastly surpassed in time and extent, as the flash will be understood, and the roar will be heard at the same moment, hundreds of miles in advance of the real lightning and the thunder.

The cost of the plan will be trifling compared to the advantage gained. Many county seats own cannon which can be fired by some of the officials or employees round the court house. The actual expense will only be the cost of a short telegram from the next county seat about once a week for three or four months during summer, and the additional cost of a few kegs of powder. The whole cost to each county will not be more than fifty dollars annually, while from this trifling outlay tens of thousands will be saved to each county, millions of dollars to each of the larger grain and grass growing States, and perhaps one hundred million of dollars annually to the whole United States.

As every county seat does not own a cannon suitable for a *storm gun*, and as the State and National arsenals have a great abundance of any size desired, all deficiencies may be supplied from these sources, and thus these cannon now lying idle will be put to a useful purpose, and these destructive engines of war will be converted into implements of husbandry by being used to imitate thunder to give *warning* of approaching storms many hours in advance of the real thunder or the rain.

If this plan should meet with general approval arrangements should be made to carry it into operation in time for the coming harvest, not only in our own country but also in Canada, and throughout Europe. Such arrangement may be made between the county officials and a telegraph company, or some telegraph company may make arrangements by circular with the county officials in several of the States. Then if all the newspapers would publish the storm signals to be posted in every house over the whole country the plan would be complete, and in a short time the storm guns would commence to roar, giving warning of approaching storms and hurricanes over vast extents of country hundreds of miles in advance of the actual thunder or the storm.

SUGAR BEET—SOIL, CULTIVATION.

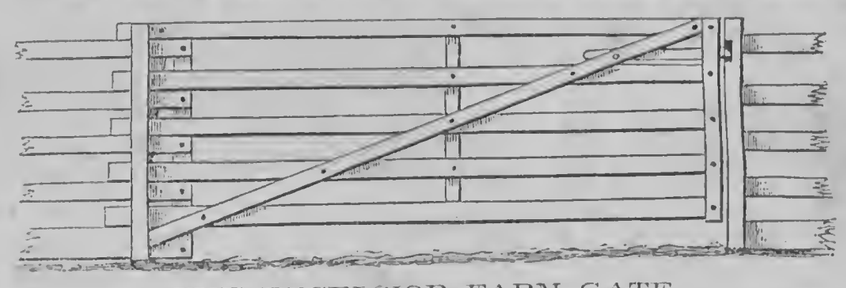
THE cultivation of the beet for sugar purposes, though carried on extensively in France and several other of the Continental States, has excited little attention here till a comparatively recent period. Experiments, to be sure, have been made, at various points, in beet culture, but they have been spasmodic—limited in number, in pecuniary resources and the experience essential to success. The increasing demand for sugar here, the restricted limits of the cane-growing region, the comparative failure in its cultivation, owing to the rigors of the season, the increasing success of the beet sugar manufacture in Europe, have conspired to renew the interest in beet culture in the United States. It is too late in the season to seed for a crop for fall use, but it is early enough to consider the matter with reference to the future, and to commence a preparation of the ground for that purpose. Assuming that some of our readers may feel an interest in the subject, we have condensed from a book recently published and noticed elsewhere, a few hints with reference to the soil requisite to success in beet culture, the manner of preparing it for the seed and the cultivation of the crop.

The ground should be mellow, warm, fertile, free from saline and alkaline constituents, not sour, and of a nature not likely to suffer materially from drought; easy to work late in autumn and early in spring, with a permeable subsoil readily penetrable by the tap-root of the beet; affording natural, or a chance for artificial drainage, enabling it to be worked soon after rains. All lands, suited to growing grain, will answer for the beet, but more especially those having a depth of from twelve to fifteen inches of rich vegetable mold. Fine, sandy, alluvial bottom lands, overflowed in winter and spring, are favorable for the beet, as they need no artificial manures—the inundation supplying all that is necessary. The ground should be thoroughly cultivated, and the sod, if any, entirely rotted. Newly broken up land should be cropped with oats one season as a preparation for the beet. If the soil is good and well cultivated, two crops of beets in succession may be raised before changing to something else. If the soil is plowed sufficiently deep the root of the beet will not rise much above the surface, which is better, as more sugar is thereby produced. Deep plowing, therefore, should be a prime consideration.

It is customary in France to plow and harrow the land thoroughly in the fall—first applying manure if any is needed. In the spring it is plowed and harrowed again. Some throw it into ridges while others leave a plane surface. If ridges are made they are flattened down by a roller and the seed sown in drills upon them by machinery—the rows being from 18 to 20 inches apart.

If the season be favorable planting may be commenced the latter part of April. The seed should be rubbed between two boards for the purpose of toning down its asperities, thus allowing it to filter freely and evenly through the seeding drill. When thus rubbed and cleaned, a solution of the sulphate of potash and an equal one of that of lime, using warm water first and afterwards cold, should be prepared sufficient to cover and soak the seed. This will take about six hours. It should then be mixed well with slaked lime, wood ashes or plaster of Paris till coated over. When dried it will pass readily through the seeding machine, which should be gauged so as to plant from an inch and a half to two inches deep according to the quality of the soil.

As the plants are finally to stand about one foot apart in the drills, seed enough should be sown to allow of a liberal thinning, if necessary, and to supply vacant places where the seed, from any cause, fails to germinate. From nine to thirteen pounds to the acre is the customary rule of seeding. The drills should be as straight as possible, as it greatly facilitates cultivation. When the seeding is done a roller should be passed over the surface, as it hastens germination. As soon as the plants appear and weeds come with them, the cultivator should be put in motion, destroying the latter and loosening up the ground around the former. Where vacant places appear, fill them up by transplanting from other parts having a surplus. It is all important to keep the crop clear of weeds, hence

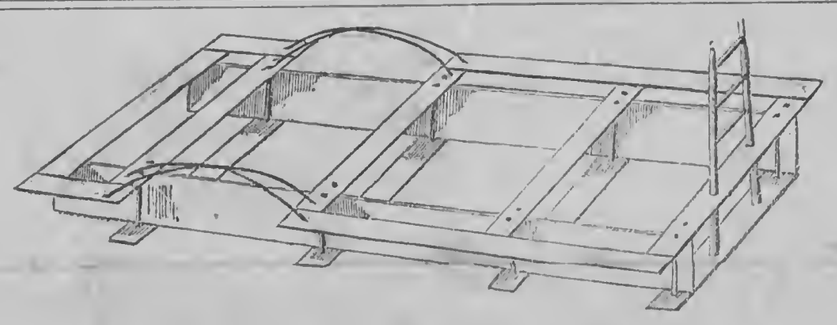


THE EXCELSIOR FARM GATE.

THE farm gate herewith illustrated was patented May 8th, 1866, by A. G. BARNARD of Ohio, and is claimed to be the cheapest and best for the purpose designed, yet offered to the public. Its points of excellence are:

1st, It is entirely free from the objections to farm gates on the score of cost, complication in construction and is said not to be liable to get out of working order or be impeded in its action by snow. 2d, It is so constructed as to lock in with and form part of a board fence in such manner as to make a firm and durable hinge without an extra post, hence costing little more than a panel of plain fence—only 25 cents, the inventor claims. If desirable it may be made self-shutting.

For further information, address H. B. NORTON, No. 10 Baker's Block, Rochester, N. Y.



CONVENIENT HAY OR GRAIN RACK.

A CORRESPONDENT, "A. M.," from Youngsville, Pa., sends us the accompanying sketch and descriptions of a rack for hauling hay or grain, the advantages of which, he says, "are lightness and ease of construction—two men being able to place it easily upon a wagon—and cheapness and durability."

"The largest stuff in it is one-inch boards. It consists of two boards 16 feet long and about 14 inches wide for the sides; four boards 4 feet 3 inches long and about 8 inches wide notched into the bottom edge of the side boards, also four boards 6½ feet long, and the same width, notched into the upper edge of the side boards, directly over the four bottom boards. Bore a one-inch auger hole through the top and bottom boards so that a one-inch pin will just pass the outside of the side boards; again, bore a hole through both boards so that a second pin will just pass the side board on the inside and you have the way of making the rack. Make the wooden pins with a head on the under side, and wedge them on the top; it will take 16 pins for the rack. Or the pins may be made of half-inch rod iron with a nut on the top, having pieces of hoop iron, two holes in each, to go over both rods as a washer. The rack should be made just wide enough for the side boards to fit within the upright stakes of the wagon, which usually is about 3 feet 2 or 3 inches. The short ladder at the forward end, should be about 4 feet high; it is made by boring two 2-inch holes through the top and bottom boards, which give it a firm hold. In the cut the hind wheels are represented as covered with hoops; it may be made without them by placing 4 by 4-inch scantling on the wagon bolsters, and having wider boards for the sides to raise the rack, so that two boards 16 feet long and 8 inches wide will go the whole length on top; then hoops will not be needed."

the cultivator and hoe should be freely used when necessary. Early in July the leaves will have become so much developed that the cultivator cannot be used, since marring them is very prejudicial to the crop. After this period reliance must be placed on the hands for the removal of such weeds as may damage the yield.

The beet matures in September and the process of manufacturing sugar therefrom may commence in October, and be continued through the winter if necessary. In storing the beets it is essential that the temperature of the storing place should be sufficiently high to prevent freezing.

As to the yield per acre, much will depend on the suitableness of the soil, the manner of cultivation and the character of the season. In France the ordinary yield per acre is about 20 tons, though 35 to 40 tons have sometimes been produced. The variety of beet most popular with sugar makers is the white Silesian. The price per ton there, in 1865, ranged from two dollars to three and a half. The per centage of sugar refined, is never under seven, and the cost per pound for land, cultivation and manufacturing rarely exceeds five cents, and is often below it. From this it will be seen that, at the present price of sugar, an enormous profit would result, even allowing that the cost of raising and manufacturing the sugar here should equal seven cents per pound. Aside from this there is from two to three per cent. of molasses worth at least twenty-five cents per gallon, while the pulp furnishes excellent food for farm stock—especially cattle and sheep. By the aid of this these can be greatly multiplied on a given quantity of land, affording increased returns in dairy products, beef, wool and mutton. There will be a consequent increase in the volume of manurial agencies for keeping up and increasing the productive power of the land on which beets are made one of the series of crops. So certain are these results as shown in France, Germany and other States, that it is safe to assume that the culture of the beet, with reference to the production of sugar, will become a prominent feature in the agricultural operations of a considerable section of the American Union. Though much of the alluvial land of the Eastern and Central States is adapted to this department of Agriculture, its greatest development is likely to be made on the vast prairies of the West. There the soil is of the right texture—free from the impediments to cultivation found in more easterly sections—so deep as to meet all the requirements of a vegetable which goes low down in the earth in search of that nourishment essential to its perfect development.

MR. GLEASON'S INFANTADO RAM.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

MR. GLEASON'S INFANTADO RAM.

Mr. Rollin Gleason, Benson, Vt., thus writes:—"My four year old ram was bred by myself; got by Mr. E. Hammond's Silver Mine; grand sire bred by Mr. Hammond, and got by his ram Sweepstakes. Dam bred by myself and got by Sweepstakes, as above; grand dam purchased of W. R. Sanford and got by Hammond's Wooster. He sheared 26 lbs. of wool this spring.

LAMB DROP IN ILLINOIS—DEATH OF TEGS.

We clip the following from a letter to us (April 27,) from Samuel P. Boardman, Esq., Lincoln, Illinois. He is one of the best shepherds and ablest writers on sheep husbandry in our country:

"My own lamb drop has been very satisfactory this spring—more so than for two or three years past. Very few unripe, immature lambs have dropped. Generally they are good and strong, and, so far, we have raised a large per cent.

"On the other hand I have been suffering from an unusual and, to me, mysterious, loss in yearlings—tegs. My tegs, ever since weaning time, have been fed and handled better than any other of my flocks; have had the use of two large sheds, 90x26 feet, and have had timothy hay in racks, and corn, either shock-corn or in troughs, constantly by them; and, in fact, have been in splendid condition. Notwithstanding, ever since about March 15th, have been dropping off; even now, although out on good grass, (tame grass,) in a 140-acre pasture, peg out at the rate of two or three per week.

"Had they ever been on short keep at any time—from the time they were dropped, or in any way have ever had a "backset,"—I should have charged their loss to that account.

"Those dying now have what *is called* blind staggers, viz: run around blindly by themselves two or three days previous to kicking the bucket. Among my other sheep I have met with only about the usual loss. From what I hear, however, I think that generally, in Central Illinois, men have lost more sheep this spring and during last winter than usual."

[We are convinced, from the accounts which continue to reach us, that the mortality among tegs has been unusually large throughout the country. Some of the best flock masters in New York have met with very severe losses. The dividing line between under-keeping and over-keeping is a narrow one, and it is equally dangerous to deviate from it in either direction.—Ed.]

RECENT LOCAL SHEEP SHEARINGS, &c.

Lake Co. (Ill.) Sheep Shearing.—This took place at the barn of J. L. Williams, in Benton, May 15th, under the supervision of appropriate committees. A sumptuous dinner was provided, at the house of DeLong Williams, by the numerous ladies present. About 100 sheep were exhibited.

* Those marked with a star the committee found were properly tagged.

Some of the ewes in the above table were suckling lambs, while others were dry; but in the hurry a full and correct account was not kept.

The committee report that one lot—that of J. H. Eddy—was "in a somewhat wet and dirty condition," which, so far, rendered the competition unequal. The officers of the Society are—E. D. Ferry, Pres't; DeLong Williams, Sec'y.

Hopewell, Phelps and Seneca (N. Y.) Sheep Shearing Festival.—This was held at the house of L. A. & J. Page, in Seneca, Ontario Co., May 18th. The accommodations were excellent. The day was cold and uninviting, so that not half the sheep on exhibition were shorn. Many ladies were in attendance, and they prepared a sumptuous dinner for all present, numbering about two hundred persons. The following were the results of the shearing:

Horace Arnold, *Pres't.*

Murray Benham, *Sec'y.*

Washington Co. (N. Y.) Sheep Show.—The exhibition was largely attended; there were about two hundred sheep shown, and about thirty sheared publicly on the grounds. Time of growth of fleece was considered, but weight of carcass was not. The premiums were awarded as follows on shearing:

Heaviest fleece from ram lamb to E. L. Campbell,—weight 18½ lbs.; 11 mos. growth.

Heaviest fleece from ewe lamb to H. W. Beckwith,—weight 13¾ lbs.; time of growth 1 yr. 15 days.

Heaviest fleece from two year old ewe to O. Collis, (no competion)—weight 14½ lbs.; time of growth 11 mos. 26 days.

Heaviest fleece from two year old ram to Baker & Harrigan,—weight 20¾ lbs.; time of growth 11 mos. 26 days.

The classification is as follows:—Div. A, as regards quality of wool; B, quantity of wool; C, quantity and quality combined with symmetry of carcass.

In Div. A premiums were awarded on ram lambs to H. W. Beckwith; on two year old ram to H. C. Rice; on ewe lambs to E. P. Hardin. In Div. B premiums were awarded on ram lambs to Gen. Kingsley; on rams two years old to C. G. Mason; on yearling ewes to Baker & Harrigan. In Div. C (this is the highest division, and the premiums double that in A and B, and a second premium is added,) 1st premium on ram lambs to Baker & Harrigan; 2d to Fred'k Braymer. 1st on two year old rams to Hotchkiss & Stoddard; 2d to Wm. Lyons. 1st on ewe lambs to E. L. Campbell; 2d to Fred'k Braymer. 1st on yearling ewes to Baker & Harrigan; 2d to Wm. Lyons. 1st on breeding ewes to Fred'k Braymer; 2d to Baker & Harrigan. The ram "Sweepstakes" premium to I. Davy of Vermont. The ewe "Sweepstakes" premium to Wm. Root of Vermont.

The entries were largest on ram lambs. The get of Stowell's "Golden Fleece," Sheldon's "Don Pedro," Hammond's "Green Mountain," and Baker & Harrigan's "Young Gold Drop" competed. The prize was carried off by "Cashier," the get of Hammond's "Green Mountain," and the property of Baker & Harrigan.

Condensed Correspondence, Items, &c.

Samples.—We have received a number of these, which will receive attention in our next issue.

Garget.—"S.," Pittsford, Vt. The disease you mention is doubtless Garget. For remedies see Practical Shepherd, pp. 158, 330.

Gold Mine.—L. J. Burgess of North Hoosick, N. Y., has purchased the interest of D. W. Percey in this celebrated ram, and is now his sole owner.

Pale Disease.—J. S. & S. R. Elder, Elder's Mill, Beaver Co., Pa. The disease you describe in your tegs is what is known under the name of Pale Disease. No adequate remedy for it has been discovered.

Inflammation of the Lungs.—W. A. Ferris, Millport, N. Y. As you describe the disease among your sheep we judge it to be inflammation of the lungs. For treatment see Practical Shepherd, pages 325 and 326.

Sore Eyes.—"S.," Pittsford, Vt., writes that some of his lambs were taken at a week old with sore eyes, which rapidly grew worse; "that he washed them with green osier (a decoction we presume) with very satisfactory results."

Large Fleeces.—F. H. Dean, West Cornwall, Vt., writes us that his old ram, "Little Wrinkly," sheared 29¾ lbs.; weight of carcass, 113 lbs.; age of fleece, 9 days less than a year. A yearling ram sheared 18¾ lbs.; carcass, 87½ lbs. He was dropped April 12th, 1866, and sheared May 1st, 1867.

Castrating Rams.—S. Herrington, Garrattsville, ——, writes that for twenty years he has practiced castrating old rams and lambs, by using sticks, as is done in the castration of horses; that he has never lost one, and entirely prefers this mode to any other. We would give his process, but several of the words are too illegibly written to enable us to make them out with certainty.

Docking Lambs.—"S. L.," West Millgrove, Wood Co., Ohio, asks, "1st. Is it right to dock lambs? Were they not made right? 2d. Is it necessary? Does it improve their looks or make them more comfortable, or have a tendency to keep them cleaner? (The last our correspondent does not admit.) 3d. Is it profitable, so long as it causes the loss of two to four ounces of wool?" We have given *our* opinion on the subject in the Practical Shepherd, p. 161.

Selling Wool.—J. W. Zigler, Rolling Prairie, Idiana complains that the local wool buyers in that region do not do justice to the growers, and he asks what the latter should do to get a fair price for their wool. If the fair market price *cannot* be obtained of local buyers, put up your wool clean, sack it nicely, put that of same quality in each bale, and forward it to a wool merchant or broker of character in New York or Boston, to be sold for you. If your lot is not large enough for this, unite with your neighbors in sending.

Inflammation of the Brain.—H. H. Antriss, Ft. Wayne, Indiana, mentions the death of some of his sheep, which were apparently healthy and in good condition, by a sudden attack of "spasms and high fever." He thus describes one case:—"I found her in spasms or fits, and not able to rise. If I put her on her feet she would stand and throw or draw back her head almost over on her back—her eyes glistened, and she appeared to be as unconscious as a person in a fit. She shook as if in ague, grated her teeth and frothed at the mouth. She had perhaps fifty fits, and died in twenty hours. I gave her quinine for the fever, lard, and lard and vinegar, and thinking of poison gave her all the warm milk I could pour down, which she appeared to swallow with difficulty." This certainly looks like a case of poison, but we cannot form any definite opinion without knowing to what poisons the sheep could have been exposed, and without a knowledge of the post mortem appearances. If not the result of poison, it was doubtless a severe affection of the brain—very likely inflammation of the brain. We think the sheep should have been bled very freely from the head (at the *supra orbital foramina*) or jugular vein, at the middle of the neck, and a dose of epsom salts at once given, and followed by an additional dose in five or six hours, until the bowels were opened.

Dairy Department.

"WHAT WAS THE DISEASE?"

Eds. Rural:—I noticed the article in the Rural of the first inst., under the above caption. Mr. Macomber does not reveal to us a very thorough post-mortem examination. Yet judging from what he does reveal, it is my opinion the disease was in the commencement simply inflammation of a portion of the udder, (caused by obstruction in the teat, perhaps,) which terminated in gangrene, (incipient mortification.) The swelling upon the back part of the udder, extending up to the tail, was of course effused serum. If I am correct in my opinion that gangrene or mortification did occur, then the rational inference would be that the immediate cause of death was from the absorption of the *putrid* or decomposed fluids. Putrient absorption would of course poison all the circulating fluids, and thus derange the absorbent system—hence the effusion of serum upon different parts of the the body and the formation of sores upon the mucous membranes. The forcing of a knitting-needle into the teat aggravated the disease. Whenever it is decided to force an opening into a teat it ought not to be done with anything more harsh than a small, flexible *bougie*, within which a wire may be inserted if necessary. The treatment should have commenced in the first place with an active purgative. The indication to be fulfilled at this critical juncture is to reduce the quantity of circulating fluids, in order to make room for the suppressed lacteal secretions. This, common sense teaches us, can best be accomplished by the use of active purgatives, which will of course more effectually and safely than anything else carry fluids from the system.

The treatment in such cases may properly be called *vicarious*. We call upon the bowels to remove a portion of the fluids which the udder in its diseased condition is unable to do. After the operation of the purgative, diuretics should be resorted to for the same purpose. As to local treatment, fomentations, &c., are the best.

Lyons, N. Y., 1867. E. Mink, V. S.

DAIRY ITEMS.

Cheese Vats, Coolers, &c.—M. W. M., Des Moines, Iowa, intends going into the cheese manufacturing business, and wants to know where he can get a vat, cooler and heater for the purpose. He will probably get the information from some of the Cheese Associations in Illinois. We have none near here from which to obtain the knowledge sought for.

Milk Dairying in Maryland.—One of the editors of the Cultivator, writing to that paper from Baltimore, gives the results of the dairy farm of Ross Winans, Esq. of that city, for the year ending April 30th, 1867. The milk sales for that period amounted to $37,630 71. Stock sold during the same time, added to the milk sales, made an aggregate of $49,616 79.

Making Cows Run.—Boys, in the busy season, are generally sent to the pasture to drive up the cows. Often they have an adjourned game at ball to play, or a fish to catch, hence, if not specially cautioned and watched will "put the cows through on the double-quick." This is a bad practice. It injures the health of the animals, vitiates their milk, and diminishes the flow of it. Cows in warm weather, and with distended udders, should never be hurried in this way.

Cows as Milkers.—A communication in the Vermont Farmer sums up briefly what the writer considers the main points of excellence or defect in several breeds of cattle. The Durham Short-horn gets the preference, on the whole, for milking and beef-making purposes. The Devons are beautiful, but rather too small—milk from the cows rich, but limited in quantity. The Ayrshires about the same size, but better milkers. Herefords poor for the dairy, but good for work and beef. Alderney and Kerry not fit for a grazing region or general farm purposes. The Dutch are not as symmetrical as the Durhams, but fully their equals at the milk pail.

Hints about Butter.—The warm weather having come, farmers should pay extra attention to the subject of butter making. The first requisite is of course good cows, but whether good or indifferent, it is important in the next place to have everything pertaining to making butter *clean* and sweet. The milker must be cleanly as well as the pails, pans and churn. If otherwise, to make good butter—an article fit to be eaten—will be out of the question. But there is something else wanting to insure success. The butter, when taken from the churn, must not be slighted—left half worked, with globules of watery matter exuding from it. This must be got out, for if left in but a short time will elapse before the butter will become sour and rancid, and not fit for table use, nor indeed any other. Work clean, salt judiciously and evenly, and good butter can hardly fail to be the result.

Rural Notes and Items.

The Season, Crops, &c.—The weather is at last *seasonable*—warm, settled, sunshiny and summer-like. For the past ten days vegetation has made rapid progress upward and outward, and Nature is rampant and radiant in garden, orchard, field—everywhere that flowers, plants, vegetables, grass, grains, etc., can grow. After a nine months' reign fires and overcoats are out of fashion, and we reckon linen coats and straw hats may be used again, for at least a brief season, in this region, yet there is little danger that woolen clothing will ever prove a drug in this latitude—whence we infer that the new clip of wool will ere long *fetch* more than it will now *bring!* Judging from the past, coal monopolists and dealers in fuel generally, may also "hope on," though their occupation is temporarily gone.

Though the season is remarkably late, farmers have much cause to "rejoice and take courage"—for by persistent and well-directed efforts they may yet reap bountiful harvests of most crops, even in regions where the prospects were very disheartening a month ago. Good crops of grass and grain are almost assured over a great portion of our widely-extended country, while fruit and other crops promise a full average. Taking the whole country, and all kinds of crops, into the account, our facts and reports in regard to the growing crops, and crop prospects generally, are more favorable on this tenth day of June than we have had at the same period in a decade of years. We therefore congratulate producers upon the great change in their prospects—from despondency to rejoicing, or cause therefor—and the country and consumers upon the probability that plenty (as well as peace) is likely to prevail.

The Wool Market—Will open at low figures compared with prices a year ago; so commercial journals and dealers say, and with reason, this time. But we beg growers to remember that the journals which favor manufacturers and speculators annually, about this season, prophesy low prices for the new clip, while buyers as uniformly "play off," paying the lowest possible figures on the start. Hence, though prices may rule low through the season, those who have good merchantable wool are not advised to hurry its sale, as prices will be more likely to advance than recede after the opening of the market. Good wool in good condition may not prove a bad article to keep awhile,—yet growers must be guided to a great extent by their own judgment and circumstances.

Items from Michigan.—"P. C. D." writes us from Hillsdale, Mich., June 3d, that the "season there is one of unusual occurrence, being cold, wet and backward. Considerable corn was planted three weeks ago and is but just coming out of the ground. Much seed has rotted; some not yet planted; and this on the light soils, where in order to have the Dent corn mature it is thought planting must be done by the 15th of May. A Sheep Shearing Fair was held at Hillsdale, June 1st, and as fine sheep shorn as any section can boast of. Fine rams are owned about here which cost their owners from $150 to $5,000. Mortality among sheep has not been as great as one year ago, when they died by scores. Wheat crop promises well though somewhat injured by the heavy rains for a month past. We badly need a good wheat crop, as that of last year was a total failure, and the year before the wet spoiled it. The prospect of a fruit crop of all kinds is very promising, though the blossoms are late in making their appearance.

Sheep Now and Last Year.—The question is mooted as to whether there are, or will be, as many or more sheep this year than during the past one. A step in the direction of solving the problem is made by the Ohio Farmer. A reliable correspondent of that paper states that the number of sheep returned to the auditor of the county of Portage, 1866, was 137,633; while the number for 1867 is but 124,427, showing a falling off in a single county of 13,427. A like decrease over the State would show a loss of one million of sheep in Ohio alone.

Dogwood and Planting.—"The Practical Farmer" concludes, and no doubt correctly, that much labor and expense might be saved were farmers to be guided in their planting operations by the blossoming of certain trees. The late J. R Poinsett of South Carolina, stated that when the "dogwood" came into bloom it was time to plant corn. As this shrub is common to all the States it would be a good indicator for the purpose mentioned. Had this guide been followed the present year, much replanting of corn ground would have been avoided.

Rain-Falls.—The average fall of rain in the State of New York, during the months of April and May the present year, was 8 and 96-100 inches. Last year the aggregate for the same time was 3 and 63-100 inches. In 1863 the fall was 8 and 47-100, in '37, 7 and 34-100; in 1838, 7 and 45-100; and in 1848, 8 and 11-100 inches. It will be seen that 1848 was but a trifle behind 1867 on the score of vernal rains.

Death on Rats.—"Agricola," in the Masachusetts Ploughman, thinks the best way to kill rats in a cellar is to put sulphur in a kettle, place it in a barrel with one head out, set fire to the sulphur after placing a slazy cloth over the top of the barrel. The quantity of the sulphur should be small, else the fumes from its ignition will drive out the occupants of the house as well as the rats.

Fruit Items From Ohio.—"An Old Subscriber," Mentor, Lake Co., Ohio, writes:—"Here cherry, pear and peach trees were all in full bloom the 10th of May, apples on the 20th. We now have cherries and strawberries as large as peas, although it is the most backward season known by the *oldest inhabitant*. Last season, cherries and peaches were in full bloom April 29th—apples on May 9th."

Flour and Wheat.—Wheat from California, which recently sold in New York for $3.60 per bushel, is down to $3 there now, with a downward tendency. Flour, of course, has an inclination in the same direction. Those who have wheat to sell may groan; those who want to buy, and have little money to do it with, will feel like giving their beavers an airing.

Horse Fair—Seneca Falls.—A Horse Fair is to be held at Seneca Falls on the Fourth of July. They have a fine coursing ground, and as the track is being put in good order the inference is that fast horses are expected there on "Independence Day."

Wheat in Georgia.—The wheat harvest has commenced in Georgia and the yield and quality are said to be of a superior character.

HORTICULTURAL.

UNFRUITFUL ORCHARDS.

We know of many young apple orchards in Western New York which are of sufficient age, and the trees are of sufficient size, to bear remunerative crops of fruit; yet the owners and cultivators of them, as yet, have received no adequate return for the labor and expense incurred in establishing them. What is the reason? Is it because the varieties cultivated are of unfruitful habit until they arrive at mature age? or has the growth of wood, induced by the fertility of the soil and the system of pruning adopted, been so great as to preclude the bearing of fruit? Doubtless to some extent both reasons are good, but chiefly, we think, the excessive growth of wood precludes the attainment of fair crops of fruit.

Our cultivators, as a class, practice but little that system of pruning which is adapted to bring a tree into a bearing condition. They are usually content when the orchard makes a good growth of wood and apples healthy and vigorous, thinking that in the future the reward will come in proportion to the amount of wood grown. If the trees are large, they must at some time produce large quantities of fruit. Perhaps so; but it is weary waiting, and "a bird in hand is worth two in the bush." and we think a majority would much prefer moderate crops of fruit as soon as the trees attain sufficient size to support their weight without injury; and we think, also, if such crops can be grown, it will be better for the interest of the fruit grower, and no detriment to his orchard. We do not advise over-cropping in any case, if it is possible, but reasonable and moderate production.

Now, it is a fact that apple trees may be forced into moderate bearing at a very early stage of their growth, by pruning, and we advise owners of thrifty young orchards to avail themselves of this art, and cause them to produce some fruit. "Prune in the winter for wood and in the summer for fruit," is an axiom, and let us act upon it. Pinch the growing shoots on a tree in the summer, bend down the branches, thrust down the sharp spade into the ground and sever the roots—in short, aim to check the circulation of sap, making the growth less vigorous, and fruit buds and spurs will be produced and fruit will grow. Aim at the life of the tree, and straightway it produces fruit and seed that its kind may not perish from the earth. This is care, and not hard labor; the work must be done in the summer, when other farming operations demand much attention, but the orchardist who does it faithfully and understandingly will find his reward.

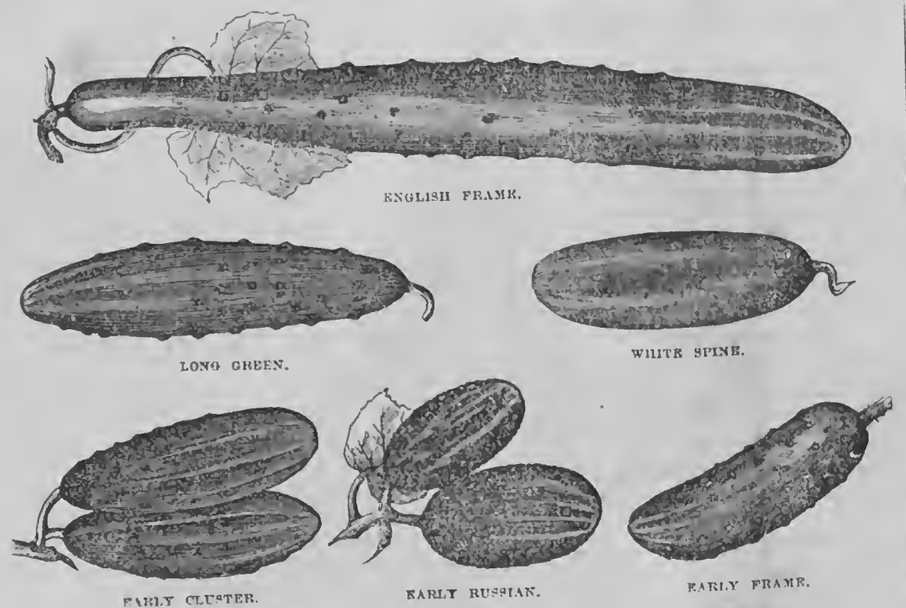
FRUIT-DRYING HOUSE.

H. M. M., of Augusta, Washtenaw Co., Mich., writes us for a plan for a fruit-drying house, as "a permanent institution," on the farm. We saw a model of one recently which seemed to combine all the points desirable for the purpose of fruit-drying. It was in the form of a house—or rather roofed like one — but its internal arrangements are not remembered with sufficient distinctness to make a description intelligible. The nearest approach to it is an outline of such a house, published in the RURAL of September last. The dimensions can be varied to suit the wants or taste of the party interested. "It is a house in miniature, about as large as an ordinary bureau, containing eight slat-bottomed drawers—each holding half a bushel of fruit. A sheet-iron cylinder, about two feet in length and ten inches in diameter, is put under the house, in which fuel is placed for heating. A pipe is connected with the cylinder and passes up by several angles through the drying house, terminating in a small chimney at the top. By means of ventilators the temperature can be ganged with entire accuracy.

CARE OF LAWNS.

Keep the walks clean and tidy. That gives a finish to their general appearance which is indispensable to a favorable impression on the beholder. Weed them, for weeds *will* appear on the best kept lawns. Perseverence in this on those newly seeded will soon give them the finish of old lawns. If moss appears, apply a dressing of lime and manure. Mow often: we know a gentleman who practiced feeding off his lawn with sheep with good success. The flock was kept in the barn-yard over night and turned onto the lawn in the morning; their appetites were sharp and the grass was soon reduced to a proper height. The shrubs, flowers, &c., were protected. A dressing of salt in the fore part of summer is often productive of good results to the lawn; put on one pound to the square rod just before a rain.

Plant Again.—Many persons who do business on a systematic plan will probably find that, in following out the rule this year, they have missed a figure or two. Especially will this be the case with those who planted their gardens early, as the seed will in many cases be found to have rotted in the ground instead of springing up and growing as was expected. In such cases the only remedy is to do the work over again as soon as possible. The season is so far advanced now that warm weather will seem to be a matter of necessity. A few days of it will suffice to bring up a second planting with a promise of maturity between this and autumn. Therefore, if the first planting of the garden has failed, as in some instances we know it has, try again and trust to providence and good tillage for remunerative results. The old adage, "better late than never," applies here without forcing.



CUCUMBERS—IN FIELD AND GARDEN.

This vegetable has become a somewhat extensively cultivated field crop for the purpose of supplying the market with pickles, and it is generally a remunerative one to the grower. We give illustrations of some of the best varieties. Early Frame, Early Cluster and Early Russian, are valuable to grow for pickling. They are of small or medium size, usually grow in pairs, and are productive. The English Frame, White Spine and Long Green, are esteemed for the table and market purposes. The White Spine is a great favorite in the New York market.

Regarding the cultivation of cucumbers as a field crop a correspondent of the Prairie Farmer writes sensibly as follows:

"There are but few farmers who have not some land that will grow cucumbers for pickles more profitably than anything else. New land, planted once or twice, is the very best for the crop, being comparatively free from weeds, and needing no manure. The ground should be dry or well drained, so that no water can stand on it, as the vines are easily scalded by letting water stand close to them; or drowned by having too much water on the roots.

The best time to plow the ground is about the 5th of June, just before planting; this does away completely with the first crop of weeds, and gives the cucumber a good start before the new growth of weeds commences. The best time to plant is from the 8th to the 15th of June; by that time the striped bugs, the cucumber vine's worst enemy, are gone, and you are free from their ravages.

The best way to plow the land is in narrow lands, about twelve feet wide, plowing so as to throw each bed as high as possible in the center, and leave the dead furrows as deep as possible for drainage. After harrowing go over the ground again and plow out your dead furrows well; and if you intend manuring the crop, use the one-horse plow and make a furrow about three inches deep in the middle of the ridge or bed, and drop a pint of well-rotted horse manure every three feet each side of the first furrow, and drop your manure every six feet in the side rows; then you are ready to plant. Cover your manure two inches deep, and plant your seeds over it, covering them one inch deep. When you plow the side furrows, plow so as to throw the soil always to the center of the bed; use from seven to ten seeds to the hill; this will use about one and a quarter pounds to the acre.

By planting in this way, you leave plenty of room for the pickers to get at the vines, without trampling on them, and at the same time, it allows the vines to grow and run together, which keeps them from being blown into winrows, which is often the case when planted six feet each way. When hoeing, thin them out, leaving four of the best plants in a hill, and when there are but two plants left in the hill, add seed again; hill up the vines as much as you can when hoeing. Those having plenty of manure can use it broadcast; but manuring in the hill alone requires only one-tenth of the amount otherwise requisite, and at the same time is equally beneficial.

One hand can attend to picking two acres by picking all the time, and should pick from seven to ten bushels a day. I have my crop picked by the bushel, and pay 12½ cents per bushel for picking; use baskets, and have the cucumbers salted as soon as possible after being picked; do not cut the cucumber from the vine, but break off the stem with your fore-finger and thumb, close up to the cucumber. A good crop yields from 150 to 250 bushels to the acre, or if sold by the thousand, when they will be picked smaller, will often yield 150,000 to the acre. The best variety of cucumbers for pickles are the Short Green and the Early Frame."

A GOOD PLANTING IMPLEMENT.

Eds. Rural:—Being a good deal old-maidish about having my garden plants make their appearance like a military company on dress-parade, I have made a little implement with which I plant the seeds in a line as straight as a string, at equal distances apart and of any required depth.

I took an old broom handle, sharpened the end, and at two inches from the end fastened a circular piece of tin, three inches in diameter. Pressing this into the soil I have a hole an inch at the top, a quarter of an inch at the bottom, and just two inches deep. The tin leaves an impression which tells me where to make the next hole. A row of holes thus made, by the side of a straight drawn garden line, drop a seed in each, and a *shove* of the hoe lightly over will fill them. Thus have I planted my late peas and early beans, and expect in time to see them come up uniformly. A similar implement may be easily made to test shallow or deep covering; instead of the tin put on a wooden collar, with as many points as you desire to plant (corn, for instance,) in a hill, making the pegs or points of such length as desired. With such an implement any one may experiment with the satisfaction of knowing (not guessing) how deep he does plant.

I do not claim that this implement is of any utility in field planting, but for experimenting and gardening it may seem of use to some of your readers who may be unfortunately as old-maidish as YORICK.

AN ENEMY OF THE TOMATO PLANT.

For several years I have observed that my tomato plants had a fever and ague look for some time after setting out, but failed to find any adequate cause. This year, and within two or three days past, a closer examination revealed the fact that they were being devoured by the common snails, and that some of the plants were wholly destroyed by them. So as they had become the enemy of my friend, I became theirs, and in this short period near one hundred and fifty have had a cessation of hostilities on my few plants. They also exhibit the same voracity on my cabbage plants and cauliflowers. A dissection gave token of aldermanic corporosity, filled as their stomachs were with the green herbage they had lately gathered. As fifty quit the business night before last, and only ten last night, I infer there is a chance that their mission may prove a failure.

Syracuse, N. Y., May, 1867. S. N. HOLMES.

Fruit in the West.—Reports from the West, the region of St. Louis, state that the frost early in May did considerable damage to strawberries, currants, and the like, but the larger fruits were not injured, and the prospect of a fine yield was never better.

Horticultural Notes and Queries

Strawberry Fair.—The Hammontonians, N. J., are to have a Strawberry Fair and Festival at Hammonton on the 18th of June. The "Culturist" of that place says the strawberry vines there are literally burthened with fruit.

Flower Named.—(H. R. S., Akron, Ill.) The plant or flower forwarded by you for a name is known botanically as *Cypripedium Candidum;* familiarly as Lady-slipper. The specimen is one of the rarest of the family, and most prized by florists.

Horticultural Exhibition.—The Horticultural Society of Pennsylvania is making extensive preparations for a grand floral display in their new hall at Philadelphia, commencing Wednesday, June 29th, and continuing ten days. In extent and magnificence the display is expected to surpass any thing of the kind hitherto attempted in this country. The avails of the show are to be applied to the completion of this Floral Temple.

A Great Show of Flowers.—For the past two weeks the lovers of flowers in this vicinity have been immensely delighted with the exhibition of tulips on Mr. Vick's grounds in this city. The like of it is not, and probably never has been in this country. Fifty thousand gorgeous and various colored tulips in blossom at once and in one garden, are worth making a journey from the Atlantic to see. On one part of the grounds we noticed a bed of German pansies in which was a complete variety of colors and single flowers of rare excellence. Mr. Vick is planting out a very large area to annuals and other flowers, and his grounds will become widely celebrated for their floral beauty.

Bugs on Currants.—A Correspondent, U. H., Highland, Ill., sends us some bugs which he thinks destroyed his currant crop last year, and is fearful, from the number on his bushes, that they will repeat the operation the present one. The bug is known to Entomologists as the *Coccinella;* more familiarly as Lady-bird, Lady-bug, Lady-cow and Lady-fly. They are supposed not to feed on the currant bushes but on a minute insect, the Aphis, of which they are an active enemy. We are acquainted with no depredator on the currant but a worm of that name which feeds upon the leaves, thereby destroying the organ of circulation through which the sap flows for the sustenance of the plant, the remedy for which is sprinkling the bushes with air-slaked lime or the powder of white Hellebore. Either of these will prove effective.

Plums—Curculio.—Mrs. C. D. Sailsbuy, Coventry, Chenango Co., N. Y., states that by applying a thick coating of whitewash made of lime slaked with water, with a broom, from the roots of a tree to the limbs, when in blossom or soon after, will protect the fruit of the plum from the ravages of the curculio. She adds:—"It was by accident that I found it out,—happening to whitewash a small plum tree while performing the operation on some other trees. Being surprised with fruit where none had ever ripened before, I was led to try it again. I have used it three years, leaving one tree and whitewashing the rest to see whether it was in the lime or the season. Every time the whitewashed trees were laden with fruit, while the one left without whitewashing never ripened a plum. A neighbor has tried it with the same result."

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Boiled Indian Pudding.—1 qt. sweet milk; 1 pt. corn meal. Heat half the milk, scald the meal, thin and cool with the rest. Add 4 well-beaten eggs, salt, fruit—dried or fresh, or raisins, to your taste. Boil in a bag three hours; have the water boiling when put in. Eat with cream and sugar.

To Keep Lemons Moist, for Weeks, in Warm Weather.—Cover with buttermilk or sour milk. I have lemons fresh and nice for lemonade, one year old, that I sliced into a can and covered with plenty of white sugar. If one is sick in winter, they are so nice.

To Clean and Polish the Teeth.—Prepared chalk, or chalk ball, is the best of anything I ever tried, used with a brush. Why won't every one clean their teeth, or keep at proper distance.—Lucy, *Spafford, Onondaga Co., N. Y.*

Wholesome Summer Drink.—"A Practical Farmer," in the Germantown Telegraph, proposes for a summer beverage, the following: Take of the best white Jamaica ginger root, carefully bruised, two ounces; cream tartar, one ounce; water, six quarts, to be boiled for about five minutes, then strained; to the strained liquor add one pound of sugar, and again place it over the fire; keep it well stirred till the sugar is perfectly dissolved, and then pour it into an earthen vessel, into which you have previously put two drachms of tartaric acid, and the rind of one lemon, and let it remain till the heat is reduced to a lukewarm temperature; then add a tablespoonful of yeast, stirring them well together, and bottle for use. The corks must be well secured. The drink will be in high perfection in four or five days. This is a very refreshing and wholesome beverage, and one which may be largely partaken of without unpleasant results, even in the hottest weather.

Egg Mince Pies.—Boil six eggs hard, shred them small, shred double the quantity of suet; then put currants, washed and picked, one pound or more if the eggs were large; the peel of one lemon shred very fine, and the juice, six spoonsful of sweet wine, mace, nutmeg, sugar, and a very little suet; orange, lemon, and citron candied.

Graham Biscuit.—Stir with a spoon tepid water into Graham flour until the dough is as soft as can be kneaded; knead and roll out, and cut into cakes three-quarters of an inch thick. Lay them on baking pans, so as not to touch, and bake quick, brown and crisp, in some 25 minutes. Put on a grate to cool.

Graham Gems.—2 eggs; 1 quart milk; 5 teacups flour. Bake quick, and as soon as made, in iron pans; make into small biscuits not to touch each other. They are excellent.

Good Ginger Cake.—One cup molasses; 10 tablespoons hot water; 6 do. melted shortening; ½ do. soda; ½ do. ginger. Bake in bread-tins.

Cheap Soap.—Not that which costs the least per pound, but that which lasts the longest, removes the dirt the easiest, and bleaches the whitest. Experience has shown that Pyle's O K Soap is the article; and being free from impurities, is equally good for bath and toilet. Send to the grocers and give it a trial.

To Consumers.—It costs you no more to buy a full pound of D. B. De Land & Co.'s *Best Chemical Saleratus* than it does other kinds that only weigh 14 or 15 ounces.

New Advertisements.

THE SHIP GOLDEN STATE
HAS ARRIVED WITH
22,000 HALF CHESTS
OF THE
FINEST
JAPAN TEAS
OF THE
GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey Street.

These Teas by the ship Golden State were purchased direct from the Japanese factor, and in consequence of the magnitude of the transaction, were transferred at about half the usual commissions. This is the largest cargo ever imported from Japan by about seven thousand packages. By this operation, the Great American Tea Company put these Teas into the hands of the consumers with but one very small profit—an achievement in commercial enterprise seldom if ever before attained. These Teas are acknowledged, both here and in Japan, as being the finest full cargo ever exported from that country.

ALSO,

The Ship George Shotton
Has arrived with
12,000 HALF CHESTS
Of the
FINEST FOOCHOW
OOLONG TEAS.

The cargo of the ship George Shotton is the second in size that has ever come to this port from Foochow (which is the finest Black Tea district in China.) These are the "*finest first-picking contract Teas*"—rich, fresh, and full-flavored.

The receiving of these two large cargoes by the Great American Tea Company for their own trade is acknowledged by the mercantile community as the largest transactions ever made in this country. They were deemed of so much importance, that the fact was telegraphed to all the principal commercial papers in the country by their correspondents here, and thus appeared as an important news item throughout the United States at the same time.

The importance of these transactions in this market is thus noticed by the oldest and most respectable commercial paper in this city—the *N. Y. Shipping and Commercial List*—which says:—"The Trade have again been startled by the arrival of two large cargoes of Teas to the Great American Tea Company—the ship Golden State, from Japan, with 22,000 half chests; and the ship George Shotton, from Foochow, with 12,000 packages." And in another place it says:—"The recent large operations of the Great American Tea Company have taken the Trade by surprise, and are rather a novelty in this market. The taking up of two cargoes within a week, comprising 12,831 packages of Black and 22,349 packages Japan, for immediate consumption, at a cost of about a million and a half of dollars, indicates the extensive nature of the Company's business, and deserves a passing notice at our hands."

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor.

To give our readers an idea of the profits which have been made in the Tea Trade, (previous to the establishment of the Great American Tea Company,) we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lines, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Consumer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages, and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than small dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

By our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores (of which class we are supplying many thousands, all of which are doing well,) can have their orders promptly and faithfully filled; and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 31 and 33 Vesey-st.

Parties sending Club or other orders for less than thirty dollars had better send Post-Office drafts, or money with their orders, to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company have selected the following kinds from their stock, which they recommend to meet the wants of Clubs. They are sold at Cargo Prices, the same as the Company sell them in New York, as the list of prices will show.

PRICE LIST OF TEAS.

OOLONG (Black,) 70c., 80c., 90c., best $1 ₱ ℔.
MIXED (Green and Black,) 70c., 80c. 90c., best $1 ₱ ℔.
ENGLISH BREAKFAST (Black,) 80c., 90c., $1, $1,10, best $1,20 ₱ ℔.
IMPERIAL (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ ℔.
YOUNG HYSON (Green,) 80c., 90c., $1, $1,10, best $1,25 ₱ ℔.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ ℔.
GUNPOWDER (Green,) $1,25, best $1,50 ₱ ℔.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

The Great American Tea Company (established 1861) is recommended by the leading newspapers, religious and secular, in this and other cities, viz.:

AMERICAN AGRICULTURIST, N. Y City. Orange Judd, Editor.
CHRISTIAN ADVOCATE, New York, City, Daniel Curry, D.D., Editor.
CHRISTIAN ADVOCATE, Cincinnati, Ohio, J. M. Reid, D.D., Editor.
CHRISTIAN ADVOCATE, Chicago, Ill. Thomas M. Eddy, D.D., Editor.
CHRISTIAN INTELLIGENCER, E. S. Porter, D.D., Editor.
EVANGELIST, New York City. Dr. H. M. Field & J. G. Craighead, Editors.
EXAMINER and CHRONICLE, New York City. Edward Bright, Editor.
INDEPENDENT, New York City. Wm. C. Bowen, Publisher.
MOORE'S RURAL NEW-YORKER, Rochester, N. Y. D. D. T. Moore, Editor and Proprietor.
THE METHODIST,—Geo. R. Crooks, Editor.
TRIBUNE, New York City. Horace Greeley, Editor.

We call attention to the above list as a positive guaranty of our manner of doing business; as well as the hundreds of thousands of persons in our published Club Lists.

CLUB ORDER.

St. Charles, Winona Co., Minn., March 28, 1867.
To the Great American Tea Co.,
Nos. 31 and 33 Vesey Street, N. Y.

I send you a fifth order for Tea. My neighbors think I have "learned the road," and insist on my doing the business for them. I will simply say that all kinds of Tea received from your company have given complete satisfaction. Your Teas are fresh—well flavored—strong. The Merchants can furnish for $2,25 to $2,50 per pound no better article than you give us at $1,25.

Truly yours, in behalf of Tea-drinkers,
SAMUEL S. BEMAN.

4	℔. best Uncolored Japan,	Joseph Dewy, at $1,25..	$5,00
4	best Green,	C B Randall, at $1,25	5,00
4	do do	Andrew Main, at $1,25	5,00
4	do do	Wm H D, at $1,25	5,00
2	do Uncolored Japan,	Henry Hall, at $1,25	2,50
2	Gunpowder,	A Brown, at $1,50	3,00
1	best English Breakfast,	N H Swift, at $1,20	1,20
2	Green,	Wm Smith, at $1,25	2,50
2	do	Geo Smith, at $1,25	2,50
2	Young Hyson,	John L Downing, at $1,25	2,50
2	best Oolong,	James Ross, at $1	2,00
4	Uncolored Japan,	Jacob Beman, at $1,25	5,00
3	best Oolong,	H Talbot, at $1	3,00
2	do Mixed,	A Turner, at $1	2,00
2	Green,	Geo Watson, at $1,25	2,50
2	best Oolong,	G B Pratt, at $1	2,00
1	Green,	Charles Grube, at $1,25	2,50
4	do	A W Bingham, at $1,25	5,00
1	best Gunpowder,	H C Parrott, at $1,50	1,50
1	English Breakfast,	do at $1,20	1,20
1	Young Hyson,	do at $1	1,00
	Total		$61,90

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the Great American Tea Company.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

TAKE NOTICE.—Clubs and quantity buyers are only furnished from our Wholesale and Club Department.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

SEED TIME.

When the Summer time begins
Farmers dip their plumpest seed
Out of spacious granary bins,
To supply the sower's need.

And, o'er the dark furrowed field
Broadcast strews he to the wind—
Praying for a bounteous yield
For the reaper's hand to bind.

On the planters swiftly tread
Hiding kernels bright as gold—
That shall rise from their deep bed
To reward them fifty-fold.

And while sun-browned farmers till
To supply the nation's need,
Smaller hands, by the door-sill
Fit the soil for finer seed.

Thus together they shall blend
Useful toil, and beauty too;
Thus together to the end
Shall walk men and women true.

Seed time;—Aye and every hand
Soweth either wheat or tares!
They shall reap a victory grand
Who discern and share earth's cares.

Home, May, 1867. ERIE.

Written for Moore's Rural New-Yorker.

DRESS.

BY I—— BUCKBEE.

Eve, was created in beauty, walked hourly amid the gorgeous hues of tropic plants, viewing her own loveliness reflected in sparkling fountains. What wonder that there should spring up in the woman's soul a laudable desire to clothe herself like the lily, and adorn herself in the waxen purity of the tiny nodding "innocence?" What better could her hands find to do than constitute herself a member of so goodly an assemblage? The tinted corolla of that lily might have been like her vital blood and juices, colorless; but an artist, whose pencil is beauty, willed it otherwise. He formed the flowers, in their very uniqueness, so varied that the individuality of each shall never be lost; then touched them with colorings which earth's artists have not. And there they stand! His work! Are you going to call them abominations? Did He not place them in the arid sands of your life?

Thus Divine Wisdom says—"A tintless sky, a barren sand, is a weariness to the soul; beauty and adornment are compatible with all innocence and charity." Why then judge woman culpable for answering the desire which the Great Artist has implanted in her being for furthering His design, by beautifying whatever her life passes over? Are you not ready and proud enough that she beautify your parlor with pictures, and all the little trickeries of ornamental handiwork, which enliven the tone of your home and give you a certain consequence in the eyes of visitors? Would not the husband have the clothing of his household lily as decorous and tasteful?

Many husbands, to their glory be it said, would and do; but there are those whose purse strings are their vital breath, touching which, be it but the value of a gingham apron, and they agonize. The wife of such a husband may ask where is her new merino to come from for 1867? Where is the three dollars which is to "do over," her five-year-old bonnet? What will Marianne do for a *basquine*, which all the girls had, long ago? And so the wife's love spoils.

But possibly the wife is an extremist, and an exacting vanity pulls pitilessly upon the *willing* purse strings. The *Queen* of beauty could scarce expect to "find favor in her husband's eyes," whose adornment was made up of his very life-blood.

The extravagance of American wives is proverbial; but we believe there are few women who would wantonly feed their vanity on illegitimate spoil. Are not you, the good American husband, *indiscreetly* indulgent? Do you credit your partner with a business understanding respectably proportionate to your own? Actual administrator of your internal affairs as she is, is she even kept in knowledge of balance? Is the alarming deficit of the ledger kept to yourself, or promptly told to the partner, that she may help to balance ere it is too late? How should she know that the costly shawl she buys, in keeping with the other wardrobe you bought her the other day, is going to ruin you, unless you warn her in time.

Dress is an early agent of civilization, and the laws of supply and demand, the levers which move the world. When the French Empress causes revolution by determining to wear skirts plain, in place of those exquisitely embroidered, the world doesn't pause to note the ominously unproductive silence of the Provencial loom, or cast a pitying glance at the hordes of working men thus suddenly become non-producers, but gives a superficial laugh and jogs on. The child who buys a toy is unconsciously increasing the possibilities of that industrious mechanic on the far off Rhine, who keeps his floor littered and his brain racked, day and night, in the manufacture of his life-supporting wares.

But would not men live without the necessity of all this wear and tear of finery? Doubtless savages do, not civilized nations. While the lilies of the field are clothed in russet brown, imperial purple, royal blue, and dazzling scarlet, they are not over-dressed. The violet is individual in her empurpled beauty. She is not complicated in a bewildering network of rose and lily, which obscure and enfeeble her identity. Simplicity is the law of nature — consistency, a *necessity*. An impoverished soil may not produce the Bignonia, but some modest flower will thrive and be a thing of beauty.

Follow nature. Be consistent enough to compass your possibilities and circumstances. Learn the faculty of devising, managing, making the most of everything, and you can *afford* an economy which can be both utilitarian and becoming.

WOMEN AS SCULPTORS.

Prosperzia di Rossi, Maria Dominica, Anna Maria Schurmann, Maria Von Steinbach, Felicia de Faveau, and, in our own time and country, Miss Lander, Harriet Hosmer and Miss Stebbins, are among those who have proved woman's ability to succeed in sculpture. Sculptors, it should be understood, seldom if ever work with the chisel. They prepare models of clay or wax, and superintend the imitation of these in marble.

Sculpture is the chastest imitation of nature, and the highest expression of the form and spirit of beauty known to art; and with woman's fine sensibility and exquisite perception, there is no reason why she should not succeed in it. M. Lagrange, in urging the forming of Government Schools of Design in France, says:—"Painting, engraving and sculpture, encouraged as music and dancing are, promise equal success; they provide a more assured support, a more substantial renown, and especially a calmer and chaster existence. It is her *works* as artist that claim the public eye. Her person is sacred. A young girl, chaste and pure, she may watch by the fireside; a wife and mother, she may educate her children under an honored name. Praise, if she deserve it, will so reach her as to be accepted without a blush." Miss Lander, Miss Hosmer and Miss Stebbins find their art lucrative. Modeling is the inventive part, that requires genius: copying is but mechanical.—*Employments of Women.*

FASHIONS IN HAIR.

Celia Logan, in a recent letter to the New York Citizen, presents some very excellent ideas about female fashions. Here is what she says about "Waterfalls" and "Coils:"

Should waterfalls be placed on the top of the head? No; they would have a prettier effect if worn on the tip of the nose, like the black pudding in the fairy tale.

What is a coil? It was known to the ancients, *vide* "Romeo and Juliet." Juliet places her hand on the back of the nurse's head and says, "Here's such a coil," thinking by this little flattery to coax the old grumbler into telling her what her young man said.

"Snapps, and snails,
And puppy dogs' tails,
And that's what big coils are made of, made of."

What do they most resemble? A decomposed door-knob smashed on the crown of the head, or rolled into three sausages somewhat lower down; frizzled hair looks like a door-mat in a fit.

We agree with Celia.

A PLEA FOR WOMEN.

A foreign writer asserts that the only way to discriminate clearly what practical careers women are and are not fitted for, is free permission to try. We have no doubt of the real and substantial distinction between the real powers of men and women, but we have a very strong opinion that in the very many fields of both thought and practice hitherto denied to women, provinces specially adapted to their powers will be discovered, which would never be discovered until the attempt of women to fit themselves for these fields of exertion had been practically tried. We have heard the opinion of one of the most eminent of our living physicians that one of the new lady physicians is doing, in the most admirable manner, a work which medical men would never even have the chance of doing. Mothers bring their children to her in hundreds to consult on really important points, on which they freely admit that they would never have thought of taking advice at all had she not been accessible to them.

A TRUE LADY.

I was once walking a short distance behind a very handsomely dressed young girl, and thinking, as I looked at her beautiful clothes, "I wonder if she takes half as much pains with her heart as she does with her body?"

A poor old man was coming up the walk, with a loaded wheelbarrow, and just before he reached us he made two attempts to go into the yard of a small house; but the gate was heavy, and would swing back before he could get through.

"Wait," said the young girl, springing lightly forward, "I'll hold the gate open." And she held the gate until he passed in, and received his thanks with a pleasant smile, as she went on.

"She deserves to have beautiful clothes," I thought, "for a beautiful spirit dwells in her breast."—*Little Corporal.*

A curious legend was told by the Rev. C. W. Bingham to that portion of the party which, at the recent meeting of the Archæological Institute in Dorset, was fortunate in visiting the little Norman chapel of St. Catherine, at Milton Abbey. The legend was that on a certain day in the year the young women of Abbotsbury used to go up to St. Catherine's Chapel, where they made use of the following prayer:—"A husband, St. Catharine; a handsome one, St. Catherine; a rich one, St. Catherine; and soon, St. Catherine." Mr. Beresford Hope, who at these gatherings is always equal to any emergency, modestly proposed that all gentlemen and married ladies should retire from the church, so as to afford the young ladies present the opportunity of using so desirable a prayer.

A novel and commendable feature of a recent fair in Canada consisted of two essays by young ladies on the qualifications of a farmer's wife.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

SPRING.

The tardy Spring has come at last,
The waiting Earth to bless;
And Earth, forgiving the delay,
Responds to her caress.

The loving breezes whisper low,
The listening branches hear,
The trusting buds unfold, and shed
Their perfume far and near.

The meadows don their robes of green,
The cherries dress in white—
The peaches, blushing, strive to hide
Their naked limbs from sight.

The birds sing soft as lovers speak,
And drowsy hum the bees;
God's fragrant promissory notes
Are hung on all the trees.

Earth, like a perfumed altar, breathes
Its incense on the air,
And Nature's voices all unite
In melody and prayer.

DRIFT-WOOD AND DRIFTING.

Spring has come, the freshet is here. Let us stand on the bank of the river. The ice king's hands are unloosed. See the drift-wood coming down the stream,—whirling, eddying, now back, now forward, one stick jostles against the other, one partially sinks, the others rush on and crowd it down.

How like a crowd of human beings rushing to see a fire. The selfish feeling predominant; no matter who is hurt if I only get a place. Or like an honest man, unfortunate in business; if his creditors would give him time he might pay them all; but the same feeling is with them. I'll get my pay whether any one else does or not, and the poor man is harrassed until his means are exhausted, his family beggars, and he perhaps ends his days in misery. If the Golden Rule had been more faithfully observed all would have been well.

Let us look again at the drift-wood; still it comes, large and small, crooked and straight, limbs and body-wood, logs and rails, sticks, poles, whole tree-tops, roots, old boxes, some useful and some good for naught, but all drifting at the mercy of the current. See that tree-top caught in the eddy—I see those smaller ones in its wake, fairly caught, no power of their own to get away; there they lodge till some human hand draws them out or breaks the barrier. How like some phases of human life. Look at that young man, who has thrown off parental restraint, and is being carried down the stream of dissipation, with course as aimless as the drift-wood, following in the wake of other and older ones. But mark, he will be caught in the eddy of destruction with them, and cannot be saved without the help of some mightier power.

Oh! this aimless drifting of men and women, or, if there be any aim, only to know who shall be greatest,—not in the kingdom of heaven, but here on earth. Man can sort and cull the drift-wood. If he only sort and cull his thoughts and wishes, choosing the good, casting away the evil. If he would have an aim, and that aim be to live for others as well as himself, and not drift on till death overtakes him, how much better.

Let us learn another lesson from the river. "Still waters run the deepest." It is not those that make the most noise and greatest show in the world that are the best or wisest. Where the water is shallow you can see the wake of every rock and stick, but it requires a great deal of skill to steer clear of them. If we are drifting aimless and unheeding, we shall surely be caught, but if we use the oar of perseverance, we may possibly escape.

In the deep water, what is at the bottom makes no ripple on the surface. So with man; if he have a firm and implicit reliance on the Divine Power he will not be moved by every wind that blows. His life is not aimless, he has a motive power, is not drifting down the stream,— but can row up or across at his will. Instead of bending to circumstances he can make them bend to him. He realizes that this world is indeed the ante-room wherein we may strive to put on the heavenly regalia. Una.

Clay, N. Y., May, 1867.

ENGLISH ELOQUENCE.

There is a very general impression in America that English eloquence is of the slow and stolid kind—a mixture of stammering, coughing and torpor. If, indeed, a traveler might take the style of speaking prevalent in the House of Commons, and still more prevalent in the House of Lords, as representative of English Eloquence, this impression would be very just. It is almost unparliamentary to be fluent; it is rather derogatory to one's credit for statesmanly moderation to speak straight on without hemming and hacking; and it is quite unlordly, because smelling of a professional aptitude, to march through a long sentence without losing the way—without stumbling over Lindley Murray, and possibly the queen herself—without the speaker coming out of the sentence at last nearly where he went in.

But popular eloquence in England — the eloquence of the platform and the pulpit — is a very different thing. The most distinguished preachers of the metropolis—Newman Hall, Spurgeon, Noel, Capel Molyneaux, Dr. Cumming—speak not only without note but without hesitation, and display an instantaneous command of varied and fitting diction that would be remarkable even in nations more celebrated for their fluency. The same is true of the political orators and popular lecturers of England. The successful ones do not read; they speak. That eloquence which goes on paper crutches — that eloquence which cannot swim without the bladders of manuscript—is not much esteemed here; and the men who sway English audiences do so by a marvelous facility in extemporaneous speech; by sentences that rush like a torrent; by a manner quite as impassioned as any to be seen among the fiery children of the young Republic.—*Independent.*

YOUNG MAN, YOU ARE WANTED.

A lady-writer, under this heading, hits off the young men as follows;—"A woman wants you. Don't forget her. No matter if you are poor. Don't wait to be rich; if you do, ten to one if you are fit to be married. Marry while you are young, and struggle up together. But mark, young man, the woman don't want you if she is to divide her affections with a cigar-spittoon or whisky-jug. Neither does she want you if you don't take care of her and the 'little afterthoughts' which are pretty sure to follow. Neither does she want you because you are a man, the definition of which is too apt to be — an animal that wears bifurcated garments on his lower limbs, a quarter-section of stove-pipe on his head, swears like a pirate, and is given to filthy practices generally.

She wants you for her companion, a helpmate; she wants you to have learned to regulate your appetites and passions; in short, the image of God, not in the likeness of a beast. If you are strong in a good purpose, firm in resistance to evil, pure in thought and action, as you require her to be, and without which inward purity neither of you are fit for husband and wife; if you love virtue and abhor vice; if you are gentlemanly, forbearing and kind, and not loud-talking, exacting and brutal — young man, that woman wants you; that modest, fair, cheerful, right-looking, frank-spoken woman, we mean, who fills your idea of maiden and wife. It is she that wants you; marry her when you like, whether she is rich or poor; we'll trust you both, on the above conditions, without any further security.

INTEREST OF BIOGRAPHY.

Parton, in an unpublished letter gives the following interesting account of the beginning of his "biographical" career:—"From early in life I have wondered why such men as Dickens and Thackeray should choose to expend themselves upon fiction, when they could find true stories to tell so much more interesting; and I often used to say, some day a man will come along and create a new branch of the fine arts—Biography. But it never crossed my mind that I should ever attempt anything of the kind, for I knew very well that to make a real and vivid biography would require an amount and minuteness of investigation which could never be repaid in money, nor done without money. One day, while I was employed in the Home Journal, I dined at a restaurant with the Mason Brothers, publishers, and the conversation fell upon books. I happened to say:—'What an interesting story might be made out of the life of Horace Greeley, if a person could only get at the facts.' One of them said: 'Why don't you do it?' I replied that it would require an expensive journey and a year of labor, and I could not afford it. A few days after, they offered to advance the money requisite; and so the book was done. In New Hampshire and Vermont, I went from house to house making inquiries. The book sold thirty thousand copies, and yielded me $2,000 above the cost of producing. Upon that most insufficient capital I had the temerity to set up in business as a book-maker."

ELEGANCE DOES NOT MAKE A HOME.

I never saw a garment too fine for man or maid; there was never a chair too good for a cobbler, a cooper or king to sit in, never a house too fine to shelter the human head. These elements about us—the gorgeous sky, the imperial sun, are not too good for the human race. Elegance fits man. But do we not value these tools of housekeeping a little more than they are worth, and sometimes mortgage a house for the mahogany we would bring into it? I had rather eat my dinner off the head of a barrel, or dress after the fashion of John the Baptist in the wilderness, or sit on a block all my life, than to consume all of myself before I got to a home, and take so much pains with the outside that the inside was hollow as an empty nut.

Beauty is a great thing, but beauty of garments, house and furniture, is a very tawdry ornament compared with domestic love. All the world's elegance will not make a home, and I would give more for a spoonful of hearty love than for ship-loads of furniture, and all the gorgeousness that all the upholsterers in the world could gather together.—*Selected.*

Uses of Adversity.—You wear out your old clothes.

You are not troubled with many visitors.
You are exonerated from making calls.
Bores do not bore you.
Sponges do not haunt your table.
Impostors know it is useless to bleed you.
You practice temperance.
You swallow infinitely less poison than others.
You are saved many a debt, many a deception, many a headache.
And, lastly, if you have a true friend in the world, you are sure, in a very short space of time to learn it.

The last meal of the day should be taken at least four or five hours before retiring to rest, and perhaps six would be preferable.—*Alcott.*

Sabbath Reading.

Written for Moore's Rural New-Yorker.

WHO ARE THE BLEST?

"Who are the blest?" said a little child,—
A creature so fair that the angels smiled,—
As he knelt him down, with an artless grace,
And a holy light on his meek young face.
When the dreamy shades of the twilight dim
Had hushed his voice to a low, glad hymn,
And stilled the gush of his childish glee,
To say his prayer by his mother's knee.

"Who are the blest?" and the earnest eyes,
In the tender glow of the twilight skies,
In the holy hush of that Sabbath night,
Grew deeper still, with a wondrous light;
And he looked away through the pensive gloom
That settled down o'er the cottage room,
Till his glance beamed bright with a strange unrest,
The yearning gaze of the early blest.

"The blest, my boy?" and the mother smiled,
As her heart went out to her sinless child;
And her eye grew dim, and her voice grew low,
As she pushed the curls from the fair young brow;
For she thought of his sweet and quiet ways,
And turned away from the questioning gaze,
And the answer fell from the lips apart,
"The blest, my boy, are the pure in heart."

Closer she folded the little one,
And talked to him long in a quiet tone,
Of the glorious light of the City of God;
Of the golden streets, and the pavements broad,
Till the long lids drooped o'er the wondering eyes,
And shut out the light of their soft surprise,
And he slept on her bosom, and dreamed the rest
Of the beautiful story about the blest.

'Tis Sabbath eve—through the open door
The moonbeams fall on the cottage floor;
In the dreamy hush of the silver light
The mother is sitting alone to-night.
Her meek heart bows as she lifts her eyes,
And looks away to the burning skies;
And a deep joy steals to her tranquil breast,
For the child she hath loved is with the blest.

H. M. G.

THE DIVINE LAWS.

Men are watchful, sagacious and persistent in managing affairs pertaining directly to external life; on the farm, in the workshop, the counting-room, or wherever their work is, they seek to know and obey the natural laws of agriculture, mechanism, trade, or whatever realm they work in.

This is right and wise, and success in all these things is commendable; for they are good in their place, helps to culture and enjoyment, means to noble ends. Well, said Paul, "The love of money is the root of all evil,"—meaning thereby that when these material riches were made finalities, and the means made ends, then came spiritual death and poverty, the senses overlaid the soul, and the transient hid the permanent. Mark the Apostle's sagacity; for he does not condemn material wealth *of itself*—only that blind love thereof, which perverts and dwarfs our lives.

But amidst the work of the fields, the hum of busy mechanism, the bustle of the shop, and the reaching over the wide sea for rich cargoes from foreign lands, men forget that there are other laws, natural, yet spiritual and divine, to be known and obeyed, that the soul may be fuller freighted than the ship, the heart bloom as a garden, the "still, small voice" of conscience be heard, thus the inner life be healthy and the gates of the eternal world stand in sight.

More lasting than the granite rock is the law of justice; when the fine gold shall become dim the law of liberty shall shine with perfect luster, and when the riches of this solid earth shall fade away and be forgotten, the wealth of the immortal life shall still increase.

Blazing out in the mighty words of the Prophets, breathed in the sweet speech of the Nazarene, speaking from historic pages, pulsing in the very air and whispered by the "voice within," comes the one great lesson, that man or nation, for true greatness, for safety, for highest success, for *being* and *doing* most and best, must obey the Divine Laws, and that without such obedience wealth and power and pleasure are as "apples of Sodom," pleasant to the eye, but bitter as ashes to the taste.

Blessed are the Meek.—When misunderstandings and constrained intercourse arise between friends or the members of a family, they seldom pass away without a crisis or an explanation; but these are dangerous periods of revolution, and for once the thorn is extracted, it is three times driven deeper. Ah, why then is it so difficult thoroughly to forgive, thoroughly to forget? We cherish the memory of the wrong that we have suffered, we brood over it, we demand satisfaction, we desire to be revenged, and thus we warm serpent eggs in our bosoms. Blessed are the peace makers! Blessed are the good that forget and forgive without thinking at the same time, "forgive."—*Fredrica Bremer.*

Prayer by the Alphabet.— A devout, ignorant, Spanish Papist felt the need of adding private prayers of his own to the pater nosters; but he did not know how to do it. So every morning, humbly bending his knees, and lifting his eyes and hands to heaven, he would devoutly repeat the alphabet, and then add, "O Good God! put the letters together to spell syllables, to spell words, to make such sense as may be most to Thy glory and my good."

The Mainspring.—Here is one of Spurgeon's best sayings, illustrating the fact that there may be morality without religion, but cannot be religion without morality:—"Teaching men morals is as though I had a clock that would not go, and I turned round one of the cog wheels; but faith takes the key and winds up the mainspring, and the whole thing runs on readily."

Educational.

PRACTICAL EDUCATION.

An "Alumnus Subscriber" writes us from Hamilton College, that "practical common sense must rest (not rust) in the people," and the lack of this in our schools is their great deficiency. The first object of education is to fit young men and women for the practicabilities of life, and abstract or theoretical knowledge is good only as a means to that end. A teacher must be a practical man, and a patient, trusting friend to his pupils; able to control himself, and thus to control others. He urges less of routine without thought and theory divorced from practice, and says:

"I remember—it was years ago—a rebuke I received from my Professor for not committing to memory a certain theoretical principle I could not understand. I was told that it was my business to commit the words first, and let the understanding follow. I well remember, too, the indignation with which I received the unjust rebuke—a feeling I cannot now cease to cherish towards all similar assertions. The mind is a mental workshop, and it is not by a mere acquaintance with the identity and use of its various machinery that I can at once work intelligently and effectively. I must first get myself accustomed to the handling and disposition of the various parts of the machinery, then I can prepare for actual service. Strive to unite the practical with the theoretical, in whatever system of education you may adopt. It is time enough for students to grapple with the theoretical and metaphysical departments when they have learned first to think, and then to act according to their thoughts."

MICHIGAN SCHOOL SUPERINTENDENTS.

At a State meeting of County School Superintendents, at Jackson, Michigan, the following resolves were passed:

That County Superintendents hold, before the commencement of the winter schools, one Institute in as central a place as possible for the whole county, to continue four or five days, or longer, if expedient.

That instruction in such Institutes be made as practical as possible in its character, and be confined mostly to modes of teaching and to the branches taught in the common district schools, and that the instruction be given for the most part in the form of class recitation and teaching.

That, in addition to the Central Institute, the superintendents meet the teachers of each township for one day at least, to give them such instruction and advice as the peculiar condition and needs of the schools in each township may require.

That examinations of teachers be held at the close of the Central Institutes, and that attendance at such Institutes be taken into account in estimating the qualifications of teachers, especially for receiving certificates for the first and second grades.

That where county teachers' associations do not exist, superintendents aid and encourage the formation of such associations in connection with the Institutes.

CURIOSITY SHOP.

Let the teacher provide himself with a convenient box or drawer to contain the curiosities, and invite the children to bring to school everything they can of this nature. The teacher may himself bring specimens of all the kinds of fruit within his reach. He must take pains to bring all the tropical and foreign productions which he can obtain. He can easily procure cloves, cinnamon, nutmegs, pepper, coffee, dates, figs, prunes, lemons, oranges, pineapples, &c. These he may exhibit, one at a time, from morning to morning, and in answer to the inquiries of his scholars, he will inform them where they grow and how they grow; will describe the climate, soil and people of the countries in which they grow; the methods of culture, of gathering, of preparing for market, and the value in the countries where produced.

If skillful at drawing, he will draw upon the board the plant as it appears at different stages of its growth. He will, when talking about all the native grain and fruits, give the geographical limit of successful cultivation, and explain their value to the people who raise and use them.—*The Normal.*

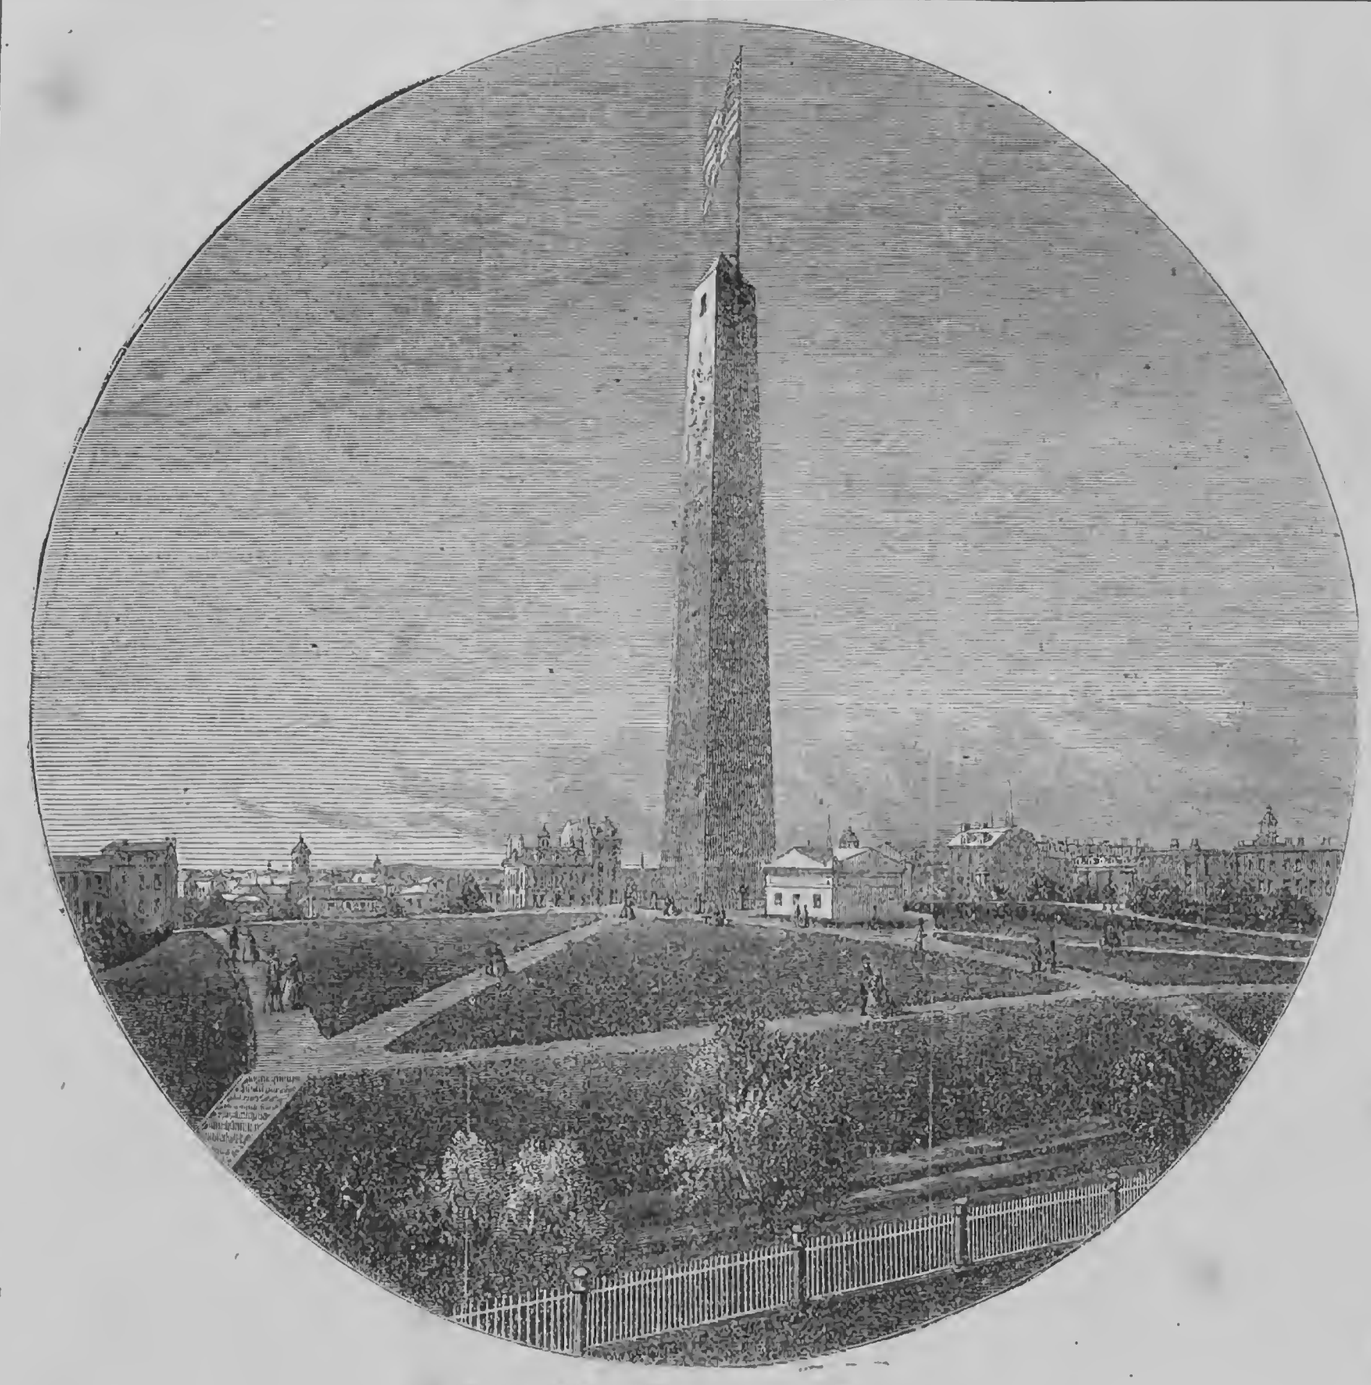
FIRM KINDNESS.

Professor Owen says in a recently published letter:

"The result of that experience induces me unhesitatingly to assert that the law of kindness is infinitely more powerful than the law of force or fear, and that in the few cases where the former fails it would actually be best for the school to be rid of the boy, and the army to be rid of the man. Whenever a youth is doing an injury by his precepts and example to fellow students, and injuring an institution more than the institution is benefitting him, then I think it becomes a duty, after fair warning and admonition, to separate him by suspension, dismissal or expulsion. Whenever a soldier is creating insubordination among others, and various admonitions have failed to correct him, it is better to have him court-martialed and drummed out of the regiment, if practicable, rather than to risk his contamination.

The great majority on leaving the schools cease to improve, because improvement is not within their reach without laborious study.

The Lyceum of the State Normal School at Ypsilanti, held its public exercises, May 18th, with great interest.



BUNKER HILL MONUMENT.

As this number of the Rural dates so near the 17th of June, the ninety-second anniversary of the battle of Bunker Hill, we fitly give a view of the monument.

On that battle-day 2,000 British soldiers crossed the narrow neck of water from Boston to Charlestown, to drive off Col. Prescott, who had taken position, in the night, on Breed's Hill, which commanded the city, with 1,000 patriot soldiers. The attacking officers had an aristocratic contempt for these vulgar "rebels," and the regular soldiers little dreamed that raw militia could stand their onset. Neither understood the firm resolve of men determined to be free, and the British leaders saw their men recoil and retreat from that fatal breastwork time after time with amazement. At last, the loss of ammunition compelled the defenders to retreat, but the British loss was 1,060 men, while their own was less than half that number, and the enemy learned to respect and fear the brave "Continentals."

The real Bunker Hill is close by and connected by a ridge with Breed's Hill, an eminence 75 feet above the water on which stands the monument, in the ground once enclosed by that famed breastwork. It is a square shaft of gray Quincy granite, 221 feet high, 31 feet across at the base, and 15 feet at the top. A winding stairway inside, leads up to a chamber just below the summit, from the windows of which is a noble view of the great city, the hills and fields westward, the harbor with its forest of masts, and the broad Atlantic reaching far eastward.

In 1825 the corner stone was laid, on the 17th June, in the presence of Lafayette, and a host of spectators. It was seventeen years in building, at a cost of $150,000. The architect and overseer seated himself on the great cap-stone, as it was swung up in mid-air and safely landed on the lofty summit, amid the cheers of the assembled crowd.

June 17th, 1843, Daniel Webster gave an address at its dedication, the President and Cabinet, and a vast audience being present.

Various Topics.

STREET SIGNS IN PARIS.

Paris takes good care of her military renown. The room in which I write fronts on the Rue de Rivoli, a name emblazoned on the flags of Napoleon's battallons. Leading from the Rue de Rivoli is the Rue Castiglione, another Italian battlefield. So also Wagram, Austerlitz, Eylau, Moscow, and other battlefields won by the troops of the first Napoleon are kept in remembrance. Nor are the deeds of valor of the troops of the present Emperor forgotten, but their record of glory is kept before the people in the boulevard Sebastopol, Inkermann, the point d'Alma, and point d'Solferino.

One would think, judging from street signs alone, that the people of Paris were very religious, and so they are in the matter of signs. There are nearly 200 streets which are named after the Saints. What an array of saintly names the street directory presents! Besides those commonly known we have Saint Eloi, Saint Andrew of the Arts, Saint Good and Saint Opportunity. In addition to the streets of the Saints, we may walk through the "Road of the Cross of the Evangelist," the "Cross of the Little Camp," the "Cross of the Wooden Wainscoting," or the street of "David's Small Tower." Names most sacred and names profane are indiscriminately used—names which it is almost a sacrilege to mention—the "Street of the Holy Spirit," and the "Street of Hell!"

Not only are such names given to the streets, but looking from my window I can see a sign over a store door with this inscription:—"The Shop of the Child Jesus." Further up the street the proprietor throws out in glaring letters the name of his establishment—"The Good Devil"—and to impress it upon you he has a pictured representation of his guardian spirit—an imp with a horned head carrying a carpet bag! Another proprietor has put up the sign of the "Poor Devil." It would require much space to give the curious nomenclature adopted by the Parisian shop-keepers; the above will suffice for examples.

But in our ramblings we may pass through the "Street of Ancient Comedy," "Street of the Beautiful Girls," "Street of the Little Shelf," the "Bouquet of the Camps," the "Basin of Copernicus," "Good News of the Miracles," "Street of St. Genevieve's Almond Trees," "Street of Woman Without a Head."

But with all this and much more of sentimentality, we come upon streets which bear such honored names as these:—"Rue Beethoven," "Rue Bellini," "Rue Auber," "Rue Rossini," "Rue Berauger," "Rue Franklin," "Rue Petrarch," "Rue Laplace." Generals, statesmen, poets, painters—great names in science, literature, art and jurisprudence—not only of France, but of all lands, are thus honored.

It is thus that we see along the streets, in the very signs which have been put up, the peculiar features of French character—sense and nonsense, wisdom and wit, seriousness and soberness—a strange mixture which defies analysis. —"*Carleton*," *of Boston Journal.*

TAKING COMFORT—BEASTS OR MEN?

A Western journal says:—A fellow at St. Peter, calling himself Joe. Waggoner, advertises to bet $25 that he can drink more of Veith's lager beer in two hours' time without getting drunk, than any man in Minnesota.

We see a notice of a cock-fight at Brighton between Syracuse and Rochester parties, in which $100 were spent, the feathered and spurred bipeds badly scratched, and the equally enlightened but less *plucky* bipeds looking on greatly delighted.

Whittier tells of finding a man lying flat on his stomach, in the Merrimac woods, unable to roll over from drinking villainous liquor. He shook the poor fellow and asked, "What are you doing?" Half awake, he grumbled, "Taking comfort."

Tastes differ, but we can only say, the higher up we get the richer and nobler these comforts. It's a long way from a pig to Humboldt. Every creature after its kind, but which do you like best?

THE OLDEST RELIC OF HUMANITY.

The oldest remnant of mortality extant is the skeleton of one of the earlier Pharaohs encased in its original burial robes and wonderfully perfect, considering its age, which was deposited, about eighteen or twenty months ago, in the British Museum, and is justly considered the most valuable of all its archæological treasures. The lid of the coffin, which contained the royal mummy, was inscribed with the name of its occupant, Pharaoh Mykerinus, who succeeded the heir of the builder of the Great Pyramid about twenty-two centuries before Christ. Only think of it; the monarch whose crumbling bones and leathery integuments are now exciting the curiosity and wonder of numerous gazers in London, reigned in Egypt before Abraham was born, and only about two centuries or so after Mizraim, the grandson of old Father Noah and first of the Pharaohs, had been gathered to his fathers! Why, the tide-marks of the deluge would scarce have been obliterated, or the gopher-wood knee-timbers of the Ark have rotted on Mount Ararat, when this man of the early world, lived, moved and had his being. His flesh and blood were contemporary with the progenitors of the great patriarch; his bones and shrivelled skin are contemporary with the nineteenth century; and the date of the Crucifixion is only about midway between his era and ours.

What a gulf of time is bridged, as it were, by those mouldering relics! Of all the resurrections effected by the archæologists, that of Pharaoh Mykerinus is undoubtedly the most extraordinary and interesting. When he flourished "remote antiquity" had jurs begun.

A Relic.—We were shown, a few days ago, by Mr. William Inscho of Jefferson township, Noble county, Indiana, a relic of "the olden times," in the shape of a pioneer powder-horn, upon which is rudely cut the following. We give it *verbatim:*

"I powder, with my brother Ball,
A Hero like, do conquer all.

JOHN CALL HIS HORN WOODSTOCK MASS: MARCH 21st 1758."

Several scenes suggestive of the then primitive condition of our country are also cut upon its surface. It is held in high estimation by Mr. Inscho, to whom it was presented by 'Squire Call, a descendant of the former owner.—*Ligonier Banner.*

Mr. Beecher's Novel.—The N. Y. Ledger announces that it will begin the publication of Henry Ward Beecher's novel in the next number. The title of Mr. Beecher's novel is "Norwood; or Village Life in New England." The Ledger remarks:—"It is said that on one occasion during Mr. Beecher's residence at the West, a committee from the church where he preached, called upon him to remonstrate against his saying so many witty things in his sermons. He replied to them, "Brethren, if you only knew how much I keep back you would never think of finding fault with me for what I say." In this story Mr. Beecher keeps back nothing. In it he gives full scope to all his faculties." "Norwood" is said to be Northampton, Mass.

An autograph of Oliver Cromwell, bearing his signature, "Oliver, P.," was recently sold in London. It was attached to a treasury warrant, dated December 20, 1665, for the payment of £500, for the benefit of the person named therein, "for his continued attention to the service of the Commonwealth."

Reading for the Young.

KINDNESS.

BY LEWIS DAYTON BURDICK.

A cheerful voice
Bids all rejoice,
Oft making cheerful and jocose
The melancholy and morose.

A friendly glance
Will oft enhance
Enjoyments of associates,
Increasing confidence in mates.

A kindly tone
Has power alone,
To drive much bitterness away,
Which else in human hearts would stay.

A helping deed
In time of need,
Makes such impression on the heart
As time can never make depart.

Greene, N. Y.

Written for Moore's Rural New-Yorker.

LOUIS ARCHER'S TEMPTATION.

BY SOPHIA C. GARRETT.

"Halloa, there, Henry Brown! What are you hurrying home so for? Stop a minute, I want to tell you about the spelling school tomorrow night."

"Father and mother have gone to Uncle Harper's to spend the night; so I'm in a hurry, Louis, as I have all the chores to do at the barn. Father says cattle and sheep ought to be well cared for this cold weather; and I'll not let them suffer when he's away. Run along with me, Louis, and we can talk on the way."

"You know, Henry, I mean to choose sides with Erastus Sibley. Everybody knows he is a first-rate speller,—one of the sure kind,—has not missed a word in the spelling book for two winters. Those hard words Mr. Barton finds in the dictionary puzzle him sometimes; but he hunts them up before he leaves the school house. I believe the fellow couldn't sleep a wink, after hearing a word he didn't know how to spell, until he learned it. I expect he will be an editor like Greeley or Raymond down in New York one of these days. Unless I study hard I shall cut a poor figure spelling against him. Of course his side will beat, but we must spell our best. I'll choose you first, and he intends to choose Simon Golden. Mr. Barton told us the pages from which he will give most of the words, and I want you to come over to our house to-night and study them with me."

"But Louis, as father is away, I cannot leave home. Come and stay all night with me and we'll master the lesson."

The boys separated, each going to his home, and early in the evening were together in Mr. Brown's sitting-room, busy with their spelling books. All the hard words were given to each other, and many more were sought in the dictionary. Louis Archer went home before daylight to help his brother fodder the cattle, and joined Henry on his way to school.

"Spell 'mnemonics,'" shouted Henry, as Louis approached. The word was promptly spelled, and a dozen more in rapid succession.

"I wish this was Saturday, and I'd ask father to let me go out fox-hunting with Mr. Colman," Louis said. "He always goes a hunting after such a light fall of snow as this. I like to hear him tell stories about that hunting trip he took out West last fall. He killed three bears and lots of small game besides."

"What are you doing out there in the snow, Henry; tracking a fox?" Henry saw a little piece of paper fluttering in the wind by the fence, and stepped from the path to get it. "Hurrah, Louis! Here's Mr. Barton's list of hard words all written down, ready for the spelling school."

"Good," cried Louis, "now we'll beat Erastus!"

The boys hurriedly read the carefully selected list and spelled them several times before reaching the school house. Mr. Barton sat near his desk reading a newspaper, unconscious of his loss. Louis and Henry were too much excited to attend to their ordinary duties. They copied the words from the paper on their slates and committed them. Louis meant to keep the list until noon, and then drop it unobserved into the teacher's desk. At recitation in arithmetic, Henry failed in his usual accuracy; his figures were poorly made, as his mind was not at ease. Conscience whispered, "Tell Mr. Barton you found his list of words." But he thought, "I dare not; for Louis will be angry. He is so anxious to win that he sees no harm in keeping it to ourselves." At recess, Henry told his thoughts to his friend, who resolutely said, "No, indeed! I won't be so foolish as that! I'll put the paper into his desk, and he'll never know anything about it."

"But he will suspect us if we spell those words so promptly."

"I don't care. I mean my side shall beat Sibley's; and you are not going to be so mean as to tell and spoil the fun. I won't speak to you again this winter if you do!"

Henry felt that it would be useless to say more, and went slowly into the school house. He saw the path of duty; but to walk therein would make Louis his enemy. Before noon he wisely resolved to do right, at whatever cost. When school was dismissed he walked out into the calm winter air. To his surprise Louis joined him and remarked, "I have been thinking the matter over, Henry, and find you are right. We *will* tell Mr. Barton the whole truth about it." The two boys went in, and Louis handed the paper to Mr. Barton. "Oh, sir, I was sorely tempted to keep that, but I knew it would be wrong."

"You have done nobly, Louis, in not yielding to temptation. My dear boys, if you would prosper, always scorn deceit and speak the truth. From the experience of a life that has numbered more years than yours, I assure you that the path of duty is alone the path of safety."

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JUNE 15, 1867.

NEWS OF THE WEEK.

From New York.

THE Orthodox Friends Yearly Meeting has delegates from New England, Pennsylvania and New Jersey. Addresses by Deborah Thomas, R. E. Douglass and others, with large attendance.

The Homœopathists' Convention is attended by delegates from all parts of the the Union.

Three tobacco factories in Keyport, New Jersey, have been seized by revenue officers.

Gen. Strain, Mexican agent, was serenaded at Staten Island, and said Mexicans demanded retaliation for the barbarous decree of Maximillian, and Juarez could not save him.

The imports of wool into New York for 1866 were 36,713,112 pounds; for nearly five months of 1867, 9,960,324 pounds.

The Annual Communication of the Grand Lodge of Free and Accepted Masons of this State commenced its session in New York the 4th inst. The attendance was larger than usual. Resolutions were passed condemning all gift and lottery schemes pretending to be for Masonic benefit. The Lodge adjourned the 8th.

The Inman line of emigrant steamers propose to stop at Newport, R. I., instead of New York, as they thus save $2.50 a head of port dues, and many of their passengers settle in New England.

From Washington.

THE House Judiciary Committee has adjourned to the 26th inst. Their vote on impeachment stood Boutwell, Williams, Thomas and Lawrence, for; Woodbridge, Eldridge, Marshall and Churchill, against. A resolve declaring the President's acts merit the condemnation of the people passed 7 to 2—Eldridge and Marshall voted nay.

White and colored voted peaceably at the city election on the 2d inst.

The public debt shows a decrease of $5,170,159.

The President has returned from his tour in the South.

From the West.

WADE'S Senatorial party were at the present terminus of the Union Pacific Railroad, 361 miles west of Omaha, the 4th, at Gen. Augur's camp. Two and a quarter miles of track was laid that day. Gen. Sherman started the 5th with Augur's command to look after the Indians along the stage route.

Eighteen inches of snow, and a heavy rain at Denver, from the 15th to the 20th May.

The Indians have Spencer rifles, and mean mischief.

The Christian Commission held a large meeting at St. Louis the 2d, on city evangelization.

The National Baptist Anniversaries at Chicago called together 3,000 strangers.

The ship Seminole cleared from San Francisco for New York with 14,000 barrels of flour.

The Sturgeon Bay Canal, one-and-a-half miles long, will connect Lake Michigan with Green Bay. A patent for 199,600 acres of land has been granted by the General Government to aid in the construction. This canal will shorten the distance between Green Bay and Chicago about one hundred and fifty miles.

Several wealthy citizens of San Francisco have organized a company with a capital of $5,000,000, with the object of encouraging and aiding immigration to the State by disseminating information about it in Europe. They also propose to establish manufactories.

Mr. Winchell, Geological Professor in the Michigan State University, with a number of the students, have gone to Lake Superior—geologizing.

Leavenworth, Kansas, is now a city of 30,000 inhabitants; Lawrence, 8,000 or 10,000; Topeka, the Capitol, 3,000; Ossawatamie is a mere village; Lecompton is at a stand still; Manhattan is a thriving village, and Salina is the termination of the Pacific Railroad. The population of Kansas is estimated to be about 250,000.

The Prairie du Chien Union says 20,000 bushels of wheat arrive there daily, and there must be more wheat in Minnesota and Iowa than speculators say.

From the South.

GOV. WELLS is preparing a protest against his removal by Gen. Sheridan, and his friends hope he may be restored.

The press and public at New Orleans are satisfied with the removal—the large majority.

Thomas J. Durant, a Louisianian now in Washington, was offered Gov. Wells' position by Gen. Sheridan, but declines.

At the decorating of graves of Confederate dead at Richmond, Va., by the ladies, 10,000 persons were present.

Gen. Thomas is called to Washington that the President may learn as to the true condition of Tennessee.

President Johnson, Secretaries Seward and Randall and others were at Raleigh the 4th, and were met by a large number of people, white and black. The best feeling was manifested. The monument to his father was dedicated with fit ceremonies, and the party left for Chapel Hill.

Gen. Pope disapproves of the action of a military officer at Mobile, in suppressing a newspaper for uttering alleged treason.

Gen. Schofield has issued an order for instruction of Boards of Registration in Virginia, based on Stanberry's opinion on the Reconstruction Act.

Gen. Longstreet publishes a letter advising the acceptance of the military bill and amendments.

Gen. Flanders has taken his place as Governor of Louisiana, Gov. Wells yielding to a military order of Gen. Sheridan. This action is approved at Washington by Stanton and Grant.

Latest European News.

IT is semi-officially known that Prussia will not be pledged against the future arming of Rastadt.

The plan for a Zollverein (customs union) for South and North Germany has been decided.

Czar Alexander is in Paris, and will visit London. Bismarck has asked release from office after the adoption of the Federal Constitution by the North German States, and the King assents to it.

Victor Emanuel and the Viceroy of Egypt will visit Paris.

Twenty-five Fenians were arrested at Dungarran (Ireland) and are in jail.

The Japanese ports of Yeddo, Osoca and Negota are open to Europe after January 1st.

The Sultan visits Queen Victoria in July.

A Pole named Beregouskoi, last week, shot at Czar Alexander in the streets of Paris while in his carriage. The ball struck the head of the horse of one of the Imperial grooms beside the carriage, who saw the assassin and urged his horse forward between the pistol and the Czar. The Pole was arrested while attempting to fire a second time.

Emperor Joseph of Austria, was crowned King of Hungary at Pesth the 8th inst.

The London Daily News says almost all the Government opposed in the Reform Bill is carried, and about all the Liberals asked, for popular rights, is gained, so far.

A MURDERER'S BRAIN.—Lemaire, a young Frenchman, murdered a girl his father was to marry, and showed no remorse to the last, seeming to regard himself as an anomaly of nature, and asking that his brain might be examined. The medical *savans* made the examination at the *Ecole de Medicine*, and found the brain well developed, showing extraordinary intelligence, but large in the regions of the destructive propensity. They gave it as their opinion that his sanguinary passion had been transmitted, and was transmissible like diseases of the body or blood—a decision which has a deep moral in favor of purity, virtue and harmony of character.

WOOL.—The growth and manufacture of wool has grown immensely during the last four years in the United States. Both in the quality of the wool and the excellence of the articles made, the manufactures of this country will compare favorably with a large portion of foreign importations, and it is reasonable to expect that ere long they will be able to rival the finest foreign fabrics. During the year 1866 the wool growth in the United States amounted to 137,000,000 pounds. We have sixteen hundred woolen mills, capable of working up 170,000,000 pounds of raw material.

THE ROTHSCHILDS TO OWN THE CATHOLIC CHURCH.—The Rothschilds, in 1865, loaned the Pope ten million dollars, receiving therefor security on the property of the Church. The next year, five millions more were advanced, and a second security taken at a higher rate of interest. This year the vacuum in the Pontifical treasury is six millions, and it must be filled in the same way. Thus the Jew is rapidly getting the available property of the Church under his control. The final ownership of the property is therefore a very interesting question.

A SIX WEEKS' OLD CITY.—The Union Pacific Railroad now runs three hundred miles west of Omaha to a station called North Platte. Six weeks ago there was not a house in that place; now, it is a flourishing town of six hundred inhabitants, and has a daily transient population of as many more. A $20,000 hotel has been erected, and is doing a "land office" business. The town, like all frontier towns, is said to be a fast one—supporting billiard halls, (one with six tables,) faro, monte and keno banks, and the usual "concomitants."

AMERICAN IRON IN 1866.—In the last year 939,956 tons of pig iron were made in this country. Pennsylvania produced the most, yet less than a fourth. Ohio came next, and the whole West made 162,000 tons. Of rails, new and rerolled 339,764 tons; of bars and rods 207,000 tons; and hand, hoop and sheet iron 142,000 tons were turned out, and also large quantities of castings. The western manufactures are growing in importance, but the importations are yet heavy, although our mines could supply the world.

TRAGEDY AT ALBANY.—On the 4th inst. Hon. L. H. Hiscock of Syracuse, member of the Constitutional Convention, was shot dead in the public room of Stanwix Hall, by Gen. G. W. Cole of Syracuse, who had suspicion of repeated dishonorable conduct by Mr. H. towards his wife. Gen. Cole made no effort to escape, and is in jail. He is a brother of Senator Cole of California, and had served in the war. Both have borne high character.

WEST INDIES.—The Cuban sugar crop will be ten per cent. short of an average.

A royal order has reached Havana reducing the value of slaves, which is considered a step towards abolition.

A rich coal mine has been found at San Christobel, in St. Domingo.

MEXICO.—Maximilian and his 15,000 men were betrayed and handed over to the Liberals by Lopez, a pretended intimate friend. He gave up his sword and asked for the treatment usual to prisoners of war, but wished to be the first shot if any one was to be. He is yet unhurt.

CANADA.—Thirty thousand Snyder Enfield rifles go to Canada for the volunteers.

Lord Monck will soon arrive from England. The Montreal officials are fully posted on the Fenian plans.

NEWS PARAGRAPHS.

A RAILROAD from Dunkirk to Warren and Pittsburg is talked of, to reach coal and oil by a feasible route by Jamestown.

IN London there is a baker's journal, and exclusive newspapers published for the benefit of the grocer, the oilman, the draper, the ironmonger, the chemist and druggist.

THE abolition of capital punishment is being agitated in Sweden. The Lower House passed a bill to that effect by a majority of 103 to 53. The Upper House rejected it, 39 to 38.

THE Bombay cotton crop for 1866-7 is reported to amount to fifteen million pounds sterling in value. Great improvement has been made by the natives in cultivation, cleaning and packing.

ROBERT HENRY HENDERSHOTT, well known as the "Drummer Boy of the Rappahannock," eloped with a merchant's daughter from Poughkeepsie. They were married at Newburgh. They are each nineteen years of age.

A TURTLE was exhibited in Norfolk, a few days ago, which the Journal says will make steak for the Board of Aldermen for some time. It weighed over 400 pounds, and measured 36 inches across by six feet long. It was caught on the North Carolina coast.

REV. MR. ALLISON of Milwaukee, has a lecture on the "Home of Evangeline," which is said by the local papers to be an exceedingly fine and interesting piece of composition. Mr. Allison is a native of Acadia, and is well prepared to write intelligibly of "Evangeline's" early home.

AT a freedmen's meeting in Greenville, Ala., a colored man defined his platform thus:—"I am in favor of all hands going to work and making plenty to eat, and keep less noise, then all will come right. I tell you the South is the greatest country in the world. I now propose three cheers for the South."

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, June 11, 1867.

AN active demand for loans is reported in New York, and rates of interest for some days have rather tended upward. The Banks are not discounting largely, and 7½@8 ₱ cent. is the ruling price on prime notes.

The price of gold has changed very little during the past week. Sales were made yesterday at 137. Government securities are very firm; the new sixty-fives were sold on Saturday at 105¾; sixty-two's at 106¾; June and July seven-thirties at 105¾. The New York Sub-Treasury purchased on Saturday $2,000,000 seven-thirties.

Yesterday (June 10,) 8,000,000 of compounds matured; June 14, 10,000,000 seven-thirty interest falls due; July 15, 12,000,000 more of compounds are to be provided for, and July 15, 5,000,000 more seven-thirty interest. Including the interest upon the compounds there are early maturing obligations to be provided for, amounting to about $40,000,000. The Secretary of the Treasury has stopped buying August 7-30s. He now receives them only in the way of immediate conversion of 5-20s of '65. He continues to buy the second and third series of the 7-30s. The June statement of the public debt shows a decrease since the May report of over $1,000,000.

WOOL.—The sales in Boston last week foot up 650,000 lbs., at a range of 42@75c ₱ lb. for fleece, and 30@62c for the various grades of pulled. The Journal of Commerce of Saturday reports sales of 200,000 lbs. fleece at 44@68c. for poor State to very good Ohio. Some small lots of this year's clip have reached New York. The Boston Commercial Bulletin of the 3th says:

"As regards the new clip, there is very little speculation and no anxiety on the part of buyers. It will not be wanted and hence will not be bought up in a hurry. Manufacturers are not in a condition, financially or commercially, to enter the field as purchasers; and speculators have the recollection of past losses too vividly impressed upon their minds to repeat the errors of the last wool season. From present appearances there will be very little competition among country buyers, at least during the early stages of the season, and the market must evidently open at low rates in order to attract customers—probably at a range of 40@50c ₱ lb., or an average of 20 ₱ cent. below last year's prices."

Some lots of Ohio have been sent east on growers account, but there is really no movement yet to determine what prices will be paid for the new clip.

WHEAT AND FLOUR.—The prices of wheat and flour have been steadily falling during the past week. The average daily decline in flour in the Eastern market has been about 20c per barrel.

The harvest has commenced in the Southern States, and as far North as Ohio the crop is considered entirely out of danger—and the yield will be large and of most excellent quality. The Cincinnati Gazette of the 7th says there is every prospect that wheat will escape all danger in that section.

903-9teo WM. B. ROGERS, President.

TROTTING COLTS FOR SALE.—One five year old horse in May, that has trotted his mile, on a circular six hundred yard track, in three minutes and ten seconds. Sired by the celebrated old "Sir Thomas." One two-year-old stallion in May, that has made his mile, on the same track, in three minutes and forty seconds. Sired by "Major Anderson," one of the best blooded Togan's in Ohio. Their dam was a Gallilan mare, and made her mile, when three years old, in two minutes and forty seconds. These horses are splendidly made, fine style and powerfully muscled; have had but little handling, and in the hands of experienced trainers would soon make their mark in the annals of the turf. For further particulars, inquire of
JAMES EWING, Lancaster, Ohio.

NEW BOOK BY THE AUTHOR OF
MY FARM OF EDGWOOD.
Just Published by C. SCRIBNER & CO., 654 Broadway, New York.

RURAL STUDIES,
With Practical Hints for Country Places, by D. G. MITCHELL, (IK MARVEL.) One Vol. Price, $1,75.

The author has sought to demonstrate:
1st. *Why a man should go, if at all, into the country.*
2d. *What sort of a homestead he should seek there.*
3d. *What he should do when in possession of it.*

"I have especially sought to excite the ambition of those holders of humble estates who believe that nothing can be done in the way of adornment of country property except under the eye of accomplished gardeners. I have endeavored steadily to show, that the proper appliance of small means will produce effects whose charms must in their way stand unrivalled."—*Extract from Author's Preface.*

ALSO, JUST READY, NEW EDITIONS OF
My Farm of Edgwood. One Volume. Price, $1.75.
Wet Days at Edgwood. One Volume. Price, $1.75.

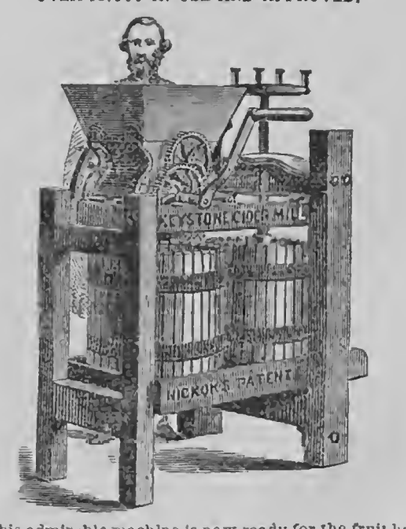
THE CHAMPION.
HICKOK'S PATENT PORTABLE.
KEYSTONE CIDER AND WINE MILL.
OVER 15,000 IN USE AND APPROVED.



This admirable machine is now ready for the fruit harvest of 1867, is made in the most perfect manner with either one or two tubs, and is well worthy the attention of all persons wanting such a machine. It has no superior in the market, and is the only mill that will properly grind grapes.

FOR SALE BY ALL RESPECTABLE DEALERS.
I also make two sizes of superior
PRESSES FOR BERRIES, &c., &c.
If your merchant does not keep them, tell him to send for one for you, or write for one yourself. Address the manufacturer, W. O. HICKOK, Harrisburg, Pa.

IMPORTANT TO HAY MAKERS.

[WORKING POSITION.]

Warner's Revolving Sulky Rake!

Combines all the advantages of both the Sulky and Old Revolving Rakes. By means of the lever with its cams and slops, the driver has more perfect control over the Rake than can possibly be had over the old fashioned Revolver. It does not dust the hay as wire teeth usually do; is easily handled by a boy, and the inclination of the teeth is easily regulated so as to pass over any obstacle, or dip into a swale. The draw-bars are jointed, so that the rake can be folded up, upon the sulky, and thus be easily transported.

THE RAKE,

Can be detached from the Sulky in a moment, should the operator wish a light vehicle for running upon errands. The Sulky being well built and with a good Spring Seat, will, by placing a box upon it, be exceedingly useful for light work all the year round.

☞ Send for Circular to BLYMYER, DAY & CO., Mansfield, O., or to BLYMYER, NORTON & CO., Cincinnati, O., manufacturers of Cane Mills, Cook's Evaporator, Drag Saws, Church and Plantation Bells, Corn Shellers, Cutting Boxes, Horse Hay Forks, Hand Corn Planters, Garden Cultivators, etc.

NATIONAL TRUST COMPANY
OF THE CITY OF NEW YORK.

Capital, ... **$1,000,000.**
Shares, ... **$100 Each.**

The Subscription Books to the Capital Stock of the NATIONAL TRUST COMPANY of the City of New York are now open at the

Ninth National Bank,
263 Broadway, cor. Franklin-st., New York,

and will remain open until the whole amount of the Capital Stock of $1,000,000 shall be subscribed.

☞ INASMUCH AS THE LARGER PORTION OF THE CAPITAL HAS ALREADY BEEN APPLIED FOR, IMMEDIATE APPLICATION SHOULD BE MADE BY PARTIES DESIRING TO SECURE STOCK. ☜

The payments will be as follows:

10 per cent. on subscribing	$100,000
June 5, 1867, 15 per cent	150,000
July 1, 1867, 15 per cent	150,000
August 1, 1867, 10 per cent	100,000
September 2, 1867, 10 per cent	100,000
October 1, 1867, 10 per cent	100,000
January 10, 1868, 15 per cent	150,000
February 10, 1868, 15 per cent	150,000

The average date of the above payments is September 12th, 1867.

After the 22d of May, inst., Subscribers may pay in the whole amount unpaid, and be allowed interest at the rate of seven per cent. per annum from the day of payment to September 12th, 1867, that being the average day of the payment of the calls.

ELISHA A. PACKER,
THOMAS W. SHANNON,
THOMAS B. READ,
JOSEPH U. ORVIS,
HENRY C. CARTER,
Commissioners.

☞ Applications for Circulars or Stock, by mail, promptly attended to.

What is a Trust Company.

A TRUST COMPANY IS THE SAFEST AND MOST CONSERVATIVE OF FINANCIAL INSTITUTIONS. A careful perusal of the following paragraphs will amply substantiate this proposition.

Trust Powers.

To receive money from individuals and corporations, and allow such interest as may be agreed upon.

The Company is constituted by its Charter a Legal Depository of Money paid into Court.

To accept and execute all Trusts, in reference to both real and personal estate, committed to the Company by any person or corporation, or transferred to the Company by order of any of the Courts of Record, or by any Surrogate, &c., &c.

To act as Financial Agent of State and City Governments and of Counties, in the management of their business at the financial center of the country.

To act as Agent for foreign Banks, Bankers, Business Men and Corporations having business transactions in the City of New York.

Guarantees.

Among the Guarantees afforded by the Charter of this Company, are the following:

Every Director or Trustee must be a citizen of this State, and be a stockholder in the Company to the amount of five thousand dollars, at least.

No loan shall be made, directly or indirectly, to any trustee, officer, or employee of said Corporation.

It is not permitted to discount or deal in Commercial or Business Paper.

On what Security may this Company Loan its Deposits?

The National Trust Company can only invest the funds entrusted to it in United States Stocks, or Stocks of the State of New York, or other States, or of any City incorporated by the State of New York.

Therefore, it is adapted for the investment of funds which the public desire very safe investments for. Its Stock will probably pay dividends equal to, or greater than the interest on Government Securities, and deposits made in this Company will earn as liberal a rate of interest as is possible, taking into consideration the great security.

COUPON Government Bonds, the Secretary of the Treasury says he will pay to any holder, whether stolen or not; therefore is it not wise to sell those COUPON Bonds and take the Stock in the National Trust Company, which will have its permanent investments in REGISTERED United States Bonds, State Stocks, and Bonds of Incorporated Cities of this State?

General Remarks.

The success of other Trust Companies and the high prices of their stocks in the market, are sufficient evidence of the profitable character of the business, and the Trustees feel justified in recommending the Stock of this Company to capitalists and others seeking a safe investment.

It is believed that the Stock of this Company is more desirable than that of most other moneyed corporations, and as safe as Government Securities; that the increase in the value of the Stock will be more rapid than Government Bonds, and the dividends quite EQUAL to, if they do not EXCEED the interest of such Bonds.

The decision of the Secretary of the Treasury that he will pay COUPON Government Bonds to the holders whenever presented, without reference to any disputed ownership, will lead, in many cases, to the sale of such Bonds. This Company will take in exchange of its Stock any United States Bonds, 7-30 Treasury Notes, or Compound Interest Notes, at the market price on the day of transfer.

OFFICERS FOR FIRST YEAR:
JOSEPH U. ORVIS, President.
HENRY C. CARTER, 1st Vice-President.
BARNET L. SOLOMON, 2d Vice-President.
JAMES MERRELL, Secretary.

— 25,000 men have been killed by explosions in English coal mines since 1820.

— A Troy wife died and left her husband $5,000 saved without his knowledge.

Special Notices.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stenciled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement;* that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 907-tf.

The first Dose convinces that COE'S DYSPEPSIA CURE is just the thing for any disorder of the Stomach. It is not necessary to try half a dozen bottles; the first dose will stop distress after eating in ten minutes.

GOLD MEDAL THRASHING MACHINE.

PERSONS intending to purchase a Thrashing Machine will do well to send for Circulars and Judge's Report of the Machine awarded TWO GOLD MEDALS at the Great National Trial, Auburn, July, 1866, manufactured by R. & M. HARDER, Cobleskill, N. Y. See their advertisement in Rural of June 1.

SOMETHING NEW!

THE UNION TELEGRAPH INSTITUTE, OBERLIN, OHIO, has an order to supply a NEW TELEGRAPH LINE with Operators.

Paying Offices are guaranteed by written contracts, to graduates. Salaries from $50.00 to $125.00 per month will be paid to beginners. This is a *rare opportunity* for young and middle-aged men to find *permanent* situations, both *agreeable* and *profitable.* With our *unequaled* facilities for teaching the art, students readily acquire it. There is in connection with the College an Actual Telegraph Line, 37 miles long, which is operated solely by students. For full particulars address C. H. POND, Oberlin, Ohio.

ELIAS HOWE JR. INVENTOR & ARMORER. NEW YORK. U.S.A.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

THE PREMIUM MACHINE!
BUCKEYE MOWER & REAPER

Extract from Official Report of Great National Field Trial, held at Auburn, in July, 1866:—"The record of the Buckeye is interesting in view of the fact that it was the pioneer in the path of the great improvements which have popularized Mowing Machines and made them an absolute necessity of every farmer. It took the prize at the Great National Trial of Mowers and Reapers, at Syracuse, (in 1857,) and at once sprang into a great popularity. In the hands of Mr. J. P. ADRIANCE it met with an enormous sale. The result of this trial clearly shows that it still keeps the forward rank which it won at Syracuse, and at many other subsequent trials, and that it is still as worthy the patronage and confidence of the public as it has been in any preceding portion of its history."

Beware of mongrel machines, which attempt to steal the reputation of the Buckeye to cover their own imperfections. Descriptive Circulars and Synopsis of Official Report of Auburn Trial forwarded by mail.

Manufacturers—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 120 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. COOPER, Watertown, Jefferson Co., N. Y.; G. SWEET & Co., Dansville, Livingston Co., N. Y.; GEO. P. YORK, Westfield, Chautauqua Co., N. Y. 903-m11-je15

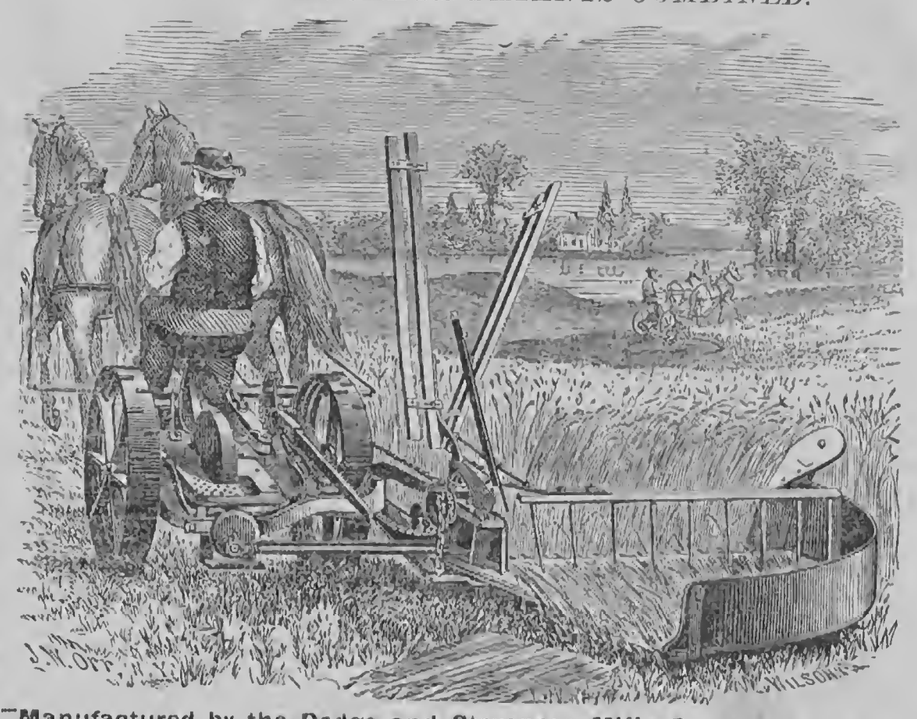
MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 907-tf

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd,** the best and latest work on American Sheep Husbandry. Large 12mo.,—454 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

WANTED—A GOOD EXPERIENCED Canvasser in every county in the U. S. To such, male or female, will guarantee $300 per month. Apply at once to C. RICH & CO., Poughkeepsie, N. Y. 901-tf

CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

SOUTH DOWN COMPANIES' PATENT
SheepWashTobacco

THE BEST KNOWN REMEDY FOR
TICKS, SCAB, VERMIN AND FOOT-ROT,
SHOULD BE USED BY ALL FARMERS ON
SHEEP, ANIMALS and PLANTS.

☞ This pure preparation has been successfully used for years, and never fails to produce the desired effect when used according to directions.

IT WILL NOT INJURE THE MOST DELICATE ANIMAL.
IT WILL IMPROVE THE QUALITY AND QUANTITY OF WOOL.
IT KILLS TICKS ON SHEEP.
IT CURES SCAB ON SHEEP.
IT CURES ALL SKIN DISEASES ON ANIMALS.
IT KILLS ALL VERMIN THAT INFEST ANIMALS, TREES, PLANTS AND VINES.

☞ For FOOT-ROT it is a sure cure, used as a poultice.

☞ **ONE POUND of this Extract will make TWELVE GALLONS of Wash, and contains the strength of EIGHT POUNDS of Tobacco, as prepared by Farmers.**

Sold by all Druggists and Country and Agricultural Stores.

JAMES F. LEVIN,
23 Central Wharf, Boston, Mass.

For sale by E. M. Livermore, Cleveland, Ohio; Bliss & Sharp, Chicago, Ill.; Valentine & Lawrence, West Aurora, Ill.; McCulloch, McCord & Co., LaCrosse, Wis.; Clark & Hawley, Red Wing, Min.; Wm. GENEVA HYGEIAN INSTITUTE.— This Institution is open to receive patients at all times; all diseases treated, both acute and chronic. Terms, per week, $9 to $15. Medical Department, A. B. SMITH, M. D., C. M. WOONWARD. Business Department, address D. H. TOWNSEND, Geneva, N. Y. 900-3teo

H. P. WESTCOTT'S
ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April,* 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (8 bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State;—or will sell Town and County Rights, and furnish the Churn.

FLAX AND HEMP CULTURE.

Now Ready, the Sixth Edition of
A Manual of Flax Culture and Manufacture:
Embracing full directions for *Preparing the Ground, Sowing, Harvesting, &c.* Also, an Essay by a Western man, on HEMP AND FLAX IN THE WEST: Modes of Culture, Preparation for Market, &c., with Botanical descriptions and Illustrations. Published by D. D. T. MOORE, Editor of Moore's Rural New-Yorker, Rochester, N. Y. Price, Twenty-Five Cents.

☞ Those who wish PRACTICAL INFORMATION on the subjects named above should send for the work, which is sent, post-paid, for 25 cents.

THE SONG OF THE CAMP.

BY BAYARD TAYLOR.

"Give us a song!" the soldiers cried,
The outer trenches guarding,
When the heated guns of the camps allied
Grew weary of bombarding.

The dark Redan, in silent scoff,
Lay, grim and threatening, under;
And the tawny mound of the Malakoff
No longer belched its thunder.

There was a pause. A guardsman said,
"We storm the forts to-morrow;
Sing while we may, another day
Will bring enough of sorrow."

They lay along the battery's side,
Below the smoking cannon:
Brave hearts, from Severn and from Clyde,
And from the banks of Shannon.

They sang of love, and not of fame,
Forgot was Britain's glory;
Each heart recalled a different name,
But all sang "Annie Laurie."

Voice after voice caught up the song,
Until its tender passion
Rose like an anthem, rich and strong,
Their battle-eve confession.

Dear girl, her name he dared not speak,
But, as the song grew louder,
Something upon the soldier's cheek
Washed off the stains of powder.

Beyond the darkening ocean burned
The bloody sunset's embers,
While the Crimean valleys learned
How English love remembers.

And once again a fire of hell
Rained on the Russian quarters,
With scream of shot, and burst of shell,
And bellowing of the mortars!

And Irish Norah's eyes are dim
For a singer, dumb and gory;
And English Mary mourns for him
Who sang of "Annie Laurie."

Sleep, soldiers! still in honored rest
Your truth and valor wearing!
The bravest are the tenderest,
The loving are the daring.

The Story Teller.

Written for Moore's Rural New-Yorker.

MILLY'S LETTERS.

BY CLIO STANLEY.

I.

BRIER HILL, Sept. 8th.

DEAR MADGE:—You will scarcely understand, at first, why I am writing to you from this little out-of-the-way place, when only three weeks ago you knew that I intended going to New York to graduate at Mrs. LARCOM'S next summer. But so it is; things change so fast in this world that it is not much wonder if we occasionally change with them. Heigho! I wonder what the next variation will sound like, for I cannot fancy much in the way of music in this quiet village. You know where I am, and yet you do not know, inasmuch as you have never been here yourself. I hear you say over to yourself, half thoughtfully, "Brier Hill," and puzzle your wise head over the why and the wherefore that could have induced MILLY FRANKLIN to settle there. Of course you remember the place where little NANNIE READ used to live, and how she used to describe it as the most beautiful spot in the wide world; so it is beautiful, in one sense of the word,—it is quiet, and that was just the type of rare beauty to suit our NANNIE; but for me it doesn't answer at all. It is all hill, and very steep at that, with great patches of piney woods growing on the sides half way down, dotting the light green meadow-land; only up here are any visible signs of cultivation; the village is a very small one, yet the society is good, partaking somewhat of a kind of quaint refinement that you would expect to find in such a latitude. We have not more than a dozen neighbors; the rest of the people whom we meet occasionally come from some of the surrounding hills; whether these, too, are *Brier Hills*, I know not, for, as yet, I have not explored further than the first pine wood, where, in spite of myself, I actually sat down and enjoyed near half a day. Staying away from school too, and that brings me right to the heart of the matter. You know CLAIRE AUBREY, my charming cousin, she who was the belle for two seasons in our gay city. You admired her I know as much as one beautiful woman can admire another, and you will sigh and say "how unfortunate," when I tell you that her uncle, old SIMON AUBREY, first failed, and then quite considerately died, so that CLAIRE has no one to support but herself. So what does she do but discard two of her lovers, who were true to her despite her poverty, and packing up her reduced wardrobe start for Brier Hill, to become assistant teacher in this queer old school. I asked her the other day why she chose this place of all others, and she told me because it suited her best to be as far away from her old home as possible. Dear old CLAIRE! I always call her old, though that is only my pet term of endearment for any one I love dearly; she is just two years older than I, though no one ever seems to believe that *I* have arrived at years of discretion.

Well, when we found that she *would* be quite independent of us all, and had made up her mind to teach, I persuaded father to send me here with her as pupil, telling him I could just as well go to Mrs. LARCOM'S next year as this, and then mamma put in a few words about my being more mature in another twelve-months, and so better capable of appreciating the advantages of her far-famed Seminary, which decided my fate, and so here I am. It isn't an *uncomfortable* place to be in, either; there are two or three real nice girls who come over to the school from a neighboring village, with whom I have already established a firm friendship, never to be broken, as you and I used to say; and then there are some pleasant walks about here, where CLAIRE and I make the most of our hours of recreation. We leave school in time to get our supper,—for you must know the inhabitants of this part of the world dine at twelve and sup at half-past five,—and get off on the shady side of the hill, in some nook by ourselves, where we can watch the sun set. How CLAIRE does enjoy that hour! I declare, MADGE, you wouldn't know her, she is so altered from the CLAIRE AUBREY you used to know. She was a little bit of a coquette in those old days, we used to think—very gay, and with not much time on her hands to inaugurate thoughtful hours; but that is all past now, and she makes the most demure, devoted and sensible school-mistress you ever saw. The girls all love her, and she makes them *learn*, too. She has had a splendid education, and it is being put in good practice now, I assure you. LILY FORBES says they have never had any kind of a lady teacher here before. Old Mr. REGULUS, as I call him, (only his name is JOHN BOWEN, but I cannot help calling him "REGULUS," and did so once right to his face, because he looks so like that description of the uncouth pedagogue in "Ernest Linwood,") has taught here for nearly six years, twice having an assistant for a few months, but they proved to be ignorant young women who wanted husbands, and each concluded to take Mr. BOWEN, but as JOHN BOWEN is, after all, a sensible man, he refused to be taken, and the disconsolate damsels left to search for those other "fish in the sea," that people describe as so plenty. But it's rather different now; our CLAIRE don't think about *such* things, and the whole school love her so dearly that they would sooner dismiss JOHN BOWEN himself than my sweet cousin, I verily believe, if the alternative were before them.

I read, and write compositions under CLAIRE'S supervision, and I begin to enjoy SHAKSPEARE and MILTON, though I do not much fancy the sharp criticisms I meet; and my compositions, Mr. BOWEN says, are quite sparkling and original. *Original* I grant them to be, for I never could do *anything* like any other "dacint body," as our NORAH used to say, but as for that other quality, I don't see where he finds it; but it is some comfort to write to father, and tell him of the compliment. Dear old father! he don't seem to think it at all strange, but then he is so partial to his loving little MILLY that he cannot see but that I am just as talented as the best of my companions.

But the supper bell is ringing, and I must seal up this first letter, with a promise of plenty more of the same sort if I stay here this long year. It looks as though it would be just the least bit dull, but I shall impose half my troubles on you, darling, and I trust you'll do the same by

Your loving MILLY.

II.

BRIER HILL, Oct. 17.

DEAR MADGIE:—It is the most delightful morning you ever found anywhere, and here I am seated by my writing-desk, at five o'clock, to write you of my welfare. I have not heard a word from you yet, but then I shall have the pleasure of anticipation until your first letter arrives, as I feel quite sure it will this week, for it is now only Monday morning.

What has happened since I left home? Do not imagine I have grown so selfish as not to care about your incomings and outgoings, even if I am so isolated from the busy world of which you and I used to form such a contented part. Are you as contented without your troublesome MILLY as with her, or do you sometimes long for one of the good old talks that two people can't have quite in perfection on paper! It is some cure for a restless heart to know one's self not forgotten, and so I indulge my fancy by picturing you growing pale and sad over my absence, wishing me back as earnestly as I wish myself there. I wouldn't write a word of this home, for it would grieve my kind mother so to feel that I was not perfectly happy, and I would not bring a shadow of pain across her dear face for the world; no, not even for the comfort of her sweet sympathy. But, dear MADGE, I must not give you such a letter, and only the second one, too!

I wish I could paint now, and you should have a lasting record in blue and gold and crimson of this perfect October day. What a genial day it is! The air is fresh and cool, blowing the few fallen leaves about the yard, and bringing hints of delicious fragrance somewhere near me. The golden-rod lifts its bright head for recognition, for you must remember I have commenced my favorite study of Botany again, and nnnumbered other flowers stand out in the meadow and woodpath, in the full glory of a clear autumn daylight. I can hear the patter of the dropping nuts just back of the house, and I am school-girl enough to be glad that little BENNY STOKES is my faithful friend, and knows just where the largest and ripest ones lie. Over on the meadow, under the shadow of a graceful elm, cattle are grazing; once in a while standing still, looking as if, out of their great, tender, brown eyes, they could discern the change on the face of the earth. What precious records of GOD'S loving kindness are these visions of bloom and fruition! The old gray earth, that a short nine months ago looked so cheerless and gloomy, seems to me now like a rare-bound volume, each leaf hiding within its bright borders some fair picture of harvest-life, some quaint little poem of love and duty, or, it may be, some familiar scene that brings up the very cheeriest of memories and the brightest of hopes. True, dear MADGE, some of the hopes were blighted almost at their birth, and left us for the time very desolate; some true friend may have been snatched from our side, and the love that seemed so surely ours taken from us,—yet let us be faithful still, for the burden must some day be dropped, the gates of Paradise opened, and our lost loves greet us in the light and radiance of a shadowless day beyond the stars. After all the sad days and the sober ones of this life are few seen in the blessed light of Eternity, and the bloom of Eden does not seem all lost.

The first thing that met my eyes this morning, when I awoke, was a tiny bird, perched on my window-sill, singing away in the merriest trill in the world. What would you have given to have heard the song? It was better than many an *aria* I have heard from our favorite singers. I acknowledge, MADGE, that I am fast learning to love the country, and I have even had serious thoughts of staying among the hills, and teaching school myself. But I had forgotten! The all-important thing is that you must know enough yourself to teach others, and as yet I am only a "receptive faculty," as our learned Professor SCHMIDT used to say, "embodied in a very enticing little form!" I wonder if he ever knew how we used to laugh at him, and more than all at his high-flown speeches.

How forgetful I am this morning! I have not told you a word of CLAIRE, although she wanted me to send her kind regards to you when I wrote. I wonder at her, as I sit and look at her in school oftentimes, and try to imagine her as she was last year this time. She has not lost her identity; the same soul shines out of her blue eyes, but intensified, it seems to me, in its power; the same kindly phrases drop from her lips, but with an added grace in their bestowal; the very same warm, cheerful smile greets me daily, yet I fancy she somehow feels the warmth and cheerfulness of it *herself* more than she was wont to do. In plain language, dear MADGE, I believe our CLAIRE AUBREY is happier as the poor school-mistress than she was as the rich heiress; though why she should be continues to be a marvel to me; she had always seemed born to such a different station in life, wedded to such different ways. Why, darling, you have no idea how plain and unsophisticated the manners of these people are, but then there is real genuine honesty about them, and that is the great charm for me. They don't say you are beautiful when you are not, nor talented when you are not, nor bewitching when you know there is none of the gentle witchpower about you; but they overlook all one's deficiencies or never seem to notice them, lose sight of one's occasional awkward remarks, and put you at your ease before you have been with them a week.

Little BENNY, that's Mrs. STOKES' youngest boy, sat opposite me at the table last night, and I noticed that he was watching me very intently, and finally I said, "What makes you look at me, BENNY? do you think mine is a pretty face?" Of course, I did not know what he would say, but I half expected some childish compliment from the earnest look of his dark eye, but it was no such thing. The dimples deepened in his round cheeks as he replied, "Not exactly, Miss MILLY; I was thinking what a lot of bread and butter you can eat." There's an honest speech for you! His mother did not reprove him either for telling the truth, only told him when *he* went to school he would be apt to get pretty hungry too.

Mr. BOWEN was here last night, as CLAIRE and he had some essays to look over, and when their work was done, they talked. The evening passed twice as quickly as usual, and I must say I had no idea he was such a cultivated man as he proves to be. Why, do you know, MADGE, he has actually traveled over half Europe, and the ideas he has stored in that wonderful brain of his about travel and foreign lands and curious things in nature would astonish you. He is a real live nobleman, too; not one of your titled ones, but one stamped with the seal royal; his broad, high forehead bears GOD'S own mark upon it, or I am much mistaken. He is too tall by a couple of inches; too lean, if I may use a term more expressive than any other—scraggy *you* would say; he wears his clothes as if he had not much idea of fitness, and rubs his hands together continually, though CLAIRE says that is because he is nervous; she always has some excuse for everybody's failing, but he really deserves it at her hands. You could scarce help being surprised to see the deference with which he approaches her,—as if she were a very queen, and he dare not come too near unless she first graciously extend her scepter, though it *is* only made of common wood. CLAIRE seems quite unconscious of this half-homage herself, but all the rest of us notice it. Last Friday morning I went over to the school house very early to get a book, and as I passed the window, glancing in I saw our quiet, reserved teacher standing by CLAIRE'S table, and I had sufficient curiosity to see what he was about to do. He took a paper from his great overcoat pocket, and brought out a delicate bunch of ferns, with some curious scarlet-blossomed plant bound up with it, and placed it in the little vase that always stands there. Wasn't that a real compliment to CLAIRE? when we all know how dearly she loves the simplest flower! I was going to tell her all about it, but when school commenced, she said, "Some little fingers have been busy in my behalf, this morning, and I am *very* much delighted with the gift. GOD'S best gift to us all, the dainty, fresh flowers, are always welcome." I thought she looked around a little anxiously, as she lifted it lightly to her lips, as if she half-wondered who among us had such exquisite taste, but she did not see JOHN BOWEN'S deep blush, for he stood half behind her, at the other side of the table, and I thought I wouldn't tell her then, for it might make *her* nervous, perhaps.

There's BENNY under the window, with his hands full of nuts; so adieu for the present. I only wish you could sit down and enjoy them with Your loving MILLY.

[Continued next week.]

MEN are like wagons; they rattle most when there's nothing in them.

WIT AND HUMOR.

THE following, supposed to have been written by an "old toper," hits the point:

TO A BOTTLE.

"'Tis very strange that you and I
Together cannot pull:
For you are full when I am dry,
And dry when I am full."

"JENNIE," said a Puritan to his daughter, who was asking consent to accompany her urgent and favored suitor to the altar, "Jennie, it's a very solemn thing to get married." "I know it, father," replied the sensible damsel, "but it is a great deal solemner not to."

"WHAT a fine head your boy has?" said an admiring friend. "Yes," said the fond father, "he's a chip of the old block, ain't you sonny?" "I guess so daddy, 'cause teacher said I was a young blockhead."

THE first time Jerrold saw a celebrated song writer, the latter said to him:—"Youngster, have you sufficient confidence in me to lend me a guinea?" "Oh, yes," said Jerrold, "I have all the confidence, but I haven't the guinea."

"Now, then, my hearties," said a gallant captain, "you have a tough battle before you. Fight like heroes till your powder's gone; then—run. I'm a little lame and I'll start now."

A POET intended to say, "See the pale martyr in a sheet of fire," instead of which the printer made him say, "See the pale martyr with his shirt on fire."

AT what time of a man's life does his horse most desire to devour him? Why, in the heyday of his existence, to be sure.

SAID a young fellow indignantly when called a boy,—"Don't you call *me* a boy; I've chewed tobacco these six years."

BURY your troubles, but don't linger around the grave-yard conjuring up their ghosts to haunt you.

Why should there be no free seats in a church? Because you ought not to be made *good for nothing*.

"Pride goeth before a fall." Sometimes before a water-fall.

Corner for the Young.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 15 letters.
My 2, 14, 1, 8 is a point of the compass.
My 3, 2, 2, 4, 15, 10 is used by tailors.
My 9, 6, 11, 1, 10 is a useful animal.
My 5, 6, 12, 7 is a number.
My 14, 13, 8, 9, 12, 13 is a celebrated Author.
My whole is good advice to give your neighbors.

Utica, Penn. S. G. R.

ANSWERS TO ENIGMAS, &c., IN No. 906.

Answer to Historical Enigma:—James the son of Alpheus.

Answer to Anagram:

Truth and justice are eternal,
Born with loveliness and light;
Secret wrongs shall never prosper
While there is a sunny right.
God, whose world-heard voice is singing
Boundless love to you and me,
Sinks oppression with its titles,
As the pebbles in the sea.

Answer to Algebraical Problem:—The numbers are 8, 20, 50 and 125.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

THE INDELIBLE PENCIL COMPANY,
(Northampton, Mass.,)
MANUFACTURERS OF THE IMPROVED

Patent Indelible Pencil,

For *Marking Clothing, &c.*, have ready for sale the new

HORTICULTURAL PENCIL,

for INDELIBLE WRITING ON WOOD.

Invaluable for making DURABLE Tree and Garden **Tags** or **Labels**, marking **Tools**, &c., &c.

PRICES.—*Horticultural*, 75 cents, single; two for $1; $5 per doz. *Clothing Pencil*, 50 cents, single; three for $1; $3 per doz. Sent prepaid by mail or express, on receipt of price. A Liberal Discount made to Dealers.

☞ EVERY PENCIL WARRANTED. ☜

GOOD AND CHEAP BOOKS FOR

Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER.** We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Pomology (320 Illustrations)	3,00
American Sharp Shooter (Telescopic Rifle)	50
American Bird Fancier	30

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

BENEFIT OF FORESTS AND GROVES.

"A stitch in time saves nine," is a wise and homely old saying. When that stitch depends on one person only—a thrifty housewife, for instance—with prudent forethought she takes it, sagacious economist as she is, but when the stitch—the step, the plan, or work, of whatever nature,—needs unity and concert of action among many, over wide distances, the promptness is wanting, and too often the nine after-stitches must be taken to make all whole.

This is true in the highly important matter of forests and groves. It is not yet wholly too late, and much labor and loss can be saved by wise and prompt action. To a pioneer in the forest a tree was an enemy to be smitten down and burned on the blazing pile, as a sort of guilty usurper who had put knotty roots and tough wood where the fine fibers of wheat or corn roots ought to spread their meshes, and had raised a leafy barrier to keep out the fertilizing sunlight that so greatly helps corn to grow. So the first work was—girdle, cut, root out, burn—make room for seed and plow and sunshine. All right in its time, but we are passing the pioneer stage over much of the forest-clad part of this country, and thus can look over the broad field and see what change in climate and products has been wrought by the pioneer's ax, and even judge what limits should be put to its use in the great forests that have never yet echoed to its strokes.

It is beginning to be seen that a region denuded of its forests and without groves, suffers from the sweep of cold winds, freezing out the very roots of the tender wheat, and is liable also to deluging rains and fatal droughts, by turns,—to sharper and more trying changes of climate than a more sheltered region. The Western prairies are subject to rains and droughts, both so severe as to be drawbacks at times on their great fertility; and they are shelterless, swept by winds rushing from the icy poles and the blazing tropics, by turns. Awful storms rush over the great plains beyond the Mississippi, where the wind has nothing to check its mad career.

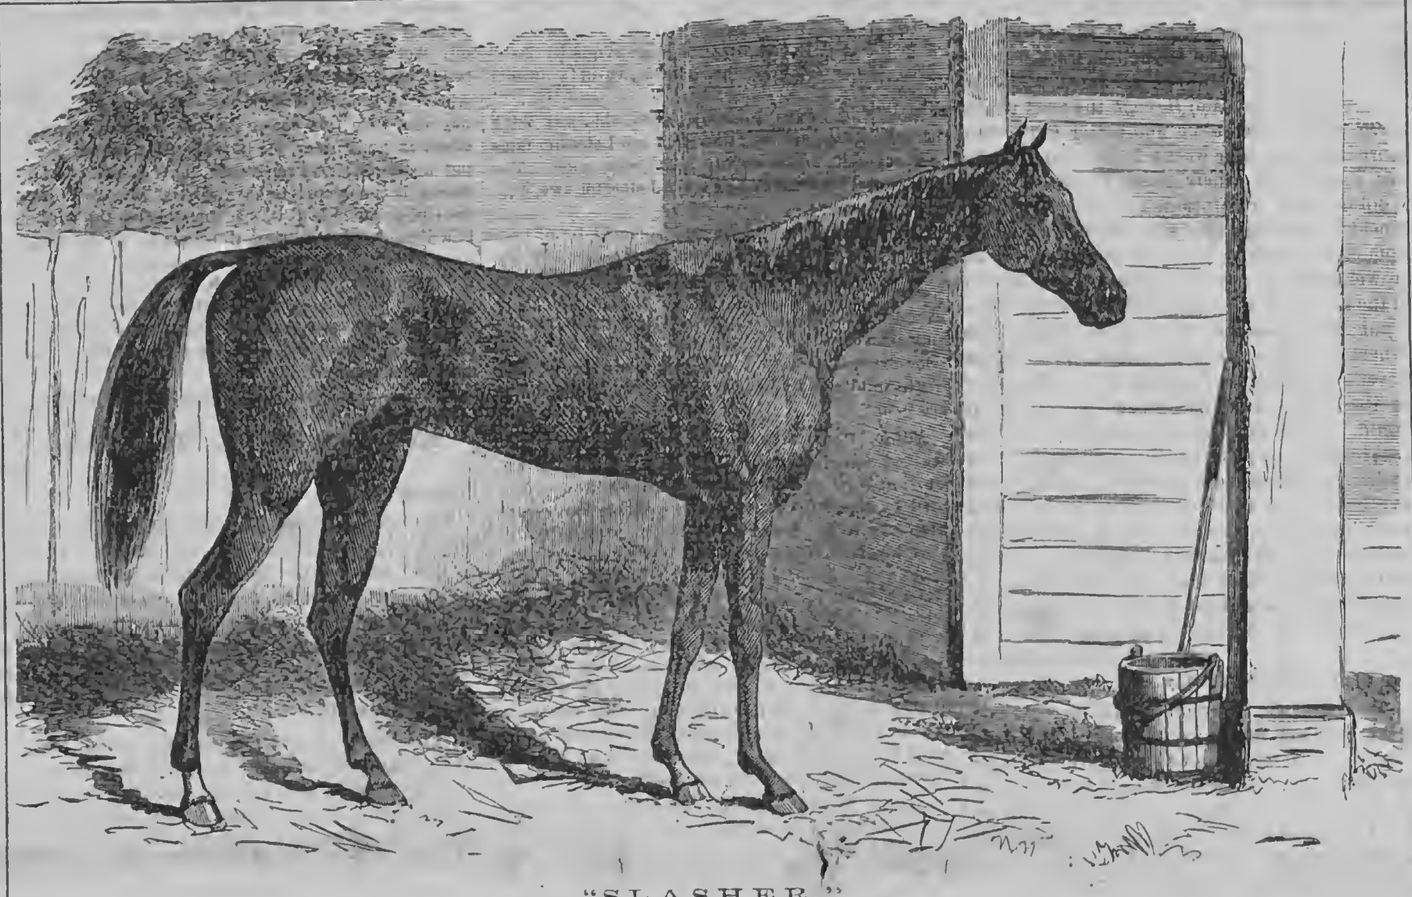
New York, Ohio and Michigan are exposed to the sweep of lake winds; other regions have dangerous exposures, if there be no safeguard interposed. Take away Nature's kindly shield of leaves and limbs and sturdy trunks and there is nothing to "temper the wind to the shorn lamb," or the growing crop, shorn also of its full richness. Signs of this are plainly manifest now, if we will but be wise in time. An intelligent observer, who has traveled over Michigan in different years, has noted the fact that, in the Northern portion of the farming country, in the Grand River Valley and vicinity, where there is still forest shelter, the wheat is better and more abundant than in the southern part, where the trees of the "oak openings" have been cleaned away. On soils of like native kind and fertility, where a belt of timber skirted the northwest sides the wheat would be green and abundant; while fields, open to the cutting winter's blast, would show but a meager covering, brown and sickly. From these extended observations, he judges the loss, even now, from want of forest shelter to be great. How much greater in a few years if this prodigal destruction of trees goes on? And this, of course, is not limited to that region, but applies all over the land with more or less force.

In Germany, Government takes this matter in hand, and officials are chosen to see that forests are preserved and groves planted with a view to shelter and amelioration of climate by decreasing the excess of drought and tempests of rain. In this country Government cannot act thus, save in the Territories, and private sagacity and enterprise must do the work.

Hon. I. DONELLY, M. C. of Iowa, offered a valuable report and draft of a bill or resolutions on this matter in his place in Congress a year or more ago. His proposal was, that Government should see to the preservation of forests and the planting of large groves on the slopes of land best adapted therefor on the great western plains, yet unsurveyed and unsold. His report gave facts of great value and interest to show the need of such a step. Dr. KEDZIE of Eaton county, Michigan, made a similar report from a Committee of the Legislature at Lansing last winter, urging like measures in that State, and giving sound, practical reasons and facts to justify and demand such a plan.

Farmers, think of this matter *soon*. On every farm of a hundred acres five or ten acres of trees, in right places to save the rake of cold winds, and for shade to retain some moisture in the air, would make the farm more valuable and productive than if every tree were gone and every foot tilled. Neighbors, school districts, towns and counties can unite in plans to plant rows and clumps of trees on either side of every road, and most freely on such spots as would help most toward the ends sought. In pasture fields, too, how grateful the shade to animals, and how preservative to sweet grass the moisture that lingers around the woodlands. Every Fair in town, county and State, should have this matter up for discussion and for reports by able and practical men, and thus awaken a wise and timely sentiment, and organize for speedy and practical work.

We should have said, in speaking of the prairies, that in Illinois and Wisconsin, and even further west, the planting of groves and orchards has wrought already the best results in the direction we have spoken of, and has added greatly to the beauty of prairie farms and homes. Indeed, were there no other and weightily practical reasons, the added beauty of trees along the road-sides and elsewhere would pay for the labor needed in their planting and nurture, in any part of the country,—but beyond these serious and calamitous results, great and disastrous changes in climate are before us soon, unless we take timely hold in united action in this important work.



"SLASHER."

BRED AND OWNED BY FRANCIS MORRIS, ESQ., OF WESTCHESTER COUNTY, N. Y.

OUR illustration is a fine portrait of the thorough-bred stallion "Slasher." In an article on "Cavalry Horses in America," given in the Report of the Commissioner of Agriculture, 1863, the owner thus gives his pedigree:

"Slasher is a bay, 16¼ hands, foaled 1854, by Childe Harold, by Imported Sovereign by Emilius, out of Sarah Washington, the celebrated dam of Inspector, Sue Washington, Fanny Washington, Bonita, &c., &c. Slasher's numerous races, at every distance, but especially his four-mile victories at Ashland, Petersburg and New York, are too recent to require more mention. The dam of Slasher, Sarah Washington, has been very remarkable for the production of very superior colts. She brought nothing but celebrated racers, with one exception, when the foal was injured by a fall while very young.

"Arguing from the facts and principles laid down in the foregoing article, we may conclude with all safety that Slasher, with such a pedigree, must possess in an eminent degree the power of nicking and reproducing his own best qualities in his offspring. So far his colts give every evidence of verifying this conclusion, although none of them have as yet made a debut upon the turf. In appearance Slasher, as may be seen, is a handsome horse; color bright bay, black mane, tail and legs, and stands sixteen hands high. As a racer he was a winner at all distances against the best horses of the day. He is a good trotter, and might to the superficial observer pass for a coach-horse of the highest type."

STABLE-FEEDING vs. PASTURING.

WHO does not remember when the grain regions were considered the "Eldorados" of Agriculture?—when grass lands were tolerated only because all could not have grain lands. The condition of the poor farmer, who could spend his time only in keeping cows and sheep and raising young cattle, was commiserated, while the waving fields of golden grain were the theme of exultation. Commercially, dairy products made a small figure twenty-five years ago. The Census of 1840 gives the value of the whole dairy products of New York at $10,496,021, and of all the States at $33,787,000. But these poor commiserated dairy farmers have become a power in commercial affairs.

The mere butter products of New York were over $60,000,000 in 1865. This class of American farmers, then, no longer need sympathy, but they will be glad of any information which shall enable them to go on enlarging their capacity for feeding the world with its best butter and cheese.

Land has been so cheap and plenty that little effort has been made to economise it, and too little attention given to increasing the yield of the cow. But these things must come in due time, and we should avail ourselves of all the careful experiments made in Europe. It is only there we can expect, as yet, to find long continued or patient experimenting.

Dr. RHODE-ELDENA, of the Royal Academy of Agriculture of Prussia, has written an interesting account of experiments on the comparative yield of milk from cows by pasturing and stable-feeding or soiling, continued through seven years of each system. The pasturing experiment began in 1853 and continued to the end of 1859, and the stable-feeding began in 1860 and ended with 1866. From 40 to 70 cows were pastured each year. The lowest average per cow is 1,385 quarts in in 1855, where 70 cows were kept, and the highest 1,941 quarts in 1859, when 40 cows were kept; and the greatest quantity given by one cow during any year was 2,938 quarts. The average increased for the last four years from 1,400 to 1,941 quarts. In the stable-feeding experiment, from 29 to 38 cows were kept; and the lowest average per cow is 2,930 quarts in 1862, where 38 cows were kept, and the highest average 4,600 quarts in 1866, with thirty-five cows, and the highest quantity given by one cow is 5,110 quarts in 1866. The average, per cow, for the whole seven years in pasturing, was 1,583 quarts, while the average per cow for the whole seven years of stabling, was 3,442 quarts. This shows a little more than double the product of milk from stable-feeding than pasturing.

This result is very remarkable, and were it not supported by such high authority, would be almost incredible. The explanation is to be found, perhaps, in the facts that the owner of the stabled herd, Mr. HERMON, in 1860 began to discard the poorest milkers and to substitute those of the best Dutch breed; that his cows were fed, in summer, besides a full supply of green clover, vetches, &c., a small portion of oil-cake and rye bran; that they were also fed highly in winter with oil-cake, bran and sometimes potatoes, in addition to hay. The yield of the same cow is compared for different years. As a sample, take cow No. 24. She gave in 1860, 3,293 quarts; in 1863, 4,483 quarts; in 1865, 4,800 quarts. And generally, they show a like increase from year to year. Mr. HERMON thinks he has not yet reached the highest point in feeding, and, of course, not the highest yield of milk. This statement is condensed from the Monthly Report of the Department of Agriculture for March. This regular increase in milk indicates high feeding, and is most encouraging to the dairyman who is ambitious of improving his herd. It is most important in another respect; it shows that the highest results in dairying are probably yet to be attained by stable-feeding or soiling. We find the same cow fed in stable through seven years, and increasing her product from year to year, proving it congenial to her health as well as condition.

The advantages of stable-feeding are, that the feeder may give, at all times, an abundant diet, may increase the quantity of milk, may keep the cow in a condition to be ready for the butcher if not a satisfactory milker, may save all the manure to enrich his acres, may keep her through the summer on one-fourth of the land used for pasture, and lastly, may "put money in his purse." E. W. S.

AGRICULTURAL FAIRS.

S. D. R. sends us some suggestions which are worthy the consideration of such of our readers as are active managers or supporters of Agricultural Societies, Fairs, &c. He writes:

"The present system of Agricultural Fairs has a great many objections. They do not accomplish as much good as they might if managed differently. Now they gather produce, stock, machines, &c., from all parts of the country,—but merely looking at the thing exhibited benefits the visitors very little. You see some very nice looking machines, painted and fixed up for show and appearing very grand. Now, it is not *the machine* that the farmer wishes to see, but *the work it can do*, so that he may examine and judge for himself which is the best for his use—for machines that work well on some lands will do nothing at all on others. Of late years the fairs have been gradually turning to the fancy notions rather than for the practical benefit of the farming community. The largest premiums are given to the fast trotting horses, which are not and never will be noted as rapid advancers of Agriculture. The owners of fast horses may claim that fairs would not amount to "shucks" without them. They will certainly not arrive at the end desired if they devote most of the time and proceeds of the Society to fast nags. Animals exhibited for stock-growing purposes should be accompanied by specimens of stock from which they descended, or some of their progeny, for some fine looking animals have poor descendents. If each Society had ten or twenty acres of land, or even less, near its grounds upon which to conduct experiments, and try the machines exhibited, beginning with plows and plowmen, then harrows, drills, &c., the merits of various machines could be determined, and everybody that desired could see each machine work and judge whether it would be of benefit to himself. The extent of these trials could be lengthened to the application of artificial manures, and otherwise enlarged at pleasure. But commence on a small scale and firm basis, then "go-ahead," and I predict a rapid improvement in Agriculture and also Agriculturists. Until something of this kind is adopted, Agricultural Fairs will amount to little, or no more than a pleasant holiday to those who attend them."

GAPES IN CHICKENS.

A SUBSCRIBER, Blacksburg, Va., asks for a cure for gapes in chickens; also a preventive of the disease. BEMENT, in his Poultry Manual, recommends spirits of turpentine, passed down the windpipe by means of the tip of a feather or quill, saturated with it. Also boxing up the fowls, with a bed of shavings sprinkled with the turpentine, to rest upon. By being thus confined they will inhale the vapor arising from the shavings, by which they are sometimes cured. The chances of success, with any kind of treatment, are not generally very flattering. As a preventive the following, communicated to the Practical Farmer, may prove as good as anything. Thus:—"I adopted a system several years ago that has proved very successful with me, and I take great pleasure in giving the benefit of my experience. It is simply this:—give the poultry no wet feed, but place clean water in a convenient position for use by the fowls. I feed wheat screenings to chickens just from the shell; they feed on broken grains until they are large enough to swallow whole ones. In the absence of wheat screenings, I presume that cracked corn, such as is used for hominy, would answer as well. Since I adopted this mode of feeding I have had no difficulty in raising chickens."

CORN RE-PLANTED.—The Whiteside Sentinel (Ill.) of the 25th ult., is of the opinion that much of the corn ground will require re-planting, as in many instances the seed is found to be already rotted. Another poor corn season is deemed inevitable. Wheat and grass look promising, but are nearly four weeks later than they were last year at a corresponding date.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

HOW TO GET HEAVY FLEECES, &c.

JOHN W. ZIGLER, Rolling Prairie, Ia., asks the following questions:—"What is the mode of obtaining the heaviest fleeces, and at what age do Merinos yield their heaviest fleeces?"

The first step to get the heaviest *unwashed* fleeces is to breed from rams and ewes which have that combination of wool and yolk which weighs most; secondly, to promote the growth of wool and the secretion of yolk to the greatest practicable extent by high keep; and thirdly, to prevent any portion of the yolk from being washed out of the wool by rain or snow, or dried out by strong drying winds.

To get a teg's fleece to brag of in the newspapers, he should be dropped early in winter (say January,) receive what grain, &c., he will eat in addition to his dam's milk until weaning—through the summer, in addition to good pasturage—through the fall—through the ensuing winter and up to the time of shearing. He must be carefully watched and tended to see that he is never fed enough to cloy his appetite, but he must be given as much as he will safely bear. If a drop of rain promises to fall, his owner should leave hay or grain to be spoiled in the fields, or if in meeting leave in the middle of the sermon and run his horse home, rather than allow an ounce of yolk to be washed from the fleece. He should be kept near the house for greater convenience in this respect, and if business calls the owner away a few hours, he should strictly charge the women and children to rush out and "get in the rain" if a sprinkle is threatened. In winter he should never be let out of the stable, unless led out or kept under the eye of an attendant—for if he lies down on the snow even, it will subtract some of the precious yolk.

As to feed, it should be of the best. The hay should be without dust and as green as a leek. He should be allowed to pick off the fine tops and the nicest leaves, but never should be allowed to exert himself sufficiently to consume any other portion of it. By no means give him light oats or any kind of grain not of the choicest quality. It is said that oil cake and certain other feeds are great on producing yolk. We do not know how this is. Perhaps Professor AGASSIZ or some other learned gentleman can inform you.

When shorn, all the "sweat balls" from the belly, inside the legs, and scrotum, should be carefully put inside the fleece. Half a peck of these black rounded knobs of grease and dirt—from the size of ounce bullets down to peas—add to the weight of the fleece "beautifully." Use twine freely. A quarter of a pound is not too much, if used judiciously. It can be taken off afterwards if necessary. If you weigh with an old pair of farm steelyards, not tested within the last twenty-five years, be pretty sure that they don't weight too light, and don't give too quick weight.

If you start with a tolerable heavy wooled and yolky fleeced teg, and follow these directions closely, Mr. ZIGLER, you will be likely, if your teg does not happen to die before shearing, to beat your neighbors all hollow, who have lambs come at the ordinary time and treat them in the ordinary way. And the merits of the system are conclusively proved by the fact, that you will thus utterly beat sheep worth twice as much as your own, and which would easily beat yours in weight of fleece under the same management. Your teg will shear at least twice as much unwashed wool as he would do if dropped at the usual time and treated in the common way. You can sell him for from four to six or even ten times as much—especially to new-beginners who expect to get rich by ram-selling in five years.

It is true that the system requires some risks. High fed and summer-grained tegs sometimes die off unaccountably in winter. The forcing system renders them far more subject to diseases than merely *well* kept sheep—especially in large flocks;—and sometimes without the appearance of any positive disease, they get off their feed and come into the spring no larger and not half so strong as they entered the winter. The forcing system requires an experienced practitioner, a quick eye, and constant care. He should be able to pick out a teg that has missed a single feed. He should be ever on the watch.

There is no doubt that forcing impairs the constitution. If not continued the second year, the "brag fleece" is lost. If kept up, the animal, especially if a ram and worked pretty hard, is quite likely to die. We doubt whether fifty per cent. of the high-priced rams of the country survive their fourth year.

Now to your second question. Under the common, old-fashioned treatment the third or fourth fleece was usually the heaviest one. Now it depends upon the special circumstances of the case. If very early dropped and forced the first year, a teg sometimes shears more than it ever will afterwards if put under common treatment. If the forcing, however, is kept up, it will shear more the second year, and sometimes an additional amount the third year. Afterwards the amount will materially dwindle.

WASHING SHEEP.

HON. HENRY S. RANDALL:—Last year I tried the experiment of shearing my sheep (570) without washing. Although I had a few heavy fleeces, yet the flock, taken together, were not very yolky; and I learned, first, that the expense of shearing such sheep that had been well littered through the winter and well tagged in the spring, was only about the same as when washed in the usual manner. My shearers thought they could shear as many within one

PAULER RAM TEG,

THE PROPERTY OF M. NORTH, OF SHOREHAM, VERMONT.

or two per day. I also learned that the unwashed fleeces from such sheep will weigh but about one-sixth more than when washed in the usual way. And as I was not obliged to wait for the water to become warm enough to wash, I sheared the first week in June, and I am satisfied that my sheep went *into* and *through* the next winter much more comfortable and better than when shorn three or four weeks later; and it is for this reason and others given in the RURAL'S Wool Growers' resolutions of May 25th, that I consider washing sheep equivalent to a tax of from eight to twelve cents per head on the wool grower, without any real corresponding benefit to the manufacturer. But lastly, I learned when I put my unwashed wool in Boston market (where it has remained unsold for the last eleven months,) that instead of its being sold on its merits, as I had reason to suppose it would be, the customary one-third deduction was insisted on; so, unless shearing without washing becomes more general, I see no other way but what I must again reluctantly return to washing sheep, and continue to, until manufacturers will buy unwashed wool on its own merits, instead of on that *miserable, unjust,* arbitrary rule of one-third deduction on about all unwashed wool without regard to its condition.

SOLOMON HITCHCOCK.

Conesus Center, N. Y., May, 1867.

[We think Mr. HITCHCOCK was unfortunate in the selection of his wool broker. We *know* that unwashed wool can be sold in New York on its supposed merits, without any reference to an arbitrary rate of deduction, and we have no doubt the same is true in Boston. We propose to investigate this subject, and furnish a list of the wool houses which do, and those which do not, insist on the one-third rate of deduction on unwashed wool.—ED.]

Condensed Correspondence, Items, &c.

WOOL SAMPLES.—We have received from the growers named below the following samples of wool. Some of them were forwarded to be used at Boston by the Committee authorized by the Secretary of the Treasury to examine the tariff samples:

Long Wools.—JOHN D. WING, Washington, Dutchess Co., N. Y., from his imported Cotswold ram, "Golden Fleece." 2 years old, which received the first prize on long wool rams at the State Sheep Fair at Auburn, May 10, 1867. Sheared on the ground; weight of fleece 19 lbs. 4½ ozs.; age of fleece 381 days. Length of wool 9¾ inches—quality of luster, excellent. Ram teg, also sheared on the ground; fleece, 18 lbs. 9 ozs.; age of fleece 381 days; length 14 inches; quality good.

L. CONVERSE, Bucyrus, Crawford Co., Ohio. No. 1, Cotswold ram teg, 13 mos. old; fleece 10¾ lbs.; length 10¾ in.; quality and luster good. No. 2, Oxfordshire ewe teg; 13 mos; weight unshorn 125 lbs.; estimated to shear from 6 to 7 lbs.; length 9 in.; quality and luster good. No. 3, same blood and age; quality equal; length same. No 4, Oxfordshire ewe, 26 mos. old, with sucking lamb, side and thigh specimens; wool 5 in. long, of good quality and luster. No's 5 and 6, ¾ blood ewes, 5 and 6 years old, good quality and luster, but crimp rather fine for combing.

J. J. DODGE, New Lyme, Ohio. No. 1, imported Cotswold ram, 4 years old; wool 9¾ in. long. No. 2, imp. Cotswold ram; wool 9 in. long. No's 3 and 4, imp. Cotswold ewes; wool 10 and 9 in. long. No. 5, five imported Cotswold ewes, "corresponding in quality with most of the full blood flock;" wool 9 in. long. No. 6, five ewes, bred by Mr. CONVERSE, mostly a cross between Cotswold and Leicester; wool about 6 in. long. The quality and luster of all the full bloods, good; those of the mixed bloods about the same with most of the combing wool grown in Ashtabula county and its vicinity.

Hon. SAMUEL CAMPBELL and R. GIBBON, New York Mills, Oneida Co., New York, fifteen samples, (sent May 8th.) No's 1 to 3 from imported Lincoln ewes, from 2 to 3 years old; wool 8 to 8½ inches long. No's 4 to 7 imported two-years-old Lincoln ewes, which received the first prize at the great Yorkshire show in England in 1866; wool 8½ to 9 inches long. All the preceding ewes were sheared last year, May 14. No. 8, imported Lincoln ram, 2 years old, *washed* fleece this year 17½ lbs., last year 18 lbs.; sheared last year May 4; wool 10½ in. long. No. 9, imported Lincoln ram, 2 years old, *washed* fleece 15¾ lbs., last year 18 lbs.; sheared last year May 4; carcass 310 lbs. No's 10 and 11 imported Lincoln ewes, 5 years old, the other older; length of wool 6 in. and 5½ in. No. 12, 2 years old Leicester ewe; wool 6½ in. No. 13, Leicester ewe teg; wool 9 in. long. No. 14, Canadian Leicester ram, 2 years old; wool 9 in. long. No. 15, Leicester ewe teg; wool 9 inches long. Mr. GIBBON thinks that the recent rough passage of the Lincolns from England, and then inadequate feed, somewhat shortened the staple, and that the luster of the wool was deadened by being soaked with salt water. But we think we never saw samples coming from a single lot of sheep which exhibited better if equal luster, and the quality we judge to be about right for the best uses of "luster wool." The Leicester samples also are unusually bright.

ISAAC AIKEN, Beekman, Dutchess Co., N. Y., six samples of Cotswold wool. No's 1, 2 and 3, from ewes, wool of 12 mos. growth, and respectively 13½, 12, 10½ in. long. No. 4, wool 11 mos. growth, 10½ in. long. No. 5, wool 10 mos. growth, 11½ in. long. No. 6, wool 10 mos. growth, 11 in. long. The above were intended to comprise the range of quality in the flock. They are good, bright samples of Cotswold wool.

Hon. T. C. JONES, Delaware, Ohio, side and thigh samples from pure bred Cotswold and Leicester rams—about 7 in. long—quality and luster good. Also from cross bred South Down and Leicester ewe, 4 in. long.

We have received a large and splendid lot of long wool samples, unaccompanied by the name of the grower. We wish they might be identified. The peckage contained two bunches of side and thigh samples—tied respectively with black silk thread and small cotton cord. All that we can make out by the post mark is that they are from the State of New York, and that two last letters of name of post office are "on."

Middle Wool.—Hon. J. WENTWORTH, Chicago, Ill., washed sample from a ram from the flock of the Duke of New Castle, unwashed sample from a ram bred by the Duke of Richmond. These rams were presented to Mr. WENTWORTH by the Prince of Wales after his visit to this country. Unwashed sample, about 4 in. long, of good quality, bright and strong. Washed sample, perhaps a trifle shorter, fine, soft, bright and strong. These rams being selected for Mr. W. with more especial reference to fattening properties, he selected a ram to cross upon their progeny with reference to wool, from the flock of Mr. TAYLOR of New Jersey. The sire and dam of this ram were bred by JONAS WEBB of England. The sample of his wool forwarded is 4¼ in. long; indicates a heavy fleece, is excellent in every particular.

SAMUEL THORNE, Washington Hollow, Dutchess Co., N. Y., numerous samples from his stock, selected from or descendants of the flocks of Mr. WEBB and other eminent breeders in England. The samples are not separately described. They average about 4 in. in length, and are of the nicest quality in every respect.

Merino Wool.—A. F. MOON, Paw Paw, Michigan, samples from 5 ewes that were awarded the first prize at the State Sheep Fair held at Jackson. No. 1, was sheared at the Fair, (May 8th,) the other four by the same shearer next day. The weights of the fleeces were as follows: 20 lbs., 16 lbs., 15¾ lbs., 15¾ lbs., 15½ lbs. Mr. MOON states that the wool lacked about 10 days of a year's growth—and the samples are from 2¾ to nearly 3 in. in length. The wool is of good style and quality, with bright, golden-tinted yolk.

E. E. BROWN, New Hope, Cayuga Co., N. Y., samples from 5 two-years-old ewes that received the first prize at N. Y. State Sheep Fair at Auburn, May 10, 1867, and also sweepstakes prize. Weights of fleeces 11 lbs. 12 ozs., (carcass 60¾ lbs.,) 12 lbs. 4 ozs., (carcass 58 lbs.,) 13 lbs. 4 ozs. 13 lbs 14 ozs., 14 lbs 13 ozs. Wool 4 days less than a year's growth, and from 2½ to 3 in. in length—of superior style and quality—yolk golden-tinted and bright We saw these ewes at the Fair, and judged that at maturity they would shear very heavy fleeces.

MARRINER & BRONSON, East Bloomfield, Ontario Co., N. Y., three samples from ewes got by Infantado ram of HARLOW BROS., Darien, N. Y., and Poplar ewes, bred by D. E. ROBINSON, Vt.; weight of fleeces 14 lbs. 2 ozs., 15 lbs. 10 ozs., 17 lbs. 10½ ozs.; wool 3 in. long; quality and style good; yolk of same tint, with preceding lot. The sheep possess great compactness and constitution, and show the excellence of this cross. M. and B's. ram teg shown at State Fair sheared 17 lbs.

MATTHEW SIMPSON, Ithaca, N. Y., eight samples. No's 1 and 2 from ewes, 11 mos. growth, 2¾ in. long, fine quality and style. No. 3, yearling ewe, 12 mos. growth, 3 in. long, fine quality; weight of fleece 9 lbs.; carcass 50 lbs. No. 4, yearling ewe's fleece, 3 in. long; style not quite so good. No. 5, ram teg, 10¾ lb. fleece; carcass 60 lbs.; wool nearly 9 in. long, sufficiently fine, but lacks style and luster. No. 6, two-years-old ram, wool eleven months' growth, about 2 inches long, of good quality and abundant yolk, but wool too short for a breeding ram. No. 7, wether. No. 8, ram teg, 10¾ lb, fleece; carcass 50 lbs.; wool fine and of good style, 2½ in. long. This is not long enough for teg's wool to meet the views of the present day, and the sample is too destitute of yolk.

A. M. GARLAND, Chatham, Ill., samples (5 days less than a year's growth) from 5 four-years-old rams. No. 1, got by HAMMOND'S Gold Drop; No. 3, by HAMMOND'S Silver Mine; No. 9, by same; No. 17, by HAMMOND'S Sweepstakes; dams owned by Mr. HARRIS of Shoreham, Vt. No. 31, bred bo J. T. & V. RICH, Vt; quality and style of all good and particularly of No. 17. No's 1, 3 and 17, very heavily charged with yolk, No. 9 a little less so and No. 31 less still. All have the bright golden tint. The first have heavy black gum on the outer end; No. 31, not so much. The samples averaged 2¾ inches long. These rams were obviously selected with much judgment to cross with long, open, dry fleeced western ewes.

J. W. ZIGLER, Rolling Prairie, La Porte Co., Iowa, sample of ram teg's wool—of fine quality, but quite too short (2 in.) for a teg's fleece. The whole complexion of it indicates a light, and what is often termed a "ewe's fleece."

DUDLEY T. CHASE, Claremont, N. H., samples unwashed, and scoured, of one year's growth, from two-years-old ram "Bunter." Weight of fleece 21¾ lbs., carcass 108 lbs. Scoured wool 5 lbs. 8½ ozs. Scoured by Monadnock Mills Co., Claremont. Unwashed sample 2¾ in. long; quality middling.

DEATH OF SHEEP AND LAMBS.—WM. H. NORTON, Springwater, N. Y., writes that he fed 75 ewes timothy, cut in full blossom and cured without rain, until Februry, then began to feed them half a bushel of corn and oats with a little wheat screenings mixed. They had free access to pure spring water and to a well ventilated room 16 + 40. His lambs came very small and weak, unable to get up and showing no inclination to suck when aided. He raised but 25. The ewes became very thin and eight of them died, as Mr. N. judged, by "grub in the head." We have no confidence in this solution. No facts are given which warrant it. The lambs certainly did not die of that malady. We are told nothing of the run the sheep had and their amount of exercise. We are not told whether they received any *green* feed. Pregnant ewes must have both to winter well and bring forth strong lambs with any great degree of certainty. We confess, too, we have a strong suspicion of wheat screenings, unless certain that they contain no ergot or other unhealthy substances. Nor is entire timothy hay the best hay for sheep—particularly if dried too much in curing. Mr. N. says that most of the farmers in his region have met with the same mortality among their sheep and lambs—losing from five to one hundred each.

REMARKABLE MORTALITY.—The Waukegan Gazette, (May 25th,) Lake county, Illinois, says that it is estimated that from six to seven thousand sheep have died in that county during the last six months. The editor adds:—"In answer to numerous inquiries we find that our intelligent sheep breeders are almost unanimous in attributing the strange mortality to the nature of the feed during the past two seasons, particularly last year when the weather was so continually wet as to give the grass an unusual rankness, rendering it far less nutritious and wholesome than when the growth is slow and the season dry. The hay, too, from this cause and the wet fall, was not saved in good order, the larger portion having been put up in very bad condition. This combination of causes is considered to have worked seriously upon the sheep, the bulk of which, commencing the winter in a dilapidated condition, were unable to stem the current of adverse circumstances against them, and many were obliged to succumb. Rank, unnutritious grass had produced 'scours' during the fall, seriously weakening the sheep and unfitting them to withstand the winter, especially upon the poor quality of the hay that was saved."

Rural Spirit of the Press.

Burning Locusts.

A JACKSON COUNTY farmer, says the Kansas City Journal, scattered hay around his wheat field last fall, and the locusts gathering into the hay at night, he set fire to it in the morning, and by repeating the process saved twenty-five out of thirty acres, and the wheat is now looking fine.

Corn—Cultivation.

THE editor of the Farmer, Richmond, Va., says:—The work done in June is perhaps more decisive than in any summer month. As the hoeing season closes, much benefit may be derived from running a subsoil plow deeply between the rows of corn and alternate rows of root crops. To neglect work now or to do it carelessly and in a slovenly manner, is to trifle with the most serious and important interests.

Farmers' Anvils.

THE Maine Farmer tells how to get an anvil for farm use, the editor having seen one recently which just met the requirements of the case. A section of a T rail, about seven inches long, from a railroad, will answer. It is easily moved, and convenient. An old rail taken to a smith's shop could be readily made into sections enough to supply a neighborhood.

A Cheese Factory.

THE Hornellsville Tribune says a building for a cheese factory at Greenwood, in that county, is nearly completed. It is 28 feet wide and 120 feet long. It will be ready for operation soon, and will manufacture the milk of 300 cows the present season. The price charged for making cheese is two cents per pound.

Wheat in the Northwest.

THE St. Paul Press says the supposition that there has been any general scarcity of wheat for seeding in Minnesota, or less breadth of ground sown to wheat there than usual, is a mistaken one. There will be a large increase in the wheat area this year, compared with that of the last. If the vernal promise is made good at harvest, the wheat crop will be immensely larger than ever. The Milwaukee News predicts the same for Wisconsin.

Wheat Scarce out West—Reasons.

Two reasons are given by the western papers for the comparative scarcity of wheat in some sections there, which explains the mystery. High prices induced close selling in the fall, is one of them. The other is found in the unlooked-for volume of the wave of immigration which has rolled over that region during the last half-year. This was wholly unexpected, and consequently unprovided for. A recurrence of this scarcity is not likely soon to occur again.

Management of Sick Animals.

A CORRESPONDENT of the Germantown Telegraph is of the opinion that more farm stock is lost or injured by hasty and ill-advised attempts to counteract real or supposed ailments, than by a failure to administer anything for the purpose of cure. He says:—When your animal has a fever all stimulating articles are to be avoided. Bleeding to reduce the circulation; purging for removing irritating substances from the bowels; cooling drinks to allay thirst and supply decreased secretions; rest and quiet to tone down the system, are what common sense would seem to dictate, and what nature would seem to require. This is safer than to cram the animal with a multiplicity of cures, without regard to anything except the fact that something is the matter. We trust farmers and owners of animals will heed the admonition here given.

Rural Notes and Items.

TO CORRESPONDENTS—We have a number of excellent articles from contributors and correspondents on file for publication in practical and other departments—and many awaiting examination. Friends who are anxious to see their productions in print must exercise that cardinal virtue, Patience—as we are constantly obliged to do, the limits of the RURAL precluding us, every week, from giving what we desire.

THE GROWING CROPS.—The past week has been one of great promise to the farmer. Rarely has it happened that vegetation has taken such onward strides in a given length of time. Corn, potatoes, wheat, grass, and, in fact, everything green has gone forward at railroad speed. This seems to be general over the States—North, South, East and West—and should the weather prove favorable for harvesting, and the autumn mild, the yield of wheat and corn will be greater than ever before. In the extreme South the wheat harvest is nearly over—in some sections entirely so—and all accounts concur in placing the yield in advance of that of any previous year. From present indications the apple crop also will be much more abundant than for several years past.

STEAMING FOOD FOR STOCK.—A Subscriber, Blossvale, Oneida Co., writes as follows:—"I would like to know, through your columns, if there are any among your readers who practice cutting and steaming feed for stock. If there are any will they please let their light shine by communicating the results of their experience—their *modus operandi*—for the benefit of the rest of the RURAL readers." He is also anxious to know whether E. W. STEWART, who wrote on this subject in the RURAL in 1859—60, now feels confirmed in the practice of steaming food for stock, as then recommended by him. We do not know whether the views of Mr. S. on this subject have been modified by time or not, but we presume he will take pleasure in answering, thereby enlightening our correspondent, and perhaps benefiting many other readers at the same time.

THE BEST KIND OF STABLE FLOOR.—"A," of Grattan, Mich., asks:—"Which is best? Plank, or grouted with gravel and lime like a concrete house, or paved with hard head stone like a street pavement, and how large stone, and should any lime mortar be used; or should they be imbedded in sand or clay? We cannot get quarry stone here, and brick are very costly. I wish some one who has had experience with paved stable floors, would tell me through the RURAL how to make the very best kind of floor for horses or cattle, where the material to be had is pine plank, sand, gravel, hard head stone of any size, quick lime and water lime. An early reply would probably oblige many who are building this summer, and certainly one who wishes to do everything in the best way." Come, friends, drop your hoes long enough to answer this. Experience is wanted, and it is your duty to give it.

SHOW OF THORN HILL FARMERS' CLUB.—Writing us of the fifth Annual Exhibition of the Thorn Hill (Onondaga Co.) Farmers' Club, held June 6, a correspondent says:—"The attendance was large, (though in consequence of the backwardness of the season and farm work, not as large as at some previous exhibitions,) and the Exhibition may be considered a success. The show of horses was very fine. The splendid matched horses of Messrs. ALVORD BROTHERS of Marcellus, PLATT, CONOVER and SMITH of Skaneateles, and WELLS of Otisco, excited general admiration. The sheep exhibited were fully equal to those of any former exhibition. Among the most noticeable were the rams of W. S. BRIGGS and GEO. CLARK of Skaneateles, P. HOLMES, S. A. WRIGHT, E. F. OLMSTED and D. CHURCH of Marcellus, and P. BURNS of Spafford, and ewes of A. WRIGHT of Elbridge and G. F. KNAPP of Skaneateles. Some of these are recent importations from celebrated flocks of Vermont, and fully justify the most extravagant expectations. The show of implements was also good."

GOOD SHEEP.—Pearl Creek, Wyoming Co., N. Y., is celebrated for *white beans* and *Merino sheep*. Several breeders of thorough-breds live in this neighborhood, and persons wishing to purchase choice sheep resort here from distant places. The sheep men keep right along improving their flocks, and have no notion of giving up their business for dairying or any other popular employment. Among the prominent sheep men are the Messrs. GORTON, and I had the pleasure of seeing several very fine ewes, shorn the other day, belonging to SAMUEL and JACKSON GORTON. The wool was in such fine condition and the sheep not having been over-fed, and many of them having lambs, I thought they might demand a place in the great Sheep Register, the RURAL.

	lbs.	ozs.		lbs.	ozs.
No. 1	12		No. 9	11	
" 2	11	8	" 10	10	8
" 3	10	12	" 11	12	12
" 4	10	8	" 12	10	12
" 5	13	4	" 13	14	
" 6	10	8	" 15	9	8
" 7	10	12	" 16	9	3
" 8	10	8			

The last two were ewe tegs of remarkable beauty, weighing 47 lbs. each. You could scarcely tell them apart.

We also claim the honor of having a ram very hard to beat, the property of JOHN C. DOTY. Little Chief (ought we to apply to the Legislature and have it called Big Chief?) sheared this spring 28 lbs. of wool; one year's growth. He is from the Farnsworth Ram of Vt., and a Cutting ewe—four years old, and boasts over five hundred descendants. Such a sheep has not lived in vain, however it may be with some folks.—H. T. S.

UNION AG'L SOCIETY—BROCKPORT.—The summer exhibition of this Society took place at Brockport on Saturday the 15th instant, and was quite numerously attended. The implement show is reported to have been large, and in quality excellent. There were plows, mowers, reapers, potato diggers, improved gates, knitting machines, portable fences. The show of horses was good and the usual trials of speed were made. An address was delivered by HORACE GREELEY, which contained many sensible and seasonable hints, tersely expressed.

"EXCELSIOR FARM GATE."—Farmers and others wanting gates for carriage ways are referred to an advertisement of the "Excelsior." It is simple in construction, cheaply made and readily adjusted to any fence desired There are no hinges about it to get broken or out of repair. For farm purposes we think it especially desirable. One can be seen on Fitzhugh street, adjoining Baker's Block, this city.

HORSE FAIR AT GENESEO.—The officers of the Livingston county Agricultural Society announce a Horse Fair at Geneseo on the 4th of July. A lively time is expected.

HORTICULTURAL.

FRUIT TREES.

LATITUDINAL AND MERIDIONAL INFLUENCES.

In a late number of the Maine Farmer—an excellent journal by the way—was an article on the subject of nursery stock. Its purport was to dissuade people in Maine from purchasing New York nursery stocks, not on account of any defect in them, but because of non-adaptation to the climate and soil of a section so far north as Maine. The argument is that stock, from the New York nurseries, will not, except in rare instances, survive the process of acclimation. If this is true, the objection is insuperable, and New York nursery stock will, and ought to be, excluded from the markets in Maine, and, perhaps, from those of all the New England States—though some of them are on the same latitudinal range with the ostracised State. But the material point—the only one of consequence—is this:—Is the conclusion of the Maine Farmer derived from facts, or from a theory sectional and without adequate foundation to support it?

We are not prepared to assert positively that our Maine contemporary is in error on this point, though our conviction is strong that it is so. That certain products are influenced, and rendered more or less affluent and perfect, by climate and soil, is unquestionably true, but equally certain is it that that there are others which find a common and congenial home in sections widely remote in point, both of latitude and longitude. Among these the apple holds a prominent place, and has hitherto vindicated its claims to a kind of cosmopolitan reputation. For years the nurseries of Western New York—a section hitherto unrivalled for the extent and variety of its nursery stock—have sent forth North, South, East and West myriads of fruit trees, both in spring and autumn. This has been going on for more than a quarter of a century, and hence it is fair to presume that, were the stock not suited to sections of country on either side of their parallels of latitude and longitude, this trade would have ceased long ago or rather never have commenced. That it will decline, from this onward, we deem to be as certain as the westward set of empire, but not because of non-adaptation to climate and soil. This change will occur as certainly and for the same reason that the West and South will purchase less and less of their manufactured goods at the East than formerly. They can manufacture for themselves and will do it; they can produce their own nursery stock and will do that also—not specially because of climatic influences, but in consequence of a feeling of local independence and the accumulation of means and leisure to produce at home that which, in the earlier stages of their progress, they deemed it cheaper to procure from a distance. This tendency to localization is one of the concomitants of human progress, and is influenced but incidentally, if at all, by parallels of latitude or of longitude, either with respect to nursery stock or any other commodity. What is true of the West is likely to be of the East. The Orient will not fall behind the Occident in this respect, and between the local pride and rivalry of these longitudinal extremes, the central section—the home of the nursery traffic for a long series of years—will be compelled to repose on and find consolation in the triumphs of the past.

THE APPLE CROP OF THE WEST.

In the February number of the Magazine of Horticulture is an article concerning the last year's apple crop in Northern Ohio, which is said to have been "in quality superior to any which has been produced in that region for a series of years." A gradual decrease in quantity and a deterioration in the quality of the apple have been observed in that section for a long time past. This retrogression is imputed to the operations of the curculio, codling-moth and fungus incrustations, by which the yield of fruit is diminished, its form impaired, its quality deteriorated, and a tendency to early decay induced. The last season witnessed, there, a pleasing and beneficent change—one imputed to the heavy rains which prevailed early in June by which the earth, about the apple trees, was kept moist during a critical period for the apple; to the cold storm in the same month by which myriads of the curculio and codling-moth were destroyed before a chance was given them to commence their summer depredations upon the apple trees. The consequence was a greatly improved crop of apples, both as to quantity and quality of the fruit produced. It is added that "coincident with the storm" which depopulated the colonies of apple tree pests, "a blight attacked, extensively, the ends of the branches of the apple trees, and apparently diminished one-half the quantity of fruit."

The vicissitudes, to which the apple, pear, peach and plum orchards have been subjected for a series of years, are disheartening in the extreme to fruit growers. But perseverance should be the motto of such, trusting that, at no distant day, a new cycle will commence which shall restore fruit growing to its former certainty and profitableness.

Striped Bugs.—An exchange paper says the best way to manage these pests of the young melon and cucumber vines is to supply them with food which they like better. When planting the melons and cucumbers, sow around the hills a few radish seed, which will come up about the same time with the former, and supply food for the bugs preferable to the other. With this precaution taken, the vines will not be molested by the bugs. The recommendation is worthy of a trial at least.

PEARS—ROOT PROPAGATION.

In a late number of the Magazine of Horticulture was a communication on the propagation of the pear from Dr. Van Mono of Belgium. We quote a paragraph:

"I now propagate for myself and intimate friends the most choice varieties of pears, which I obtain by means of the roots. Not a single one fails in this new process. It is immaterial in what manner they are set out. This method I discovered accidentally, in consequence of some roots on which I intended to graft other kinds of pears, being thrown on the ground and covered with a little earth, to preserve them until used for that purpose, and which were lost sight of and forgotten until the next spring, when all of them sent up stalks, which, in the autumn, were as tall as those raised from the seed of two years' growth. They can be set out in the spring as well as autumn. Such roots should be selected as have one or more terminal fibers, and those that are often cut off or left in the earth when a tree is transplanted, succeed well. They cannot be too small, but should not be larger than the finger. The wounds at the large ends of the roots should be covered with the same composition to protect, as in grafting. They must be set obliquely."

SLAUGHTER OF THE COMMITTEE-MEN.

Eds. Rural New-Yorker:—I feel it my duty to call your correspondent, Penn Yan, to an account for his communication in your paper of March 27th. If I were a resident of your State I would have him indicted for the crime of Committee-man slaughter; and at any rate I must insist on his retracting the offensive article or else adducing proof of justifiable homicide, and making due apology to the bereaved friends.

I am happy, however, in being able to prove an *alibi* on the part of one of the accused persons named by Penn Yan. (The others are abundantly able to defend themselves.) The veteran of Iona did not serve on the Cleveland Wine Committee, as supposed by P. Y., and did not "stultify himself" by signing the report; so his numerous friends may hope it will be a long time before his name will appear in the lists of necrology. It is true that the name of Dr. Grant was appended to the report, as published in the Ohio Farmer, and the Ohio Pomological Report, but this was an error; and as soon as noticed by the Doctor he wrote me a letter, as Secretary of the Pomological Society and Grape Growers' Association, designing to express his dissent from some of the sentiments of that report, especially the commendation of the Ives' and Norton's Virginia Wine, and the seeming approval of the analyses of Prof. Jackson. This letter was published in the Ohio Farmer, but doubtless was not seen by Penn Yan. The error occurred by the inadvertence of Mr. Graham, the Secretary of the Wine Committee. In writing out the report for publication he forgot that Dr. Grant, though appointed on the Committee, was called away from the meeting before the wines were inspected, and he did not hear or read the report, as the others did, before it appeared in print. His name was omitted from the report in the published transactions of the Grape Growers' Association.

Painesville, Ohio, May, 1867. M. B. Bateham.

In justice to Mr. B. it is proper to state that the above article should have appeared a month ago.

GROUND VINERIES.

I find the best method of cultivating fruits under these vineries is as follows:—At one end of the vinery a hole, two feet square and about two feet deep, is dug and filled with a compost of good loam, rotten dung, and a little road-sand. These should be well incorporated together, previously throwing in about a peck and a half of bones, merely bruised, to afford drainage to the mass, also to feed the vines during hot weather, or when the heat is so great as to rob the plant of its natural moisture. The bones will likewise absorb the fluids passing down to them the more readily by being bruised. All being thus prepared, the vine is turned out about the middle of March, providing the weather is open and mild, the cane being introduced and pegged down. Air should be admitted about 10 o'clock, A. M., by raising slightly the lights; this, with the additional air from the bottom of the frames, will serve to check the vines from making too quick and premature a growth before the season is sufficiently forward to assist and facilitate the young growth. The cases should be closed again about 2, P. M., if possible, securing a little atmospheric warmth. The vines should be at this period slightly syringed. The moisture will aid the expansion of bark, and the bursting of the young buds and leaves. This process should be continued until the flowers are expanded, when syringing must be entirely suspended, and air admitted upon every opportunity.

As soon as the flowers are set, I find moisture applied in the form of vapour highly beneficial. This can be obtained by pouring tepid water upon the slates. Atmospheric warmth is generated throughout the day, and causes the moisture to evaporate, thus charging the interaal air with an agent highly beneficial. As soon as the grapes have got to the size of sweet peas the bunches should be thinned, taking out all ill-shaped and deformed berries; also all those which are in immediate contact with others, taking care not to take out all the interior berries, or the bunches will be loose and ill-shaped. At this period the structures should be kept close, and as much warmth secured as possible, as the critical time of stoning will have arrived, and a check at this period would prove highly injurious

As soon as coloring commences, as much air as possible should be admitted, consistent with safety from chilling; and the vinery must be closed sufficiently early to secure, as before stated, as much natural warmth as possible. If this course is pursued, I feel confident every success will attend the operator, and will repay him for the pains he may bestow. The weight and quality of the fruit will equal, if not surpass, that which is grown in extensive vine-houses.—*Gardener's Magazine.*

WEIGELA ROSEA.

Among the shrubs which are now coming into bloom the rose-colored Weigela holds a prominent place in the estimation of florists. The preceding illustration presents a branch in bloom, and will give a pretty good idea of the richness and beauty of this flowering shrub.

HORTICULTURAL GLEANINGS.

Layering Vines, Shrubbery, &c.—The Germantown Telegraph reminds its readers that they can successfully *layer* vines and shrubbery during the present and the ensuing month. It adds that in the fruit line, the grape and the raspberry that do not propagate themselves readily, like the Catawissa and American Purple and some red varieties, can be extensively increased in this way.

New Method of Grafting.—The Horticulturalist gives an account of a new mode of grafting the vine, as practiced by Auguste Buisselst of Nantes, France. He cleaves the stock at the point of intersection of two branches by pressing them apart, and inserts the graft, fashioned as for the cleaving process. It is bound up with grafting wax and left to grow till the following autumn, when the two branches are cut off and the strength of the main stem thrown into the graft. If the graft fails the branches will grow on, and nothing is lost by the operation except a partial retardation of growth be so considered.

Keeping Fruit back in the Spring.—A Chester Co. farmer communicates to the Germantown Telegraph his experience in apple raising. He became impressed with the idea that the trees were allowed to blossom too early in the spring, and cast about for the means of keeping them back. In putting his theory to the test he procured the refuse cane from a sugar mill and tramped it around or about half his apple trees, leaving the balance without any. This cane offal froze solidly about the trees and retained the frost in the ground several days after it had disappeared from that devoid of this covering. The consequence was quite a week's difference in the time of blossoming of the trees and, what was better still, a fine crop of apples on the trees held in check, and none on the others.

Peach Borer—Killing.—It is stated on authority deemed reliable that to exterminate the peach borer it is only necessary to pour a small quantity of common sperm oil on the bark of the trees, close to the roots, without disturbing the earth. If the scaly bug infests the bark of your trees, rub them with an oiled swab and it will be destroyed also. Oil is the most effectual poison for all insects. It closes their spiracles, or breathing holes, on the side of the body. Essential oils, such as camphor and turpentine, kill or drive away insects for the same reason, and not because their odor is pungent.

Thinning Out Fruit Trees.—On this subject the Horticulturist remarks:—"If large and choice well-flavored fruit is wanted of any kind, it must be thinned out, removing a few at a time from every part of the tree, so as to leave the residue pretty evenly distributed. The work can not be all performed at once, and it therefore should be commenced early in the season, the operator going over his trees, bushes, or vines from time to time, removing now one here, now one there, as the eye meets it, and the evidence appears of the advantage obtained by its removal. Early thinning, before the strength of the tree or vine is taxed in the stoning or seeding, will avail much more than the same course afterward."

Influence of Timber on Fruit.—Proofs are accumulating as to the beneficial influence of forest trees in the preservation of the more susceptible fruits from the rigors of our northern and western winters. We have noted this frequently in years gone by—a fact corroborated by an Illinoian in a letter of recent date to the "Institute Farmers' Club." He writes from the southern section of the State, and says:—"Here, on the edge of the timber belt, peaches have not failed for nine years." On the open prairies they are killed almost annually—the present year proving no exception.

Horticultural Notes and Queries.

A New and Promising Strawberry.—Having observed in European catalogues notices of a new and valuable strawberry, which originated in France, and learning that Messrs. Frost & Co. of the Genesee Valley Nurseries, this city, had plants of the same which they obtained in the spring of 1866, we recently called and examined them. We found that from five plants that survived had been produced, with ordinary culture out of doors, four hundred strong vines. The plant apparently possesses excellent characteristics, being very hardy and having magnificent glossy foliage;—nearly one hundred plants set out in September last, were in full fruit and showing very large berries. The flowers are really a curiosity, some of them being 1⅛ inches in diameter. One of the original imported plants produced 41 plants, and then the runners stopped and the plant last week had 141 berries already set.

From present indications we think this strawberry will prove a valuable acquisition; it certainly is very promising. The following is an extract from Dauvesse's Catalogue, Orleans, France, referring to it: "*Strawberry Doctor Nicaise:* Fruit enormous and early weighing more than 50 grammes (1¾ oz., 9 to the lb.;) bright red and vermillion; flesh white and of first quality. This variety was obtained by Dr. Nicaise, who gave it to his gardener, Joseph Riffaud, who put it in commerce on the first of August, 1864, at three francs per set."

Bark Lice—Apple Trees.—T. W. R., Tully, N. Y. The bark louse is a difficult thing to dislodge from an orchard, as there are usually so many sections of the tree affected with this pest. As safe a thing for killing them as we know of is leaf tobacco boiled down to a pulp, with soft soap, made cold, and mixed to the consistency of paint. Apply with a brush to the affected limbs and twigs. It is a tiresome process, but is said to be effectual in killing the lice. What will prevent their reappearance is more than we can tell unless it be to wash the trees every spring with the material used for killing them.

Western New York Fruit Growers' Society—Summer Meeting.—By a notice, signed by H. E. Hooker, President of the Society, a summer meeting is announced to be held at the Court House in the City of Rochester on Thursday the 27th day of June. The President adds:—"It is expected that a more general display of fruits and flowers will be made than usual, and trusts that all will come prepared with specimens of their productions."

Salt For Fruit Trees.—It is the opinion of some fruit growers that salt is an excellent fertilizer for fruit trees, adding to their productiveness while shielding them from the attacks of insects. It is claimed to be especially beneficial to the pear in preserving it from blight.

Catching Insects.—A. S. P., Parishville. It is probable you can quiet the insects you mention by an effusion of kerosene. The trouble will be to keep the winged ones still long enough to make the application. With a large scoop net you might secure them and serve them out with ignited sulphur, as is done with bees sometimes when their stores are wanted. You can probably find out about the isinglass at some stove mounting establishment.

Bolster the Tomatoes.—Tomatoes will grow and yield a tolerable crop even if allowed to sprawl over the ground, but the fruit is not so good and savory as that derived from supported vines. Three or four staves of an old barrel, or sticks of any kind, placed in a circle around a plant with a hoop thrown over them near the top will furnish a good and cheap support.

Horticultural Pencil.—Among the novelties of the day is the "Horticultural Indelible Pencil for marking on wood," manufactured in Northampton, Mass. It is a good thing. See advertisement in another part of this paper.

Plowing Near Trees.—C. R. E., Bridgeton, N. J. We have no knowledge of any implement, patented or otherwise, which will meet your views regarding plowing in orchards.

Floral Exhibition at Buffalo.—There is to be a grand Floral display by the Society of Natural Sciences in Buffalo on the 25th and 26th of the present month.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Eds. Rural:—The following recipes I know to be good and will please all who will try them:

Lemon Pies.—Stir together a piece of butter the size of an egg, and sugar to your taste; after beating well, add the yolks of 6 eggs; the grated peel of 2 lemons; tablespoonful of flour; add the juice of the 2 lemons and beaten whites of 6 eggs; 1 quart sweet cream; bake in deep plates.

Wine Jelly.—Soak one paper gelatine in a pint of cold water half an hour, then add 1 pint wine; (Madeira is better than Sherry,) ½ lb. granulated sugar; cut up 3 lemons; then pour on 3 pints of boiling water; boil 10 minutes; then strain through a bag; the dish and bag should not be moved while draining.

Tapioca Pudding.—1 cup taipoca; 4 eggs; 1 quart milk.

Breakfast Puffs.—1½ pints new milk; 2 eggs; 1 lb. 3 oz. flour; a little salt. Bake in tins about half an hour; grease the tins well with lard.

Chocolate Cake.—1 cup butter; 2 of sugar; 3½ of flour; 1 teaspoon soda; 2 cream tartar; 4 eggs; 1 cup sweet milk. Flavor with the grated rind of a fresh lemon, or pounded bitter almond; white of six eggs; grate the chocolate with sugar and make as stiff as frosting; put between the cake when cold.—M. O. R., *Batavia.*

Eds. Rural:—I send my method of making bread, and, though it is one of the simplest, I do not think it by any means the poorest.

Salt Rising.—Take a pint of water nearly scalding hot, and a heaping teaspoon of salt; stir thick with flour and set the dish in a kettle of warm water; stir occasionally till it rises; be sure and keep it warm. As soon as it rises, take nearly a quart of scalding water, pour it on your flour, then add ½ pint cold water and stir it up; then your yeast; stir thick and set under the stove to rise. When it rises knead, let it rise again and bake. This will make 3 large loaves.

Brown Bread.—One pint sour milk; ½ teacup molasses; 2 eggs; 1 teaspoon saleratus; 1 of salt; 1 heaping tablespoon flour; then add the meal. Make thin enough to pour out.

How to Cook Asparagus.—Take 5 or 6 stalks; cut in small pieces rejecting all which are not very tender. Put on the stove in a dish containing a pint of hot water, let it simmer till done; then add 1 tablespoon of flour stirred with 2 of sweet cream and a lump of butter the size of a hen's egg; a little salt and pepper; stir all in while boiling and take off immediately.—A. E. H., *Porter, N. Y.*

Why Potatoes Should be Pared Thin.—A scientific writer says:—"The fact is, almost the sole value of the potato is near the surface; so near that a very thick peel would take the largest part of the nutriment. This is at once made obvious by examining a thin slice of potato with a microscope, when the starch granules will be found lying in great numbers in a belt just under the skin, and decreasing towards the center. They are placed here for the nourishment of the young sprout, which springs from the "eye," and which being like beauty, "only skin deep," is required to go no deeper for its food during the germinating process. This starch is, for all practical purposes, the entire nutriment which the potato contains—there being only 2 per cent. of gluten, while 75 per cent. is clear water. If it is worth while to eat the potato at all, it is obviously foolish to throw away the nutriment and save only the water cells."

Indian Bread.—Take 2 quarts new milk; 2 of Indian meal; ½ a teacup molasses; a teaspoon saleratus, and 1 of salt. Bake 3 hours. Ladies try it, and if you have anything better, send it to the Rural.—C. D. S.

Housekeepers—When you buy D. B. De Land & Co.'s *Best Chemical Saleratus* you will find every paper weighs a pound. Can you say the same about other Saleratus?

One-Egg Cake.—Two cups of sugar, 1 pint of flour, 1 egg, and lump of butter as large as an egg, 1 cup of milk, 1 teaspoonful of soda, and 2 of cream of tartar.

Ladies' Department.

THE MOTHER'S DAY-DREAM.

A mother sat at her sewing,
But her brow was full of thought:
The little one playing beside her
Her own sweet mischief wrought.
A book on a chair lay near her:
'Twas open, I strove to see,
At the old Greek artist's story,
"I paint for eternity."

So I fancied all her dreaming;
I watched her serious eye
As the 'broidery dropped from her fingers,
And she heaved a heartfelt sigh.
She drew the little one nearer,
And looked on the sunny face,
Swept the bright curls from the open brow,
And kissed it with loving grace.

And she thought, "I, too, am an artist;
My lifework here I see.
This sweet, dear face, my hand must trace,
I must paint for eternity.
But how shall I blend the colors,
How mingle the light and shade,
Or arrange the weird surroundings
The future has arrayed?

For hand and heart together,
Some grace shall add each day;
And, thus, shall her face grow lustrous,
With beauty that cannot decay.
My darling! God guide my pencil
And grant me the vision to see
In the light of His love, without blemish or stain,
In the coming eternity."

Then the mother awoke from her day-dream,
Her face grew bright again,
And I knew her faith was strengthened
By more than angel's ken.
Her fingers flew the faster
As she sang a soft, low song:
It seemed like a prayer, for the child so fair
As it thrilled the air along. [*Observer.*

FASHIONS.

"As well be out of the world as out of fashion," is a worldly saying which but overstates a truth. Avoiding extremes, it is imperative to know somewhat of prevailing modes, that they may be adapted to person and purse, with such modifications as good taste and fit economy may suggest.

Our poor skill would fail to give a good view of the kaleidoscopic colors, the delicate shapes, the fabrics of substantial richness or gossamer lightness, the "trifles, light as air," of lace and feathered ornament which fill this realm of dainty and ever changing device. We turn for help to the great *modistes* and give Madame Demorest's summing up of summer styles, beside which any stiff essay of our own were poor indeed:

"The metropolis presents a brilliant appearance at the present time, dressed in all the gayety of the new spring and summer fashions. The windows are bright with beautiful muslins and light summer silks, and the streets are thronged with ladies abroad as well as at home, who have come to air their new clothes and pretty Easter bonnets in the sunshine of Broadway.

The prettiest costumes to be seen as yet upon the streets are the summer silk suits, chene, or striped in narrow line in two colors. A white and lilac stripe, for instance, dress and sack, is trimmed with bands of silk in the contrasting color, and worn over a white mohair petticoat, trimmed with three rows of purple silk braid.

Another very pretty suit is composed of mouse-colored chene silk, dotted with white and trimmed with rouleaux or narrow folds of mouse-colored satin, dotted with white opaque beads. This is worn over a fluted skirt.

There is a delicate chene poplin, and a very silky material, made of silk and linen, both of which are introduced for traveling dress purposes; but though very pretty, they are not equal for service to the pure mohair, which will stand all sorts of weather without shrinking.

The new muslins are very gay, and in very large patterns; they are softened, however, by the delicate and beautiful shading of the designs. An organdie muslin, moreover, needs a large pattern to be effective. Small figures are absorbed by the fine transparent groundwork of the tissue, and serve only to give a misty, uncertain tint to the entire fabric.

Robes in organdie have been revived this season; some made with a single flounce round the bottom of the skirt, others with an upper skirt, with flowered bands, which descend upon it, and form a sort of fan-shaped tunic.

White toilets promise to be very fashionable again this season for young ladies; although they certainly require great neatness and exquisite attention to detail to be attractive. The finest and nicest of skirts and hose, white shoes, (unless the trimmings of the dress are black, and then black satin slippers may be worn,) spotless gloves, and a very careful coiffure, are all indispensable to a white dress; it is not therefore an economical toilet.

The new Paisley shawls have black centers and black fringe; they are considered very distinguished. A great many ladies are having their old white centers cut out and the black ones put in. A great business is done in this way in the alteration of India shawls.

A novelty in summer black silk cloaks and sacks is the introduction of color into the trimming.

"Reins" are now as fashionable as ever, but they are all worn without loops, and quite frequently simulated by an embroidery at the back of the garment, the edges of which are finished with fringe.

Short dresses are great conveniences for country wear, and ladies are adopting them universally for this purpose and for traveling. Nothing so comfortable or convenient has been invented before for a long time.

It is decided now that the summer bonnets will be very small; the bonnets for dress and reception purposes are really smaller than ever, very generally of the fanchon shape. They are merely little triangles of lace or white crape, laid in fine folds, and trimmed with a mauve or blue velvet bandeau, a little fine blonde, a white rosebud, and two or three small bronze leaves.

Dresses are still cut very narrow, and with long trains; four yards and a half is considered sufficiently wide round the bottom for a trained dress, and three and a half for a short dress.

Dresses, not full gored, are gathered at the back. We have said several times, and repeat again, the underskirt must either be gored or made very narrow at the top, and with a deep flounce at the bottom; this is essential to the good appearance of the dress."

WOMEN EYES ON WOMEN.

The eyeing of women by women is one of the most offensive manifestations of superciliousness now to be met with in society. Few observant persons can have failed to notice the manner in which one woman, who is not perfectly well-bred or perfectly kind-hearted, will eye over another woman who she thinks is not in such good society, and above all not at the time being in so costly a dress as she herself is in. It is done everywhere; at parties, at church, in the street. It is done by women in all conditions of life. The very servant girls learn it of their mistresses. It is done in an instant. Who cannot recall hundreds of instances of that sweep of the eye which takes in at a glance the whole woman and what she has on, from top-knot to shoe-tie? It cannot be a new fashion of behavior; but the daily increasing preference of people to superiority, because they can afford to spend more money upon their backs than others can, makes it at once more common and more remarkable even than it was ten or fifteen years ago.

Men are never guilty of it, or with such extreme rarity, and then in such feeble and small-souled specimens of their sex, that it may be set down as a sin not masculine, or at least epicene. But women of some sense, of some breeding, and even of some kindliness of nature, will thus endeavor to assert a superiority upon the meanest of all pretences, and inflict a wound in a manner the most cowardly, because it cannot be resented, and admits of no retort. If they but knew how unlovely, how positively offensive they make themselves in so doing, not only to their silent victims, but to every generous-hearted man who observes the manœuver, they would give up a triumph at once so mean and so cruel, which is obtained at such sacrifice on their part. No other evidence than this eyeing is needed, that a woman, whatever be her birth or breeding, has a small and vulgar soul.—*The Galaxy.*

OLD MAIDS.

Never be afraid of becoming an old maid, fair reader. An old maid is far more honorable than a heartless wife, and "single blessedness" is greatly superior in point of happiness to wedded life without love. "Fall not in love, dear girls—beware!" says the song. But we do not agree with said song on this question. On the contrary, we hold that it is a good thing to fall in love, or get in love, if the loved object be a worthy one. To fall in love with an honorable man is as proper as it is for an honorable man to fall in love with a virtuous and amiable woman. What could be a more gratifying spectacle than a sight so pure, so approaching in its devotion to the celestial? No: fall in love as soon as you like, provided it be with a suitable person. Fall in love and then marry; but never marry unless you do love. That's the great point. Never marry for a "home," or a "husband;" never degrade yourself by becoming a party to such an alliance. Never sell yourself, body and soul, on terms so contemptible. Love dignifies all things; it ennobles all conditions. With love, the marriage rite is truly a sacrament. Without it, the ceremony is base fraud, and the act a human desecration. Marry for love, or not at all. Be "an old maid," if fortune throws not in your way the man of your heart; and though the witless may sneer and the jester may laugh, you still have your reward in an approving conscience and a comparatively peaceful life.—*Phrenological Journal.*

FORCE OF EXAMPLE.

The imitative propensities of Young America are nearly equal to those of the monkey tribe.

Willie, a three-year old, was at dinner with the rest of the family, which included an aunt on a visit.

"Aunt Ellen," asked Willie, "do you ever say devil?"

"Why no, Willie; what makes you ask such a question?" replied the lady.

"Because Pa says so. Pa, what made you say devil the other day, when you were looking for the hammer and could'nt find it?"

"Oh," said his Pa, rather cornered, "did I? Well so as to find it easier, I suppose."

Here the discussion ended, the explanation being considered as good as could be given under the circumstances—but Willie's retentive memory treasured it up.

A few days after Willie's cap got somehow out of place, and he forgot where he left it. His mother told him to look till he found it.

Off he started, up stairs, and down stairs, and soon his treble voice rang through the halls, crying out, Devil! *Devil!* Devil!

"Willie, my son!" called out his frightened mother, "what in the world do you mean by using this wicked word?"

"So as to find my cap easy," cried the boy. "Pa says devil when he can't find things, don't he, Ma?"

Choice Miscellany.

Written for Moore's Rural New-Yorker.

AFTER THE STORM.

Oh, golden glorious sunset!
Your rays, as they fall to-night,
Can never know a fairer scene
Than these fields so fresh and bright.

Oh, golden glorious sunset!
You come with peace to me,
But with darkness your glory will soon be met,—
Are shadows again in my heart to be?

Oh, golden glorious sunset!
You are fading *even now*,
But you carry sorrow with you
And ease an aching brow.

Oh, amber clouds of sunset
Your glory now has gone.
But you leave in place the twilight,
And a heart free of sorrow and wrong.

A. M. M.

SUNSET.—JUNE 6TH.

It seemed as though the gates of heaven
Were opened in the West,
And all the angels looking out,
In shining garments drest.

Their radiant forms went flitting past
The gateway of the blest,
Then in a chariot of flame
They took the sun to rest. H. M. L.

Written for Moore's Rural New-Yorker.

A WORD TO PARENTS.

"What has George been doing?" I asked, one day, of Mr. Brown, whom I had overheard scolding his son, a boy of twelve years.

"The little rascal has been making a bow and arrow—fooling away his time when he had better be doing something else?"

How many boys, like George, have been scolded for making a bow and arrow, or doing some other little thing equally harmless; and how are the joys of their young being saddened by this thoughtless scolding of parents. Think of the pain it gives them, when their pleasures are thus nipped in the bud, the object of their joyous activity torn away, and their eager minds left an aching void. The trial is quite as severe to them as heavier sorrows are to the stronger powers of manhood. This scolding is not only cruel but thoughtless. Many parents seem to see no difference between youth and age, but think to apply the same rules to the restless activity of the one and the dull declining of the other. They forget that this onward moving world of ours would stagnate and decline but for that same vigorous activity, that boundless and elastic hope they every day reprove in their children. It is the law of nature to their young being, which parents should neither amend nor repeal.

Yes, father, let your boy enjoy himself as best he may. If he wants to go a nutting, fishing or hunting, why not let him go? It is a world of pleasure to him, and let him enjoy it. The time may come when joys will not scatter so thickly around him to cheer and make life pleasant.

If you would be a wise father do all you can to make your boy happy. Your kindness can go further than getting him a new coat. Let him enjoy every pleasure he can that has no harm in it. Do not be too ready to think, either, that he is wasting his time and growing up in idleness. Making bows and arrows, or wooden guns, is better for the boy than studying Greek or Latin. You will see the proof of this in future life, if you will watch and wait. You will see, too, the sad folly of forcing premature thought and study on the youth, and drawing him away from the world of perception. And so, parents, let nature have her course. Give your boy tools to work with, and let him make and build. By so doing you will give sunshine to his days, tone and vigor to his mind and body, and develop his life into strength and manliness, the best inheritance you can leave him. G.

SOMETHING TO DO, SOMETHING TO LOVE, SOMETHING TO HOPE FOR.

Among the first feelings which stir the mind in infancy is the desire for something to do. The child, as he runs about the floor, feels the need of motion; as he grows older, although he may have no taste for continuous labor, idleness is misery and activity is happiness. When he is older still this want for something to do is not lessened, and even when he totters down the western slope of life it continues. Why does the criminal so dread solitary confinement? It is not alone the terrible loss of intercourse with his fellows, but it is the extreme wretchedness of want of occupation for body and mind.

It is not man alone that shows this trait; all the universe manifests it. The lower animals, and even the murmuring brook and the waving grain, whisper action. If we could look into the bright abode beyond the sky we should there find still more earnest action.

"An angel's wing would droop if long at rest,
And God himself, inactive, were no longer blest."

Our Father above, in giving us this great desire for something to do, gave each also "a work which no other can do." When our fathers left their home across the seas and came to this beautiful New World, they did their work nobly, and bequeathed to us the priceless boon of a free country and a goodly name, which it is ours to preserve untarnished.

This want of something to do is not more general than that of something to love. From infancy to the grave this law of affection rules all mankind. Almost the first impulse of a child is love for mother and father, and others who are kind to him, and the sentiment increases with his growth. Whether the object be a toy, a book, or a friend, he loves it. The miser loves gold, and gives up everything else that he may possess the shining treasure. The true scholar loves his books, and spends many a happy hour with them. The lover of Nature spends hours of uninterrupted pleasure and delight amid flowers which his kind mother has strewn around him, and at autumn walks far away in the forest, "as the leaves, all stained with crimson, golden-flecked, and trimmed with purple," fall in rich profusion, each has for him a lesson. We love our friends, and we shed bitter tears when we see them suffer, and our hearts are torn with anguish when we lose them by death, or when they turn coldly from us. If these earthly ties are so strong, may they not be types of the greater love which we should bear to the Giver of all good.

Something to hope for is another imperative want, and a source of strength and persistence. Each one of us is looking for some good to come. The student looks forward to the time when he shall be called one of earth's learned men. The aspirant after fame is working and waiting for the time when he shall have won a name that shall be known and honored by future ages, and it is the hope of victory that enables the soldier to stand at his post in times of the greatest danger. Hope is the golden band that keeps the heart from breaking, the power that keeps the soul from sinking when for an instant the dark waters of despair sweep over it; the anchor that stays us from floating far out into the regions of darkness.

More of happiness is derived from anticipation than realization. When our life's journey is ended and we pause wearily on the bank of death's shadowy river, to look back over the path we have traveled, if we have fulfilled the true end of life, Hope will not leave us, but will point across the stream at our feet to the bright fields of the "promised land," and whisper of the joys that await us beyond "the pearly gates of the heavenly city." BEAUTIFUL HANDS.

BY MINA MILLER.

We think the list of adages would be incomplete without one something like this:—"He who has a beautiful heart has a beautiful hand." Beautiful are the hands engaged in helping the needy, wiping away the mourner's tears, and scattering happiness over the earth. Worthy of praise were the hands that framed the Constitution of our country. The slave sees beauty in the hand that unbinds his chains. Therefore, beautiful were his who wrote the emancipation proclamation—beautiful even while pointing to the dark cloud which, for weary years, hung over our land; for it pointed also to the silver lining with assurances that the morning of peace would dawn. Beautiful, howsoever sun-browned and rough they might be, were the hands of those who fought to save the country, or when administering to the sick in camp or hospital, holding to their lips the needed food or medicine, bathing their fevered brows, supporting their weary heads, or gently covering the sleeping dust with earth, writing their names above the graves and sending to friends the last "good bye." Beautiful are the hands of the teacher held forth to assist those who would climb the hill of science. The records of the great and good of earth are the holding up of their hands to show us the way to wisdom, greatness and purity. Beautiful were the hands of Jesus, placed on the eyes of the blind, resting on the heads of children in blessing, or raised to heaven in prayer.

May we do such deeds that when we come down to death our hands may be free from stains, and we become inheritors of the promise, "He that hath clean hands and a pure heart shall ascend into the hill of the Lord, shall stand in His holy place."

East Gaines, N. Y., 1867.

THE WILL TO BE TRAINED—NOT BROKEN.

Men often speak of breaking the will of a child; but it seems to me they had better break its neck. The will needs regulating, not destroying. I should as soon think of breaking the legs of a horse in training him, as a child's will. I never yet heard of a will in itself too strong, more than of an arm too mighty, or a mind too comprehensive in its grasp, or too powerful in its hold. I would discipline and develop the will into harmonious proportions. The instruction of a child should be such as to animate, inspire and train, but not to hew, cut and carve; for I could always treat a child as a live tree, which was to be helped to grow, never as dry, dead timber to be carved into this or that shape, and have certain grooves cut in it. A living tree, and not dead timber, is every little child.—*Selected.*

Nature's Periodic Lessons.—The flow and action of vital currents and forces is like the vibration of the electric current from positive to negative; hence the heart-beating; the regular breathing, the air inspired and expired; the periodic craving for food; the desire to sleep at night, to wake at morning. As mother Earth has her periods of spring-time and all the seasons, so we find our vital processes and wants periodic. Hence regular habits are but obedience to Nature's periodic laws.

Forces are invisible, but the phenomena, or facts caused by them, are visible; force is permanent, ever acting in ever-varied ways, therefore phenomena or facts constantly occur; and science, which is the knowledge of forces and facts, has a field ever rich and new.

Sabbath Reading.

HOPE AND MEMORY.

Earth has each year her resurrection-day,
When the spring stirs within her, and the powers
Of life revive; the quiet autumn hours,
Ere the rough winter drives their warmth away,
Wear pleasant likeness of returning May;
Oft in the soul, where all was dry and bare,
Founts of fresh joy spring up, and heavenly air
Plays round it, while along its desert way
Blossoms bright flowers of hope, and dull despair
Melts like a cloud;—and our dear Christ has said,
There is a resurrection of the dead;
Then may th' immortal spirit yet repair
The freshness and the grace that here had fled,
And in new strength and beauty flourish there.

But as a ship, when all the winds are gone,
Hangs idly in mid-ocean, so the soul
Helplessly drifting hears the waters roll,
While in the heaven the breeze of hope dies down,
And memory darkens round, and from the lone
Vast sea dim shapes arise, and shadowy fears
Cling like damp mists, and the long track of years
(Where once the brightness of the morning shone)
Lies strewn with wrecks of that rich argosy
With which the bark sailed freighted to explore
The unknown deep, and distant gleaming shore—
Keen, soaring hopes and aspirations high,
Pure thoughts, and sunny fancies, and the store
Of priceless gems from God's own treasury.

But the still depths of the unreturning past
Have buried more than blessings, nor alone
Grief and regret blend with the wild waves' moan
Infinite yet not hopeless. In its vast
And healing waters kindly Time hath cast
Sorrows and sins, where in th' eternal tide
Heaves the full heart of God, and we confide,
Not comfortless, to Him the First and Last,
The secrets of our being.—Lo! the face
Of ocean, kissed by the descending breeze,
Breaks into smiles, and long-lost melodies
Vibrate from earth to heaven, and a fresh grace,
New-born of hope, lies on the breathing seas—
The far-off isles shine in the golden space.

CLARKE'S TOKEN OF RESPECT.

I have met with no individual who so highly appreciated the talents of Wesley, or was so affectionately attached to him, as Adam Clarke. When he heard of his death he was overwhelmed with grief, and wrote with the point of a diamond the following inscription on a pane of glass in his study window in Manchester. I frequently gazed on it with deep interest during the three years that I occupied the adjoining parsonage:

"Good men need not marble: I dare trust glass with the memory of John Wesley, A. M., late Fellow of Lincoln College, Oxford, who, with indefatigable zeal and perseverance, traveled through these kingdoms, preaching Jesus for more than half a century. By his unparalleled labors and writings, he revived and spread Scriptural Christianity wherever he went, for God was with him; but having finished his work, by keeping, preaching, and defending the faith, he ceased to live among mortals March 2d, MDCCXCI, in the eighty-eighth year of his age. As a small token of continued filial respect, this inscription is humbly dedicated to the memory of the above by his affectionate son in the gospel, Adam Clarke."

Wesley was an accurate judge of character. Clarke had been but a short time in the ministry when the founder of Methodism wrote, "Adam Clarke is doubtless an extraordinary young man, and capable of doing much good." In his will he appointed him one of the seven trustees of all his literary property, and Adam never put his father to shame.

TO WHAT END IS OUR LIFE?

At the end of natural life we gather up the things we have accumulated in this world, they are added to our soul, and we carry them out of the world with us. Then no man will ever be sorry that in his youth he bowed his head to God in prayer; none will be sorry that he clasped his hands in the instant of his resolution and swore he would reverence the dreams of his youth, and keep his conscience undefiled, and honor his God with a great life. This is sacramental and holy. Rejoice, O young man, in thy youth; but remember into what littleness men may make their lives taper off and vanish away. Remember, too, what an eternal joy a man may gather from a small field of life, and go home with the sheaves in his bosom to be welcomed by God's smile.

Of old, the rock slumbered in the mountain, and Michael Angelo reached out his hand and took it, and gathered the stones from the field, and built them into that awful pile of St. Peter's, covering acres of ground and reaching its mighty dome toward heaven. So, brothers and sisters, out of common events, and the passions God has put in your hearts, you may paint on the walls of your life the fairest figures of angels and prophets, and, from the common stones of your daily work, build a temple which shall shelter from all harm, and bring down the inspirations of God.—*Parker.*

Do You Love Christ?—Brethren, is your life hid with Christ in God? Do you hate sin heartily, and strive to subdue it? Do you love Jesus entirely, and strive to imitate Him? Do you seek to do good to all men, and to win them to Christ? Do you live as you pray, or only pray as you live? Do you make every cross to be a crown, and out of weakness grow strong in the power of your God? If so, then are you indeed Christ's "peculiar people, zealous of good works."

The golden days of June are full of promise of ripe harvest; so let your life be, golden to-day, and promising more to-morrow.

The Paris Exposition.

[Correspondence of Moore's Rural New-Yorker.]

MOWING MACHINE TRIAL AT THE GREAT PARIS EXHIBITION.

PARIS, May 26th, 1867.

As the pleasure of attending the Great International Trial of Mowing Machines at the Paris Exhibition of 1867 did not fall to the lot of but one individual of each million of American citizens, and as the RURAL NEW-YORKER has not, probably, a special correspondent on the ground, it is possible that a few notes from a non-professional reporter will be acceptable.

GOING TO THE TRIAL—A SNOW STORM.

A notice posted in the Agricultural *annexe* informed those who could read it, and were on the look out, that the trial of Mowing Machines would take place on the Emperor's farm near St. Cloud, on the 23d, 24th and 25th insts., commencing at 10 o'clock in the morning. A small party of us under the guidance of GRIFFIN, (the European agent of MCCORMICK) who understood the road and ropes, left the Exposition building early in the morning, taking the *Chemin de fer Americaine* (American railway) to St. Cloud. The weather was cold and dreary—so cold, in fact, that before we finished the two or three miles walk to the farm we were treated to a good sharp squall of snow. A mowing match in a snow storm is a thing we could not do every year, even in America.

THE EMPEROR'S FARM BUILDINGS, COWS, ETC.

Our arrival in advance of the appointed time, and the delay usual on such trials, gave us an opportunity to examine the Emperor's farm buildings, and the various machines sent out for trial. Among the latter were some twenty mowing machines in about equal proportions of English, French and American manufacture. Some half dozen English hay-makers, as they call machines for spreading hay, and one of HERRINGS hay-tedders for the same purpose, as well as about a half dozen English steel-tined horse-rakes, I noticed. The farm buildings consisted of but three independent structures arranged like the body and two arms of the letter E. The center building on one side of the central archway was used for a cow-stable in which there were at the time some thirty mouse-colored cows of no ordinary breed. In fact the lofty, well-kept room, and the clean and uniform grade of cows, made it appear the best cow-stable I had ever seen. Over the archway is raised a low tower with a clock that keeps time. On the opposite side from the stable is the dwelling for the family and a stable for six horses.

The two side buildings appear to be used for thrashing, storing hay and grain, and housing the various tools belonging to the farm, which latter, by reason of purchase and presentation, have become very numerous. There is a large water basin or pond in the center of the yard, and the fish pond, serpentine walks, gardens and fancy summer houses scattered about, make it rather a pleasant place. A portion of one of the barns had been cleaned out, tables set and provisions provided for those who wished. As the French breakfast hour is from 11 to 12 A. M., this private Restaurant was pretty well patronized, and the proprietor seemed to understand the old adage, "make hay while the sun shines," or thought it was *harvest* time. At any rate a small quantity of provisions cost a deal of money as I know to my sorrow.

THE TRIAL AS WITNESSED.

Hitching up the teams, getting into position, the examination of machines by the juries, &c., &c., so took up the time that it was after twelve o'clock before the first six teams were ordered to go. WALTER A. WOOD'S was, I believe, the only American machine of the six, and it was quite apparent from the very start that they had no ordinary job before them. Every machine was clogged before crossing the field once and some of them in going the first five rods. The WOOD machine made the first complete journey before either of the others got across; but even it had to stop six or eight times to be cleaned out. It was said that there was in each piece about two acres, but I doubt it. The field itself was an excellent one for the purpose, but the grass seemed to be a tough combination of something a little like swamp grass and clover, with a damaging *accent* of French weeds. The surface of the ground was very rough, as if left from the plow without harrow or roller, or else terribly disturbed by the frost without being rolled down in the spring as it should have been. So, in fact, the machines had to mow dirt and gravel as well as grass and weeds, and it was almost too much for them. The WOOD machine was the only one of the six that finished its piece, which it did in one hour and thirty-six minutes. All the other machines, except HOWARD'S of England, withdrew voluntarily, and it received a hint from the jury that it might as well be withdrawn as the piece was scarcely more than half done when that of the WOOD'S was completed.

Of the remaining seven or eight machines, I believe but six actually started, and among them was the MCCORMICK Mower (a machine of only two years standing, and of the two-wheel rear-bar style, possessing all the good features of machines of that class;) the PERRY Mower of Boston; a one-horse Clipper; a SEYMOUR, MORGAN & ALLEN, arranged as a reaper, cutting a five-foot swath; and a counterfeit WOOD Machine from Canada.

At the completion of the first round the Perry machine stood ahead, but unfortunately on turning across the starting end, which was done in the field road, the track-cleaner was swung into a rut and broken off. Thus crippled the machine continued to work, but evidently at such a disadvantage that the jury promised the proprietor an opportunity to bring in his other machine the next day, and it was stopped.

When near the end of its third round the MCCORMICK machine met with an accident. One of the stakes used to mark out the field had been thrown out into the swath and got into the working parts of the machine and bent the "pitman," which delayed it nearly half an hour. In the mean time one of the other machines had withdrawn. The Clipper was working along remarkably well, but evidently too much for one horse. The SEYMOUR & MORGAN, with its enormous swath, was fast reducing the width of its section, but doing shocking bad work. At about this time, say three-quarters of an hour after the start of the machines now spoken of, it commenced to rain, and continued to do so through the rest of the day's trial. At the end of an hour and a quarter the SEYMOUR & MORGAN machine appeared to be the only one able to rival the WOOD machine in point of time, it having then only one "bout" to make a finish,—all the other machines at this time being off, except the Clipper and MCCORMICK. The Clipper soon after withdrew. The SEYMOUR & MORGAN, by some mischance, got swamped at the last swath, leaving the MCCORMICK as the only one of the lot to finish its piece, which it did in two hours and fifteen minutes. This result plainly left the Americans masters of the situation, with WOOD 1st, MCCORMICK 2d, and PERRY 3d,—but whether these positions were to remain so was left for the morrow to decide.

The morrow came and so did the machines, and the men, and the Jury; and, what was worse, so did the rain, which so disarranged affairs that it was decided to do no more until harvest time in July. This determination cannot be regarded in any other light than unfortunate for all parties, except the friends of the WOOD machine. The Clipper managers cannot complain after trying a one-horse machine when they had a two-horse one at hand. The SEYMOUR, MORGAN & ALLEN people failed by trying to do with a five-foot bar, work that was too much for a four-foot one. But the breaking of the PERRY machine was certainly unfortunate, for at that time it was ahead, and it is useless to say, as some do, that breaking off the track-clearer did not affect the working of the machine, for if track-clearers were of no use they would not be used. The test as between the WOOD and MCCORMICK machines is not a perfectly fair one. Though the amount of ground mowed over was without doubt equal, it was not equal in any other respect, as the MCCORMICK piece was much the longest and the extra length was up and down hill, while WOOD'S field was nearly level. Besides, the MCCORMICK machine finished its work in the rain, and though it is contended by some that that didn't make any difference, the rain was severe enough to wet a man to the skin through overcoat and all, if he had no umbrella, as I know to my own extreme personal discomfort from experience.

THE PERRY MACHINE DESCRIBED.

The recent origin and novel construction of the new candidate for public honors, "The Perry Machine," entitles it to a brief description. It is of the two-wheel, double-driver class, with one wheel made very large in the hub—so large, in fact, that the supporting piece of the finger-bar and the pitman both pass through it, thus bringing the finger-bar in line with the wheels, which is no doubt a very desirable place to have it. The machine is in other respects generally well designed, having I believe a less number of parts than any other first-class machine. It also possesses some refinements, such as silent clutches, &c., but it is defective in one point, the same as the early Buckeyes. I refer to the cutter-bar dropping down when the finger-bar is elevated for the road.

THE "SHOW" MACHINES, WITH EXTRA DISPLAY.

Each of the leading firms have machines beside those put in the field, fitted up for show and exhibited in an *annexe* to the main building. The one shown by WALTER A. WOOD is very expensively gotten up and displays a great amount of taste, (whether good or bad I won't pretend to decide.) One thing however, perhaps with a single exception, is the worst display I have ever seen attempted. The pole, as in many of the other machines, has been cut off down near the frame of the machine, and instead of leaving it direct from the saw, so as to show the fact in the plainest possible way, the carver, so proud of his skill, has not left even this end *unfinished*, but attempted to embellish it with all the elegant quirks at his command. An eagle's head is a nice thing in its way, and one that a man may well be proud to successfully imitate, but that it is a good design to put on the handle end of a tilting lever is at least questionable.

RESULT OF THE TRIAL—AMERICA AHEAD.

The result of this trial has proved some things, and among the rest that NAPOLEON had a very large field of very hard mowing; also, that the American machines were the only ones equal to the task; but it has not proved that the WOOD machine is superior to the MCCORMICK, the PERRY, the Clipper, or any other of our first class machines unrepresented. However, as the prizes are to be awarded on the 1st of July, and the next trial is not to take place until some time during the month of July, the Jury will have to base their opinions on the evidence already at hand, and the classification will no doubt be as I have assigned it above. We Americans have come out in mowing just about as the English did in the plowing match—that is, they swept everything clean. Every one will ask, "Were there any American plows and plowmen?" No, but it would have made no difference if there had been, except that, in not trying, we avoided being outdone. The English would excel us, as they did the French, for three very good reasons: We cannot compete with them either in plows, teams or plowmen—all necessary elements in a plowing match. This will be perfectly understood and acknowledged by all who have seen England and taken the least notice of plowing there, but will not be by those who have not. I do not contend that the time and force expended by the English plowman is any more remunerative than with us, but when you come to the doing of a nice job, such as is expected at a plowing match, we cannot come up to their ordinary work. However bitter this pill may be to some of our "crack" plowmen, plowmakers and horsemen, they had better take it and it will do them a vast deal of good.

J. E. S.

Biographical.

COUNT BISMARCK.

WE give the portrait of this man who now commands the attention, and gains the admiration of the world, more than any crowned king of the whole Continent; and thus illustrates the truth of EMERSON'S pithy saying:—"there's nothing succeeds like success." The features show that power, audacity and promptness which have marked his career, and make him seem, in his field, like a Western man in our country, who would tunnel mountains, bind the Continents with iron rails, send steamships to Japan, find gold, or do anything else, with a sublime indifference to obstacles that seems like recklessness, yet with a capacity to wait for the hour to strike, and a power and swiftness to make the blows tell, and win the end sought.

In his youth BISMARCK was a law student and an active intriguer siding with the opposers of popular rights, but with his off-hand word for either party by turns. When King WILLIAM came back to Prussia, after the revolution of 1848, he was elected deputy, and ridiculed the Liberals, showing meanwhile small reverence for King or Constitution, and begun to be known, and to gain influence, as a devoted worker for the growth of the power of Prussia. As ambassador to St. Petersburgh he gained the good will of Prussia, and soon sought to foster disputes with Austria.

In 1864 the Schleswig-Holstein dispute with Denmark opened the way for differences between Prussia and Austria as to the control of that territory, and BISMARCK, with his usual skill and audacity, pushed matters on until the war came, the great battle of Sadowa was fought, (July 3d, 1866,) Germany united with Prussia at the head, and the Austrian power over Germany broken. He is tall, soldierly in bearing, a fine horseman, usually wears uniform, and has the light hair and blue eyes of the Teutonic race.

A German paper thus describes his appearance in the North German Parliament:—"He usually enters the Chamber a short time after the debates have opened, bows shortly to the president, and then sits down on the ministerial bench, where he occupies the first place. His neighbors on the right, who are mostly Generals, nobles, and high officials, rise when he comes to take his seat, but their example is scarcely ever followed by the Poles and Catholics, who sit on his left. His speeches are very uncouth in style, and his voice is sharp and grating. When excited he loses the thread of his discourse, and not unfrequently commits faults of grammar and construction. At the same time there is an epigrammatic incisiveness in his short, sharp sentences, and a picturesqueness of expression in his style, which go far to redeem his oratorical defects; and if the form in which he clothes his ideas is somewhat harsh and repelling, there can be no doubt as to the value and effect of the ideas themselves. His speeches are full of deep thought, of far-reaching political insight and of statesmanlike views. His wit, too, is very remarkable, and its slashing effect has been felt by many an antagonist to his cost. He is very sensitive to attack, especially since he has been suffering from his present nervous disorder."

Although worn by the vast labors of the two past years he has yet,—at 54 years of age—great recuperative powers, and years of active life are probably before him. He asks relief from official duties, but cannot long be out of public position, and meanwhile will exert great influence. The greatness of Prussia, as linked with his own greatness, is his leading aim; but, although not despotic or tyrannical in character, he has little sympathy with, or faith in, the elevation and freedom of the people.

THE FIRST STEAMBOAT BUILDER.—John Fitch built a steamboat which ran five miles an hour, on the Delaware, in 1798, but its mechanism gave way; he was poor and thought crazy, and died on the Ohio river. He left a sealed packet in a Philadelphia library, to be opened in fifty years, in which he said the steamboat would then be on every navigable river of the continent. His prophesy was verified. Fulton knew him and his invention, improved it greatly, and had the money of the Livingstons to help him.

Various Topics.

TALK ON WORK, HEAT AND HEALTH.

WORKERS in the fields—strong men and sturdy boys, toiling beneath a blazing sun, and exposed to rain and chill—let's have a talk together about work and health. Not a *fussy* talk, like a set of fidgetty nervous fellows, afraid to stand up square lest some of the inside works give out; but just a word of practical common sense. (Common sense, by the way, is rather *un*common.)

There's a good deal of work to be done in the six months ahead that can't be got round, or pushed aside, unless you like sheriffs and red flags. If the old farm is to be kept, and to gain in value, this work ahead must be met and done up. For three months we shall have some *awful* hot days, with burning sun and sultry air, "muggy," as they used to say, "down East." Thunder storms will come up sudden, wetting you to the skin, and with raw winds that check perspiration sooner than is healthy; and a damp, chill day now and then, in between these *scorchers*, to say say nothing of fogs and dews. But this work is to be put through, blow high or low, and it's a good plan to start and go on in such fashion as to hold out strong and come through sound and bright.

It may be well to "take an account of stock," as merchants say,—we mean stock of bone and muscle, and nerve, and will-power. Every sensible man knows about what he can do, and not break or weaken his powers; settle that, and then *don't over-do*. Many a man (and more boys) just wrecks himself needlessly in ten minutes, and is never the man again he was before. When you feel you are up to your highest mark, *stop*; and stop before you get there, save in rare emergencies. It's well to feel that you have a reserve force, and could "let out another link."

Look out for the sun. He's a fiery fellow, and sometime when your system may lack positiveness from overwork, he'll send a hot shaft right through you. Don't be careless or foolhardy, that's all. The "boys in blue" all say that the best soldiers took no useless risks, and were therefore fresh and right when the sharp work was to be done.

If you have a feeling come over you that the heat is *going through*, take to the shade without any foolish shame, for the hardiest sometimes falter, and far better one hour's care than months or years of weakness from sun-stroke—*coup de soleil*, as the French say. Keep a firm will, for that has great power over the body, and keep the system in a positive condition, with an overplus of vital force to meet and master heat, or cold, or work, by rational care in your habits: but, when you feel that the vital forces are too weak, or too much taxed, yield for the moment and recuperate.

Don't drink too much, no matter what it is, but rather a little, often, and slow, rinsing the mouth well. Be careful about ice-water. Some ginger and sugar or molasses is good in your water. Home-brewed ale of the best sort may help. As for spirits, it's too fiery, in whatever shape, gets up too much fever, too high pressure and makes the boiler burst. We've worked in hay fields when sealing wax would be soft as putty, and mowed away hay under the barn roof where it was hotter than any spot on this earth, and went through it without the *ardent*.

Beware of getting hot and tired and standing in a chill draft of air, especially if it comes on your back. That heat and work has lessened your vitality, and put you in negative condition, so that outer forces control you easier, perspiration is checked and sad mischief done before you think. Keep your face to the wind when you stop to rest, for the resistant vital forces emanate from the front more than the rear, and he is a wise as well as a brave man who faces exposure as well as danger.

Don't bolt a hearty meal in hot haste and rush out to your work, but get a little rested, then eat moderately, yet enough, and go to work fresh. Dyspepsia and its kindred horrors come often from eating full meals with the system overtaxed and heated, and no vital power left for digestion. Keep cool; the more to be done the more need of self-possession, that you may be master of the situation.

Don't eat heaps of meat and drink gallons of rank coffee and strong tea with a blind notion that you must have hearty food. Your bread or beans, pound for pound, has more nutriment than your beef, and the water don't clog up the system like this black coffee, or rack the nerves like strong tea.

Meat has more stimulus than bread, and a share of this is well, but not in excess. Eat meat, vegetables, fruits, &c., and drink moderately. Keep the system open and all evacuations easy and natural, and save fevers and congestions. Take less meat in very hot weather. Judge for yourselves, but keep all firm, and trim, and cool, and open, in the internal department, and you'll be fit for a good, long pull.

Bathe often, *but never when hot or tired*. At night a hand-bath all over, if not too tired, and in the morning you are fresh, and it is always safe. It helps greatly through the heated season.

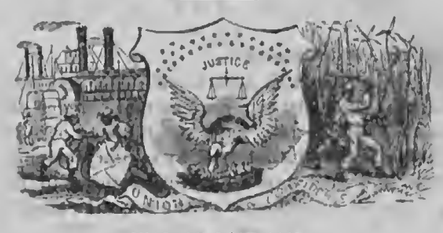
All this, and much more in the same way that you will all think of, can be done, and avoided, sensibly, quietly, and without fidgeting, and, rely on it, will help through all the exposure, make work a welcome task, and land most of you, strong in body and clear in mind, on the cool edge of next winter's snow banks.

THE coal production of the following countries in the year 1865, was as follows:—Great Britain, 98,150,587 tons; Austria, 4,161,698 tons; Belgium, 11,840,703 tons; Bavaria, 260,600 tons; France, 11,061,948 tons; Prussia, 21,197,266 tons; Russia, 128,571 tons; Spain, 418,827 tons; United States, 22,906,939 tons; and the Zollverein, 22,350,000 tons.

Reading for the Young.

ORIGIN AND SEALS OF THE STATES

NUMBER SEVEN.



SEAL OF LOUISIANA.

THE French first settled Louisiana in 1699, and for a long time the territory now embraced in this State and that embraced in Arkansas and the region east of Louisiana was the subject of dispute between France, Spain and England, its possession passing from one to the other. At last, in 1803, it was bought by our government for $15,000,000, a great object being not only to gain the territory, but to have entire navigation of the Mississippi. In 1812 it was made a State. The southern part is a vast range of swamp, bayou, river and level fields of great fertility, and some 10,000 square miles are liable to inundation, although not half that space is yearly under water. Levees, or broad solid banks built up with great labor, prevent overflows, and the land near the Mississippi and other streams is higher than at a distance, and wonderfully fertile. The central and northern portion is higher and more undulating, and the apple, peach, orange, fig, grape and pomegranate grow finely. New Orleans is a city of great business, and many of its most wealthy and refined people are descendants of the French, and still speak the language and retain the elegant manners, peculiar customs, and religion of France. Sugar is largely produced, and cotton and rice yield well. There are 48,220 square miles in the State, and its population, in 1860, was 376,206.

Its seal is the pelican feeding her young, with the negro working in the corn field, on one side, and boats and cotton bales on the levee, on the other.

SEAL OF ARKANSAS.

Arkansas was originally a part of Louisiana Territory, but was made separate, with its present name in 1819, and admitted as a State of the Union in 1836. The Arkansas river, a broad stream, navigable some 800 miles for a part of the year, flows through its center eastward toward the Mississippi, and other fine streams traverse it. The land between the Ozark mountains and the Mississippi is level, somewhat liable to inundations, and very rich along the rivers and bayous. Northwest of these mountains are broad open prairies, with soil rich, near some rivers, and sterile in higher portions, with water rather scarce. Cotton and corn yield well and cattle are easily raised. Iron, coal, lead and salt are found and will doubtless be sources of future wealth. It has 45,000 square miles, and a population, in 1860, of 324,335.

Its seal has, on a central shield, the steamboat, the plow and the bee-hive, emblamatic of industry and intercourse with the world, with eagles supporting it and the motto, "Reignant Populi,—let the people reign.

SEAL OF TEXAS.

The first Europeans in Texas were a company under command of LA SALLE, a famed discoverer, who intended to go up the Mississippi, but landed in Matagorda bay, erecting Fort St. Louis. LA SALLE was killed by his own men, and the Spanish took the place. The not exactly known limits of Louisiana made Texas a field of dispute between Spain and France; the first power holding, and the few settlers being mostly Spanish. It became a part of Mexico and Americans settled there until, in 1835, they declared their independence, and after a short and bloody war, cut away from Mexican rule. In 1845 it was admitted into the Union as a State. Its area is 237,504 square miles, or nearly six times as large as Pennsylvania. The portion near the coast is level, and much of it fertile, the middle part more rolling and the northwest section elevated table lands reaching up toward the central mountains in Colorado, and rising some 3,000 feet above the sea. There is much rich soil in all parts, and it will at some future day, sustain a large population, as the climate, save on the low coast, is healthy. In 1860 its population was 421,169. Cotton and grain yield largely, and cattle are raised with ease.

The seal has the famed "Lone Star" on the center, and flocks and herds, and the wild buffalo hunter on either side.

WEAK doses of wash-board are recommended to ladies who complain of dyspepsia. Young men troubled in the same way may be cured by a strong preparation of wood-saw. Early rising and open-air exercise may be used very beneficially in conjunction with the above remedies.

PERSONS good for apologies are commonly good for nothing else.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JUNE 22, 1867.

NEWS OF THE WEEK.

From Washington.

It appears that Attorney-General Stanberry thinks that district commanders, under the reconstruction law, have no right to remove civil officers without trial by military commission, and then only when found guilty of impeding the enforcement of the law. As most of the Cabinet agree with this, Gov. Wells and others may be re-instated or tried by military commission.

President Johnson goes to Boston the 21st inst., for a few days.

A letter from the Commissioner of Internal Revenue says that only 450,000 persons in the United States, or about one in seventy, returned an income for 1866, above the amount exempted by law.

David A. Wells, Revenue Commissioner, has gone to Europe to investigate the condition of manufacturing in England and Belgium. He is also instructed by the Secretary of the Treasury to inquire into the English method of collecting revenue by stamps, the methods of supervising distilleries, and the practical operation of the British custom laws.

Surratt's trial is again resumed.

From the West.

The revenue cutter Joe Lane left San Francisco the 1st, to take possession of an island, 20 miles long, lately discovered just in the route of vessels to Japan and China, and to map its position.

The revenue cutter Lincoln is to report at San Francisco, to carry out proper officers to assume the goverment of Russian America.

Idaho advices report Indians attacking stages and stealing horses and cattle.

The eight-hour labor system was quietly inaugurated in San Francisco, by a large procession of the Trades' Union.

Gen. Sherman is ordered to guard the Pacific Railroad from Omaha westward, and thinks he can clear the Platte Valley in two weeks. A fight between nine passengers and twenty Indians took place near Moor's Fort. One man was killed and one wounded; two Indians killed and five wounded. The Governor of Colorado narrowly escaped.

Gen. Sherman thinks the war can be stopped this summer. Grant, Sherman and Stanton agree on sharp and strong measures. Cavalry and volunteers will be used.

Twenty men have been killed in Gen. Augur's region in a week, and stock taken.

The Indians about Cottonwood are reported very hostile.

Parties from Montana report that more gold than ever will be mined there this season.

Gen. Smith is going to Fort Kearney with several hundred recruits.

The Chairman of the Indian Committee, Senator Henderson, who has been on the Plains with Gen. Hancock, reports that many accounts of Indian hostilities are false, and got up to make money out of the Government.

From the South.

Gov. WELLS at New Orleans, hears nothing from Washington, and Gov. Flanders fills his place. Gen. Sheridan will issue a proclamation to insure peaceful exercise of the rights of all parties in the State campaign.

After conference among the different classes of Virginia Republicans, a joint Convention is to be held at Richmond August 1—the call being signed by the State Committee, Gov. Pierpont, J. M. Botts and three hundred others.

A Conservative Convention for Fulton and De Kalb counties, Ga., met in Atlanta the 6th, and denounced the Sherman Reconstruction Bill as infamous. The Atlanta newspapers express no sympathy with the movement.

The Georgia wheat harvest has begun, with great promise.

Gov. Orr of South Carolina, advocates the acceptance of the Reconstruction Bill, the cultivation of good feeling between the whites and blacks, and the forming no alliance with either of the great political parties.

Some of the old members of the Mobile city government refuse re-appointment from General Pope, and their places are to be filled by negroes.

A Railroad Convention at Petersburg, Va., are consulting as to concerted action, for time-tables, &c., by Southern roads.

The Georgia cotton crop, it is thought, may be some four or five hundred thousand bales, or double that of last year.

One hundred and twenty thousand bales of cotton, or more than before the war, have reached Norfolk, Va., this season.

From Mexico.

MENDEZ was executed the 16th ult., by order of Escobedo, and died firmly.

Maximilian gave up his sword to Escobedo, and said:—: "I surrender yon my sword owing to an infamous treason, without which to-morrow's sun would have seen yours in my hands."

His trial by court martial was fixed for the 29th ult. He issued the following proclamation:

COUNTRYMEN:—After the valor and patriotism of the Republican forces who have destroyed my scepter in this place, of which a tenacious defence was indispensable to save the honor of my cause and of my race, after the bloody siege in which the Imperial and Republican soldiers have competed in abrogation and boldness, I will explain myself. Countrymen, I came to Mexico not only animated with the best faith of insuring felicity of all and each of us, but was called and protected by the Emperor of France, Napoleon the Third. He, to the ridicule of France, abandoned me cowardly and infamously by the demand of the United States, after having uselessly spent forces and treasure, and shed the blood of her sons and your own.

When the news of my fall and death reaches Europe all monarchs of Charlemagne's country will demand of the Napoleonic dynasty an account of my blood, and of the German, Belgian and French blood shed in Mexico. Then will Napoleon the Third be covered with shame from head to foot.

To-day he has already seen his Majesty, the Emperor of Austria, my august brother, praying for my life to the United States, and myself a prisoner of war in the hands of the Republican Government and with the crown on my head torn in pieces.

Countrymen, here are my last words. I desire that my blood may regenerate Mexico and serve as a warning to all ambitious and incautious princes, and that you will act with prudence and truthfulness, and may Providence save you and make you worthy of myself.

MAXIMILIAN.

Latest European News.

REPORT says that Napoleon and the Empress intend to visit St. Petersburg and Berlin in the autumn.

A simultaneous reduction of the military forces of all the leading European powers is much talked of and meets with favor among the rulers and high officials now in Paris.

The Emperor of Austria makes known his intention to proclaim universal amnesty to all imprisoned Austrian subjects, and all liable for political offenses prior to his coronation.

All the powers in diplomatic relations with Austria, save America, will be represented at Pesth at the coronation of the Emperor as King of Hungary.

The Turks are badly and constantly defeated in Crete.

Great rejoicings in London over the Czar's escape from the assassin. The Poles repudiate the crime.

The sentences of all the Fenians convicted are commuted by the British Government.

RECEIPTS.—The reported receipts from all sources of the various Societies whose anniversaries were held in New York, in May, show an increase upon those of former years. The following is a synoptic view:

American Female Guardian Society	$87,768 00
" Seamen's Friend	57,190 00
" Missionary Association	253,900 00
" Tract Society, New York	544,151 50
" Tract Society, Boston	135,466 22
" Foreign Christian Union	110,000 00
" Bible Society	734,089 14
" Board of Missions	446,942 00
" National Temperance Society	8,632 49
Total	$2,377,239 85

THE PANAMA RAILWAY.—Since the construction of this road across the Isthmus it has carried nearly 400,000 passengers and $675,000,000 of treasure, the latter from the Pacific to the Atlantic side of the Isthmus. The silver shipments are gradually declining, and most of the silver transported is from the Pacific coast of South America. Of freight the road has transported 614,535 tons, but this year it is estimated the traffic will amount to 150,000 tons. America now controls the road, which runs through the territory of New Grenada, but England is making great exertions to get possession of it.

CHRISTIANITY A CAPITAL OFFENCE.—Rev. Paul Bagley, Missionary to Japan, China, India, &c., lately addressed a note to Secretary Seward, referring to the ancient unrepealed edict making christianity a capital offence in Japan; to which Acting Secretary F. W. Seward on June 4th replied:—"The subject has already been brought to the attention of the Japanese Government." The old law, from late signs, will doubtless be repealed. It grew out of troubles with the Portuguese, who albeit professed Christians, had decided filibustering tendencies in olden times.

NEW RAILROAD PROJECT.—A delegation from the leading men of New England, among whom were Gov. Washburn and Mayor Stevens of Portland, Maine, Gov. Dillingham and Ex-Gov. Smith, Judge Poland and Hon. W. C. Smith of Vermont, were at Oswego, N. Y., the 6th inst., on railroad business of great importance. The project is to build a railroad from Portland, connecting at Montpelier with the Vermont Central and Ogdensburg line. It is proposed to make such connections as will form an unbroken railroad route from Portland to the Far West.

A WISE AND GOOD WORK.—Mr. S. B. Halliday, Superintendent of the New York House of Industry, has projected, and is now engaged in preparing, at a cost of $140,000, a "House for Working Women." It is intended to provide furnished apartments, with board, for five hundred women, and the whole cost not more than $3.50 for each per week. It will have reading-rooms and libraries, a ladies' gymnasium, bathing-rooms, and the two great requisitions are cleanliness and good deportment.

A SOURCE OF DISEASE IN WASHINGTON.—It has been discovered that back of the building used as a medical museum in Washington during the war a large number of human bodies had been deposited in sunken hogsheads. Physicians attribute the existing unhealthiness of the locality to this cause. The remains will be speedily removed.

BASE BALL TOURNAMENT AT DETROIT.—Arrangements for a grand trial in that city for prizes of $1,200, are going on for August 15th, open to all Uncle Sam's boys, and the Canadians also. About that time the farmer's boys will be making the tallest kind of *hits* and *runs* in the harvest fields, and $1,200—broken shins thrown in—will be small potatoes.

A LARGE MICROSCOPE.—The Northwestern University at Evanston, Ill., has just added to its apparatus the most powerful microscope in the West, at least. The performance of the instrument is as beautiful as its appearance. Its greatest magnifying power equal 1,300 diameters, or nearly 1,700,000 superficies.

SUSPENSION BRIDGE AT HARLEM.—The new suspension bridge over the East River at Harlem is finished, and a public opening will soon be made. About 35,000 tons of iron have been used in its construction, and it is said it will sustain a weight of one hundred tons to the square foot.

NEW YORK CONSTITUTIONAL CONVENTION.—This important body is in session at Albany, and now organizing for its work. Nineteen Standing Committees on the leading questions are proposed: for instance, Bill of Rights, Judiciary, Legislative, Executive, Suffrage, &c.

A NORFOLK, (Va.,) paper argues that money can be made by building wooden-ware factories in the edge of the Dismal Swamp. The swamp men are crippled for want of money, yet they are doing something. There are now a large number of cypress and juniper logs waiting for transportation. The business amounts to between $75,000 and $100,000 a year, and the supply of timber shows no sign of exhaustion.

SOME idea may be formed of the immense oyster trade of Norfolk, Va., from the fact that one firm in that city sent north, from September last to within a few days ago, 104,685 bushels. The firm had, during the busiest part of the season, no less than forty-seven vessels, transporting oysters, fish, terrapins, &c.

— A New Hampshire paper says Geo. Peabody once sawed wood to pay for a night's lodging in Concord.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, June 18, 1867.

OUR local money market is easy. For some time the amount of good paper offering at the banks has not been equal to the supply of funds. In a few days, when the wool market fairly opens, there will be more call for money. Millers are using very little currency, and will not do much business until new wheat is in market.

Money in New York is easier than last week, and rates of interest are lower. In Boston the market is easy. The Bulletin says:—"The banks are discounting long paper at 6 per cent., and are very glad to obtain the right stamp of notes and acceptances at this rate." At Cincinnati and Chicago money is rather close. The heavy failures at the latter point, in consequence of the decline in corn, wheat and flour, has tended to create a temporary stringency, and the banks are very shy of produce paper unless the margins are decidedly large.

Gold still rules unexpectedly high. Sales at the New York Board yesterday were made at 137¼. The U. S. Treasury at present is not selling gold. Sterling exchange has recently advanced. At the close of last week sight drafts sold as high as 110⅝.

On Saturday (June 15) the interest on the June issue of seven-thirties becomes payable. These notes are very widely distributed, and holders present their coupons to the nearest National Bank, as they have occasion to use the money. These payments will have no material effect upon financial matters generally.

The payment of the coupons of the July '65s will bring upon the market about $8,000,000 in gold. The balance in the Sub-Treasury at New York increased about three millions last week. The "bulls" at that point claim to control about forty millions in gold—probably half that sum is a large estimate—and therefore they successfully manipulate the market. Ere long they may be as much taken aback as the grain gamblers were at Chicago recently.

DRY GOODS, &c.—Our local Dry Goods trade this season has been better than was anticipated early in the spring. Dealers, however, have been obliged to be content with very small profits. They have been selling most articles upon a declining and exceedingly variable market. Eastern jobbers report the trade "flat, stale and unprofitable." Country merchants who wish to "sort up" can purchase some descriptions of goods at almost their own prices, just now, in New York and Boston. There will be no activity at the East until the commencement of the fall trade.

WOOL.—There has been very little wool of this year's clip offered for sale in Western New York thus far. Some small lots have been taken in this city, and in the villages in this and adjoining counties, at 40@45c. The latter price is the highest figure offered for the best quality. The sales in Boston last week were less than in any previous week for many months, footing up only about 400,000 lbs. Prices were low, and ranged, for domestic fleece, at 2@60c., and 41@57c. for the various grades of pulled. Many of the eastern woolen mills have stopped; others are running on half-time.

The Boston Commercial Bulletin of Saturday says:

This condition of things is neither strange nor unexpected. It is the natural result of an over-stocked goods market, rigidly curtailed production, and the prospect of a large wool crop about to come upon the market at low prices. The present exigencies of consumption are very limited and easily satisfied. Manufacturers, in their present condition of incertitude touching the future course of trade, will not buy any more staple than is needed for present use, and even this they must get at low prices. They have no assurance that their products, now selling at unremunerative rates, will not fall still lower before the year is at an end, and they cannot afford to pile up more goods at a risk.

WHEAT AND FLOUR.—The new crop of wheat from Georgia is beginning to reach New York. The first lot of white wheat that arrived was sold at four dollars per bushel.

The prices of wheat and flour, both at the East and West, are declining. The fall has not been so rapid the past week as for the week ending June 8. The receipts of wheat at Milwaukee, last week, were 150,309 bushels, against 443,876 for the corresponding week last year. Eastern millers are buying some at Chicago and Milwaukee, but they are very cautious purchasers. They are grinding a little to supply local trade, but evidently see no money in flour at present prices for wheat.

CORN.—There has been a very large decline in corn in the last two weeks. Prices have rallied somewhat in the last few days, and sales were made at Chicago 10 to 15c. per bu. higher than on the 10th. Corn fell in sympathy with wheat, but the supply in the country would not seem to indicate continued low prices.

THE GROWING CROPS.—The weather in this region is exceedingly favorable for the growing crops. Winter wheat is looking remarkably well. Reports in regard to crop prospects from the West could not well be more flattering, particularly in regard to winter and spring wheat. Corn, though backward, in most localities is growing well. There was a good deal of late planting, but with a favorable fall there is time enough for the crop to mature.

THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₩ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER $1,25, best $1,50 ₩ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names of clubs, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

All about Mowing and Reaping Machines.
Willis' Stump Machine.
Coe's Dyspepsia Cure.

Special Notices.

All About Mowing and Reaping Machines.

FRAUD AND HUMBUG EXPOSED.

THERE has been, and is now, such an amount of misrepresentation in reference to the trial of Mowing and Reaping Machines at Auburn, N. Y., last July by a committee of the N. Y. S. Ag. Society, accompanied with such gross libels upon us and our machines, that "*Forbearance* has ceased to be a virtue" indeed.

Some unscrupulous manufacturers and their agents for their own selfish and greedy purposes have published in newspapers, pamphlets and circulars, what purports to be the Report, or *extracts* from the Report of the Committee. These publications are *false and garbled* and "*made up*" to suit eastern machines and cast odium upon others. They ALL claim having received *the first* premium or medal, leaving it *to be inferred* that there was but *one first premium*; whereas, in truth there were *Eleven Premiums and Medals*, awarded to as many different styles and makers of mowing machines, and would have been more if fair play and honor had been observed. These *garbled and false* publications make certain machines stand higher than others by taking the highest credit marks of *their* machines and the lowest ones of *ours*. Now by this rule we find in the COMMITTEE'S PUBLISHED REPORT, that DODGE'S PATENT MOWER AND REAPER, Ohio and Buckeye Patents combined, made by Dodge, Stevenson & Co., was THE LIGHTEST DRAFT MOWER at the trial; that it had THE LEAST SIDE DRAFT; that it was marked for quality of work two higher than Buckeye, and nearly double that of the Walter A. Wood Mowers on the most *difficult* piece of work during the trial, viz., Lodged Clover and Weeds in the Leach lot.

Here are the figures of the principal machines as published by the Committee. The No. 40 represents perfection:

Name of Machine,	Qual. work. Mow'g	Qual. work. Reap'g	Side draft.	Direct draft.
Columbian; Am. Ag. Works,	26	31	8¼	270
Walter A. Wood's Mower,	19	32	7½	247
Marsh; Wm. A. Halladay,	28	not giv'n	7¼	273
Cayuga Chief,	30	28	6	291
Kirby; D. M. Osborne & Co.,	32	32	3	250
Buckeye; Adriance, Platt & Co	30	31	5	220
Dodge's Patent; Dodge, Stevenson & Co.,	37	37	2¼	213

Our machine *was awarded the preference* in Class 5 as a *Mower, Hand or Self-Raker, as preferred*, in the same machine, and the above clearly shows that it was entitled to it. HIRAM CURTIS of Albion, N. Y., who manufactures a machine he calls the Buckeye, did not have any machines at the trial, and for his gross libels upon us and our machines we have appealed to the courts for redress.

We have no objection to *fair competition*, be it ever so spirited, but when downright lying and malicious falsehoods are resorted to we shall defend ourselves in a proper manner against any and all such.

The immense popularity and sale of our machines has caused alarm amongst the *old concerns*, relying on reputations earned years ago; hence the fluttering, which is good evidence that *somebody is hurt*.

FARMERS! READ OUR ADVERTISEMENTS. YOU CAN RELY ON THEIR TRUTHFULNESS.

909-4t DODGE & STEVENSON M'F'G CO.
Auburn, N. Y., June 12, 1867.

WILLIS' STUMP MACHINE.

DURING the recent civil war a division of the "Boys in Blue," camped on the premises of W. SMITH, Warrenton, Va., familiarly known as "Extra Billy Smith," and cut over some sixty acres of his wood land. The stumps were there and in the way. Being on a visit to this section, he saw WILLIS' STUMP MACHINE, and ordered one. Having tested its capacity, he writes a flattering letter to Mr. W. in commendation of the Machine which has proved to possess all the power claimed for it in the removal of stumps from the soil. He regards the Machine as a great acquisition.

Look out for the Children. Many deaths occur from eating unripe fruit. Every family should have COE'S DYSPEPSIA CURE at hand in case of emergency. It will speedily correct the stomach in cases of Cholera Morbus, if taken in season.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement*; that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 907-tf.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

Bookseller, Rochester, N. Y.

THE PREMIUM MACHINE!

Was the only machine which received the unqualified praise of the Judges at the Great National Field Trial, held at Auburn, in July last. It was awarded the

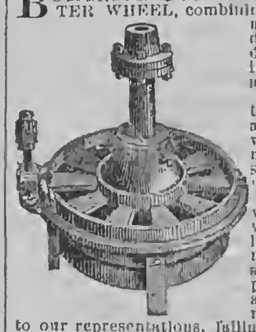
Grand Gold Medal in Class One,

For superiority over all competitors in lightness of draft, freedom from side-draft, portability, facility of management, perfection of mechanical construction, strength and durability. It was the only machine which received the mark for perfect work in all kinds of grass. Do not allow yourselves to be deceived by inferior machines, which are offered as something combined with a Buckeye, as they only attempt to *steal the reputation* of the Buckeye to cover their own defects.

☞ Descriptive Circulars of the Genuine Buckeye and Synopsis of the Official Report of Auburn Trial forwarded by mail.

Manufacturers.—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. COOPER, Watertown, Jefferson Co., N. Y.; G. SWEET & Co., Dansville, Livingston Co., N. Y.; GEO. P. YORK, Westfield, Chautauqua Co., N. Y. 909-1t

BODINE'S JONVAL TURBINE WATER WHEEL, combining great economy in the use of water, simplicity, durability, and general adaptation to all positions in which water can be used as a motive power.



The undersigned manufacturers of the above wheel are prepared to furnish and warrant the same to give more power than any overshot or other turbine wheel made using the same amount of water. These wheels have been tested with all the wheels of note in the country, and have never failed to prove their superiority. We therefore propose to put them in for any responsible party, warranting them to work up to our representations, failing in which we will take them out at our own expense. The attention of millwrights is invited to this wheel. Agents wanted in every county in the United States and Canadas. Send for descriptive Circular. J. H. BODINE & CO.,
907-eotf Mount Morris, New York.

A. B. CLOSSON, JR., 38 West 4th St, Cincinnati, O.

THE McKAY SEWING MACHINE, the only machine in existence by which a sewed boot or shoe can be made. Adapted to all kinds, styles and sizes of boots and shoes. 200 pairs can be made with ease by one man, with one machine, in ten hours. These shoes take precedence of all others in the market, and are made substantially at the cost of pegging. In use by all the leading manufacturers. Machines, with competent men to set them in operation, furnished at one day's notice. For particulars of license apply to GORDON McKAY, Agent, 6 Bath street, Boston, Mass. 901-13t

PORTABLE STEAM ENGINES—Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 500 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
904-26t J. C. HOADLEY & CO., Lawrence, Mass.

THE HOWE MACHINE CO.'S
SEWING MACHINES,
699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES
Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES
Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quill, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

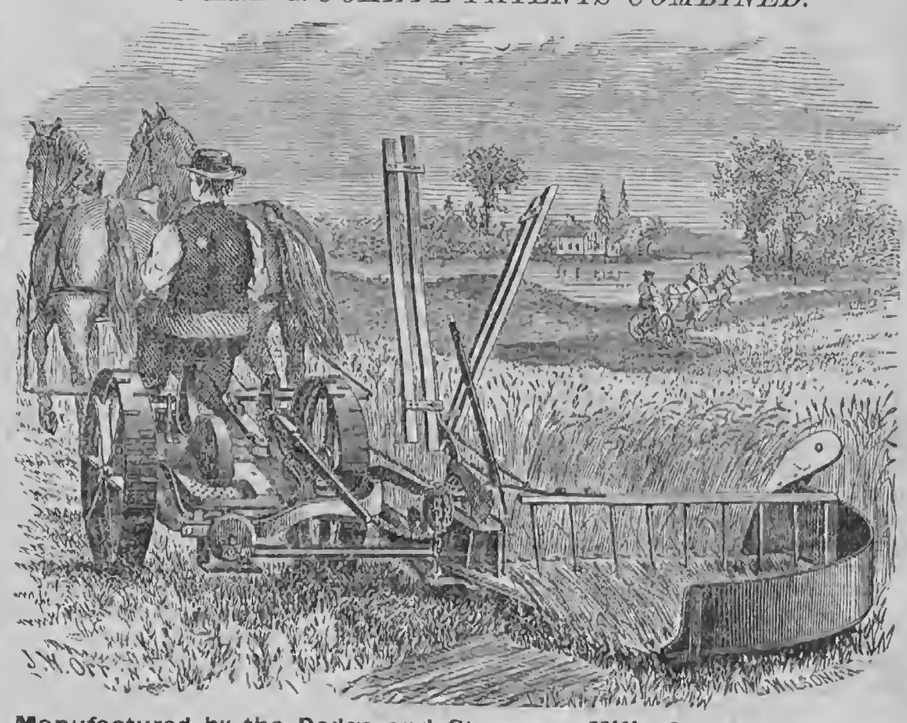
BALTIMORE, MD.

DODGE'S
PATENT REAPER AND MOWER,
AND SELF-RAKER,
OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:
L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own cocking, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED
The Special Diploma and Grand Medal of Honor,
AS THE BEST
COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.
J. RAPALJE, Agent, No. 17 South St. Paul St., Rochester, N. Y.

H. P. WESTCOTT'S ADJUSTABLE
DASH CHURN.

First Pat'd Aug. 1865, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the largest quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (1-5 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.

☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

50 MAKE YOUR OWN SOAP PER-CENT SAVED BY

USING B. T. BABBITT'S PURE CONCENTRATED POTASH or READY SOAP MAKER.—Warranted double the stength of common Potash, and superior to any other saponifier or ley in the market. Put up in cans of 1 pound, 2 pounds, 3 pounds, 6 pounds and 12 pounds, with full directions in English and German for making hard and soft soap. One pound will make 15 gallons of soft soap. No lime is required. Consumers will find this the cheapest Potash in market. B. T. BABBITT, Nos. 64, 65, 66, 67, 68, 69, 70, 72 & 74 Washington St., New York. 888-30t

CANCERS CURED OR NO CHARGE—BY Dr. KINGSLEY of Rome, N. Y. Circulars sent free.

A JUNE MORNING.

BY GEORGE S. BURLEIGH.

The dew is in the daisy and the bird is in her nest.
And the lily, the white lily, is in bloom;
A honey-bee is rocking like a baby on her breast,
And the soft air is delicious with its freshness and perfume.

There's a humming in the clover, there's a rustle in the trees,
There's a laughter of the children on the lea;
For June is but a holiday to natures such as these,
The blameless and the pure of heart, the simple and the free.

The blue without a cloudlet is an opal of rich dye,
The earth a mighty emerald below;
And clouds, when any clouds are, make lovelier the sky,
Like a flock of sheep from washing, all moving white and slow.

A soft illusive purple is over the wide sea,
And where the sun has touched it is a dance,
As if a million Nalads, unseen of you and me,
Were dinting with their tiny feet the undulant expanse.

The very air exhilarates our senses and our soul,
We drink the true elixir at its spring;
The life that overmantles the jeweled sapphire bowl
Where the earth' floats like a bubble within its beaded ring.

I have quaffed the breath of lilies, I have sipped the rose's wine,
And my nerves have caught the joyance of the dew:
All the birds have set my pulses to a melody as fine
As their own, and theirs articulates the tone of every hue.

Oh! the beauty of the morning in the redolence of June,
Is a draught to thrill and gladden all the blood;
To warm us to thanksgiving as it wakes the birds to tune,
Till dance our hearts as David danced before the ark of God.

The wine-cup of the spoils has not a draught like this,
That thrills us without burning, without loss;
Life leaps to nobler issues, as if a mother's kiss
Had strengthened us for action, to strive or bear the cross! [*From the Advocate.*

The Story Teller.

Written for Moore's Rural New-Yorker.

MILLY'S LETTERS.

BY CLIO STANLEY.

[Continued from page 196, last number.]

III.

BRIER HILL, Dec. 23.

DEAR MADGE:—Three letters from your precious self lie here just under my hand, unanswered, and I am just as surprised myself as you can well be at my long silence; the worst of it is that I have not the least shadow of an excuse. Did you ever see a robin perched among the pink blooms of an old apple tree, looking around as if too happy to sing? Did you ever see a humming-bird flitting through the garden, alight on a dozen different flowers in a minute, and finally coming to a simple clover blossom that had found its way to the very edge of the grass, drop down upon it, losing all desire, apparently, to try its wings again? There, you need not laugh! I didn't mean to compare myself either to a robin or a humming-bird, but their ease is mine. I have been literally too happy to sing aloud, though my heart has been full of songs! I have been too satisfied with my one little red clover to let my gaze wander! Do you ask what all this means? Well, it's a long story, but, if you have time to read a long letter, I will begin at the beginning.

The same week that your first letter came, indeed, he brought it up in his own hand, ROBERT GREEN came home. Now, MADGIE, please call up to your mind half-a-dozen quotations to prove that "the rose by any other name," etc., and don't laugh at his name. He is Mrs. STOKES younger brother, some like her in his gentle ways and kindly manners, but more refined. You *will* laugh, I know, so laugh away and may it do your heart good! ROBERT—he will not have me call him anything else now—was at college when his sister SUSIE was married to Farmer STOKES, and directly after went to Germany, where he has spent most of his time studying, so that they have not seen each other for five long years. Ah! dear, if you only knew how much they all love him, and how well he deserves it! It seems strange enough to think he should have seen anything to fancy in me, for, you know, my face is one of the plainest, and there is nothing pleasant or sunny about me unless it be my temper. I positively do not ever remember to have been angry in my life,—but then that is only a negative quality, after all.

Only two months since I saw him first, and already he has won my poor little heart all to himself; yet I do not love you the less, dear MADGIE—indeed, I think I love all my other friends the more. Well, he came up to the house that evening with my letter in his hand, and that served as an introduction, for when I heard him read the superscription, I almost snatched it out of his hand, and he laughed at me so heartily that I was obliged to laugh myself, and we have been friends from that minute. Then Mrs. STOKES had heard his voice, and came to the door and took him in her arms and kissed him a hundred times, I should think, all the while calling him her "dearest ROB." Maybe he was *then*, but he is mine now! She was going to introduce him to me at the tea-table, but he declared he had had a sufficient introduction. No one could look in his frank, manly face and not like him; no! not even you, MADGE, though you do call yourself a stoic.

He stayed for a month then, and we had rides and walks and picnics innumerable, and long quiet evenings at home, and then—he went away. Two long weeks I had in which to find out that life did not seem so much of a holiday without him, nor yet such earnest living; so, when he came back, I could not help greeting him just as cordially as if we had been friends for half a life-time; and he told me, night before last, that my actual daily presence was all he needed to make life bright and happy, and asked me to be his wife. And that isn't all he told me, MADGE, darling; you would never guess it, he is so cheerful and jol—; there! I had almost said *jolly*, but he isn't *that* you know, only it *does* seem queer that he should be a minister! He is good enough for one, I am sure, but I am very much afraid that MILLY FRANKLIN isn't half good enough for a minister's wife.

He is coming on here to see his *sister* in the spring, and then he will come home with me to ask my dear father and mother to give him their only child. But, MADGE, I must stop all this chit-chat about myself, or I shall have no room left to tell you of CLAIRE. Do you remember CHARLIE WILSON? Yes! I see you smile! It is the same handsome CHARLIE whom we thought CLAIRE would marry before her uncle's failure, and now he is only just started in business for himself, and came up here to Brier Hill to see MISS AUBRAY, and persuade her to sit down in his pleasant little home as its mistress. And CLAIRE! what do you suppose she did? Why, she refused him, and sent him home so lonely and despairing. Oh! I shall never forget the white face he wore when he went down the hill. Never! Well, I took CLAIRE to task, and told her she must be crazy to give up an honest man's love for the sake of being independent; and then I told her of my own happiness and content, and said I was *so* sorry for her, but she only smiled a half-sad smile as she said "I, too, am content, MILLY."

To-night, I said to her, as we were coming back from the post-office, where I had been to get ROBERT'S letter, that I did not see how she could live without some one to love as *I* love my own noble ROBERT. "Why," said I, "if I had no one to love already, CLAIRE, I believe I should actually try to induce old REGULUS, himself, to fall in love with me." You should have seen how CLAIRE looked at me; her eyes fairly flashed as she gave me a very just rebuke for my levity. Dear cousin CLAIRE! how good and pure she is! She sees good in everybody, and always labors to hide their defects, even when they must be apparent to her own eyes. But then she always was better than any one else I knew, even when she seemed so gay and careless. But to think of her taking JOHN BOWEN'S part! Could he have heard, he surely would have loved her for it!

The moon is shining in upon me as I write, and I long to put out the light and draw up the curtains. I can lie here on the bed and look out at the deep blue of the sky and watch the stars as they shine down upon me with such a tender light; a light tenderer far than they *used* to yield to MILLY FRANKLIN'S tired vision.

Good night, MADGE.

Your happy MILLY.

IV.

BRIER HILL, Dec. 31.

THE last day of the dear old year, MADGE; the day that you and I were to have spent together, and now the nearest approach to it is sitting down to my desk and talking to you. How oddly things happen, darling, and how little as we mean they shall: yet all is for the *best*; of this we are certain, because He holds our lives in His hands, and guards and guides us with a *Father's* ever-watchful care.

Christmas came and went joyously enough, for all it was the very first holiday I have ever spent away from home; but these people, with whom we are domesticated, have a peculiar faculty of making every one feel at home, and it was almost dusk before I began to realize that I was just the least bit homesick. I missed my father, with his genial smile and cheerful repartee; mother, with her ready caress, and you too, my more than sister! Yes, I missed you all, and I would have given a good deal to have been able to steal away by myself and just indulge in a good, hearty cry; but I think they all suspected me, for I could find no chance of escape.

JOHN BOWEN came in before the evening was over, and he and the children had a real old-fashioned game of romps! We laughed, CLAIRE and I, to see how he seemed to enjoy it, entering into it with all the free abandon of boyhood, and BENNY himself could not laugh more heartily or shout with more eagerness than he did, seemingly. I suppose it was all to please them, though CLAIRE did say there were some people of just that nature, who could, at the proper season, throw aside their usual manner, and show their hearts as GOD made them—full of rapture. I asked her if she did not think it a little undignified for Mr. BOWEN to make himself so thoroughly one of them, but she only said, with a queer little smile playing about her lips, "certainly not," and I couldn't say another word.

We had a grand Christmas tree, full of twinkling lights and precious gifts; precious for the sake of those whose love dictated their bestowal, as well as for their intrinsic value. BENNY was loaded down with toys of all kinds, while the older ones had each their share. Father had sent me a box of things from home, but in CLAIRE'S care, so that I knew nothing of it until, one after another, the gifts were taken down and passed to me with the familiar names attached. Father sent me an exquisite little pin of diamonds and emeralds in a tiny cluster, (I wonder if I shall ever dare wear it when I am a minister's wife?) and mother sent me a very pretty gold watch and chain. Your face looked out at me from that little casket where it lay nestled so snugly, and I could almost fancy the lips were parting for a real home-chat.

I was beginning to think I had the heart-ache, but all these testimonials of a triple love roused me from that selfish wanting to grieve, and I was as glad and happy as the *rest* of the children.

CLAIRE seemed a new creature that night. I don't know what spirit had entered in and taken possession of her quiet self, for quiet she *has* been for the past few months; but she seemed fairly brimming over with gladness. As I looked at her I thought of that sweet line of a poem you and I have read so often—

"The world that knows itself too sad, is proud to keep some faces glad."

Hers wore a more perfect look of happiness than I ever knew it to do before. In every mood CLAIRE is beautiful! I have seen her when her heart was as tender as a little child's over the grief of another, and I have seen her calm and still over her own; tearful over the desolation that had fallen into some other young life, yet cheerful when her own looked dark and stern. I wondered at her for a good, long hour, and finally, when we were together in our room, I said, only half-seriously, "What gift have you had, CLAIRE, to make your face such a revelation of joy?" What do you suppose she did? Why, came and laid her head down on my shoulder and burst into tears. What could I do or say? But I soon found I had no need to comfort her, for hers were tears of joy. Our dear CLAIRE *loves and is beloved.* You will look inquiries, as I did, and it may be that you will be as heartily surprised when you know that JOHN BOWEN is the fortunate man. I must look at him through different eyes hereafter, and so must you, dear. Perhaps I have prejudiced you; if so, forget it, for has he not made CLAIRE as happy as a woman can be?

So our Christmas ended in a joyful surprise, and the bells that rang out at midnight rung in a happy future, and tolled a requiem over past possibilities of sorrow.

Your affectionate MILLY FRANKLIN.

V.

BRIER HILL, Feb. 16.

MY DEAR MADGE:—If the lines do not run straight and the words do not flow smoothly, blame my love, not me! To-morrow he is coming! He is coming! And the day clothes itself in a happier light, and the sweetest of songs rhyme on in my heart!

Do you remember that exquisite little poem of TENNYSON'S on the approach of the loved one? How the flowers listened and greeted her in their own quaint language? I could make it all seem real now, those beautiful conceits; but summer is yet far off with her buds and blossoms, and the chill wind sobs and sighs through the windows of the night; but with it all there is no sense of dreariness in my heart. All is joy and exultation; sweet anticipations of what will be yet sweeter realities! So the evening wears on, and night is almost here, and I will slumber till the "dawn of the glad day."

Somehow I can never lie down and watch the stars on these clear, still winter nights without thinking of that quaintest of eastern legends, which some among the wandering tribes of the desert hold for truth,—that the beautiful far-off stars we watch with such delight are torches carried in the hands of our own loved ones who have crossed the river, to light with hope and love the footsteps of the living over the rough and uncertain ways of life. Isn't it a pleasant thought for those who wait? Little AMY, my baby-sister, is the one friend I have lost hitherto; yet not *lost*, for I know I shall greet her again when those pearly gates of life are opened to me. She died in the summer, you know, and that was all the thought I had then to comfort me—that she would be laid under the warm, green sod, where violets would bud and bloom, and the starry myrtle cling. I think I should never wish to die in winter. A grave seems so solitary then, so shut off from the world of life and sunshine!

How glad I shall be when the spring finds her cheerful way to this hillside! CLAIRE says all seasons are alike when one is near the beloved one; but do you believe it? It makes a wide difference, I acknowledge, but my birth-place, you must remember, was in a valley, and I love the warm, genial atmosphere, and yearn for the returning flight of birds. The influences which surrounded my life all those early days cling to me still. When May-day comes I rejoice with the merriest child that—

The glad, bright summer is coming, dear,
The fields will be full of flowers,
The soft winds laugh in their merry glee,
And toy with the sunny hours!

You asked me, in your last letter, how I liked my *studies* thus far. I really think I like them better every day; for its own sake first—and then you know there are so many little things I shall need to know as a minister's wife, that I am glad of this long winter in which to learn. I have taken up a *new* branch of study lately, with good Mrs. STOKES for instructor; and you would laugh, no doubt, could you step into her neat little kitchen, every Saturday morning, and see me, with my sleeves rolled up, a big apron tied on, and my hands—that *used* to be skilled only in running over the keys of my Erard, and in dainty embroidery—immersed in *flour*. Yes, flour! You should have seen the two loaves of bread I baked the other day, and the pies! You might have held up your hands in astonishment, but you would, I am quite sure, have relished a taste.

CLAIRE said she could not understand it, and wanted to know who had been taking me to task for my ignorance. But no one has said a word to me of my failings, only since I have thought of being really mistress in a home of my own, I have grown ambitions to have it *not excelled*. That is all; and I really think, MADGE, that we ought to know all these plain duties that make home so much more a place of comfort and content. I knew I should never be allowed to go near the kitchen at home, so I just concluded to learn here.

I have been studying German, too, with JOHN BOWEN, out of school hours, for it is ROBERT'S favorite language, and he will be so happily disappointed when he finds I can read with him. Ah! it's worth one's while to go through a good deal of trouble, toil and vexation to win a real proud, glad smile from the one you love best on earth.

Only wait a year or two, MADGE, and see if you don't say so, too?

CLAIRE is out for a walk. They insisted on my going, too, but I told them I had letters to write, and I scarcely think they missed me when they were once out of sight. It is real pleasant to watch and see how even the younger scholars have become conscious of this new tie between their beloved teachers, and at the same time how carefully they refrain from any hint toward such an understanding. I don't know what they will do when they have to accept a *new* teacher, but I hope a good and kind one—and one, withal, as *patient* as CLAIRE—may fall to their lot.

I must write a letter to mother before I sleep; so good night, and all good angels guard you.

Your true and loving MILLY FRANKLIN.

[Concluded next week.]

MISS GARRETT, the celebrated London female physician, is described as a slender, golden-haired young lady, dressed with a taste which few English women possess. It was curious to hear the girlish little creature in white silk talk of her practice, her office, and the daily work she did. As a patient was waiting for her at the time, the observer had only a brief interview.

Corner for the Young.

For Moore's Rural New-Yorker.

HISTORICAL ENIGMA.

I AM composed of 42 letters.
My 9, 40, 36, 19, 8, 42, 5, 21 was a celebrated King of Sparta.
My 30, 5, 32, 6, 26, 11, 36, 19 was a temple at Rome.
My 37, 36, 36, 7 was a Commodore in the American Navy.
My 38, 27, 38, 35, 10, 36, 19 was an ancient city.
My 30, 1, 15, 20, 8, 41, 16 was a very noted sculptor of Athens.
My 23, 33, 19, 2 was a Queen of England.
My 34, 5, 35, 17, 36, 39 was a President of the United States.
My 30, 18, 39, 3, 22, 32, 19, 36, 33 was a temple sacred to Minerva.
My 4, 29, 33, 39, 35, 28, 5, 19, 2 was a Governor of Massachusetts.
My 39, 23, 30, 13, 5, 2, 24 was a distinguished Painter.
My 30, 25, 18, 12, 26 was a noted Athenean Philosopher.
My 14, 8, 31, 9 was a Confederate General in the late rebellion.
My whole is a proverb of Solomon.

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper.* Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

THE INDELIBLE PENCIL COMPANY,
(Northampton, Mass.,)
MANUFACTURERS OF THE IMPROVED
Patent Indelible Pencil,
For *Marking Clothing, &c.*, have ready for sale the new
HORTICULTURAL PENCIL,
for INDELIBLE WRITING ON WOOD.
Invaluable for making DURABLE Tree and Garden **Tags** or **Labels**, marking **Tools**, &c., &c.
PRICES.—*Horticultural*, 75 cents, single; two for $1; $5 per doz. *Clothing Pencil*, 50 cents, single; three for $1; $3 per doz. Sent prepaid by mail or express, on receipt of price. A Liberal Discount made to Dealers.
☞ EVERY PENCIL WARRANTED. ☜

GOOD AND CHEAP BOOKS FOR
Ruralists and Others!
THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER.** We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Pomology (288 Illustrations)	3,00
American Sharp Shooter (Telescopic Rifle)	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	30
American Horticultural Annual	50
American Agricultural Annual	50
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	30
Architecture (Cummings & Miller,) 882 designs and 714 illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored illustrations	9,00
Bement's Poulterer's Companion (120) illustrations	2,00
Bommer's Method of Making Manure	25
Browne's Field Book of Manures	1,50
Buck's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	30
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50
Dadd's Modern Horse Doctor	1,50
Dadd's American Cattle Doctor	1,50
Darlington's Weeds and Useful Plants	1,75
Directions for Preserving Natural Flowers	1,50
Domestic Poultry Book, with over 100 Illustrations	50
Downing's Cottage Residences	2,50
Eastwood's Cranberry Culture	75
Everybody his own Lawyer	1,25
Farm Drainage, by H. F. French	1,50
Field's Pear Culture	1,25
Flint on Grasses	2,00
Flowers for the Parlor or Garden	3,00
Fruit Trees of America	1,50
Fuller's Illustrated Strawberry Culturist	30
Fuller's Forest Tree Culturist	1,50
Fuller's Small Fruits (beautifully Illustrated)	1,50
Gardening for a Profit	1,50
Grape Culturist, by Andrew S. Fuller	1,50
Guenon on Milch Cows	75
Herbert's Hints to Horse-Keepers	1,75
Holley's Art of Saw Filing	75
Hop Culture	40
Hooper's Dog and Gun	30
Horse Training Made Easy, Jennings'	1,25
Indian Corn; Its Value, Culture and Uses	1,75
Jaques on Fruit and Fruit Trees	60
Jennings' Sheep, Swine and Poultry	1,50
Johnston's Agricultural Chemistry	1,75
Johnson's Elements Agricultural Chemistry	1,25
Kemps' Landscape Gardening	2,00
Kings' Text-Book, for Bee-Keepers, paper	40
Langstroth on the Hive and Honey Bee	2,00
Letters on Modern Agriculture	1,00
Liebig's great work on Agriculture	1,50
Liebig's Familiar Letters on Chemistry	30
Liebig's Agricultural Chemistry	1,00
Manual of Agriculture, by Emerson and Flint	1,25
Miles on Horse's Foot (cloth)	75
Miss Beecher's Receipt Book	1,50
Manual on Flax and Hemp Culture	25
Mayhew's Practical Book-Keeping (Single and Double Entry,)	90
Mayhew's Account Books (to go with the above,)	1,20
Mayhew's Key (to go with above,)	90
Modern Cookery, by Miss Acton and Mrs S J Hale	1,50
Monumental Designs, 158 plates and designs	10,00
Nature's Bee Book	25
Norton's Elements Scientific Agriculture	75
Onion Culture	30
Our Farm of Four Acres	30
Parsons on the Rose	1,25
Pedder's Land Measure	60
Phantom Flowers	1,50
Practical and Scientific Fruit Culture (Baker)	4,00
Practical Shepherd, Randall	2,00
Quimby's Mysteries of Bee-Keeping	1,50
Quincy on Selling Cattle	1,25
Rabbit Fancier	30
Randall's Fine Wool Husbandry	1,00
Randall's Sheep Husbandry in the South	1,50
Richardson on the Dog	30
Rivers' Orchard Houses	50
Rivers' Miniature Fruit Garden	1,00
Rogers' Scientific Agriculture	1,00
Rural Homes (Wheeler)	1,50
Saunders on Poultry (Illustrated)	40
Schenck's Gardeners Text-Book	75
Scribner's Produce Tables	30
Scribner's Ready Reckner and Log Book	30
Silver's new Poultry Book (70 Illustrations)	50
Stewart's (John) Stable Book	1,50
The American House Carpenter (Hatfield's)	3,50
The Barn Yard, a Manual	1,00
The Boston Machinist (Fitzgerald)	75
The Farm, with Illustrations	1,00
The Fruits and Fruit Trees of America (Downing)	3,00
The Garden, a Manual	1,00
The House with Original Plans	1,50
The Farmer's Journal and Account Book	3,50
Thomas' Am. Fruit Culturist, (480 Illustrations.)	3,00
Thomas' Farm Implements	1,50
Ten Acres Enough	1,50
Todd's Young Farmers Manual and Work Shop	1,50
Ventilation in American Dwellings	1,50
Warder's Hedges and Evergreens	1,50
Wax Flowers, how to make them	1,50
Woodward's Graperies and Horticultural Buildings	1,50
Woodward's Country Homes	1,50
Woodward's Rural Architecture	1,00
Wool Grower & Stock Register, Vols. 1, 2, 5, 8, each	33
Young Housekeeper's and Dairy Maid's Directory	30
Youman's Hand Book Household Science	2,00
Youman's New Chemistry	2,00

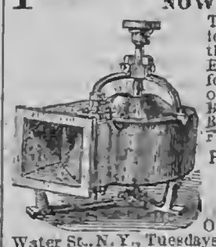
☞ Any of the above named works will be forwarded by mail, post-paid, on receipt of the price specified.
Address D. D. T. MOORE, Rochester, N. Y.

TWO GOLD MEDALS AWARDED ONE MACHINE.
HARDER'S PREMIUM RAILWAY Horse-Power and Combined Thrasher and CLEANER, at the Great National Trial, Auburn, July, 1866, for "Slow and easy movement of horses, 15 rods less than 1¼ miles an hour, mechanical construction of the very best kind, deserving of high commendation, thorough and conscientious workmanship in every place, nothing slighted, excellent WORK," &c., as shown by Official Report of Judges. Thrashers, Separators, Fanning Mills, Wood Saws, Seed Sowers and Planters, &c., all of the best in market. Circulars with price, full information, and Judges Report of Auburn Trial, sent free. Address R. & M. HARDER, Cobleskill, Schoharie Co., N. Y.
904-m18-je1,22-j20]

$18.00 A DAY.—Agents Wanted, Male and female, to introduce a new article of household utility. Only Five Dollars Capital required. Particulars free. Address W. A. HENDERSON & CO., Cleveland, Ohio. 905-13t

$20.00 AGENTS WANTED—$100. Male and female, to introduce our New Patent, Star Shuttle Sewing Machine. It is adapted for family use, and Tailoring. It makes a stitch alike on both sides. Price only Twenty Dollars. Extraordinary inducements to Agents. For full particulars, address W. G. WILSON & CO., Cleveland, Ohio.
905-13t

THE BOOK OF WONDERS tells how to make all kinds of Patent Medicines, Perfumery, Toilet Articles, Cosmetics, Candies, Wines, Cordials, Soaps, Dyes, and hundreds of other articles in daily demand. Easily made and sold at large profits. Sent post-paid for 25 cents, by O. A. ROORBACH, No. 122 Nassau street, N. Y. 897-tf

PRESSURE TURBINE WATER WHEEL NOW READY.


The best Wheel in market, using less water and selling for less than any other first-class Wheel. Every Wheel warranted. Send for a descriptive Circular. Also, our Improved Brick Machine and Brick Machinery, Engines and Boilers, Cane Mills, Portable Forges, and all other machinery.
PEEKSKILL MANUFACTURING COMPANY,
PEEKSKILL, N. Y.
D. L. SEYMOUR will be at the Office of Packard & Hill, No. 105 Water St., N. Y., Tuesdays, Thursdays, and Fridays, from 11 to 1 o'clock, to receive specifications and make contracts for Machinery and Castings of all kinds. 895-13teo

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

DEPARTMENT OF AGRICULTURE.—DEATH OF COMMISSIONER NEWTON.

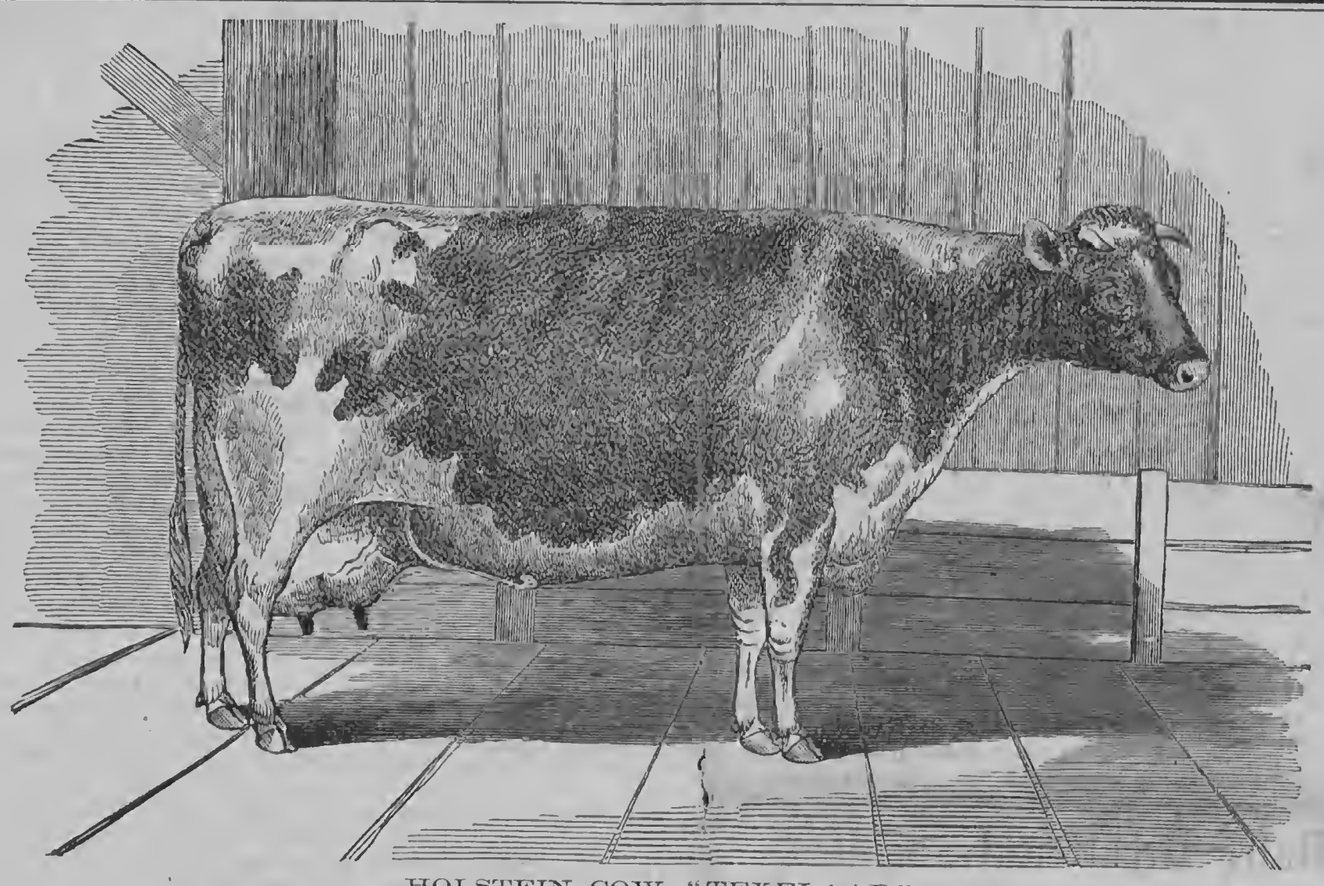
DURING a recent visit to Washington we had opportunity to learn somewhat concerning the Agricultural Department, and the men by whom its principal operations are conducted. We then purposed giving an article containing our impressions in regard to the workings of the Department, and the competency of the Commissioner and his principal co-laborers, but causes beyond our control precluded us, while at the South, and since our return, from fulfilling the purpose,—and now we learn that ISAAC NEWTON, the Commissioner of Agriculture, has departed this life. This event induces us to say, hurriedly and briefly, some things which we intended to have expressed in a deliberate and extended article.

It is proper to state that our first visit to the Department, and acquaintance with Mr. NEWTON and his principal aids, was over two years ago—in March, 1865,—and that some of our opinions concerning the Commissioner and Department were modified, and certain prejudices removed. We found Mr. NEWTON a more competent man, especially in practical knowledge and executive ability, than had been represented, though we did not believe him qualified for the important position he occupied. Among his aids or superintendents were several gentlemen of decided ability—particularly JAMES S. GRINNELL, then Chief Clerk, J. R. DODGE, Statistician, TOWNEND GLOVER, Entomologist, and WILLIAM SAUNDERS, Superintendent of the Botanical Gardens. From what we then saw and learned of the operations of the Department, and the heads of its various branches, we hoped for beneficial results; and as there was little or no probability that any effort to remove the Commissioner would prove successful, we concluded to refrain from making or joining in further complaints or criticisms and await the progress of events.

At the time of our recent visit—two months ago this week—we found the various branches of the Department in a much better condition than formerly, some of them exhibiting marked evidences of progress and improvement in the right direction. This was especially true of the Cabinet or Museum so long and ably managed by Prof. GLOVER,—the Botanical Garden, superintended by Mr. SAUNDERS,—the Experimental Grounds or Farm, then in charge of ISAAC NEWTON, Jr.,—and last, but by no means least, the important branch of Statistics, Correspondence, etc., presided over by Mr. DODGE. In each of these branches we saw or ascertained much worthy of commendation, and believe that if the plans inaugurated were properly carried out great benefit would redound to the agricultural public. And we wish to say here, that, whoever may succeed Mr. NEWTON as Commissioner, such competent gentlemen for their positions as Messrs. DODGE, GLOVER and SAUNDERS should by all means be retained—for their peculiar qualifications, and long experience, render their services of paramount value to the Department and the Country.

Of the deceased Commissioner we can truthfully say he possessed some admirable qualities, and had he not it would have been impossible for him to so long retain, against much opposition, a position so important and responsible. Though lacking the education, scientific requirements, and that knowledge and comprehensiveness of mind relative to the agriculture and rural needs of the whole country requisite for the position, he was practical, observing, affable and a rare judge of human nature. Our purpose is not, however, to write an obituary or eulogy, but simply to speak of the Department and the Commissioner as we saw and judged of them during our visit. Some matters pertaining to the branches already mentioned, of which we have notes and facts, may be recurred to in a future number.

The death of Mr. NEWTON occasions a vacancy in a branch of the Government which should be rendered one of the most important. Our own idea is that the head of the Department of Agriculture should be a member of the Cabinet, and the man occupying the position possess superior attainments and ability. But even if the rank of the Department is not, at present, what it ought to be in justice to the Rural Population of Agricultural America, it is still important that an eminently competent man should be placed at its head—one who understands and comprehends the Agriculture of the whole country, its peculiarities, needs and paramount importance,—and we sincerely trust that such a man will be selected, regardless of his location or political antecedents.



HOLSTEIN COW "TEXELAAR,"

IMPORTED AND OWNED BY WINTHROP W. CHENERY, BELMONT, MASSACHUSETTS.

OUR engraving portrays the Holstein or Dutch cow "Texelaar," from a drawing taken when she was five years old. At the time this portrait was taken (1864) Texelaar weighed 1,265 lbs., her height was 4 feet 4 inches, length 7 feet 5½ inches, and girth 6 feet 3½ inches. In June, 1863, a careful record was kept of the milk produced by this cow, and showed a result of *seventeen hundred and four and one-half pounds*, or an average of 56 81-100 pounds per day for thirty successive days. The first six days in the month she gave an average of 59 4-100 pounds daily, and on four subsequent days 60½ lbs. per day. Texelaar was then only four years old, and had been in calf about two months—having dropped her calf on the 2d day of the previous April. In the following year her milking quality was again tested, and showed a result in seven days (from May 27 to June 2, inclusive,) of 512 2-16 pounds, or an average of 73 9-56 pounds per day. Her calf, dropped May 15, weighed at birth 101 pounds.

The above facts are derived from an article on Holstein Cattle, contributed to the Report of the Commissioner of Agriculture for 1864, by Mr. CHENERY, the owner of Texelaar and other superior imported cows of the same breed. The article referred to gives an interesting account of the Dutch or Holstein breed of cattle, their antiquity, early importation into England and this country, and great excellence for the dairy. Those of our readers interested in the subject of dairy stock will find the article worthy of perusal.

PERIODICITY IN THE SEASONS.

REMARKING on agricultural periodicity, the Maryland Farmer observes:—"It has been for many years a favorite theory of some observers, that seasons, very similar to each other, recur at stated intervals, whilst others have gone so far as to contend that they move in regular cycles, changing gradually from rainy to dry and from hot to cool summers, and from moderate to severe winters, and at the completion of the cycle reversing the phenomena year by year, from dry to rainy, and from cool to hot summers, and from severe to moderate winters. The terms usually alloted are seven and fourteen years, but thus far no meteorological laws have been discovered to justify this theory of atmospheric changes, or to furnish data upon which such changes may be confidently predicted."

This conclusion, all things considered, seems a legitimate one and accordant with facts as they transpire from year to year without reference to any particular series.

That the seasons should possess a general family resemblance seems a matter of necessity, so long as the sun is the great source of light and heat and the earth continues to make its annual circuit around it with uniform velocity. But there are influences at work *on* the earth, which tend to change or considerably modify the character of the seasons in particular localities—substituting comparative aridity for excessive moisture in summer, and increased wind and diminished snow in the winter. These changes will scarcely have escaped the notice of those who pitched their tents in a wooded country with but here and there a log cabin for many miles, and remained there till the ax, in brawny hands, had let in the sun and wind upon what before was comparatively perpetual shade and oppressive stillness. Then, the summers were noted for the almost daily occurrence of showers and the winters for the depth of snow which covered the earth. But, as the forest trees fell before the ax and their severed trunks melted away in glowing heaps, the summer showers became less frequent, the winters less prodigal in snow, but increasingly affluent in winds, searching and pungent in their character. These climatic modifications bore no perceptible relation to any particular cycloid of years, but were seemingly wholly, or mainly, dependent upon the velocity and pertinacity with which the ax performed its office. These changes, too, have been followed by consequences, to the farmer, little thought of at the time the onslaught was being made on the primeval forest. The woodman then, but agriculturist now, saw in each forest tree an enemy to be slain, and he went forward like a destroying angel, sparing none. The stately tree which had breasted the storms of a thousand ages and the modest sapling reposing beneath its sheltering branches, met a common fate. "A clean sweep" was the word, and the consequence now is that the blasts of winter repeat it as they course over fields without check or hinderance.

In thus denuding his land for long distances of any forest shelter, the farmer made a mistake as he removed what, in suitable places, should have been left to protect his own domicil and the fruit orchards which are essential to and give finish to every well regulated farm. Regrets for the hasty action of the past will not repair the evil done, but they may induce an attempt to modify its effects by interposing new forest barriers in such places as will best serve as shields to the dwelling, stock barns and the fruit orchards. It is true, the parties most in fault may be stricken in years now, with no prospect of profiting by a late atonement, but they have descendants who will appreciate the comforts supplied by a change of policy and hold in grateful remembrance those to whom they will be indebted for them. Plant trees then, to modify the rigors of the seasons, protect your homes and their surroundings, without reference to the question as to whether the seasons are cyclodial or the reverse.

SYSTEMATIC FARMING.

THERE is much diversity of practice among farmers in the preparation of their grounds for the crops designed for each section. Some do this systematically—having a well defined plan with respect to their several fields—while others are rather mixed or confused in their plan of operations, if plan that can be called which is without system or order. A dim perception may be had of what is to be done on a given day, but when that day arrives a change takes place and something else is attempted and the line of consecutive labor is broken. These sudden changes of purpose are as hazardous to the success of the farmer, as is a change of front on the part of an army while in the midst of a hotly contested battle. The change may secure an improved position—a better application of force—but the chances are many to one that an adverse result will be the consequence.

This mutability of purpose in farming operations occasions loss of time, delays the proper preparation of the ground, and necessitates a slovenly mode of doing it. To make up for lost time the "cut and cover" system is resorted to, and the result is that not more than two-thirds of the soil is disturbed by the plow—reliance being placed on nature to perform that which the farmer, from lack of system and a useless expenditure of time, finds himself unable to accomplish. A field may be rapidly gone over in this way—may present an appearance of cultivation, but when harvest time comes the cheat will be exposed by the paucity of the returns made. It is a subject of congratulation to reflect that there is less of this slip-shod farming observable now than in years gone by. Those who expect remunerative returns from their farms must manure well, plow thoroughly, cultivate seasonably, ignore the "cut and cover" system, and then if they fail of securing a return they will have the satisfaction of reflecting that they deserved success, though failing, from causes beyond their control, of its attainment.

ANOTHER CORN PEST.

L. V. SMITH, Geneva, N. Y., sends us specimens of the snout beetle family which made their appearance in that section, for the first time, last season. He adds that they have "increased to an enormous quantity this year, and are very troublesome in the corn fields. The one, from which the specimens sent were procured, furnished from six to twenty beetles to each hill. They have proved very destructive. This insect seems not to have been known to SAY, MELSHEIMER, HARRIS, or FITCH, as it is not catalogued by either of them. Dr. LE CONTE calls it *Sphœophorus antiqua*—a beetle about which nothing has been known till within a comparatively recent period.

Our correspondent is anxious to know how to destroy these troublesome and destructive insects, as well he may be, considering their numbers and rapacity. Of course killing them, by any ordinary means, over the surface of a large field, would be next to an impossibility, but a sure and available substitute, for hand killing, does not readily suggest itself. The books are silent on this subject, while the old and experienced among the farmers are equally reticent. We have an idea that an application of hellebore would prove effectual, based on its acknowledged efficacy in destroying or expelling other insects from plants and shrubbery. If any of our readers are posted with reference to this new corn beetle and the best means of getting rid of it, we should be pleased to give the information they may supply the benefit of our circulation.

HOW GRAIN GROWING MAY BE MADE TO IMPROVE THE SOIL.

IT is a common saying among farmers, even in fertile Western New York, that grain growing impoverishes the soil; yet 1,000 lbs. of wheat takes from it only about 16 lbs. of mineral elements, nearly one-half of which is phosphoric acid, which can easily be replaced by the bones of the meat consumed on the farm. The potash, only about 5 lbs., is easily replaced in the farmyard manure, that also supplies the nitrogen and the balance of the mineral elements of plant food, including phosphoric acid itself. 'Tis true that the wheat straw from the same soil contains 53 lbs. of mineral elements, but this every good farmer returns to the soil as nitrogenous stable manure; and it is the waste of this straw, and the neglect of farmers to save the urine of their animals, that makes the manure heap so poor in ammonia salts that it fails to keep up the fertility of the wheat fallow.

In England, where animals are fed with reference to the richness of the manure they make, they now grow one-third more wheat to the acre than they did a hundred years ago on the same farms. True, turnip culture there and commercial manures have done much to produce this improvement of the soil, but if we cannot grow turnips and feed them out on the soil in winter as they do in England, we can grow clover, which so often fails in England, and as Indian corn is indigenous here we can grow and fatten more hogs and stock and make more manure.

By alternating crops, plowing in green clover, or even a clover sod, besides returning all the hay and straw of the farm to the grain fields in the shape of all saved stall manure, the soil of those fields will grow richer instead of poorer. Then, good tillage and underdraining adds continually to the fertility of the soil, as it makes slowly soluble the inert plant food, so long locked up insoluble in the soil. While a poor, half-tilled, lightly manured surface gains no organic matter from the atmosphere, a well-tilled and manured soil gains organic matter from the falling dew and every gentle shower. *.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

KEEPING INDIVIDUAL PEDIGREES OF SHEEP.

R. S. T. THURBER, Jeffersou, ——, asks us: "Did the Spaniards keep a separate pedigree of each of their sheep? Is not the practice attended with much trouble? Is it of any practical utility? If a sheep is known to be of full blood, or any other particular blood, why is not this enough? Were pedigrees of each sheep kept in the flocks of HUMPHREY, LIVINGSTON, JARVIS, &c.? Did any of our American sheep farmers keep such pedigrees before the publication of the Practical Shepherd?"

The Spaniards were exceedingly tenacious of purity of blood in their flocks, but did not as a general thing, so far as we are informed, keep individual pedigrees of their sheep. The practice is of course attended with some trouble, but when systematically commenced and kept up regularly every year, the labor is but trifling. The utility of preserving and recording the separate genealogy of each animal, giving the *names* of all its ancestors, depends upon the same considerations in the case of sheep that it does in the case of horses, cattle, &c. If it is of no use in the former, it is of none in the latter.

We have on a former occasion defined breeding, in its technical sense, to be the art of selecting such males and females to procreate together as are best adapted, in conjunction, to produce an improved and uniform offspring. The experience of every breeder has demonstrated that a male animal peculiarly fitted to breed well with particular females, is unfitted to breed well with other females of the same flock or herd. The very best breeders we know of, and those who possess the most uniform flocks, frequently,—indeed generally—use two or three different rams for inlambing only one hundred ewes. The progeny also require to be coupled with rams of different individual qualities. It is often found that the get of a particular ram breed best with the get of another particular ram, and so on for generations. Certain ewes, too, breed better than other ewes, and their progeny is more valuable. How are these facts to be ascertained and acted on, if the get of the respective rams used or the progeny of particular ewes are not capable of being identified? The history of each sheep's descent is its pedigree, and it matters not whether it is written or merely remembered, providing it is correctly remembered. But few men's memory can be relied on, in this particular, in regard to a large flock. The written record or pedigree does not, as already said, require an amount of trouble worth talking about. If the breeder's register starts with the pedigrees of his flock, all that he has to enter down annually is that ram lamb No. 25, for example, was got by ram No. 50, out of ewe No. 300; and then the preceding records will of course give the pedigree of the ancestors.

A pedigree of *names* merely, without a knowledge of the characteristics or qualities of the animals bearing those names, is of no practical utility. The value of a pedigree is, first, to show that the animal is of pure blood, and, secondly, to show what individual qualities were possessed by its ancestors, and are likely therefore to be transmitted to its progeny.

We do not know how far HUMPHREY, LIVINGSTON and JARVIS made individual pedigrees a matter of record in their flocks. Our impression is that they did not do so to any considerable extent. All of these gentlemen should be spoken of only with respect by American sheep breeders. But the great improvements made on the Spanish sheep in the United States are due to neither of them. These have been made by a class of men who have carefully studied the qualities of each of their sheep, and who never coupled a ram and ewe without a due consideration of their hereditary as well as individual fitness to be coupled together—and who accordingly know their individual pedigrees to a considerable extent. And it is the best breeders who best know the genealogy of every individual sheep in their flocks.

In answer to Mr. THURBER'S final question we inform him that individual pedigrees were kept by some American sheep farmers before the publication of the Practical Shepherd. If that work induced these men to keep them still more carefully and to make them a matter of *written* record—if it has induced thousands to commence so useful and important a practice, it is a matter of sincere gratification to us. We should have been glad to treat this subject more thoroughly, but we are writing in haste, and in one of the pauses of a journey.

ALEXANDER SHEEP SHEARING FESTIVAL.

A LARGE number interested in sheep met at Alexander, Genesee Co., N. Y., May 24, to witness the shearing of a fine flock of Merinos, the property of JAS. G. SHEPARD of Alexander, opportunity being given to all who might wish to shear their sheep. I send you an account of Mr. SHEPARD'S fleeces as follows:

	lbs.	ozs.		lbs.	ozs.
No. 1	13	2	No. 12	11	4
" 2	11	12	" 13	13	
" 3	10	3	" 14	12	7
" 4	11	13	" 15	16	9
" 5	14	1	" 16	11	12
" 6	10	7	" 17	11	11
" 7	11	1	" 18	10	
" 8	15	1	" 19	11	10
" 9	13	5	" 20	13	7
" 10	12	1	" 21	10	8
" 11	12	4			

No. 15 weighed, after being shorn, 62 lbs., giving 16 lbs. 9 ozs. of wool—a weight of fleece according to the carcass very remarkable.

The wool was not more than one year's growth, the sheep two years old being thoroughbred, from the flocks of Messrs. WILLIAMSON, F. MOORE, HALL, and SANFORD, Vt. They were brought out by BOWKER & BUSH, who have sold about 300 similar sheep in the neighborhood, assisted by O. A. PECK of Vt. They also had a flock of splendid sheep on exhibition, which were examined with much interest.

The Attica Brass Band enlivened the occasion with soul-stirring music, and HUGH T. BROOKS of Wyoming Co. addressed the multitude at the close of the shearing, from the steps of the Newton House, as follows:

"FARMERS AND FELLOW CITIZENS:—There are two precious gifts to man, *cows* and *sheep*—to say nothing of wives and children. I don't know which we could least afford to spare—I am talking now about the cows and sheep. To say nothing of butter, of which we use too much, he is deserving of the profoundest pity and commiseration who either don't like milk or can't get it. But *sheep* belongs to the order of these exercises. You have been shearing. Do you intend to turn the meek and amiable animals, which have just been stripped 'stark-naked' for your benefit, adrift, to sleep on the *cold ground*, and take the storms as they come? You have had abundant evidence that sheep have thick coats these days, and when you shear them it is like wearing an over-coat, under-coat, shirt and wrapper, and stripping them all off and going naked. You would expect to die if you did it, and you ought to; and that is about what those deserve who shear their sheep at their own convenience, and let them take the rains and the winds, and the frosts as they come. In this way, multitudes of sheep get coughs, consumptions and premature death, and are reported to die of grub in the head, &c. Don't be so greedy but what you can leave a good half-inch of wool on the sheep when you shear; you will get it all in the end; and, furthermore, shelter your sheep for at least three weeks after shearing, every rain and every night that is not particularly warm.

It is a great accomplishment to shear a sheep fast, smooth, and without cutting the skin—the shearers to-day have acquitted themselves well.

Sheep in a climate like this, where winter gets the better of summer about two-thirds of the time—sheep, as I intimated in the start, are very useful institutions. Are you doing what you can to improve them? The sheep of Genesee county will shear double the cleansed wool per head in 1867 that they did in 1839! There is a gain for you unparalleled in any other department of farming. I do not hesitate to say that we owe much of this to Vermont—to such men as Messrs. BOWKER and BUSH, who are offering to you such choice animals as you have seen to-day. I suppose when we get up to their present standard they will be ahead of us; they will be out with another lot something more miraculous, and then we shall have to buy again, and perhaps at still higher prices! We'll go ahead, and keep going ahead. I demand of my friend SHEPARD, here, that he leave this flock a good deal better than he found it—there is just as much chance for improvement as there ever was. When you get the wool so compact that you can't pull it open to see the hide, then keep on growing it longer—there is a world of space in that direction. But be sure of one thing: study the nature of your animal—*study with profoundest solicitude the laws of healthy development.*

Remember that the sheep is something like the goat, and wants air, exercise, and fresh, succulent food. It is not expected to grant out a short life in a close pen, like swine fed on corn, but to snuff the fresh breeze on the hill-side. Health is the foundation of every excellence in man or beast. Every man, woman, sheep, and child that is able to go alone, ought to walk a mile or two every day.

The particular danger in sheep breeding comes now from a desire to *show well*—you *bleach out* your wives and daughters by close confinement, and you *blacken* your Merinos in the same way—and you murder both. Soften that word at your leisure, but you won't get any nearer the truth.

Improve your flocks. Don't sell off every time the wind shifts, but keep right along and breed first quality of sheep, and it will pay as long as you live and I reckon longer."

Mr. BROOKS here closed his speech, the band played, the old folks went home, and the young people danced in the evening.

Dairy Department.

WHEY—ITS VALUE—HOW TO USE IT.

SINCE the extensive organization of Cheese Factory Associations, and the large accumulation of whey, which has too much run to waste, it becomes important to inquire whether it has a value worth utilizing. And for this purpose we must look at its chemical composition. Whey is composed of

Casein (flesh-forming food)	.8
Milk sugar (heat and fat forming food)	5.0
Fat (butter)	.6
Mineral (ash)	.4
Water	93.2
Total	100.0

It will be seen that the whey contains six and four-tenths per cent. of nutriment, five per cent of which (sugar) is identical with the starch of grain. Of nitrogenous food, such as builds up the muscular system of the animal, it contains only eight-tenths of one per cent., and seven-eighths of all its nutriment (sugar and fat) go to supply animal heat and fat. And the question arises here, can any food be economically used which contains only six and four-tenths per cent. of nutriment? This will be best answered by examining the natural food of our domestic animals. In the green state in which it is eaten in pasture, red clover has eight per cent., white clover seven per cent. and timothy ten per cent. of nutriment.

Thus we see that whey has nearly as much nutriment as red and white clover in the green state. This must settle the question of its economical use, and, besides, its nutriment is in a soluble state and easily assimilated. But it will be said, whey is found, practically, quite inferior to clover. This is because about one-third of the nutriment of clover is nitrogenous food, which supports the muscular system, and whey has only one-eighth part of this food. It will be readily seen that by supplying the flesh-forming nutriment to the whey, it will become an excellent food for all our domestic animals, and especially calves, cows, colts and pigs. To this end we must mix with the whey some food very rich in albumen or gluten. The latest analysis gives oil meal 28 per cent., pea and bean meal 25 per cent., wheat and rye bran and oat meal 18 per cent. of albuminous food. Now, by mixing one-half pound of oil meal, pea or bean meal, or three-fourths of a pound of bran or oat meal, with each gallon of whey, we shall have a food, very nourishing, and fit to build up all parts of the animal system. It will be very valuable to feed to milch cows, as it will not only increase the quantity and quality of milk, but greatly assist in keeping up their condition when in full milk. At a fair price, oil meal should have the preference, next bean and pea meal, then bran. The oil meal, bean meal and lime, so necessary to build up the bones of the young animal. Buckwheat and barley meal have been profitably used, but are less valuable than the other foods mentioned.

HOW TO FEED IT.

It would be well to mix oil, bean and pea meal or bran with the whey when hot, and then let it stand till slightly sour, say 24 hours, for feeding hogs and cows. It is, in this condition, more easily digested and assimilated as food, and not constipating. Whey when fed alone and sweet will soon constipate the animal so as to produce fever and disease. It would not produce this effect when mixed with nitrogenous food, even if fed sweet, as there is then a proper balance between its constituents; and to calves it may be fed sweet. Three gallons of this mixture, fed to each cow per day, through the summer, would more than pay the expense in extra milk, besides keeping the cow in much better condition. Milk being rich in casein, it draws heavily upon the flesh of the cow, in full milk, and she requires food rich in the same quality to supply it and keep up her condition. Whey, mixed with the different foods mentioned, would exactly supply this want, and therefore may be profitably fed back to the cow. Cows fed thus would be worth from five to ten dollars per head more in the fall, as it would cost so much less to winter them.

But it will also furnish an excellent food to raise calves upon or to feed pigs. It would give range and strength to calves, which is very necessary, especially in heifers, designed to give milk at two years old, and for this purpose they should be fed for eight or nine months. In this way the whey may be turned to good account, and assist materially in swelling the income from the cow.

If the whey is retained by the owner of the cheese factory, and fed to calves or hogs in the manner described, it would very nearly pay the whole labor account in making the cheese. This subject of utilizing all food should be thoroughly studied by the farmers of this country. Careful study and experiment will enable them to save hundreds of dollars, now wasted, and would change many an unprofitable farming account into a cheering balance sheet. E. W. S.

DAIRY ITEMS.

A Great Cheese County.—The Grauga Democrat states that the total amount of cheese manufactured in that county in 1866, as returned by the assessors, was 6,358,577 lbs. The quantity made in factories was 3,985,000 lbs—the number of those in operation being seventeen. The total value of the cheese made in the county was not less than one million of dollars.

Dairy Cows in Canada.—The Galt Reporter states that a number of Americans appeared in that place for the purpose of purchasing cows for the dairy business. They got a car load, but prices advanced so under this foreign demand—reaching $100 per head in greenbacks—that the business of buying was abandoned. The present ruling of dairy products will not warrant such prices for cows.

Cheese Making—Cost.—At a recent meeting of the Little Falls Farmers' Club, GEO. W. DAVIS gave the results of an examination into the comparative cost of making cheese at factories and in private dairies. The calculation was based on thirty cows, and the result was as $271,00 to $225,60—or $45,40 in favor of the factory in point of cost of making. In marketing the factory-made cheese had an advantage of from one to two cents per pound.

Prices of Cattle.—A few weeks since JOSEPH L. HURD of Concord, Mass., disposed of thirty cows and heifers of pure bred Aldderneys and Jerseys at public sale. The highest price paid, for a single animal, was $425. The lowest $62. The thirty brought an aggregate of $3,904, or a fraction over $130 per head. When it is remembered that, but a few years since, it was an extra cow which would sell for forty dollars, the prices now obtained appear surprising, and naturally suggest the question, can this advance be maintained?

The Cheese Market.—The last sales of farm dairy cheese at Little Falls, as quoted in the Utica Herald, show a rather depressed market—prices ranging from 8 to 10 cents per pound—the latter paid for only a small quantity. The bulk of the sales were made at 11 cents. It is charged that a combination has been formed in New York to put down prices, and that it has succeeded in doing so on two occasions, with a promise of repeating the operation. A grand meeting of dairymen, to counteract this influence, is hinted at.

Improvement in Cheese Apparatus.—The Utica Herald, noticing the Fairfield Association Cheese Factory, mentions some improvements which it deems worthy of adoption generally. The presses and sinks are about two feet lower than the platform on which the vat is placed. This allows drawing the whey and curds through a shute at the end of the vat into the sink, thus avoiding the labor of dipping—a very convenient arrangement. The pipes for heating are placed under the center of the vats, instead of at the end, and are thus out of the way in working—a decided improvement on the old plan.

Choosing a Cow.—There are certain features about cows which indicate, with almost entire certainty, their character as milkers. A head weighed down with ponderous horns *may* belong to a good milker, but the chances are a hundred to one against her. So, too, very long legs may pertain to a good animal, but the probabilities are against it. A smooth, clean head, a bright, mild, liquid eye, a gentle and confiding look, a compact body, clean limbs and a well developed udder, are guarantees sufficient to warrant a purchase which will not be likely to cause regret. Cows set high, as on stilts, are almost certain to be rovers—always uneasy, and never good for dairy purposes. Color is less a guide to good dairy qualities than is generally supposed. Still, black or white cows are less likely to turn out well, as a general rule, than those with differently shaded hair. A cow with a yellowish, lively looking skin rarely or never fails to prove a good and profitable milker.

Rural Spirit of the Press.

Farming of the Prairies.

M. H. BIRKARD, Des Moines, Iowa, sent to the N. Y. Farmers' Clubs last month a note on farming in the prairie regions of the West. It is musically dramatic. We will assume that he has taken a friend out to witness farming operations and begins explanations, Yankee fashion, by asking questions. Thus—"What is that man doing in this stalk-field, riding on a kind of two-wheeled wagon?" I hear you say. "Well, Sir, he is cutting the stalks down ready for the plow. That is a stalk-cutting machine, and it cuts them in pieces 12 to 14 inches long, making them readily plowed under." "Just so, a good invention!" you reply, "Do you see that man in this stubble-field, riding on a low-looking thing, I can hardly tell what. It must be some kind of a plow, there's ground fresh-plowed near by?" "Yes, Sir; that's a four-horse gang-plow. He rides all day, turning over four to five acres, feeling no more tired at night than when he began in the morning." "Another good thing," you say. "I see two men over in that field with a blue, two-wheeled concern, and two horses pulling it. One man appears to be working a lever, the other behind him is driving?" "Ah, yes! that's a corn-planter. They put corn in a box on either side, hook two horses to it, and mount the machine, and there, chatting, laughing and enjoying themselves, they plant 10 to 12 acres per day, doing it better than it can be done with the hoe." "Well, well," you reply, "Is that the way you farm in Iowa?" "Yes, farming is done almost wholly by machinery." "And here is a man drilling wheat or oats; he rides, of course, on his drill?" "Yes; he would be ashamed to walk when all his neighbors ride." "Surely, this is farming made easy!" you say. "It is so. To tend a farm of 80 or 160 acres in the West is easier than to tend 20 or 40 in the East. Such are scenes in this beautiful Valley of the Des Moines.

Unsound Horses.

N. SMITH, Richford, N. J., writes the Stock Journal on the subject of the increasing prevalence of unsound horses, asserting that not more than one-third of the horses in the country at the present time are what may be called *sound* ones. The increasing deterioration in this class of stock is accounted for in this way:—"If a man owns a really good mare, with her natural parts intact, he considers her too good to be put to raising colts, and the responsibility of propagating the species is thrown upon some decrepid animal that is good for nothing else. Horses with inherited ring-bones, spavins, &c., circulating in their veins, will locate them at the least mishap—often whilst at pasture or standing in the stable. I think that if farmers really understood this matter, they would be careful in selecting healthy stock to breed from." This is an important consideration for farmers, and doubtless receives less attention than it should.

Lime as a Stimulant.

A CONTRIBUTOR to the columns of the Germantown Telegraph passes a high encomium upon the fertilizing properties of lime. Among other things he asserts it to be the strongest of all stimulants, rendering what was sluggish and inert, quick and volatile, producing a vigor of growth in the plant often astounding. But this vigor is spasmodic, like the exhilaration caused by liquor, and will soon die off if not fed and kept in action by something which may retain a portion of the effervescing powers of the lime and give it out when most needed. This may be found in barnyard manure or any compost which may be prepared for grain or grass land.

Eggs—How Many to a Hen.

GEYLIN, in his book on poultry breeding, says:—It has been ascertained that the ovarium of a fowl is composed of six hundred ovules or eggs; therefore, a hen, during the whole of her life, cannot possibly lay more eggs than six hundred, which in a natural course are distributed over nine years in the following proportion:—First year after birth 15 to 20; second, 100 to 120; third, 120 to 135; fourth, 100 to 115; fifth, 60 to 80; sixth, 50 to 60; seventh, 35 to 40; eighth 15 to 20; ninth, 1 to 10. From this the conclusion is deduced that it is not profitable to keep a hen after her fourth laying season is over.

Do Poultry Pay?

F. F. MECHI answers this question very briefly, and he thinks conclusively, by saying: "I test this by the following propositions and comparisons. It pays indirectly to produce cattle, sheep and pigs—if so, why not poultry? It does not cost more to produce a pound of poultry, live weight, than a pound of meat, live weight. Well, then, do poultry sell at less or more per pound live weight than meat? The answer to this is:—A pound of poultry, live weight, always sells for much more than a pound of meat, live weight, and so that question is settled in favor of poultry."

A Good Time Coming.

THE Working Farmer, alluding to the future, says:—"When the crops come in, next September, it is now morally certain, best wheat flour will not be twenty-two dollars per barrel, and bakers' loaves will grow so that they can be seen across the table. Nor shall we need to import breadstuffs from Europe or San Francisco; and flour of Oregon production, after twice crossing the equator in an ocean voyage of 18,000 miles, will not be sent to our western grain-fields for consumption, as has recently been the case."

It is given as a rule to determine at what time to cut timothy for hay:—"Whenever in the bloom it has obtained sufficient strength to pull up by the roots without breaking the straw."

Rural Notes and Items.

A NEW HALF VOLUME.—Agents, and all others interested in the circulation and prosperity of the RURAL NEW-YORKER, are reminded that a new Half Volume will commence next week. The present is, therefore, just the time to either subscribe or renew subscriptions. Those who have taken the paper during the past six months, or longer, know its character and value, and can best judge as to continuing it and inviting others to make its acquaintance. We shall endeavor to render the paper as acceptable as heretofore, at least, and confidently hope its hosts of friends all over the country will second our efforts to maintain and augment its extensive circulation and corresponding usefulness. All disposed to aid in the matter are referred to notice at head of News Department—page 210.

THE GREAT AMERICAN TEA CO.—*Superior Teas.*—Some months ago we had occasion to speak of the reliability of the Great American Tea Company—mainly upon information and belief—and can now commend the Company upon knowledge derived from actual observation of their premises, mode of doing business, and the use of their teas. In April last, while in New York, we visited the stores of this Company, both wholesale and retail, and were surprised at their extent, and the large amount of business daily transacted. The Company occupy four large stores and basements, and employ 175 men in the establishment. Their receipts for the three days preceding our visit were over $50,000—as the Company's books attested—which simple fact demonstrates an immense business, and proves that their systematic and extensive advertising in the best mediums is a good investment. As to the quality of the teas furnished by the Company, we can freely say they are superior, judging from samples of the cargoes of the ships "Golden State" and "George Shotton," which we have lately received and are now using in our family. We have used no better tea for years, either at home or abroad, and think we know a good from an inferior article—especially as it it is our principal beverage, neither coffee nor spirits being permitted by our constitution or physician. We therefore reiterate all we have hitherto said in behalf of the Great American Tea Company,—"and more too."

A POINT DEMONSTRATED.—The publisher of that excellent monthly, "The Practical Farmer," Philadelphia, offers his paper for the next six months at 50 cents to the number of 100,000, copies if so many are wanted. To show that the investment would be a paying one he quietly adds:—"As some of our readers have told us that each number is worth a dollar, and we are not prepared to disbelieve them, it will be seen that the investment of fifty cents for six months will yield a better profit than any other ordinary business transaction." Of course, our readers (and especially non-subscribers or borrowers) will construe this into a hint that the commencement of the next half year will be a good time to commence a paying acquaintance with the RURAL.

CHEAP PAINT FOR FENCES, &c.—J. P. B., Rodman, N. Y., asks for a cheap paint for fences, and here it is, or rather the material for making it:—Take a bushel of well burnt lime, white and unslaked; 20 lbs. of Spanish Whiting, 17 do. rock salt, and 12 pounds of brown sugar. Slake the lime, and sift out any coarse lumps, mix into a good whitewash with about 40 gallons of water, and then add the other ingredients and stir the whole together thoroughly, and put on two or three coats of it with a common brush. It is a cheap paint and improves the appearance of buildings and fences very much, while aiding to preserve them from the action of the weather.

WARDING OFF THE FROST.—A correspondent asks whether cultivating the soil in a cornfield just preceding a frost will tend to ward it off? We cannot see that it would. Frosts that cut young corn are capricious; they sometimes smite a field badly and skip over another lying along side. It is possible that a freshly cultivated soil, retaining more air and warmth, might radiate more heat at night, and thus ameliorate the effect of a light frost. Under some conditions the cultivated soil would suffer as badly as the uncultivated.

WOOL HAND BOOK.—The Wool Commission Merchants, BAILEY, JENKINS & GARRISON, Boston, have issued a hand book on wool which will prove convenient to wool growers and dealers. Besides remarks on grading and preparing wools for market, a synopsis of the recent tariff is given as also a table of shrinkage, based on the price for the different grades. Also a table of market fluctuations for a series of years.

CATTLE DISEASE AT COXSACKIE.—J. STANTON GOULD reports that he went in company with Dr. CALKINS to examine into the cases of reported rinderpest at Coxsackie, where several cattle had died, as was supposed, of that disease. The result of the examination was that the cause of the several deaths of cattle at that place was pleuro-pneumonia, and not rinderpest.

DOCTORING HOG CHOLERA.—An exchange, alluding to the multitude of cures for hog cholera, says they are all bosh and humbug. The disease defies their power, and disposes of the porkers without regard to any of them. An affected animal may survive, and if it does it is not in consequence of administering any of the hundred remedies in vogue, but in spite of them.

ABOUT WOODCHUCKS.—A subscriber wants to know "how to cook and dress a woodchuck." The best way is to dress the "chuck" first and then cook him. If parboiled awhile and then roasted to a light brown, the meat will not be bad to take. A very palatable pot-pie can be made of the same animal.

TO DESTROY CUT WORMS.—J. FOLTS, Hebron, Wis., alluding to worms and how to destroy them, says:—"Disturb them in their winter quarters by plowing the ground infested with them quite late in the fall and they will perish. I speak whereof I know by experience."

PRESERVING INSECTS.—W. W. J., Hunt's Hollow. The probability is that the information you desire may be found in "Goss on the Microscope," in which the preparation of insects for examination is explained.

FLIES ON HORSES.—A correspondent wants a remedy for flies on horses. Fly-nets may help some, but the only effectual remedy we know of is "to spot them out" with the hand as soon as they light on the animal.

POTATOES FOR NAME.—E. J. B., Murray, N. Y. The redish potato sent by you is pronounced to be the Davis Seedling. The others are known as the Garnet Chili. With reference to the "P. S." in your note we answer *yes*.

HORTICULTURAL.

FRUIT—HALF AN ACRE.

EVERYBODY—we mean everybody who pays attention to rural affairs—has doubtless read extracts from the book, if not the work itself, entitled "Ten Acres Enough," and been interested in the results therein detailed. It seems a rather restricted domain to be "enough," but by proper management it was rendered equal in productiveness to many times that quantity of land tilled on the "cut and cover" principle. It is perfect preparation, intelligent diversification of products, clean and timely tillage which do the work.

In a late number of the N. Y. Tribune Dr. PECK gives an account of a shoemaker in New Jersey who had a taste for fruits and purchased half an acre of rather heavy clay land on which to gratify it. On this he built a house and the balance was devoted to the cultivation of fruits. He commenced fertilizing this with the droppings of cattle running in the street; conveyed from the woods rotted stuff, moss and leaf mold, which he mixed with the soil to the depth of three feet. This was accomplished by degrees, but as fast as one portion was properly prepared, fruit was planted. So much success attended his efforts that he relinquished the "awl and last" and took to his half acre for support, and has lived on its proceeds comfortably ever since. Grapes and currants were his main reliance. One season he sold $800 worth of grapes. More than a half acre of land is, of course, desirable; but when a large quantity is not available, it is the dictate of sound policy to make the most, as this son of St. Crispin did, of what is within reach of the means possessed.

THINNING GRAPES.

S. JORDON of Andover, Mass., furnishes an article to the Magazine of Horticulture on the best manner of thinning grapes—a timely topic. We quote from the article as follows:—"This operation (thinning) is generally altogether too carelessly done. The ordinary mode of thinning grapes is to cut them out here and there in sufficient quantity to allow the swelling up of the remaining berries, regardless of the true form of the bunch. The time of thinning is when the berries are well set, or attain the size of No. 3 shot, beginning at the bottom of the bunch, leaving the leading berry when possible, taking care to thin judiciously.

As you proceed, thinning upwards on the bunch, say for an inch or two, more or less, from the bottom, you find the peduncles or footstalks, or what more technical term you may apply to them, to consist of three berries, the leading one, and one on each side. My practice is to leave the leader or center berry, taking off the other two. As you approach higher up the bunch, or approaching the middle part, such sorts as the Hamburgs form a sort of secondary shoulder, and upon the sides of these you will find them set on in threes. Proceed to thin as for the bottom, leaving the leading berries, take off the side ones as before, proceeding upwards to the top of the bunch to the main shoulders, suspending or raising the shoulders with strands of soft matting, and thinning the same as before mentioned, taking care to remove all inside berries, as they scarcely ever color well, and if the grapes have to hang long on the vine they contribute to mouldiness in rainy weather. The above system of thinning leaves a bunch equally balanced, each berry acting its own part and not robbing another, will be found to assume a strong, bold footstalk, and be regular as to size in every part of the bunch."

By this mode of thinning the bunches will retain their proper form and size—the work is performed at once to the great advantage of the grape, as the less it is handled the better.

STRAWBERRIES—RUNNERS.

INQUIRY having been made of the Germantown Telegraph as to whether the runners of strawberries should be cut off and a portion of the foliage removed the editor of that paper replies by saying that, "All strawberries will run if allowed to do so. When they are planted in hills and wish to be so continued, the runners must be cut off. Some growers prefer hills, others full beds, allowing the vines to run at pleasure. The runners do not affect the strength of the main plant, as they soon take root and set up for themselves. The leaves will not interfere with the ripening of the fruit and should not be removed. Plants set out in the spring ought to give half a crop the ensuing season. Those set out in the fall rarely produce any worth mentioning. If our inquirer wishes to have a bed of 'broadcast' strawberries—that is, not in hills—he must let the runners alone. If hills they must be removed by cutting, not pulling."

PRUNING TOMATOES.

IT is stated that gardeners in France cut off the stem of the tomato plants down to the first cluster of flowers which appear on them—thus impelling the sap into the buds below the cluster, which pushes up vigorously, producing another cluster of flowers. "When these are visible, the branch to which they belong is also topped down to their level; and this is done five times successively. By this means the plants become stout dwarf bushes, not over eighteen inches high. In order to prevent them from falling over, sticks or strings are stretched horizontally along the rows, so as to keep the plants erect. In addition to this, all the laterals that have no flowers, and, after the fifth topping, all laterals whatsoever, are nipped off. In this way the ripe sap is directed into the fruit, which acquires a beauty, size and excellence unattainable by other means."

THE PARIS EXPOSITION.

[THE following letter from Hon. MARSHALL P. WILDER, President of the American Pomological Society, to WM. GRIFFITH of Northeast, Pa., will be perused with interest by RURAL readers:]

PARIS, May 31, 1867.

MY DEAR SIR:—Your favor is in hand. I regret to state that the Jurors had passed on the Wines before my arrival, and I learned with sorrow that the examination was not so thorough as we could have wished. But of the awards, &c., &c., we yet know nothing. As soon as I arrived I commenced looking up this Department, and found Mr. FLAGG of Ohio, who with myself has been appointed U. S. Commissioners;—also Dr. THOMPSON of New York.

There having been no Committee of the Commission "on Horticulture, Pomology and the Culture of Products of the Vine," we were constituted as such, and have given a whole week to the examination of our own and foreign wines. There are large contributions from all the wine districts of Europe, and we have already been favored with interviews with some of the Commissioners of those lands, and are promised similar courtesies from others. Our American wines have been more or less affected by transportation, which is evident from the slight fomentation to be seen, and this is increased by the fact of this department being contiguous to the American Restaurant. I shall do all I can to protect the interests of our countrymen, and shall if possible have these wines removed to a cooler place. This however may be *impossible*. I shall look with anxiety for the arrival of Mr. BARRY and yourself, with whom we will take counsel of these matters.

The weather has been very cold and rainy until within a few days. Last week we had some frost in this vicinity, but still the markets are well supplied with strawberries, cherries, apricots, plums, grapes, &c. Many of these came from Spain, although immense quantities are grown under glass near Paris. Strawberries are about 40 cents per quart, apricots 50 cents per dozen, in gold.

Of the Exhibition I can only say that with its people and products of all nations it is a world in miniature. Much has been said of the incompleteness of the American Department. For myself I am disposed to speak favorably of it, and although there may not be so much fancy, and perhaps taste, in the arrangement, I believe the record, when the prizes are awarded, will redound to the honor of the American Republic. It is unfortunate that GRANT'S splendid locomotive, and all of the American sewing machines, are placed "outside the ring" in a separate shed, and it is hoped that they may yet be brought into the appropriate circle with other nations.

I went out to the trial of Mowers last week. This was held on the Emperor's farm at St. Cloud. The crop was French clover (*luzerne.*) There were nineteen machines in the field, eight of which were American. Eleven machines were set aside the first day, leaving seven competitors for a future day. I may state that at the head of the list, as the question now stands, the WOOD, MCCORMICK, and PERRY'S Machines lead off.

But I have written more than I intended. Suffice it to say: If, as now anticipated, Gold Medals are awarded to GRANT'S Locomotive, to the Steam Engine from Providence, to the American Sewing Machines, to the American Pianos, and several other important productions of our countrymen—including the Mowing Machines—we shall have no cause to be mortified with the Record when it is made up.

MARSHALL P. WILDER.

WM. GRIFFITH, Esq.

THE CURCULIO AND WOOD ASHES.

N. BARNETT, West Haven, Ct., writes the Albany Cultivator that wood ashes sprinkled over plum and other trees will destroy the insects on them, and especially the curculio on the plum. He writes:

"Having tried this, as well as many other remedies, such as salt and clay on the surface, and washes of salt, tobacco, lime and soap on the foliage, I at last found a remedy in wood ashes, at once simple, effectual and feasible.

Upon the plum tree the dry ashes should be applied by dusting when the blossom begins to drop from the young fruit, and repeated when washed off by showers, for a few weeks or till the fruit gets two-thirds grown.

It is necessary to do this at sunrise, when the dew is upon the young fruit and foliage—the great object being to cover the fruit from the time it gets to be of the size of a pea, with a coating of ashes.

Of course this is more readily done where the tree has been trained low, and when this is the case, a handful or two to a tree will accomplish the object in a minute or two.

Not the curculio alone, but almost all insects, are more or less thrown *hors du combat* by a dose of dry ashes. Thrips and aphides, squash bugs and turnip flies, slugs and worms, are checked in their destructive operations by this; and while it relieves the plant from its insect enemies, it nourishes it by enriching the soil with the alkaline solution that washes into the ground.

Were the gardener to have but one single remedy, that should be dry wood ashes, for instead of being injurious to plants like oil, and grease and tar, and some washes, it benefits it by fertilizing properties."

It is suggested that if fruit growers and vineyardists would train their trees low the application of the ashes would be comparatively easy, and the fruit crop certain every time.

AZALEAS.—The Horticulturist says these plants bloom much better if planted out doors in the full sun, than if kept in shade during the summer as they often are.

CABBAGES.

IT is probable that most persons with a garden spot at command have planted cabbages for autumn and winter use. If any have failed to do this they should hasten to supply the omission. The cabbage, though not as nutritious as the bean, is a palatable and healthful vegetable, a rapid and hardy grower, and very desirable for winter and spring use. There are often nooks and corners abandoned to weeds and brambles which would produce good cabbages were the ground prepared and the plants set out. If any of our readers have such neglected nooks about their premises there is yet time to improve them in the way suggested. It will prove a profitable operation—because it will supply otherwise valueless ground with an opportunity to materially enrich the winter stores of the family. It is a plant easily cultivated and highly remunerative of the labor bestowed upon it.

HORTICULTURAL GLEANINGS.

Apples in Iowa.—A. GARNER, Mason City, Iowa, writes the Homestead thus:—"The prospect of an abundant harvest of apples is good wherever there are trees old enough to bear."

Peaches in Delaware.—This is a small State, but reports from it indicate that it will this year head the list in the production of peaches. In all parts of the State the peach trees are burthened with the finest and most promising fruit.

Pear Trees—Bearing.—The question as to what age dwarf pears should be allowed to fruit was up before the Institute Farmers' Club at a late meeting. Some said not till three years old at least; others thought five years better. Finally a half a crop at three years was deemed about right.

A Grape Vine—A Tall Story.—Thirty-eight years ago an Indian woman rode horse-back from Los Angelos to Santa Barbara, using a piece of grape vine as a switch. On reaching her destination she stuck her switch into the ground. It took root, and sixty barrels of wine were made last season from its fruit.

Pear Trees—Pruning.—Summer pruning of the pear is recommended by the Magazine of Horticulture, which says:—"Commence by cutting or pruning off laterals to the second or third leaf, allowing the terminal branches, or those wanted to supply vacancies to extend awhile. Manure liberally, if not already done and dig lightly around each tree.

Heat in Evergreens.—The editor of the Gardeners' Monthly cites the fact that shortly after a storm, the snow will be seen to have melted away from the trunks of evergreens, leaving an open circle around them. It said, and no doubt truly, that this decomposition of snow is attributable to the heat given out by the body of the evergreen, hence a good supply of these trees and shrubs will tend to mitigate the rigors of the winter in places where they abound.

Cultivation of the Olive.—A discussion is going on in the columns of the California Farmer as to the propriety of planting the olive in that State for commercial purposes. There is no dispute as to the adaptability of the soil and climate to the production of the olive, but the question is, "Will it pay?" The party in the negative had the floor last and stated that the olive was entirely too slow in coming forward to answer the demands of a decidedly fast people. This is a clincher.

Fruit in Southern Illinois.—From a recent number of the Alton Telegraph we learn interesting particulars concerning the quantity of land devoted to fruit culture in Southern Illinois. From Centralia, southward along the line of the Central Railway are planted 500 acres of strawberries, 516,400 peach trees, 78,000 pear trees, and 208,875 apple trees. The yield of strawberries is estimated at 50,000 bushels, and the peaches at 1,376,000 boxes. Last year the largest yield of strawberries to the acre was 250 bushels, and the smallest 67 bushels.

Aged Pear Trees in Egypt, Ill.—That section of Illinois familiarly known as Egypt, has the reputation of being one of the best fruit regions in the west. The pear seems to have found a congenial home there. W. C. FLAGG writes the American Journal of Horticulture concerning two aged trees which continue to yield bountifully. One was planted in 1750 and the other in 1785. The first resembles the Seckel and produces from 15 to 20 bushels annually. The latter is akin to the Bartlett—vigorous and productive.

Mulching Fruit Trees.—A writer in the Maine Farmer is of opinion that mulching fruit trees is one of the most important considerations connected with the cultivation of fruit. He recommends, in orchards put down to grass, removing the turf around the body of the tree to the distance of ten feet or more, and then mulching with such refuse litter as is most readily attainable. Over this mulch replace the sods taken off in an inverted position, which will prevent the grass from growing and the mulch from being scattered about.

Summer Flowers—Arrangement.—The Horticulturist for June alluding to the proper grouping of flowers says:—"It has been, and yet is, the practice of most who group, to think only of colors; but they should go one step farther—adopt in a measure the system by which practical bouquet makers give such effect to the arrangement of a few flowers, and that is, 'use filling in.' To this end, as we now have a large number of variegated and colored foliaged plants, we suggest their use as a filling in among the plants whose great beauty is their blooms; by this means a more satisfactory and less monotonous tone is given to the group; and if then we add a few more whose beauty is in their form and grace as well as color of foliage, we shall have created a mass closely resembling, but more artistic and scarcely less graceful than Nature in her wildest and most harmonious moods."

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

RAISED BISCUIT.—Boil 8 or 9 medium-sized potatoes; take the water they boil in when you set your sponge—about a quart altogether; ½ cup of good yeast; mix in the morning; add 1½ pints of warm milk and water with the flour. It will rise in an hour. Knead in sugar, 1 teaspoon butter and lard to a tin.

STRAWBERRY OR APPLE SHORTCAKE.—One cup of cream; ½ cup of buttermilk; 1 teaspoon of soda; 2 of cream tartar; a little salt; knead harder than for biscuit. Roll out the size of the tins, ½ inch in thickness. Bake. When a little cool, split it through the middle, butter the under side, put on a layer of berries, sprinkle on sugar and a little salt; serve with sweet cream or sirup.

GOOD PIE CRUST.—Rub the flour and lard together until it is dry; put in water and press it—do not knead it; a little salt; about half the quantity of lard we generally use.

MOLASSES CAKE.—One cup of sour cream; 1 cup of molasses; 1 egg; 1 tablespoon of ginger; 1 large cup of flour; 1 teaspoon of soda; 1 do. cream tartar. Bake quick.—S. PALMER, *Schenectady, N. Y.*

EDS. RURAL:—I send you a few recipes for the benefit of "Domestic Economy:"

CORN BREAD.—2 cups wheat flour; 4 do. Indian meal; 1 do. sugar; 1 quart milk, (sweet or sour;) 4 eggs; 2 teaspoons of soda; 4 do. of cream tartar, and a little salt.

SWEET RUSK.—1 pint sweet milk; 1 bowl of sugar; ½ lb. of butter; ½ tumbler of yeast.

MUFFINS.—1 qt. of sweet milk; 4 eggs; lump of butter size of a hen's egg; 1 teacup of yeast; a little salt, and flour sufficient to make a stiff batter. Let it rise eight hours and bake in rings.

POUND CAKE.—4 eggs; ½ cup sweet milk; 1 cup of butter; 2 cups of sugar; ½ teaspoon of soda; ½ do. of cream tartar; add flour enough to make a thick batter, and flavor to taste.—MRS. S. K. B., *Hackensack, N. Y.*

SPONGE CAKE.—6 eggs; 2 cups flour; 2 cups sugar; 1 teaspoon soda; 3 teaspoons cream tartar; 4 teaspoons hot water.

DOUGH NUTS.—2 cups sour milk; 1½ cups sugar; ½ cup lard; 2 or 3 eggs; 2 teaspoons soda; 2 do. ginger; a little salt.

SODA SPONGE.—3 eggs; 3 tablespoons cream; 1 teacup flour; 1 of sugar; 2 teaspoons cream tartar; 1 of soda; nutmeg. Stir lightly and bake immediately.

MUFFINS.—3 pints flour to 1 pint milk; 1 pint water; 1 yeast cake. Bake in rings.

JELLY CAKE.—3 eggs; 1½ cups cream; 2 of sugar; ½ teaspoon soda; flour to make a *thin* batter. Spread as thin as possible on buttered tins.

LEMON JELLY.—3 eggs; 2 lemons; 1 cup of sugar; butter size of half an egg.

TART CRUST.—1 cup lard; 1 tablespoon white sugar; white of 1 egg; 3 tablespoons of water. If you love nice tart crust try this.

CREAM CAKE.—5 eggs; 3 cups sugar; 1 of butter; 1 of cream; 1 teaspoon nearly full of soda.

CUP OR PLUM CAKE.—3 cups of sugar; 1 of butter; 1½ cups milk or cream, (cream is best;) 3 eggs; 5 cups of flour; 1 teaspoon saleratus; 1 lb. raisins; spice to taste.

UTICA CAKE.—2 eggs; 2 cups white sugar; 3 cups flour; ½ cup sweet milk; ½ cup butter; ⅜ teaspoon soda; 1½ do. cream tartar. Dissolve the sugar in the milk; beat the whites and yolks separate.

FRENCH LOAF.—3 cups light dough; 2 cups sugar; 1 do. butter; 3 eggs; 1 teaspoon saleratus. Add nutmeg and fruit, wine or ½ cup of boiled cider.

COOKIES.—1 cup of butter; 2 do. of sugar; 3 eggs; 3 tablespoons of sour cream; ⅜ teaspoon of soda.

SODA BISCUIT.—3 cups of sour milk; ½ cup shortening; 3 teaspoons cream tartar; 2 do. of soda; salt.

SISTER KATE'S SODA CAKE.—1 cup sugar; 1 tablespoon butter; 1 egg; 1 teaspoon saleratus, dissolved in one cup sweet milk; 2 teaspoons of cream tartar, rubbed in 1 pint of flour; nutmeg. To be baked immediately after mixing together.

SHORT CAKE.—3 cups *thick* sour cream; 1 teaspoon saleratus; salt.

ECONOMICAL WAFFLES.—4 eggs; 1 pint o milk; 2 oz. of butter; 1 lb. of flour; 4 tablespoons yeast; a little salt. Beat the eggs to a froth; put the butter in the milk and warm it until the butter dissolves; when cool add the eggs and flour, and afterwards the yeast and salt. When light pour the batter in the "waffle iron." Bake on both sides by turning.

INQUIRY.—Will some of the RURAL readers give me the best method for bleaching the dark table linen that fades a yellow?—MRS. LIBBIE L. WHEELER, *Barrington, N. Y.*

MAKING VINEGAR.—A correspondent, J. C. R., says that to make good vinegar, at a cost of only ten cents per gallon, use the following ingredients:—4 lbs. acetic acid; 1 gal. molasses; 40 do. rain water. Mix well together, and in three weeks good strong vinegar, closely resembling that made from cider will be produced. This acid exists in vinegar in a diluted state, and is composed of carbon, hydrogen and oxygen in certain determinate and uniform proportions.

THREE BIRDS KILLED WITH ONE STONE.—Buy Pyle's O K Soap, and you have the best *laundry, bath* and *toilet* soap in market. Ask your grocer for the O K and see for yourself.

WANTED—An Agent in Each Town and County in the United States, to introduce

SPEAR'S PRESERVING SOLUTION.

LIBERAL INDUCEMENTS OFFERED!

This solution will preserve all kinds of Fruits, Tomatoes, Jellies, Cider, Milk, etc., without sterilizing and with or without sugar. It admits of keeping fruits, &c., in vessels of any size, and of using them from at intervals as wanted.

It will preserve milk sweet from 24 to 5[illegible] hours longer than it would naturally keep, causing it to furnish more cream in hot weather.

It is warranted perfectly healthful and effectual, and can be relied upon as being the cheapest and best, and in the world for preserving fruits, &c. Full direction for using with each bottle. L. P. WORRALL, General Agent, No. 91 Hudson St., New York City.

THE

GREAT AMERICAN TEA COMPANY

HAVE JUST RECEIVED

TWO FULL CARGOES

OF THE

FINEST NEW CROP TEAS.

22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON

In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:

OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₩ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₩ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,20 ₩ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
YOUNG HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₩ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₩ lb.
GUNPOWDER $1,25, best $1,50 ₩ lb.

Coffees Roasted and Ground Daily.

Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economize in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the

THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5643 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

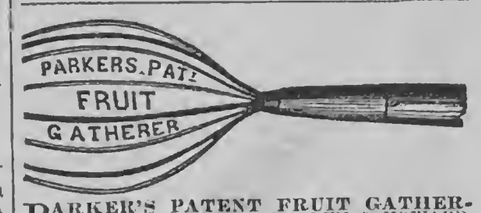
Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to

GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.
Post-Office Box, 5643 New York city.



PARKER'S PATENT FRUIT GATHERER. Send for Circulars. HOLDEN & HOWARD, Scio, Allegany Co., N. Y. 905-tf

A VINELAND FRUIT FARM FOR SALE, or exchange, for a good farm in Central or Western New York, consisting of 12 acres of land, one and one-eighth miles from P. O., &c.; 5 acres in fruit upon which is a good two story house. Price, $5,000. The house and five acres in fruit will be sold separate if desired. Terms of payment reasonable. Address 908-3t J. D. BENTLEY, Vineland, N. J.

PRESERVE YOUR FRUIT.
SPENCER'S PATENT
Self-Sealing Fruit Jars.
The Most Reliable.—A Perfect Success.

☞ The Easiest to Open and Close. Will Produce the Greatest and Most Perfect Vacuum, without which Fruit will not Keep. Consult your interests and buy no other. COLEMAN & BARNES, Rochester, N. Y.

☞ Merchants through the West can order from the following Agents—HALE, BRACKELTON & Co., Milwaukee, Wis.; F. WETMORE & Co., Detroit, Mich.; EATON, MAGUIRE & Co., Chicago, Ill. 900-17t

THE SPORTING MANS EMPORIUM.—Send your address on a stamped envelope for our mammoth Catalogue of Prints, Books and Fancy Articles of every description. Address WM. H. DYKE & CO., Box 189, Troy, N. Y.

IMPORTANT TO FARMERS AND ALL FAMILIES.—A new "Invention"—thousands of dollars can be made yearly by its use, in every home. For sample and instructions address 909-3t E. W. ATWOOD, Box 2,133, Cincinnati, Ohio.

Ladies' Department.

Written for Moore's Rural New-Yorker.

"AFRAID."

BY ADELAIDE STOUT.

I know not by what haunting terror
The heart of the young child was stirred,
But under the snowy-white vesture
It fluttered like frightened bird.

Ah! why is my little one hiding?
Whence cometh the hot fever-flush?
Beat warm near my heart, O sweet flutt'rer,
And not 'gainst the night's solemn hush—

Sleep sweetly, for fond arms are round thee,
O! heart 'neath the snowy robe's fold;
I know how the dark shadow broodeth,
I know all the terrors untold,

That creep through the silent night-watches
And touch with a shuddering chill
The timid child-heart; and I know them
As all uncontrolled by the will.

Let me thoughtfully study this marvel,
And lovingly draw to the light,
The ghost-like, indefinite terror,
That stole to the young heart at night.

SPEAK ENGLISH.

SOMEBODY says, the dictionary of some young ladies has just two words—"horrid" and "splendid." Possibly a few more might be added,—"awful," and "first-rate," and "Oh, sugar!" These poor words are maids of all work, and do duty on all possible and impossible, appropriate and inappropriate occasions; eked out by screams and laughs, sharp, rude and emphatic.

Girls, do speak English,—simple, clear, varied and natural,—not Pottawotamie, or Congo, or Ojibwa. Do laugh, when you feel like it, without effort, and then it will be musical as the ripple of a brook. Do scream when there's real danger, and we shall all know it means something; but this counterfeit *screech* only makes the air hideous and you—disagreeable; which you don't want to be at all, and don't need to be. The "loud" style of manners is a pest, to be banished from good society, and a pest which affects those who wear silks and diamonds as well as those clad in plainer garb. But into the choice circle where the divine art of conversation is, it cannot come, save as a transient intruder.

The finely modulated voice of a cultivated woman, ranging in its varied conversational cadence, "from grave to gay, from lively to severe," is the most attractive music in the world; but bald exclamations, stereotyped phrases, intense even for slightest trifles, and meaningless noise, pitched on a high key, are just the opposite in their effects.

Really good society, where is best and richest enjoyment and finest natural sentiment, is limited to no rank or grade of wealth, but is found in country and city. Fortunate indeed is man or woman who seeks it by force of some innate attraction thereto; but an invisible barrier, which yet they cannot pass, will stop their entrance into this charmed circle, until they can drop all explosions and expletives, speak and act simply and naturally, and use "English, pure and undefiled."

Written for Moore's Rural New-Yorker.

BE KIND TO YOUR HUSBAND.

HE is older than you. He has battled hard and manfully with life's duties. You may not perceive, but others do, that he fails gradually. You say he is getting childish. Yes, he *is* getting childish; but it is the childishness of which CHRIST speaks when he says, "Except ye become as little children ye cannot enter the kingdom of Heaven." His hair is whiter, his eye duller, his face more deeply furrowed than a year ago. You do not consider that his outward joys are fewer, his smiles less frequent. You *do* see that he is more fretful and forgetful. Have you forgotten that time when he was so suddenly stricken in health and brought so nearly to the gate of eternity? And the good resolves you then made for the future, would GOD but spare him that once? He was spared. How are you now performing those sacred vows?

Remember, your husband is growing older, feebler, more helpless. His golden thread is spinning very slenderly. A little jar may break it.

H. S.

CAMEO CUTTERS.

THERE are two kinds of cameo cutting,—one with a lapidary's wheel of hard stones, as the onyx and sardonyx. The shell cameos are cut with small steel chisels, from the white part of the shell, leaving the chocolate color for the background. The figures are in relief. The stone is prepared by the lapidary, and the artist arranges his design according to the capabilities of the stone. He makes a drawing in paper, on an enlarged scale, and a wax model of the exact size, and the latter is carefully compared with the stone, and such changes made as may be needed. The outline is then sketched on the stone and cut with the fit tools, and then polished.

Mrs. DUBOIS of New York, cut cameo likenesses of her friends, and then went to Italy to perfect herself, but the artist there told her he was not capable to teach her. PETER STEPHENSON of Boston, in 1853, cut some 600 or 700 cameo likenesses. He says that in Italy he employed girls to polish, who earned $1 a day. The Misses WITHERS of Charleston, S. C., are said to cut fine cameo likenesses. MARGARET FOLEY, formerly of the New England School of Design, cut cameos for $35 each.—*Employments for Women.*

Miss FOLEY once taught in a private school in this city. A cameo portrait of Pope PIUS, cut by her and on sale in a Boston book-store, was instantly recognized by an Italian gentleman who said it was a perfect likeness, and gladly bought it. She has since become a sculptor, and has ample employment, being now at Rome,—greatly prized and beloved for her excellence and beauty of character by friends both sides of the Atlantic.—EDITOR.

HARRIET HOSMER AND CHARLOTTE CUSHMAN AT ROME.

MISS HOSMER is often seen in public here in Rome, at times driving a handsome carriage and span rapidly along the streets, at times on horseback, making her way (in which latter capacity she excels) to the meet of the fox-hounds on the Campagna. The pack this year is good, the sport fair, and the amusement very fashionable. Miss Hosmer is an expert rider, and both she and Miss Cushman are often seen going at a furious pace over walls, fences and ditches close upon the heels of the hounds. Each of these ladies has a strong and tireless energy, and a muscular physique which many men may well envy. They are gifted with wonderful endurance, which the latter has had occasion often to display upon the stage, and with which many of your readers are familiar. Both are thoroughly American, yet of strong and impressive individuality, that brings them out in striking contrast to the rest of society in Rome. Miss Cushman still continues to take the lead in all social affairs; and though now in mourning, yet dispenses her old and abundant hospitality to her American friends in a quiet and genial way that is so pleasing to every stranger.

She has shown great kindness to artists, especially to those from her own country who have come here poor and friendless and needed a helping hand. In this connection, her generosity and devotion have been unlimited, and for it, if for nothing else, she deserves the gratitude of every American. Often has she infused her own courageous temperament into the despairing, and given them fresh energy to encounter the hardships that so often surround the beginning of an artist's career. And more than this, many a time has she bestowed from her own purse upon the deserving who were struggling with failing means the aid that was so much needed. Miss Cushman has a noble reputation in her own country for benevolence and public spirit, but nowhere can one appreciate so thoroughly as in Rome the good she has been so unwearying in doing.—*Cor. Boston Post.*

SKELETON LEAVES.

THERE is much beauty to be studied and admired in the exquisite structure displayed in the skeleton of plants. Our readers may be pleased to learn how to make such preparations for themselves. Dr. G. Dickson of Scotland, in a paper communicated lately to the Botanical Society of Edinburg, gives the following directions:

"A solution of caustic soda is made by dissolving three ounces of washing soda in two pints of boiling water, and adding one and a half ounces of quick lime, previously slaked; and bring it to the boil. During ebullition add the leaves; boil briskly for some time, say an hour, occasionally adding hot water to supply the place of that lost by evaporation. Take out a leaf, put it into a vessel of water. If the epidermis and the parenchyma separate easily the rest of the leaves may be removed from the solution and treated in the same way; but if not, then the boiling must be continued for some time longer. To bleach the skeletons, mix about a drachm of chloride of lime with a pint of water, adding sufficient acetic acid to liberate the chlorine. Steep the leaves in this until they are whitened—about ten minutes—taking care not to let them stay in too long; otherwise they are apt to become brittle. Put them into clean water and float them out on pieces of paper. Lastly, remove them from the paper before they are quite dry, and place them in a book or botanical press.

FACTORY GIRLS IN FRANCE.

AT the woolen manufactories in Rheims, a large number of female operatives are employed, and they are said to present a striking contrast to the same class of workwomen in this country and in England. Instead of the well dressed and intelligent factory girl, to be found in the great manufacturing cities of America and England, these poor French women are described as being but little better than working animals, and they receive even less consideration from their employers than the brutes. Their clothing is of the scantiest description, "but little more substantial than the fig leaf of mother Eve," and their faces seem to indicate that all intelligence and the softer feelings of the sex have been obliterated by the hard labor which they have to undergo in order to obtain the scanty wages which are no more than enough to barely support existence. The woolen manufactories of Rheims are principally owned and managed by English capitalists.

THE GIRLS TO THE YOUNG MEN.—The literary department of the Inka (Miss.) Mirror is edited by four young ladies. Their last number contains the following paragraph, which exhorts the young man to "depend on himself;"—"Most young men consider it a misfortune to be born poor, or not to have capital enough to establish themselves at their start in life in a good and comfortable business. This is a mistaken notion. So far from poverty being a misfortune to them, if we may judge from what we daily behold, it is a blessing; the chances are more than ten to one against him who starts with a fortune. Most rich men's sons die in poverty, while many poor men's sons come to wealth and honor. It it is a blessing, instead of a curse, to have to work out their own fortune.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

LOVING HEARTS.

BY A. A. HOPKINS.

I.

I SOMETIMES think 'tis little worth—
This weary, fitful life we live—
That there is little here on earth
Sufficient recompense to give
For toil and wailing, hope deferred,
And longings ever unfulfilled;
But now and then my heart is stirred,
And all my deeper nature thrilled
By joy the purest, tenderest,
That ever any living blest,
A joy no other good imparts—
The love outpoured from loving hearts.

II.

Fond loving hearts! there are no shades
However dark, no woes so drear,
But thro' them all they weave their braids
Of sunlight, giving holy cheer:
There are no bitter draughts to drink,
No lessons sad for lives to know,
No sorrowings as link by link
Our cherished love-chains shorter grow,
But nestling closer to our own
We feel these loving hearts are grown,
And Hope, our sweetest angel, flings
A gleam of Heaven from off her wings!

III.

Ah! better 'tis to work and wait,
Than taste the sweets of ripe reward,
If haply, by some kindly fate,
These loving hearts with us accord;
For toil and waiting sweeter are
When shared by them, than rich return
Enjoyed alone, and dearer far
The saddest lesson we may learn,
When through a hand-clasp warm and true
We feel their pledge of love anew,
And know, though happen good or ill,
Those loving hearts will cheer us still!

AN OLD-FASHIONED SUNDAY.

FROM "Homespun; or, Five-and-twenty years ago," a charming book recently noticed in our columns, we take the following admirable picture of a Sunday in the country:

"In the summer time, when the sun gets up and looks in at the east windows, not far from 4½ o'clock of a Sunday morning, the good farmer-folk bestir themselves right early. In place of setting the pitcher in the dingy area for the milk-and-water-man, they turn out to fill their own frothy pails as soon, certainly, as sunrise, and then send off the dewy-coated cows to pasture again. The children are all brought up to the kitchen sink and scrubbed and rubbed till they take on a shine like new furniture. Pretty soon old aunts slip out into the garden and snap off a spike or two of lilac blossoms from the bush close by the gate, which they stick into broken-nosed pitchers about the mantels and hearth. The farmers themselves, in snowy shirt-sleeves, are everywhere about the barns, greasing up their wagon-wheels, tinkering at the harnesses, and indulging in a general fuss of preparation for the hour of meeting.

Not a home in the whole breadth of quiet landscape but is at that moment all ready to send forth its own swarm. And the white wooden meeting-house is big enough to collect and hold them all safely together.

Breakfast being done, and the children having taken off their long tires, a tedious spell—to them—intervenes till church time. Where the family is a pious and well-ordered one, the restless young folks are seated around the room in a silent circle, generally with Testament in their hands, and there they keep them fast, sitting stiffly, primly and uncomfortably, until *the* hour comes laggingly around. No matter if a golden-ringed humblebee does fly in at the open window; or a lady butterfly shakes the yellow dust from the velvet of her gorgeous cloak, just over the window-sill; or a bird comes and sings on a low bough hard by, to let the boys feel how unspeakably joyous out-door liberty must be, of a Sunday morning; there must they all sit in a row, with faces as rigid as the copies of Miles Standish, and spirits crowded back into the pit of youthful despair, till the old clock in the corner rings out ten, and perhaps a little while after.

After the country wagons begin to stir the dust on the roads, they do not stop to let it settle again. One family party close behind another; a white horse pulling up behind a red one, and a lean beast chasing after a pot-bellied one; a loitering line of sturdy young fellows, honest and lusty, whose necks and hands have been tanning all the week in the hot corn-fields; now two maidenly women in bonnets to match their years,—now a hobbling old man who is not able to keep a horse, turning about all the while to let the wagons pass him; girls crowded in on the back seats at the cost of much of the starch in their Sunday attire; these are the sights that give a new face, on that day, to the landscape. You see nothing like it near the cities: you would hardly think that such pictures could be sketched from life anywhere.

Almost every country meeting-house has a plat of green grass before and around it, and, occasionally, a few trees, old elms, or vigorous growing maples. Commonly, too, a sign-post is near—the magnet for knots of men before services open within, whereon they attentively study the probate, town, and society's proclamation.

It is painfully clear that nobody feels at his ease in his Sunday clothes; the efforts to appear so only make the fact more apparent. One is in a sorry state of doubt about the best place for his hands, and you guess he wishes he could have left them at home. That one puts little faith in his feet, thrusting forth first one and then the other, as if they were in conspiracy to play him false and let him down. A third betrays a slight personal acquaintance with the hat he wears that day, continually tipping it back and pulling it forward upon his head. Still another goes around offering his hand to everybody, as if he thought there must be some magic in the town's palms. The uneasiest and unhappiest one of all laughs when he catches anybody else laughing, though he can give no sort of reason why he should. If one of the other sex chances to pass him on her way in, he begins with throwing a glance at her sneakishly, and ends with a square and courageous turn-about, studying the motions of her shoes till they take her up the steps and out of his sight."

AN EXQUISITE STORY BY LAMARTINE.

IN the tribe of Neggdeh, there was a horse whose fame was spread far and near, and a Bedouin of another tribe, by name Daner, desired extremely to possess it. Having offered in vain for it his camels and his whole wealth, he hit at length upon the following device, by which he hoped to gain the object of his desire. He resolved to stain his face with the juice of an herb, to clothe himself in rags, to tie his legs and neck together, so as to appear like a lame beggar.

Thus equipped, he went to wait for Naber, the owner of the horse, who he knew was to pass that way. When he saw Naber approaching on his beautiful steed, he cried out in a weak voice, "I am a poor stranger; for three days I have been unable to move from this spot to seek for food. I am dying; help me, and heaven will reward you. The Bedouin kindly offered to take him on his horse and carry him home; but the rogue replied, "I cannot rise, I have no strength left."

Naber, touched with pity, dismounted, led his horse to the spot, and with great difficulty set the seeming beggar on his back, but no sooner did Daner feel himself in the saddle, than he set spurs to the horse and galloped off, calling out as he did so, "It is I—Daner—I have got the horse, and am off with it." Naber called after him to stop and listen. Certain of not being pursued, he turned, and halted at a short distance from Naber, who was armed with a spear.

"You have taken my horse," said Naber. "Since heaven has willed it, I wish you joy with it, but I do conjure you never to tell any one how you obtained it."

"Why not?" said Daner.

"Because," said the noble Arab, "another man might be really ill, and men would fear to help him. You would be the cause of many refusing to perform an act of charity, for fear of being duped as I have been."

Danar, struck with shame at these words, was silent for a moment, then springing from the horse, returned it to its owner, embracing him. Naber made him accompany him to his tent, where they spent a few days together, and became fast friends for life.

A MIRAGE AT HOME.

THIS singular illusion by which the traveler in African deserts sees limpid water and green hills where there is only the arid waste of sand, is not common here; but the Transcript at Jordan, Onondaga county, some twenty miles south of Lake Ontario, describes one there as follows:

"On Monday morning our quiet village was awake with excitement by the curious phenomenon of a mirage on Lake Ontario. It was so singular an occurrence, and so life-like, that during the early part of the forenoon the eyes of all the village were turned northward, watching with deep interest this beautiful phenomenon. As far as the eye could reach up and down the lake, what seemed to be a boundless expanse of water was spread out to view. The representation was complete, all the indentation of the shore being plainly visible. The most singular part of all was that it seemed to be so near us. To look at it, it seemed as if a fifteen minutes' walk would bring you to it.

GRINDSTONE'S NIGHTSHADE MICROCOSMS.

Home—A nursery of human nature appropriated to the use of boy-men and girl-women.

Fathers—Foot-mats for striplings in swaddling clothes.

Husbands—Cow-catchers, prefixed to family trains.

Wives—Richly laden crafts, smuggled through life under the guise of fuss and feathers.

Young Gentlemen—Creatures of circumstance and occasion, compounded of the scraps and scum of society.

Young Ladies—Delicacies, compounded of sugar, salt and sawdust, and seasoned with the driblets of fashion.

Husbandmen — Those commoners who do not falsely pretend to uncommon wisdom.

Professional Men—Those uncommon pretenders who fool commoners out of a living.

Tradesmen—Those who live upon the advantages of circumstances and locality.

Mechanics—Those who live upon the homage paid to the utilitarian achievements of mind.

Editors—Those starvlings strutting over the illuminated pages of life, with the dry bone of hope in their mouths.

Science—A jumble of complicated suppositious, simmered down with a plausible paradox.

Politics—The source of all trickeries that live on the conventional blood of human folly.

Laws—Rules of action, whereby money-might is rendered right.

Physic—A deadener, that keeps company with our bodies to the graves.

Humbug—A senseless thing, best adapted to popular taste.

Fashion—A whirlpool of stygian filth, wherein wiggle all the tadpoles of human folly.

Microcosms — Curious shadows, that quietly whisper to our latent beings of truths in the dark.—*Mobile Register.*

THE FATHER IS OVER ALL.

BY KATE WOODLAND.

WHAT if another, in searching for truth
Should honestly differ from me?
Have I any right to say he is blind
Because he has no wish to see?
On the false, and the true, on the evil and good
The sunbeams of Heaven ever fall.
On the just and the unjust the rains still descend,
And the Father is over all.

What if the weaker ones stumble and fall,
Deprived of the strength to arise,
Shall I, with the Pharisee's prayer on my lips,
Dare lift to the Father my eyes?
Perhaps the *great* sins which their weakness reveals,
Less odious to GOD may appear,
Than *smaller ones*, I, in self righteousness love
And cherish as precious and dear.

What if affliction should darken my way,
And sorrow be mingled with joy?
Shall I say that GOD is unwise, or unkind,
Who chooses this means to employ?
On the false and the true, on the evil and good,
The sunbeams of Heaven ever fall,
On the just and the unjust the rains still descend,
And the Father is over all

SOWING FOR OTHERS TO REAP.

SITTING here with the twilight shadows gathering around me, looking out beyond the maples at the wheat field with its beautiful green, waving in the evening air, I can but think of him who last autumn scattered the seed, little dreaming that when the harvest time should come other hands would reap the golden grain, and his be folded silent and cold beneath the grave-mound. But the father's work is ended; he has sown that others may reap.

Is it not ever thus with life? We plant, we build, we lay our plans, but how seldom do we realize their entire fulfillment. Yet we are not toiling in vain; others will come after us who will reap the benefit of our work, even as we have reaped the harvests planted by those who have gone before us.

Each day we are sowing. We scatter words; sometimes of love and wisdom which take root in the heart of a fellow being and spring up to bring forth golden fruit. Oft times our unkind words rankle in the bosom of another, causing weeds to grow where might have been flowers. The parent scatters in the heart of childhood the seeds which are to bring forth good or evil, the fruits of which are to tell in the coming harvest of life.

How great the responsibility of sowing for others to reap—how necessary that the seed we scatter be pure and free from tares, that when the Master calls, we can go hence rejoicing, to reap the golden fruits he has prepared for the faithful beyond the River of Death.

Maple Hill, Cazenovia, N. Y. S. E. W.

CHRISTIAN GROWTH BY LABOR.

HEALTH of body can be preserved only by out-door exercise, and cheerful labor gives a tone both to mind and body. Spiritual health is equally dependent on labor, and the idle Christian is exposed to many moral perils. An exchange says:

"We have tried to make Christians without giving them anything to do; which is like trying to make swimmers without use of hands or feet. The churches are all full of religious dyspeptics, feeble of purpose, weak in faith, indifferent, languid, listless, of little use to themselves or any body else, and all for want of the natural exercise which would come from doing God's waiting work in the world. Admit that Christian character is the great thing; that piety and personal holiness are the very highest states and attainments; but to acquire those qualities, and rise up to that serene elevation, we must do something more than to sit even in a closet, and muse, and meditate, and try to magnetize our souls by pious exercises; we must go out into the world, and put our heavenly thoughts into heavenly deeds of love and mercy."

CONVERSION OF LOYOLA.

MR. PARKMAN thus sharply sketches the conversion of Loyola, the founder of the Jesuits:

"Loyola's training had been in courts and camps; of books he knew little or nothing. He had lived in the unquestioning faith of one born and bred in the very focus of Romanism; and thus at about the age of thirty his conversion found him. It was a change of life and purpose, not of belief. He presumed not to inquire into the doctrines of the church. It was for him to enforce those doctrines; and to this end he turned all the faculties of his potent intellect and all his deep knowledge of mankind. He did not aim to build up communities of secluded monks, aspiring to heaven through prayer, penance and meditation, but to subdue the world to the dominion of the dogmas which had subdued him; to organize and discipline a mighty host, controlled by one purpose and one mind, fired by a quenchless zeal or nerved by a fixed resolve, yet impelled, restrained and directed by a single master hand.

DR. BELLOWS recently remarked that the one great peril of American society is the lack of manly, independent thinking, and individual conscience. Personal aspiration gets lowered to a popular standard. An average and compromised pattern of character is thrust on us by a tyrannical, hasty and unreasonable public opinion.

DROP every hope and every dependence but Christ; give your whole life and soul to him.

The Traveler.

THREE MONTHS IN EUROPE FOR $500.

SOMETHING FOR YOUNG MEN TO READ.

THE Great Exposition at Paris, after over two months of preliminary settling down, is now in a condition to satisfy the exacting public. The contributions of its 50,000 exhibitors—five times the number that challenged the wonder of the world at Hyde Park Exhibition of 1851—are now all in place ready for inspection. And the people are proceeding to the inspection. Not tumultuously, and in overpowering throngs, as Parisians fondly fancied they might; but leisurely, comfortably, and yet, withal, in numbers which will aggregate, when the doors of the monster structure of the *Champ de Mars* shall have closed in November, more than any similar exhibition has yet called to its viewing.

The papers just now are full of the visits of the crowned heads of Europe to the Temple of Industry. The progress of royalty, and the *fetes* incident to the royal journeyings, are being read of throughout the world. Few, perhaps, in this hemisphere have read, or reading have given a second thought to the reported journeyings from England of the uncrowned sovereigns—the lords of the forge, the lathe, the loom and the plow—who are now reported to be going in thousands to the survey, and, in greater proportion probably than would be found in any other class, to the critical inspection of the contributions of their brother workmen of the world at the Exposition.

A chance-met paragraph in an English journal announcing the departure of some scores of working men from a provincial town for a week at Paris has induced the writing of this. I write with the sole purpose of rousing young men of the middle class—those who have completed their collegiate course, those who have the summer vacation to spend, the young farmer and the young mechanic—to do as the young men of England are doing. I am persuaded that if Americans once realized how readily accessible Europe is to them the number who go abroad would be wonderfully increased. But the idea is general that a trip to Europe is a very expensive affair, and young men of modest means as well as those dependent upon their yearly salary or monthly wages, sigh as they devour a volume of travel or the letter of a foreign correspondent, that the pleasures and the benefits of a summer in Europe are beyond their reach.

Now, this is a mistaken idea. One who has five thousand dollars to spend on a three month's run abroad it is safe to say will have no difficulty in getting rid of the money. But a young man whose desire is not to astonish London and Paris, but to see the lands of which they are the capitals, to feast his eyes upon their treasures of art, to examine their busy manufactories, to study and compare their systems of agriculture, may safely start upon a purse holding but a tenth part of that sum. Upon this moderate expenditure, though economy must be studied, every comfort can be secured.

I repeat the statement. At the present price of gold, five hundred dollars in currency will defray the necessary expenses of a trip to Europe and return, and of a two-months' stay in England and France. And I am quite sure that no young man, whether he be intended for a profession, for a mechanical avocation, or for the farm, can make a better investment of five hundred dollars, even if it be the only five hundred of which he is possessed. He certainly cannot if, like most Americans, he travels with eyes and ears open, ready to profit by that which he sees and hears.

But to take the journey for this money he must *know how* to do it. Otherwise the modest sum I have named will barely suffice to pay his steamship fare. Of course, if he is one of the fortunate class to whom "money is no object," he will, for the name of it, and because it is the correct thing to do, "take passage by the French or by the Cunard line. In this case the five hundred dollars will just pay his passage from shore to shore and back—any trifling change that might be left being no more than the stewards would expect. But, passing by these "crack lines" as out of the question with the reader, what shall he do? Just this: There are an average of a dozen departures of steamers weekly from the New York terminus of the Great Atlantic Ferry. There are four or five lines to Liverpool, one to London, &c. The rates of fare by these lines, as well as the accommodations they offer, vary, but the latter not always with the price. Speed and name enter more largely into the price than do fare and accommodation. To get the most comfort, the best accommodations and the best fare for his money, the traveler must patronize a line which makes no pretentions to extraordinarily quick passages. To one who has no pressing business demanding his presence, a voyage of twelve days is just as satisfactory as one of ten days, and infinitely more comfortable, for a slow ship is always a dry ship, and those who have been kept below decks under penalty of a wetting if they ventured out, on a quick voyage, will agree with me that the privilege of lounging upon the deck at almost all times is cheaply purchased by the addition of two or three days to the length of a summer voyage.

A thorough examination of the vessels of the various lines plying between New York and Liverpool has satisfied the writer that there are none more worthy of patronage, none where the comfort of the traveler is better assured, than those of the National Steam Navigation Co. The steamships of this line are all iron vessels of the first class, unsurpassed in sea-going qualities, and officered by as thorough seamen as can be found. In point of accommodations for passengers they are especially to be commended, as their great size admits of all the sleeping rooms being upon the main deck, and opening directly into the saloon. By this arrangement a ventilation is secured to them that is impossible in rooms upon the lower deck. As to the table, the daily bill of fare on these, as on all other steamships of which we have any knowledge, will be found satisfactory, even if the tastes of the traveler are a little exacting. By this line the traveler can secure his ticket to Liverpool and return (the return ticket being good for a year) for $150 in gold, which is just the price by the Cunard (and $10 less than by the French) boats for a ticket one way. My own experience of the National line has been so favorable that I think I should sail by it, were the price the same, preferably to using any other line. Certainly, while its rates are from 25 to 50 per cent. below those of other lines giving no better accommodations, I should do so.

Whatever line the tourist may select, he should by all means take a return ticket, as a saving of quite twenty per cent. is effected by so doing. This rule holds good after he has landed also, and should be observed whenever consistent with the route proposed to be taken.

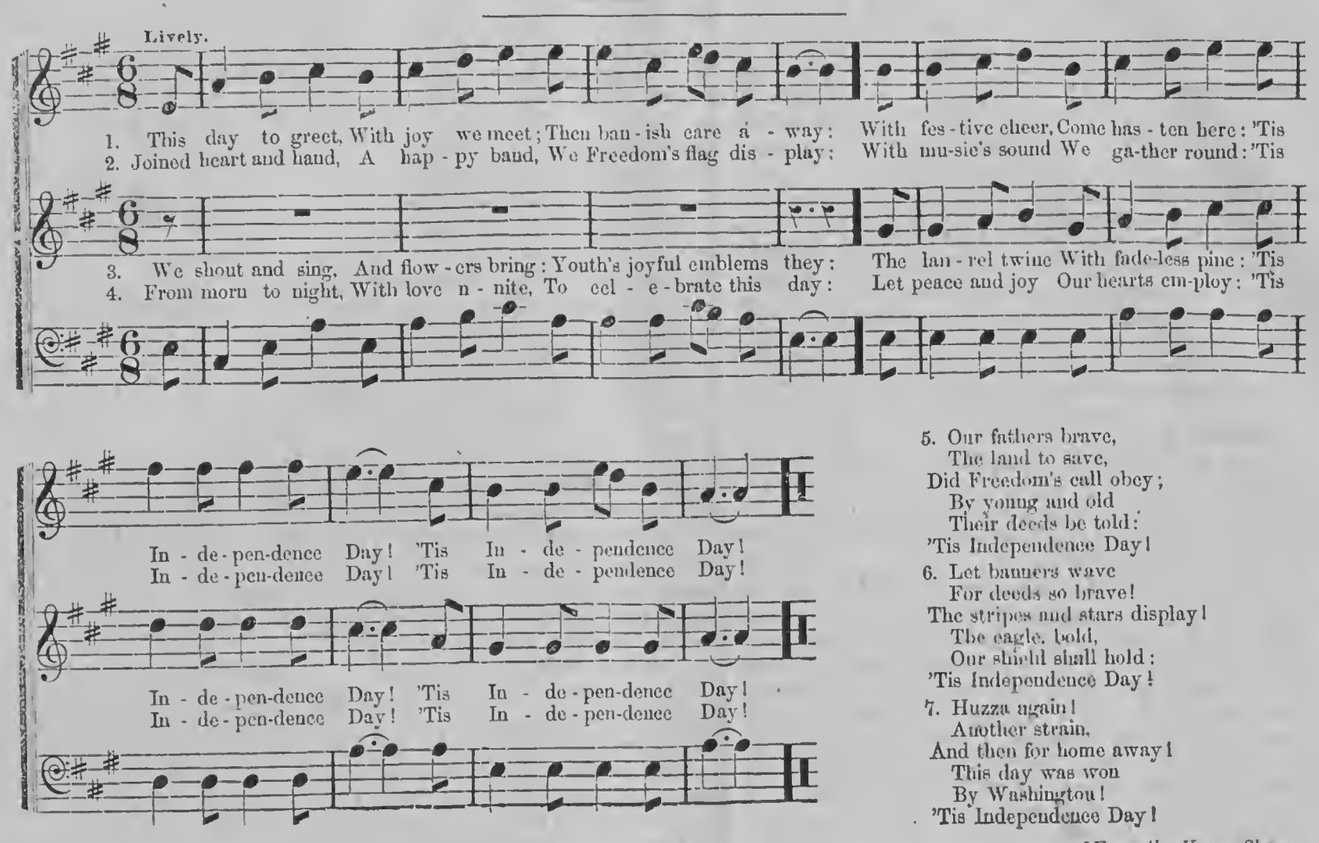
And now let us see how the $500 is to be distributed so as to cover the necessary expenses of the three months' tour. At the present premium, the $500 will give the traveler $360 in gold. His steamship ticket out and back will cost him $150. Arrived at Liverpool, he will desire to visit the manufacturing towns of Lancashire and agricultural districts of Yorkshire and Derbyshire — the latter, as I fancy, the most beautiful portion of England—and thence on to London. (I will mention here in passing, that when homeward bound, by taking another line of road from London to Liverpool, Oxford, Warwick, Kenilworth, &c., can readily be visited.) Having seen London and its neighborhood, he will take his return ticket, *via.* Dieppe for Paris. This will allow the journey to be broken at Dieppe and at Rouen. From these points, and by two or three short excursions in different directions from Paris, a good idea of the rural portions of France may be gained.

The cost of the railroad fare from Liverpool back to Liverpool again, by the route and with the digressions given, second class, (and, as many very respectable people always ride second class in England as well as on the Continent, the traveler may adopt the custom without compromise,) will be about $30. If a first class seat is taken the cost will be increased ten or twelve dollars. The cost of living can be kept down to an average of two dollars a day without the sacrifice of comfort. To do this the traveler must avoid the pretentious hotels of Paris, and in the English hotels take a room quite well up, and be content to take his meals at the restaurants and coffee houses. If a stay of two weeks or more is made in London or Paris, it is better to take furnished lodgings, which can be had in respectable localities, in either city, at three or four dollars per week, and even less if the lodger is willing to mount a few more stairs. Assuming the stay abroad to be extended to two months, at a cost for living of two dollars a day, the total is $120. Sixty dollars then remain of the sum in hand at starting, which is ample for incidentals, such as the week's ticket to the Exposition, the hire of an occasional carriage, gratuities to servants, a visit now and then to the theatre or opera, newspapers, and possibly the purchase of a few trifles as souvenirs.

The reader is assured that the foregoing demonstration of the possibility of a three-months' tour abroad at a cost of $500 is reliable. The writer has been over the ground and knows of what he writes. He has no hesitation in saying the estimate above given the tourist is not expected to forego anything below luxuries—all comforts are provided for.

Now, young man, the feasibility of the journey being shown, my advice to you is to pack a portmanteau—that is all you want to carry, if it will hold a dozen each of shirts, collars, handkerchiefs and socks, with a change or two of flannels—being sure to take along an overcoat, and a shawl or rug also, if you have it—draw your $500 from the bank, (if you haven't it to draw, persuade your father to advance it from the portion he designs for you in the future, if you have a father and expectations,) and start. You will come back in the fall to thank me for having shown you how to use the money and the time so profitably as well as pleasantly.—B.

INDEPENDENCE DAY.



5. Our fathers brave,
The land to save,
Did Freedom's call obey;
By young and old
Their deeds be told:
'Tis Independence Day!

6. Let banners wave
For deeds so brave!
The stripes and stars display!
The eagle, bold,
Our shield shall hold:
'Tis Independence Day!

7. Huzza again!
Another strain,
And then for home away!
This day was won
By Washington!
'Tis Independence Day!

[*From the Young Shawm.*

Various Topics.

TORTURING WORDS.

AN article in the Galaxy for this month, under this title, has several curiosities, rare and noteworthy, not only in our own tongue, but in French and Latin. Here, for instance, is a queer old rhyme which is quite contrary in sense, as you read it across, running the lines together:

I always did intend	To take to me a wife
Single my life to spend,	Would grieve my very life,
It much delighteh me	To think upon a bride,
To live from women free,	I can't be satisfied.
A female to my mind	The joy I can't express
I ne'er expect to find,	So great in singleness.
A bachelor to live	I never could agree
My mind I freely give,	A married man to be.

Here is an old equivocal verse which trims toward GEORGE or JAMES as you read it; reminding one of a modern, facing-both-way politician's letter:

I love with all my heart	The tory party here
The Hanoverian part	Most hateful do appear
And, for the settlement	I ever have denied
My conscience gives consent	To be on James' side,
Most righteous is the cause	To fight for such a King
To fight for George's laws	Will England's ruin bring,
It is my mind and heart	In this opinion I
Tho' none will take my part	Resolve to live and die.

Here is a pyramid in verse by one Benlowes, to be read from top or bottom:

There
For aye
To stay,
Commanding,
'Tis standing,
With godlike air,
Sublimely fair!
Its fame declaring
Its height admiring,
Look on it from afar,
Lo! every smiling star—
To raise the pile to heaven,
These beauteous stones are given.
Each prayer for truth inspiring light,
Each manly struggle for the right,
Each kindly word to cheer the lowly,
Each aspiration for the holy,
Each strong temptation nobly overcome,
Each clamorous passion held in silence dumb,
As slow it rises toward the upper Heaven,
Stone after stone, until the mass is given;
Its base upon the Earth, its apex in the skies,
The good man's character a pyramid doth rise.

HOW JUBAL EARLY FAILED TO TAKE WASHINGTON.

SUCH was the feeble condition of the defenses when General Early and his army came in sight of the dome of the Capitol. We all looked confidently for an attack in force on Tuesday morning. Had it been made by a column of ten thousand men, led by a bold, determined commander, capable of infusing his own impulse into their movements, they might, feebly garrisoned as the forts were at that moment, (with no support between or behind them,) have treated our defenses with contempt and marched into the city. But General Jubal A. Early was not the man for such an enterprise. There were two great events in this remarkable siege, and I must tell you what they were:

The Generals (rebel) had not tasted fresh beef for several days, and had a sharp appetite which their commissaries were inclined to gratify. Now, there was on the plantation of Mr. George Riggs, near where these Generals had their headquarters, a celebrated Alderney bull, much valued by its owner. Here was a temptation not to be resisted by these commissaries, who had the animal led to the slaughter and served up to their masters.

Now to the great event. A number of General officers (choice spirits) coming to the house of Hon. Montgomery Blair, put it under a close examination, especially the cellar and larder, which was supposed to be filled with the choicest. They were disappointed, however, to find that the cellar contained little wine, and were about setting the honorable owner down for a disciple of temperance, when they came on a barrel of rare old Bourbon whisky.

This discovery caused great rejoicing; the news of it spread far and wide among the officers, and not an order was obeyed for the rest of the day. So you see, my son, that while the superior Generals and their staffs were banqueting on Mr. Riggs' bull, the field officers were besieging their brains with Mr. Blair's choice whisky. The city was perfectly safe while this state of revelry existed. And I feel my son, that you will agree with me that Mr. Blair deserves well of his country for supplying his cellar with this remarkable weapon of defense. Let the future historian bear in mind that the War Department can claim no credit for the safety of Washington. The credit belongs exclusively to Mr. Riggs' bull and Mr. Montgomery Blair's barrel of whisky.—"*Adams' Siege of Washington.*"

STRENGTH OF THE BEETLE.

THIS insect has just astonished me by its vast strength of body. Every one who has taken the common beetle in his hands knows that its limbs, if not remarkable for agility, are very powerful; but I was not prepared for so Samsonian a feat as that I have just witnessed. When the insect was brought to me, having no box immediately at hand, I was at a loss where to put it till I could kill it; but a quart bottle full of milk being on the table, I placed the beetle for the present under that, the hollow in the bottom allowing him room to stand upright. Presently, to my surprise, the bottle began to move slowly and glide along the smooth table, propelled by the muscular power of the imprisoned insect, and continued for some time to perambulate the surface, to the astonishment of all who witnessed it. The weight of the bottle and its contents could not have been less than three pounds and a half, while that of the beetle was about half an ounce, so that it really moved a weight 112 times its own. A better notion than figures can convey will be obtained of this fact by supposing a lad of fifteen to be imprisoned under the great bell of St. Paul's, which weighs 12,000 pounds, and to move it to and fro upon a smooth pavement by pushing within.

AMERICAN COTTON vs. INDIA.

THE value of the raw cotton imported into Great Britain in 1866 was greater than for any single previous year, except 1864, and was just double the value of the amount imported in 1861. Nearly half of the whole amount of British money paid for cotton last year was paid for American cotton, while British India received about one-third. The value of American cotton imported into great Britain last year was nearly three times the value of the combined imports from this country for the years 1865 and 1864, while the value of Indian cotton imported last year was a trifle in advance of the imports of 1865, and about 50 per cent. less than the imports of 1864.

The probability is that the culture of cotton in India reached its maximum in 1864, and that the tendency hereafter will be towards a decrease, if not from year to year, certainly as compared with the production of the year referred to. The fact is established beyond the power of question that the United States is the best cotton growing country in the world.

CURE FOR WARTS.—H. W., Waverly, N. Y., says he has been greatly troubled with warts for some time. Has tried aquafortis, lunar-caustic, milk-weed, and several other things, without avail. If he will gather a lot of cob-webs and make them into balls about the size of the wart and burn them on the excrescences, they will come out whole. The pain is not very severe, and the result a certain cure, or said to be so. Another cure is reported to result from washing the warts a few times in the water sometimes found in hollow oak stumps. White oak is the best, and is often found containing water strongly impregnated with the acid of the tree. A third method—a sure cure—is to run a pin through the wart, and hold the other extremity in the blaze of a lamp or candle. The wart will fry out, but the process is somewhat painful. "Grin and bear" is the word in this case.

THE English watch trade is decreasing from importations of Swiss and German make, and the increase of American watches.

Reading for the Young.

A REMINISCENCE.

ONCE, when I was a little boy,
I sat me down to cry,
Because my little brother had
The biggest piece of pie.

'Twas not but I had quite enough,
But then I could not see
The reason why a partial nurse
Should give him more than me.

They said I was a naughty boy,
But I have oft seen men
Behave themselves as foolishly
As I behaved then.

For we are often thankless for
Rich blessings when we sigh
To think some luckier neighbor has
A "bigger piece" of pie.

BENJAMIN FRANKLIN.

HERE is a portrait of a man who, from a poor boy, by diligent work and good conduct grew to have great influence, and be much beloved and respected. BENJAMIN FRANKLIN was the fifteenth of seventeen children, and was born in Boston in 1706. With such a house full of little folks all must be busy, and he went to a brother's office to be a printer. Having some trouble he went to New York in a sloop, but could get no work, for there were very few newspapers then. So he trudged away across New Jersey, a hundred miles on foot to Philadelphia, and had a bundle of clothes, one dollar, and a loaf of bread which he ate as he walked the streets.

But he had a brave heart, and soon got work, and went to England a while. There he was rather wild, a short time, but gave it up and showed the English boys who drank liquor, that a Yankee, who only used water, was stouter and abler at work than they were. Going back to Philadelphia he was soon known as a writer and editor; for, although he could go to school but little, he read and wrote much.

He was an active advocate of our National Independence, and was sent to England and France by the Government on public business, and was highly respected in Europe. He found time to think, and experiment on electricity, and his well-known experiment of drawing sparks from a kite-string wound with wire, as a thunder cloud was passing over, led to the invention of lightning-rods. He invented a very useful stove also. In 1785, after almost fifty years of public life, he was allowed to come home and rest a little, yet he was an active man to the last. Wise and eminent, yet plain and without foolish pride, and very social and kindly in his manners, he retained his faculties until his death, April 17th, 1790. His writings fill three volumes. So much a man can do with good health, good habits, cheerful spirits and industry.

Boys and girls remember FRANKLIN, and do well and diligently whatever is for you to do. Be cheerful and useful.

MAKING OTHERS HAPPY.

A MOTHER who was in the habit of asking her children, before they retired at night, what they had done that day to make others happy, found her twin daughters silent. The question was repeated.

"I can remember nothing good all this day, dear mother, only one of my school-mates was happy, because she had gained the head of the class, and I smiled on her, and ran to kiss her; so she said I was good. And that is all, dear mother."

The other spake still more timidly. "A little girl who sat with me on the bench at school has lost a little brother. I saw that, while she studied her lesson, she hid her face in her book and wept. I felt sorry, and laid my face on the same book and wept with her. Then she looked up, and was comforted, and put her arms around my neck; but I do not know why she said I had done her good."

"Come to my arms, my darlings!" said the mother; "to rejoice with those that rejoice, and weep with those that weep, is to obey our blessed Redeemer!"

LITTLE THINGS AND LITTLE PEOPLE.

IT is of small things that a great life is made up; and he who will acknowledge no life as great save that which is built up of great things, will find little in Bible characters to admire or copy.

Little things and little people have often brought great things to pass. The large world in which we exist is made up of little particles as small as the sand on the sea shore. The vast sea is composed of small drops of water. The little busy bees, how much honey they gather? Do not be discouraged because you are little. A little star shines brightly in the sky on a dark night, and may be the means of saving many a poor sailor from shipwreck; and a little Christian may do a great deal of good if he or she will try. There is nothing like trying.—*Dr. Chalmers.*

NEW HALF VOLUME!

A GOOD TIME TO SUBSCRIBE!

As the Second Half of Vol. XVIII of the RURAL NEW-YORKER will commence next week, July 6th, *now is a favorable time to subscribe or renew.* Agents, and all earnest friends of the RURAL, will please note this, bearing in mind that every new subscription will tell in enabling us to make the paper more acceptable and valuable. And now that splendid crops are being vouchsafed farmers and planters in almost every section of the Union, we trust they will not forget the RURAL and other journals which seek the best interests of producers.

All subscribers whose terms expire this week will find the number of the paper (910) printed after name on address label. In renewing, as we hope all will,—either by remitting singly, or joining or forming a club,—we hope no one will neglect to invite others to give the paper a trial for six months or a year. Single or club subscriptions will be received for six months at the same proportionable rates as for a year, and free copies, etc., allowed in proportion. Agents are reminded that the Premiums offered for the Spring and Summer Campaign extend to July 1st.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JUNE 29, 1867.

NEWS OF THE WEEK.

Meeting of Editors and Publishers.

THE Annual Meeting of the N. Y. State Editors' and Publishers' Association was held at Penn Yan on the 20th and 21st inst. Though unable to be present, we were with our brethren in spirit,—and are glad to learn that the meeting was largely attended and exceedingly pleasant. President CLEVELAND of the Yates Co. Chronicle, is reported to have acquitted himself admirably, both as presiding officer and host. GEO. W. DEMERS, Esq., of the Albany Journal, delivered the Annual Address. Subject—The Newspaper; its Relations to Society, its Responsibilities, Duties, &c. The Address is commended by those who heard it, as is also the Poem read by WM. WIRT SIKES of New York, (whom our readers will remember as a contributor to the RURAL.) The business session was mainly occupied in discussing affairs pertaining to publishing, rates of advertising, dealing with agents, &c. It was decided to hold the next Annual Meeting at Watkins, and the following board of officers was elected for the year ensuing: *President*—L. M. GANO of the Watkins Express. *Vice-Presidents*—C. G. BEACH of the Orleans Republican, and R. L. ADAMS of the Geneva Courier. *Secretary*—A. T. NORTON of the Livingston Republican. *Treasurer*—W. T. TINSLEY of the Lyons Republican.

On the second day the members of the Association, their ladies and sundry citizens of Penn Yan, made an excursion, per steamer to Hammondsport, at the head of Crooked Lake, visiting Pleasant Valley and the headquarters of the Pleasant Valley Wine Co. We infer from reports of some of the participants that the excursion was exceedingly pleasant, and the visit to the aforesaid Wine Co. sufficiently spirited to be long remembered.

A Great Newspaper Building.

THE Philadelphia Public Ledger, the leading newspaper of the Quaker City, has just moved into its splendid new building at the corner of Sixth and Chestnut streets. The opening of the building was inaugurated by a splendid dinner at the Continental Hotel on the 20th inst., in which some five hundred editors and others participated—(and as we were unavoidably precluded from attending, we take this occasion to congratulate Mr. CHILDS upon the eminent success of his enterprise and the merited prosperity of the Ledger.) Speaking of this new building the Philadelphia Bulletin says:—"The magnitude and the elegance of this structure are such that its completion deserves to be publicly recorded, just as the completion of a public monument is recorded. For the Ledger building is monumental in its character; the Ledger is an "institution" of Philadelphia, and the whole community takes an interest in the noble building where it is in future to be housed. It is something, too, for Philadelphians to be able to boast that they possess in their city the largest, most splendid and best appointed newspaper establishment in the world. The energy, enterprise, liberality and good taste of the proprietor, GEORGE W. CHILDS, Esq., have been so abundantly displayed in this grand edifice, that the public will recognize him always as a benefactor to the city. He will issue his paper from the new building on Monday next, and all good citizens will join us in wishing for it a career of ever-growing prosperity."

From the South.

IN Texas Judge Rives and Judge Dougherty refuse the testimony of negroes, and will not recognize the law of Congress in the matter.

Gov. Flanders in Louisiana, decides that all men chosen for office must take the oath of the State Law and that in the Constitutional Amendment.

Registration of whites and blacks is going on at Mobile, and Augusta, Ga. In Petersburg, Va., up to the 19th, 486 whites and 1,448 negroes had been registered. The whites seem indifferent. At Richmond, about an equal number of each.

The Virginia State Debt interest will be promptly paid at Richmond, July 1st, and a surplus left in the treasury. Funds are in London to pay interest due there.

Gen. Sickles asks to be released from his command in South Carolina.

Col. D. H. Bingham of Alabama, a Unionist, has been dragged from his bed, gagged and beaten in the woods by ex-rebels.

The Gettysburg battle-field monument was dedicated the 4th inst. Gen. Grant was present.

State News.

THE Commencement at the Vassar Female College, Poughkeepsie, took place the 19th.

Heavy rains interrupted travel on the Hudson River and Erie Railroads.

The State Temperance Society adjourned their meeting at Buffalo the 19th, to Homer, Cortland county, next October. It was urged that petitions be circulated asking the Constitutional Convention to prohibit the use and sale of intoxicating drinks.

The Constitutional Convention at Albany has just fairly organized and begun its work.

From the West.

THE San Francisco Fenians had a great pic-nic the 19th.

The damage to the Pacific Railroad near Leavenworth by flood, is not yet repaired, and mails are detained at Junction City.

Kentucky wheat is reported to be badly hurt by rust. Rains in Minnesota have injured railroads.

Hon. R. B. Hays, M. C. of Cincinnati, is nominated for Governor of Ohio by the Republicans.

The leading Congregationalists of Chicago have started a subscription which is rapidly and liberally filling up, to establish a new journal in that city, to represent that sect, and fill the place of the Independent. The sheet will be of the size and style of the New York Evangelist.

Indian Affairs.

THE Superintendent of the Union Pacific Railroad, just from the North Platte, says work on the road must be abandoned unless there be protection against the Indians.

Gen. Sherman is on the North Platte. Hon. J. M. Taylor, U. S. Senator, telegraphs from Omaha that Gen. Buford's telegraph reports are very incorrect, and that the Indians are only fighting small parties in a barbarous manner.

Reports by Junction City, Kansas, tell of several killed. Coaches are attacked, and drivers refuse to go out.

Latest from Europe.

THE riot in Birmingham, England, which seemed formidable, is over, and all is now quiet. It was not of a political nature, but anti-papal.

In London the 18th, a Reform mob stormed the platform of St. James' Hall, while a tory meeting was going on and put up a red flag and a liberty cap. Many arrests were made. Men-of-war are in the Irish channel, to guard against Fenians.

Frazier, Trenholm & Co. owed a million pounds more than their assets.

A breakfast was to be given in London to Wm. L. Garrison, the 18th, and John Bright was to preside. Victoria writes an autograph letter to Napoleon expressing regrets that she cannot visit the Exposition, with the usual ceremonies, but leaves it to be inferred that she may go to Paris *incog.*

The Austrian Government grants amnesty to all political offenders, Kossuth included.

The Czar suspends confiscation in Poland.

FROM WASHINGTON.—Surratt's trial is again going on, and the prosecution intend to prove his presence with Booth at the theater the night of the assassination. Special Cabinet meetings are being held, and Attorney-General Stanberry and Secretary Stanton were in conference with the President the 19th. Gen. Grant has a telegraph from Gen. Pope denying that negroes are chosen city officers at Mobile. Hon. L. D. Campbell, Minister to Mexico, has resigned. A dispatch to the Times says there seems no doubt of a quorum of Congress in July.

CHINA.—Steamer Colorado from Yodhoman to San Francisco, in twenty days and three hours, brings Hong Kong news to the 18th. Ten ships are going to Hong Kong this season to load for London. A move has begun to open the Yantsee, 400 miles from Hong Kong. U. S. ships on the river had done good service against pirates. It is greatly wished the Colorado should stop at Shanghai. Fargo & Co.'s Express had nine tons waiting there for the ship, and a hundred tons were its stop sure.

WAGES OF REPORTERS.—Concerning the pay of the New York journalists, a correspondent of the Boston Voice says:—"The Tribune employs fifteen reporters at an average salary of $23 per week; the Herald, twenty-three, at an average of $17; the Times, ten reporters at $23 per week average; the Sun, five men at an average of $12; the Post, four at $23; the World, eight at an average of $13, and the Express, six at an average of $9."

THE PRESIDENT'S TOUR.—Hartford, Ct., gives President Johnson a public welcome. The New Hampshire Legislature has voted to invite him there. It also invited Thaddeus Stevens. The President and suit were welcomed at New York, New Haven, &c., with fit ceremonies, and reached Boston the 22d to join in the meeting of the Knights Templars.

THE BROKEN CABLE REPAIRED.—The broken wire of the Atlantic Cable near the Newfoundland shore, is all right again. An English steamer is at St. Johns, under Admiralty orders, to run a line of soundings from Placenta, Newfoundland, to the island of St. Pierre, and to North Sydney, Cape Breton, for a new cable to be laid this summer for the New York, Newfoundland and London Telegraph Company.

MEXICO.—The State Department at Washington have information that the Court Martial to try Maximilian is suspended for the present. Mexico and Vera Cruz are held yet by the adherents of the fallen Emperor.

NEWS PARAGRAPHS.

A LADY in Maine applied to the police authorities on purpose to seenre her lost cat. She had brought it from England and valued it at $1,000. When it ran away it had on a gold necklace worth $40.

J. S. C. ABBOTT's astounding praises of Napoleon in his published volume, have been translated into French, and the Paris *Siecle* ridicules the book as justly, but more severely, than it was treated here.

THE London (Canada) Free Press urges that the Fenians all be set free on Confederation day. More rolling stock, and a large quantity of superior rails for the Grand Trunk Railway, are coming over from England.

A CURIOUS effect of the result of the recent London Congress in preserving the peace in Europe is said to have been a rapid rise in the price of white oak staves in West Virginia. The French and Spanish wine merchants are supplied largely with wood for wine casks from that region.

THE Merchants' Union Express Company held a Directors' meeting at Auburn in May, and voted unanimously to make no compromise with the old Express Companies, asserting that they are in prosperous and healthy condition. This was done to stop rumors about their intentions.

IN the recent match at Bennington, Vt., between Adams, the champion walker, and the Sykes horse, the man to walk a quarter of a mile while the horse was trotting half a mile, the man won the last two heats in 1:23 and 1:25 with great ease, and came in almost as fresh as when he started.

THERE seems to be good grounds for believing that our Government is negotiating with Great Britain for the purchase of the territory of the latter on the Northwest coast. It is proposed to acquire all the region west of the Canadas and Hudson Bay—a tract much larger than the present United States, but of no great value.

IT is said that at the Yearly Meeting of the Hicksite branch of the Society of Friends, held in New York the other day, the belles wore loves of bonnets, chignons, light robes of the most attractive texture, and fashionable jewelry, while the young men "Friends" appeared in the latest fashion. The garb of George Fox, however, was not wholly absent from the assemblage, but worn by the elder members.

Remington's Foot-Rot Remedy—Andrew Cooley.
Coe's Dyspepsia Cure.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, June 25, 1867.

THERE is no material change in financial affairs in this locality or at the East. The New York market rather tends to greater ease, and plenty of money and low rates of interest are anticipated through the summer. The banks this week are preparing for the coming quarterly statement of July 1st, hence miscellaneous accommodations will be considerably restricted—and the market in some localities, particularly at the West, will be reported close. After "the 4th" financial affairs may be expected to assume their ordinary course. Just now the Secretary of the Treasury is calling in funds from many of the deposit banks. These deposits are withdrawn at such uncertain intervals that few bankers now seek the honor of being Government depositories.

Government securities are firm and in demand. Railroad and miscellaneous stocks, as a general thing, are not active.

Commercial men everywhere discuss with much earnestness the fine weather, and the encouraging prospects for an abundant harvest. They are content to do little now, in view of the cheering prospects of a good fall business.

WOOL.—There is nothing of any amount doing in wool in this section. Buyers offer 40@45c., but farmers are either too busy to take their wool to market, or are not disposed to sell at prices offered.

Very little wool has been purchased in Michigan. Buyers at the principal markets in that State are offering 35@40c. The Detroit Post of Friday says:—"The manufacturers are puzzled and hardly know what to undertake. Mr. Platt, who is the buyer for the Manchester Mills, and the heaviest that ever visited our market,—taking generally 2,000,000 lbs.,—is not coming here, it is stated, for 60 days yet. Mr. Hunter of the Watervliet Mills, who averages 1,000,000 lbs., was in town a day or two since, but has gone home without effecting anything."

Buyers are reported to be more particular in regard to the condition of wool than heretofore.

A letter from Coldwater, Mich., says:—"Very little wool has been brought in. The price opens at about 40c. Usually at this time of the year we have plenty of eastern buyers, and plenty of eastern capital ready to invest in wool. This year none. Farmers expect a large price, and will hold their wool as long as they can."

Sales in Boston last week foot up 450,000 lbs., at a range of 35@70c. for fleece. The Boston Commercial Bulletin of Saturday says:—"The wool market is more quiet, and transactions tighter than for many years past towards the close of the season. The stocks of desirable fleece wool, adapted to the production of seasonable goods, are reduced to small compass, and hence holders are not anxious, and prices are tolerably well sustained."

WHEAT AND FLOUR.—The prices of wheat and flour still tend downward. Western farmers who held on to their grain, hoping for a famine, are now crowding it to market with all possible rapidity. The condition of the new crop alarms them. In Delaware Co., Iowa, the price of wheat has fallen within a few weeks from $2,25 to $1,50. Some have predicted a reaction in prices before harvest, but there are not signs of it yet. New flour has made its appearance in Georgia, and at some other points. Some days since there was a telegraph statement that the rust had done great injury to the wheat in Kentucky. This may be the case in some localities, but we judge the injury is not very extensive.

HOPS.—The market at the East is inactive. Emmet Wells of New York quotes new at 30@35c.; old at 20@40c. The growing crop generally promises well. The vine has been growing almost too rapidly. Some farmers in Wisconsin report a growth of 24 inches in as many hours.

Rochester Wholesale Prices Current.

Flour, Feed, Grain, Etc.		Fruits, Vegetables, Etc.	
Flour, w't wh't	$16,50@17,00	Apples, green,	$0,00@0,00

Special Notices.

STUMP MACHINE EXHIBITION.

W. W. WILLIS, proprietor of the Lever Stump Machine, will show its practical working on Tuesday, the 2d day of July, on the FROST farm, now ASHLEY'S, in the town of Greece. The farm is situated on the first road west of, and parallel with, Lake Avenue, and 1½ miles from the toll gate on said Avenue.

FIRST MOWING TRIAL OF THE SEASON.

Dodge's Patent Reaper and Mower Victorious!

THE Chenango County Agricultural Society held a Trial of Mowing Machines on Tuesday, the 18th inst., at Norwich, N. Y., in heavy lodged clover. The following machines competed for *Quality of Work, ease of draft*, and simplicity of construction:

YOUNG WARRIOR,
MONITOR,
CAYUGA CHIEF,
WOOD'S MOWER,

BUCKEYE, made by ADRIANCE, PLATT & CO., DODGE'S PATENT, made by DODGE, STEVENSON & CO.

The Committee report that of the six machines, DODGE'S PATENT MOWER did the best work; that its simplicity of construction, strength of parts, and superiority of cutting apparatus, made it the superior machine for the rough farms of Chenango county. Therefore they award *it* the FIRST PREMIUM.

Norwich, June 19, 1867. HENRY PECK, Agent.

THE GREAT NATIONAL TRIAL OF
Mowers and Reapers at Auburn in 1866.

Genuine Buckeyes and Bogus Buckeyes Compared.

THE GENUINE BUCKEYE.

THE summing up of the Judges on the Buckeye Machine of Adriance, Platt & Co.

From page 58 of Official Report of Auburn Trial.

"The record of the BUCKEYE is interesting in view of the fact that it was the pioneer in the path of the great improvements which have popularized Mowing Machines and made them an absolute necessity to every farmer. It took the prize at the Great National Trial of Mowers and Reapers, at Syracuse, (in 1857,) and at once sprang into great popularity. In the hands of Mr. J. P. ADRIANCE it met with an enormous sale.

The result of this trial clearly shows that it still keeps the forward rank which it won at Syracuse, and at many other subsequent trials, and that it is still as worthy the patronage and confidence of the public as it has been in any preceding portion of its history."

THE BOGUS BUCKEYE.

The summing up of the Judges on the machines of Dodge, Stevenson & Co.

From page 103 of Official Report of Auburn Trial.

"In our judgment the FAILURE of THESE MACHINES TO DO GOOD WORK arose—1st. From IMPROPER MECHANICAL EXECUTION. The gearing seemed to us to be ill made; the working parts were not exactly in line; the materials were not well distributed with reference to the strain they bore, and there was a general roughness in the work which might well cause inequalities in their action."

The GENUINE BUCKEYE which was awarded the GRAND GOLD MEDAL in Class One at the Great Auburn Trial, and which was the only machine that received the highest mark (40) for perfect work in every test, is built in New York State by ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie) 165 Greenwich St., N. Y; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion Orleans Co., N. Y.; H. & E. F. COOPER, Watertown Jefferson Co., N. Y.; G. SWEET & Co., Dansville, Livingston Co., N. Y.; GEO. P. YORK, Westfield, Chautauqua Co., N. Y.

All About Mowing and Reaping Machines.

FRAUD AND HUMBUG EXPOSED.

THERE has been, and is now, such an amount of misrepresentation in reference to the trial of Mowing and Reaping Machines at Auburn, N. Y., last July by a committee of the N. Y. S. Ag. Society, accompanied with such gross libels upon us and our machines, that "*Forbearance* has ceased to be a virtue" indeed.

Some unscrupulous manufacturers and their agents for their own selfish and greedy purposes have published in newspapers, pamphlets and circulars, what purports to be the Report, or *extracts* from the Report of the Committee. These publications are *false and garbled* and "*made up*" to suit eastern machines, and cast odium upon others. They ALL claim having received *the first* premium or medal, leaving it *to be inferred* that there was but *one first premium*; whereas, in truth there were *Eleven Premiums and Medals*, awarded to as many different styles and makers of mowing machines, and would have been more if fair play and honor had been observed. These *garbled and false* publications make certain machines stand higher than others by taking the highest credit marks of *their* machines and the lowest ones of *ours*. Now by this rule we find in the COMMITTEE'S PUBLISHED REPORT, that DODGE'S PATENT MOWER AND REAPER, Ohio and Buckeye Patents combined, made by Dodge, Stevenson & Co., was THE LIGHTEST DRAFT MOWER at the trial; that it had THE LEAST SIDE DRAFT; that it was marked for quality of work two higher than Buckeye, and nearly double that of the Walter A. Wood Mowers on the most *difficult* piece of work during the trial, viz., Lodged Clover and Weeds in the Leach lot.

Here are the figures of the principal machines as published by the Committee. The No. 40 represents perfection:

Name of Machine,	Qual. work. Mow'g	Qual. work. Reap'g	Side draft.	Direct draft.
Columbian; Am. Ag. Works,	26	31	8¾	270
Walter A. Wood's Mower,	19	32	7½	247
Marsh; Wm. A. Halladay,	28	not giv'n	7½	272
Cayuga Chief,	30	28	6	291
Kirby; D. M. Osborne & Co.,	32	32	3	250
Buckeye: Adrianee, Platt & Co	30	31	5	220
Dodge's Patent; Dodge, Stevenson & Co.,	37	37	2½	213

Our machine *was awarded the preference* in Class 5 as a *Mower, Hand or Self-Raker, as preferred*, in the same machine, and the above clearly shows that it was entitled to it. HIRAM CURTIS of Albion, N. Y., who manufactures a machine he calls the Buckeye, did not have any machines at the trial, and for his gross libels upon us and our machines we have appealed to the courts for redress.

We have no objection to *fair competition*, be it ever so spirited, but when downright lying and malicious falsehoods are resorted to we shall defend ourselves in a proper manner against any and all such.

The immense popularity and sale of our machines has caused alarm amongst the *old concerns*, relying on reputations earned years ago; hence the fluttering, which is good evidence that *somebody is hurt.*

FARMERS! READ OUR ADVERTISEMENTS. YOU CAN RELY ON THEIR TRUTHFULNESS.

909-4t DODGE & STEVENSON M'F'G CO.
Auburn, N. Y., June 12, 1867.

FOOT ROT IN SHEEP.

WITH one bottle of REMINGTON'S FOOT ROT REMEDY I cured 104 sheep badly off with foot rot. Some of them were so bad that the hoof was almost gone. All but four were cured with one application, and the cure effected during the cold wet weather of last spring. ANDREW COOLEY.

Geneva, June 1, 1867.

One of the Greatest causes of ill-health is Indigestion or Dyspepsia, with their attendant miseries, such as Headache, Sour Stomach, Loss of Appetite, Depression of Spirits, &c. COE'S DYSPEPSIA CURE will certainly cure these troubles, as thousands can testify.

GOLD MEDAL THRASHING MACHINE.

PERSONS intending to purchase a Thrashing Machine will do well to send for Circulars and Judge's Report of the Machine awarded TWO GOLD MEDALS at the Great National Trial, Auburn, July, 1866, manufactured by R. & M. HARDER, Cobleskill, N. Y. See their advertisement in Rural of last week.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement*; that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 908-tf.

Silver Tips For Children's Shoes.—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

The News Condenser.

FOR SALE—A SPLENDID ESTATE of 1060 acres, rich land; 900 acres open under good fence in Northumberland Co., Va., lying on the Potomac river, in full view of Point Lookout and Chesapeake Bay. The sales of ¼ of the corn and oats from 300 acres paid the owner $1,400 rent last year. Also, many desirable Farms on the Northern Neck of Virginia, from $3,500 to $40,000. Apply (with stamp) to W. H. HARDING, No. 4 North Green St., Baltimore, Md., Coal Dealer and Real Estate Agent.

TROTTING COLTS FOR SALE.—One five year old horse in May, that has trotted his mile, on a circular six hundred yard track, in three minutes and ten seconds. Sired by the celebrated old "Sir Thomas." One two-year-old stallion in May, that has made his mile, on the same track, in three minutes and forty seconds. Sired by "Major Anderson," one of the best blooded Togue's in Ohio. Their dam was a Gallitan mare, and made her mile, when three years old, in two minutes and forty seconds. These horses are splendidly made, fine style and powerfully muscled; have had but little handling, and in the hands of experienced trainers would soon make their mark in the annals of the turf. For further particulars, inquire of JAMES EWING, Lancaster, Ohio.

BURNHAM'S FIRE AND WATER-PROOF

CEMENT ROOFING!

Patented November 13, 1866!

Having the control of the Letters Patent for the above roofing we are now prepared to sell territory, or grant territorial license to canvassers, and establish agencies to builders or companies for mixing and putting on the same. For

BEAUTY, DURABILITY AND CHEAPNESS,

It excels all other Patent Cements now in use. Its cost is much less than shingles, and will last as long as the building stands. Can be used by any common workman, on new or old roofs; for old roofs, spreading it on the shingles.

As a Preserver of Timber, Fence Posts, Pitching Boats, &c.,

It has no equal, and can be applied as easily as a coat of paint. Brick and stone may be cemented together and made water-tight for Cisterns, Water Tanks, &c. It being elastic, it is not affected by either cold or warm weather, and is proof against fire. For further information, address BOSWORTH & HUBBARD, Syracuse, N. Y.

References.—John Strowbridge, John Van Buren, De Witt Messenger, Cortland; S. P. Hoag and D. E. Utley, East Homer; having used the Cement, can give information as to the utility of the same.

OUR NEW DOMAIN!

Second Edition now ready of Mr. A. D. Richardson's new work,

OUR NEW STATES AND TERRITORIES.

Being notes of his recent tour through Colorado, Montana, Utah, Idaho, Nevada, &c., &c., &c., beautifully illustrated, from designs taken on the spot, of Scenery, Mining Operations, Persons, &c. A very valuable source of information regarding the new domain. Sent to any address, post-paid. Price, Fifty Cents.

Now Ready, Fifth Edition, (15,000 already sold.) The remarkable Romance,

THE DEAD LETTER!

Pronounced by the best Judges the finest romance from an American pen. Sent to any address, *post-paid*, in paper covers, beautifully illustrated, price, Fifty Cents; Library (12mo.) edition, price, $1.50.

Also, just out, the new novel by the ever popular Mrs. M. V. Victor,

WHO WAS HE?

Strikingly strange, original and captivating reading. Sent to any address, post-paid. Price, Fifty Cents.

☞ Among the latest issues is Mrs. C. A. Warfield's very much talked of

ROMANCE OF THE GREEN SEAL.

1867.

The Joseph Hall Agricultural Works,

GLEN & HALL, Proprietors,

ROCHESTER, N. Y.,

MANUFACTURE THE CELEBRATED

HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly forty years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.

We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.

We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.

We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by Wm. Sanborn, and general agencies as follows:—J. D. Easter, Chicago, Ills., Richard Cromwell, Baltimore, Md., Jones & Hewlett, Stockton, Cal., and Wm. Lyne, San Francisco, Cal. 899-tf GLEN & HALL, Rochester, N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd,** the best and latest work on American Sheep Husbandry. Large 12mo.—451 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

THE HOWE MACHINE CO.'S

SEWING MACHINES,

699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. Howe, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

SEND FOR CIRCULAR.

THE HOWE MACHINE COMPANY,
699 BROADWAY, Corner Fourth Street, N. Y.

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug. 1863, Improvements Pat'd April, 1865 and Nov. 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn,* above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¾ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¼ bbl.,) $10; No. 5, (15 bbl.,) $8.

H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. Moore, *Editor Rural New-Yorker.*

"The best form of Churn ever invented."—Solon Robinson, *Ag'l Ed. N. Y. Tribune.*

Mr. Robinson also named it first and commended it highest of all the Churns on exhibition at the New York State Fair.

"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*

"The most important improvement recently brought out."—S. Edwards Todd, *Ag'l Ed. N. Y. Times.*

"The very best Churn extant."—*Prairie Farmer.*

"It is perfectly common sense in its structure."—*Ohio Farmer.*

"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*

☞ The Seneca Falls Churn Manufacturing Co. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the patented fixtures. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. Moore, Editor Rural New-Yorker.

☞ The Michigan Churn Man'f'g Co., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

The only Family Machine that sets up its own work, knits all sizes, widens and narrows, knits the heel into the stocking, and narrows off the toe complete—producing all varieties of knit goods, from an infant's stocking, mitten, or glove, to a lady's shawl or hood.

It is *simple, durable,* and *easily operated.* Agents wanted. Send for a Circular and sample of work. Address (inclosing stamp) LAMB KNITTING MACHINE CO., 903-4teo Rochester, N. Y., or Springfield, Mass.

BATCHELOR'S HAIR DYE.—THIS splendid Hair Dye is the best in the world. The only *true* and *perfect Dye*—Harmless, Reliable, Instantaneous. No disappointment. No ridiculous tints. Natural Black or Brown. Remidies the ill effects of *Bad Dyes.* Invigorates the hair, leaving it soft and beautiful. The genuine is signed *William A. Batchelor.* All others are mere imitations, and should be avoided. Sold by all Druggists and Perfumers. Factory 81 Barclay St., N. Y. ☞ Beware of a Counterfeit. 882-26teo

GENEVA HYGEIAN INSTITUTE.—This Institution is open to receive patients at all times; all diseases treated, both acute and chronic. Terms, per week, $9 to $15. Medical Department, A. B. Smith, M. D., C. M. Woodward. Business Department, address D. H. TOWNSEND, Geneva, N. Y. 906-3teo

Westfall, Cash'r First Nat'l Bank, Minneapolis, Minn.; Thomas Arthur, Cash'r First Nat'l Bank, Newton, Ia.; Messrs. Ford, Dixon & Co., St. Louis, Mo.; and to any Banker throughout the Country having New York Correspondents. 901-6tomm

FOR SALE—The best Farm in Monroe county, situated in the town of Wheatland, four miles west of Scottsville, belonging to the estate of the late Hon. Elisha Harmon, consisting of about 400 acres. A splendid residence with tenant house, barns, &c., in first rate condition on the premises. A portion of the premises will be sold separately if desired. Terms to suit the purchaser. For particulars, inquire of Milford Harmon at Medina, Oscar Folsom at Buffalo, or 895-tf F. A. MACOMBER, Rochester, N. Y.

THE ALBANY COTTON GIN MANUFACTURING CO.,

ALBANY, N. Y. (POST-OFFICE DRAWER 162.)

Manufacturers of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising "Star" Cotton Gins and Condensers, **"Star" Railway Powers,** (Emery Patent,) **"Star" Lever Powers, "Star" Thrashers and Cleaners,** Thrashers and Separators, Circular and Dragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c. The "Star" Thrasher and Cleaner, as now made by us, unites more valuable features and possesses qualities superior than were ever before combined in such a machine. Comparatively small,—compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw,* so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be thrashed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.

We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power.

With regard to our Railway Power, we may say that everywhere the "Emery Power" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as the "Star" Railway Power, it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c. Our "Star" Lever Power, though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small, loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.

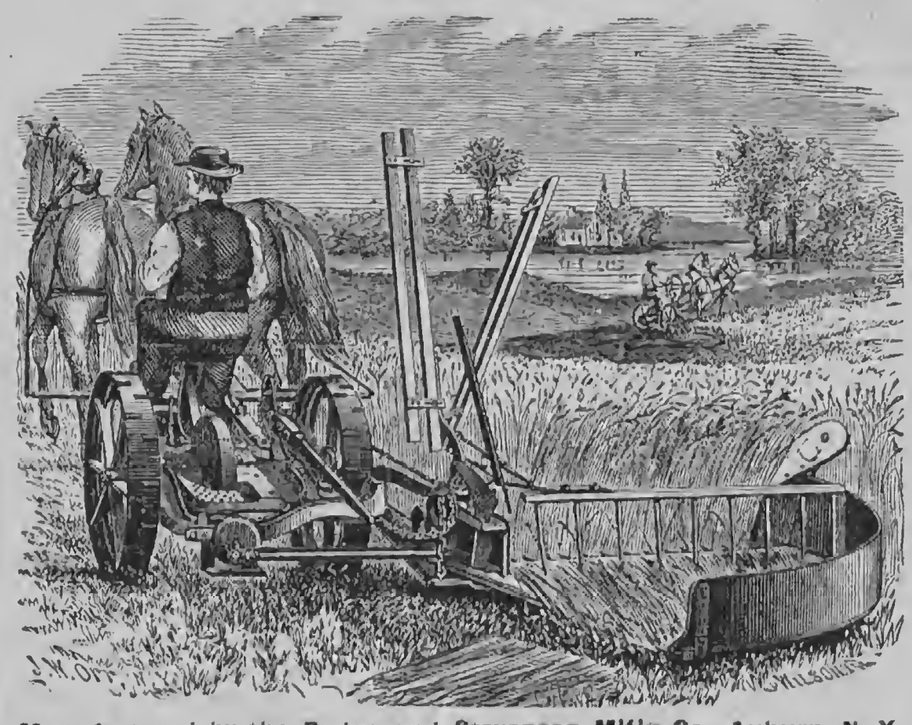
All Manufactures of this Company are made under the immediate Superintendence of Mr. WM. B. EMERY, (Survivor of Emery Brothers,) whose long personal experience in the business of Manufacturing Agricultural Machines, with the facilities this Company possesses in the appointments of a Large and Commodious Factory, appropriate Machinery and skillful workmen, and in the determination of the Company to make and sell only such Machines as are known to be best adapted to their particular purposes, using only the best materials in their construction, furnish the strongest guarantee of the superior character, in all respects, of the Machines made by this Company. Confident, therefore, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Planters, Dealers and others, assuring such that all orders addressed to this Company, will be executed with Promptness and Fidelity. Our complete Illustrated Descriptive Circular and Price List will be furnished gratis on application. ☞ **AGENTS WANTED**—Where none are already established, and also active and energetic men to canvass the country.

DODGE'S

PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

This Machine embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a Revolving Rake, and does its own reeling, saving the expense and trouble of a Reel. It makes a Perfect Separation, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the Saint Louis Agricultural and Mechanical Association, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a Gold Medal as the best Combined Machine, Hand and Self-Raker.

This Machine has been awarded Gold and Silver Medals, and First Premiums, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some Great Improvements for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

SOUTH DOWN COMPANIES' PATENT

SheepWashTobacco

THE BEST KNOWN REMEDY FOR

TICKS, SCAB, VERMIN AND FOOT-ROT,

SHOULD BE USED BY ALL FARMERS ON

SHEEP, ANIMALS and PLANTS.

☞ This pure preparation has been successfully used for years, and never fails to produce the desired effect when used according to directions.

It will not injure the most delicate animal.
It will improve the Quality and Quantity of Wool.
It kills TICKS on Sheep.
It cures SCAB on Sheep.
It cures all SKIN DISEASES on Animals.
It kills all VERMIN that infest Animals, Trees, Plants and Vines.

☞ For Foot-Rot it is a sure cure, used as a poultice.

☞ **ONE POUND of this Extract will make TWELVE GALLONS of Wash, and contains the strength of EIGHT POUNDS of Tobacco, as prepared by Farmers.**

Sold by all Druggists and Country and Agricultural Stores.

SWORD AND PLOW.

THERE once was a Count, so I've heard it said,
Who felt that his end drew near;
And he call'd his sons before his bed,
To part them his goods and gear.

He call'd for his Plow, he call'd for his Sword—
That gallant, good and brave;
They brought him both, at their father's word,
And thus he his blessing gave:

"My first-born son, my pride and might,
Do thou my Sword retain;
My castle on the lordly height,
And all my broad domain.

"On thee, my well-lov'd younger boy,
My Plow I here bestow;
A peaceful life shalt thou enjoy;
In the quiet vale below."

Contented sank the sire to rest,
Now all was given away;
The sons held true his last behest,
E'en to their dying day.

"Now tell us what came of the steel of flame,
Of the castle and its knight;
And tell us what came of the vale so tame,
And the humble peasant wight."

O, ask not of me what the end may be!
Ask of the country round!
The castle is dust, the Sword is rust,
The height is but desert ground;

But the vale spreads wide in the golden pride
Of the autumn sunlight now;
It teems and it ripens far and wide,
And the honor abides with the Plow!

The Story Teller.

MILLY'S LETTERS.

BY CLIO STANLEY.

[Concluded from page 204, last number.]

VI.

AT THE PARSONAGE, May 1st, 1865.

CAN it be, dear MADGE, more than five years since I have written to you? It does not seem possible, yet it must be so. *Then* it was May-day with us all! Youth and beauty and love cast roses, dripping with fragrance and sunshine, on our paths, and we could only lift up our glad voices and sing songs.

I heard CLAIRE singing to our little NELLY an hour ago, and her sweet sad voice seemed to

"Ring in the crimson sunset
Of the long forgotten years."

Our four-year old MADGE, your own little namesake, was sitting by me, and she looked up with such a piteous face as she said, "Aunt CLAIRE don't sing *happy* as you do, mamma; there's a little cry in her tune." The child had guessed aright! There is a faint undercurrent of sadness running through all her words and her songs, though she wears a smile, sunny as ever, on her dear face, and never says a word to us of her grief.

You know as much of it as *we* do. Never, since we sailed for Europe, the week after I was married, has CLAIRE heard one word from him! In my own heart I believe he is dead, and I think she begins to think the same. Five years of silence is enough to break any woman's heart, when she loves a man as entirely and devotedly as our CLAIRE loved JOHN BOWEN.

She goes about the house quietly enough, but with a lingering step, as if all the time conscious of something left behind; and does she not leave something behind her at every step? Each day I can see she greets the morning with a faint, sweet hope in her heart, born of her own truth and love and patience, and which we have neither of us the heart to discourage; and each night she buries it away in the dim sepulcher, only to woo it to resurrection in her dreams. I often find myself wondering how she can hope so *against* hope, but I never grieve her by saying such a word.

As she goes hither and thither over the lawn, with that rare face of hers—so shy and tender, yet so beautiful in the strength of belief, she seems to me like a Calla lily, that royal blossom whose

"Spirit yearns with passionate power
'Cross the gay slopes of Time."

Just now she has come in, her apron heaped and running over with the first roses of the season, which seem to have opened this year in unusual perfection. You know we are so much further south than you that we greet the best half of the year at least a month earlier than you do in your mountain home.

What dreams we used to dream up among the rocks, just back of your father's house; and what visions of beauty we could see as we looked off far over the valley into the luxuriant cloud-land. We don't see the *sunsets* here in half their perfection, as you do, and that is all I can regret in my dear little home. Only a mile away lies the sea, and down there on the crisp, gray sand I take my evening strolls. ROBERT generally finds time to go with me,—for if he has any other thought, there in the seclusion of his quiet study, I drop in upon his happy labor with a pleading smile that wins him at any time. The time has never come yet, dear MADGE, when we have tired of one another; fruition is still sweeter than was the desire, and I doubt whether you could find a more contented, harmonious home circle than ours on mountain or in valley.

My husband is a devoted pastor, and I own one of my sincerest pleasures is in working with him for our people. Our little church stands just beyond the house in the shadow of a beautiful grove, where birds sing their exquisite songs, and the cool winds chant among the branches.

That is CLAIRE's favorite retreat: she will wander there, listening to the wind for hours; she says it comes fresh from the sea, and always seems as if it were some winged messenger, bringing her "tidings of great joy." I am so glad she can enjoy these hours. She seems to *rest* then in full content, like a tired child falling asleep in a meadow full of clover blooms; scarcely a thought of the outer, busy world of care and sorrow to trouble her, but only "in a half-dream," where she weaves her own glad fancies in bright, unfading colors!

Little MADGE has come in and is standing by me, patiently waiting for my pen to stop, but I must just wait to sketch her for you. She has your color of hair—the purple-black that NANNIE used to rave about; eyes large and dark, but almost of a blue shade, while her features are like mine, with a dash of humor about them caught from her father. She is as brown as a little berry, for I let her run out in the sun and wind, caring little for the delicate complexion I used to prize, but all for the rosy cheeks, the glad look of health.

NELLY is her father's self in miniature. Golden hair curling away from her pure, fair brow, and deep blue eyes full of gleams of mirth; full red lips and dimpled cheeks, a nose just the least trifle *retroussez*, and rather low but broad forehead. There you have my two darlings! Only, MADGE, no words of mine can reproduce the love-light shining on their dear little faces; the trust and faith in the uplifted eye, nor the gentle grace that adorns them. All this you must *see* to understand, and though I look at them through *mother-eyes*, yet you would hardly fail to see the promise of rare womanhood in them could you see them. If they live here till then; *if not*, ah MADGE, they will be wondrous fair among the angels!

Ever your fond MILLY.

VII.

AT THE PARSONAGE, June 2, 1865.

DEAR MADGE:—Our weary time of waiting and watching, hoping and despairing is, at length, all over, and we look about, over our little household, recognizing with glad love the fact that each one has full share of the happiness that passeth not away.

Yesterday, I had been busy all day, for we have had company for a week—some of dear ROBERT's student-friends—and just at dusk I went out to take a little bit of a walk. It was a clear, beautiful twilight, and we urged CLAIRE to go with us, but she said "no" to all our pleading, saying she would rather stay with the children. I have sometimes thought she clings to their childish love as to her one consolation in life. But that's all past now!

We had been gone nearly an hour, and, returning, found a man leaning over the little gate, looking into the open window where CLAIRE sat playing with the little ones. ROBERT hesitated a moment, then going up to him, said, laying his hand on his arm, "Will you come in?" for you see we knew he was a traveler by his garments all dust-stained and worn. He turned away at first, then suddenly turning around again, we were brought face to face with JOHN BOWEN!

Yes, *himself!* and I know you cannot be more astonished than I was. My heart beat so fast for a minute that I thought I could not stand. Then, as I saw the look on the man's face, I controlled myself, and said, "You see CLAIRE; don't wait here." He turned to *me* then, as he said brokenly, "Those children—are they *her's?*"

"No! indeed! they are mine. CLAIRE is not married, and never will be unless you have come back to fulfill your promise."

But the words were scarcely out of my mouth before he was at the door—then inside, and when we reached the room he was holding her in a close embrace, as if he would never let her go again, saying, with a voice that sounded as if tears were dropping into the broken utterance, "Oh, my darling, my poor darling, I can never let you go from my arms again," while CLAIRE looked just ready to faint, with her white face and great frightened eyes. Then he bent over her, and left kiss after kiss upon her cheeks and lips and brow, unmindful of us all, until CLAIRE leaned her head on his shoulder and burst into a flood of happy tears. I cried, too, for sympathy, while even ROBERT, though saying he *could* not see what we were all crying for, had a few bright drops in his own eyes, which he quite forgot to wipe away. Little MADGE went quietly up to him and began pulling him away, saying "Nobody shall rumple Aunt CLAIRE's pretty ruffles but NELLY and me," which made us all laugh, and then we were ready to sit down and hear his story, though he would not move away from CLAIRE, but sat holding her hand all the time. You know I always thought him an undemonstrative man, but I have changed my mind since last night.

And now for his record. Only two weeks after *we* left the country he received news from England that his favorite uncle, the one for whom he was named, was seriously ill; and, if he would see him alive, so the writer said, he must hasten to him at once. A steamer sailed in three days from that time, and in its list of passengers was JOHN BOWEN'S name! he sent a little letter to CLAIRE telling her of his intentions, and of his hope of meeting her in "Merrie England," (for he is a real Englishman at heart,) but that letter CLAIRE never received, and he never had the opportunity to write another.

For now comes the strangest part of the story. The vessel in which he had taken passage was wrecked, and only himself with the captain and his little son were saved. Saved, but by being cast by the waves on the shore of an island almost as desolate as that one made famous by old CRUSOE; a wild kind of men living there, untamed, yet not cruel. They took them to their huts, and treated them as if they knew them to be superior beings. JOHN had a good many books along, which he fortunately rescued, and he really taught some of those poor, benighted creatures to read. He says it would have made our hearts leap for joy to see how glad and satisfied they were when they had once overcome the difficulties of the alphabet.

Well, for nearly five years he has lived there, he and the old captain,—for the boy pined so for his mother that nothing at length would arouse him, and he fell asleep just at the close of one of the loveliest days of last June, and they buried him there under an old pine tree. Think of the requiems sung over his lonely grave when the wind rises at night!

CLAIRE seems half in a dream. She cannot realize that such blessedness is really hers, though I do think if any one in this world really deserves GOD's richest blessings, it is our dear old CLAIRE.

They are to be married next week, and will perhaps settle near us. He is no longer the poor schoolmaster, but one of the richest men for miles around. His uncle died four years ago, leaving him all his immense property, and so CLAIRE don't succeed in marrying a poor man after all.

Dear MADGE, you saw her once as the belle of the ball-room; come now and make us a visit and see her in her *role* as Lady Bountiful, for such I am sure she will be.

The vessel which took JOHN up, finally, at his island home, was bound for England, so he went to his old birth-place and staid a fortnight. You should see the trunk full of things he brought to CLAIRE.

Exquisite laces fit to adorn a queen's throat, dainty mulls and soft cashmeres; and silks—*you* would look well in some of them. Then there was a tiny velvet and gold casket, lined with amber satin, and at the bottom, lying there in pure, solitary splendor, was a diamond bracelet, which he told us had been his mother's. There was a curious blending of pride and sorrow in the way he said it, which I would give much to fathom. But that will probably be CLAIRE's task, not mine. I only know from hints he has dropped several times that there is some sad mystery about his family history which lies heavily on his heart. But I will not think about it longer, for it is enough to know him kind and noble and true. Last came four exquisite little vases of tinted wood, with the strangest carved figures upon them; they were of Persian device he told us, and the wood was still rich and spicy with the fragrant odor of that far-off land. Two of them he gave to MADGE and NELLY. Baby looks at hers with wonder, but MADGE holds hers up against her face and says "It is sweeter than roses!"

But why cannot you come and see us all, and rejoice with us? Your little namesake pleads for you; ROBERT says he longs to see you, and as for me—why, the day that brings you to our door shall be the merriest day of all the glad, glad year! Come soon.

Your loving MILLY.

Wit and Humor.

A LAWYER'S ODE TO SPRING.

WHEREAS, on certain boughs and sprays,
Now divers birds are heard to sing,
And certain flowers their heads upraise;
Hail to the coming on of spring!

The song of those said birds arouse
The mem'ry of our youthful hours—
As green as those said sprays and boughs,
As fresh and sweet as those said flowers.

The birds aforesaid—happy pairs!—
Love 'mid the aforesaid boughs enshrines
In freehold nest, themselves, their heirs,
Administrators and assigns.

Oh! busiest term of Cupid's court,
Where tender plaintiffs action bring—
Season of frolic and of sport—
Hail, as aforesaid, coming spring.

A LITTLE three-year old in South Boston was considerably excited the other day by seeing the cat kill a mouse. The next day she asked her mother suddenly:—"Who made the birdies?" "God made them, my child." "Who feeds the birdies, mamma?" "God feeds them." "Mamma, who made the mice?" she continued. "God made them." The little one was thoughtful a moment, and then asked, energetically:—"Does God keep a *cat?*" The mother told her she would tell her all about it when she got older, but for the present she had better go play with her new India-rubber doll.

SEVERAL of our exchanges, in publishing the following paragraph, print the name of the poet "WADSWORTH," thus indicating an ignorance of the subject equal to that which it is intended to ridicule:

Soon after the death of WORDSWORTH, a man met a farmer of the neighborhood, and said to to him: "You have had a great loss." "What loss?" "Why, you have lost a great poet." "Oh! ay," said the farmer, "he is dead, but I hev no doubt his wife'll carry on the business and make it as profitable as iver it was."

A FRIEND asked a pretty child of six years old, "Which do you love best, your cat or your doll?" The little girl thought some time before answering, and then whispered in the ear of the questioner, "I love my cat best, but please don't tell my doll."

"HAVE you not mistaken the pew, sir?" blandly said a Sunday Chesterfield to a stranger who entered it. "I beg pardon," said the intruder, rising to go out, "I fear I have; I took it for a Christian's."

A NEW author asked an editor his opinion of his books. The answer was, "I have found a great deal of good and original matter in them; but what was good was not original, and what was original was not good."

LITTLE girls believe in the man in the moon—big girls believe in a man in the honey-moon.

AN unwashed street boy, being asked what made him so dirty, replied, I was made, they tell me, of the ground, and I reckon it's just working out.

AN anti-hymenial punster says that the recriminations of married people resemble the sounds of the waves on the seashore—being the murmurs of the tied.

A DANDY wishing to be witty, accosted a young bell-man as follows:—"You take all sorts of trumpery in your cart, don't you?" "YES; jump in, jump in."

A GERMAN being required to give a receipt in full, after much mental effort produced the following:—"I ish full. I wants no more money." John Swackhammer.

JOSH BILLINGS says:—"Give the devil his due" sounds well enough in proverb, but mi friends, what will become uv me and you if this arrangement is carried out?

THE editor of a Chicago newspaper has declared, in speaking of the filth of that city, that he had two hundred and twenty several and distinct smells, with three wards to hear from.

WHAT quadrupeds are admitted to dinner parties, balls and operas? White kids.

AT an agricultural dinner the following toast was given:—The game of fortune. Shuffle the cards as you will, spades must win.

A YOUNG lady, on being asked where was her native place, replied, "I have none; I am the daughter of a Methodist minister."

MOORE'S RURAL NEW-YORKER,

THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or any other number. Subscriptions can begin with the volume or any number; but the former is the best time for those who wish to preserve the paper for binding, reference, etc. ☞ A new Quarter begins April 6th, a good time for club or single subscriptions to commence. See head of News page.

The Best Way to obtain subscribers for the RURAL is to *show the paper*. Take a number in your pocket when you go visiting, or to the store, mill, etc.

Remit by Draft.—Club Agents are requested to remit by Draft or P. O. Orders, whenever they can be obtained, and either can be sent at our risk.

A CARD TO AGENTS AND ALL WHO want a good paying business; secure at once the agency for the People's Edition of Irving's great work, THE LIFE OF WASHINGTON; five volumes complete in one, at less than half the former price. Address E. B. TREAT & CO., Publishers, No. 654 Broadway, N. Y.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

HINTS FOR THE MONTH.

JULY is a month of heat and harvest. Commonly it is the hottest month of the year; yet it is one which exacts severe toil from the farmer, for it likewise takes precedence of all other months in the gross amount of hay and grain harvested. But we anticipate the farmer will work cheerfully during the present July, for, generally, the crops to be harvested are promising abundant rewards for toil. Finer wheat fields we have never seen even in those palmy wheat growing days when the rich harvest was so golden and famous in the Genesee Valley, than recently on a hurried trip through some portions of Ohio, Indiana, Michigan and Illinois. Corn, so far as we observed, stands well, and has a good color, though small; but we hear from some localities serious complaints of the ravages of the cut worm. This pest is becoming a formidable enemy to corn growers. Newly seeded grass fields will give heavy crops, and the spring-grown grains are dependent only on sufficient rain to yield satisfactorily. Pastures are finsh, having sent up the grass so rapidly that stock is wallowing knee-deep in it. White clover is unusually plentiful. In respect to grass the first three weeks of June made good all deficiencies caused by cold and backward May. So, despite the forebodings caused by the wet and chilly spring, farmers have now a cheery harvest prospect before them, and the business prosperity of the country depends very much on the abundance of this year's crop.

The Hay Field.—No crop deteriorates faster than clover when it becomes over-ripe. Do not let the brown heads dot the clover field. Cut it green, sun it a few hours, and let it sweat in the cock. We think it less work to cure clover for the mow than timothy, both being in the same stage of ripeness when cut. Clover will bear stacking in an apparently much greener state than most other grasses. Of course your tools for the hay field—the rakes, forks, scythes, wagon-racks and machines—are all in readiness Keep the work snug, and do not be tempted to risk too much grass down at once, taking the chances of the weather.

The Grain Field.—If the weather is good, cut before fully ripe, if contrary cut later, shock and haul as soon as possible. It pays to bind wheat and oats well, and shock carefully so as to shed rain. A great deal of grain might be saved from sprouting by careful and skillful shocking. Rake the stubbles. Barley can be handled best unbound. Reap it, and if heavy and somewhat green let the gavels dry a day, then cock it with barley forks. In this condition it will throw off a great deal of rain and cure well. If the weather is extremely hot, work early and late, and take long "noonings." Strong tea, taken clear, is a refreshing beverage for the harvest field; it may be drank warm or iced, though if taken hot it is equally refreshing and more healthful.

The Hoed Crops.—Machinery aids farmers to such an extent that time is found even in haying and harvesting to give some attention to the hoed crops. This is necessary. The late season crowds the work "all in a heap." But hoeing can hardly be tolerated—only with the horse, and you should so manage the work as to be able to run through the corn and potatoes even in haying time. While the machine is mowing the men can cultivate.

Turnips—May be sown in the corn and potato field, if space is left vacant by the working of the grub, wire-worm or other cause. It is better to have a hill of turnips growing where the worm has destroyed the corn than a hill of weeds. If you have neglected planting other root crops you have yet a chance for turnips, and should by all means try and grow a partial supply for winter use.

Cabbage—For feeding to stock is a profitable crop. It is good all through the autumn months, and with little care and shelter may be kept good for stock until the middle of winter. One acre of cabbage is worth four of meadow for feeding cattle. Cabbage as well as turnips may be profitably grown in the corn field where worms have taken the corn. The large flat Dutch, Drumhead and Marblehead Mammoth are excellent kinds for feeding purposes.

The Summer Fallow—Should be thoroughly harrowed. July is rather late to plow a tough, old sod for wheat, especially if the summer be a dry one. Clean clover leys may be plowed late in the season—even in August, and if the work be well done it is a good preparation for wheat without a second plowing. Collect all the manure possible to give such fields a top-dressing with.

Weeds.—July is full of peril to the farmer from his great enemy—weeds. His danger is from their seeding. It is better that a shower of rain fall on the unbound sheaves than for a shower of Canada thistle blossoms to fall on the bare earth.

THE HAYING SEASON.

FARMS of any considerable dimensions—especially stock ones—usually contain portions varying not a little in soil and position. Some sections may be what are denominated "bottom land," thickly coated with turf and proof against the effect of the summer sun. Other portions more elevated will naturally be put down to clover and timothy and these require early mowing. If left till late in the season before being mown, the sun will scald the roots of the grass and prevent an after growth or such a one as an earlier cutting would have supplied. The gain in bulk from late mowing, if there is any, is more than counterbalanced by the loss in quality. Early cutting produces a rich aftermath and preserves the meadow from the withering effects of an August sun and the drouth common to that season of the year.

STABLE FLOORS.

MANY horses are doubtless injured in consequence of the improper construction of stable floors. In warm weather the horse is naturally restive and stamps about a good deal, and the consequence is, that with a hard, unyielding floor, the animal is likely to become injured. As a preventive of injury from this cause, W. L. DARBEE, V. S., of West Falls, N. Y., says: "When you are ready for laying the stable floor, get plank four feet long, two and a half inches thick, and lay them down so as to leave a space of two feet in front of the horse's fore feet to stand on. Fill the vacant space up with blue clay or mortar made of dirt, and wet it often, and your horses will never be troubled with contraction or fever in their feet. Make the stalls four and a half feet wide so as to leave plenty of room alongside of the horse. A stone floor is the worst kind of one. Better let the animal stand altogether upon the ground."

HIGH vs. LOW BARNS.

THE introduction of the horse-fork for pitching off hay not only enables the farmer to save time in its handling, but makes high barns both convenient and desirable. The argument for the prevailing custom of building low barns, was based on the inconvenience of pitching higher than could be reached with the hand-fork. It was readily admitted that a barn with fourteen or sixteen feet posts would not hold as much in proportion to height as with twenty to thirty feet posts. Hay in the mow settles in proportion to height or pressure. A barn with twenty-four feet posts will have as much capacity over a stable eight feet high as one having only sixteen feet posts without any stable. The high barn also gives abundant room for grain, after settling, when filled to the ridge with hay; besides hay will come out sweeter from a high than a low mow. The gasses and moisture from a mow of hay pass off at the top, and if any is injured it will generally be found at the top. Height also improves ventilation for animals stabled. Snow will lodge less on a high than a low roof. And lastly, a high barn is much CHEAPER in proportion to its capacity. The foundation and roof cost the same. The only addition to the expense is in length of posts, boards, one tier of girts and a few nails. The increase of labor is very little. But the increase in capacity is, at least, sixty per cent., while the expense does not exceed ten per cent.

But we hear some one say, "The roof will blow off, and the barn very likely blow down." The roof may, perhaps, be exposed to a little stronger wind by the elevation, but with a little attention to the manner in which wind lifts off roofs, a remedy will be found. Roofs, when blown off, part at the side and sometimes fall both ways, but do not raise at the eaves and end over. Without observing this fact, barn builders sometimes anchor the foot of the rafter, leaving the ridge without security. It only requires each pair of rafters to be collar-beamed under the ridge to render the roof secure against any wind not strong enough to carry off the barn bodily. The foot of the rafter may be anchored also, but this is of less consequence. It is necessary to prevent the barn racking with a strong wind, to put in a pair of long braces on each end, reaching from the sill near each corner post to the top of the center post. A four by twelve inch joist will give the requisite stiffness. If the barn is long, a pair should also be placed in the center bent. The long braces will hold the barn more securely than all the small braces. We have a barn with 20 feet posts, standing on a wall seven feet high, presenting a broad side 27 feet high and 84 feet long to the wind, which has withstood many gales that have blown off roofs from small, low barns in the vicinity.

OCTAGON HAY BARN.

We wish to recommend to our brother farmers the octagon as the model form for a simple hay barn. It can be built without cross beams or interior posts, and leaves the whole inside space without any obstruction. This, as will readily be seen, offers great facility for pitching with the horse-fork into side windows. And as there are no obstructions inside, the hay will settle even. There being eight sides, as many windows or pitching places, out and in, may be had as convenience requires. Besides a large barn may be built without any long timbers. The longest timber required, except for rafters, to build a barn fifty feet across, is only twenty-four feet, if the timbers are halved together at the corners, which is best, or but twenty feet nine inches if beveled together and a tongue mortised in and pinned—that is each side is twenty feet and nine inches. An octagon with sides sixteen feet and seven inches makes a building forty feet across, containing 1,325 square feet of floor, and with twenty feet posts will hold over fifty tons of hay. It will also be observed that the sides of this barn make 132 feet of outside boarding, while a thirty by forty feet barn has 140 feet of boarding, yet has but 1,200 square feet of floor. It requires much less lumber, as all the inside works are dispensed with, and less carpenter work in framing, but there is a little more work in roof boarding and shingling.

This form can be built, as a simple hay barn, for at least one-fourth less than the old style, besides being much more convenient. The upper tier of timbers should be bolted at the corners with three-fourths or inch round iron about three and a half feet long to prevent spreading. These barns require less bracing than the square or oblong, as the roof forms a brace at the top, and each side braces against every other, are secure against wind, and the roof furnishes no lodgment for snow. E. W. S.

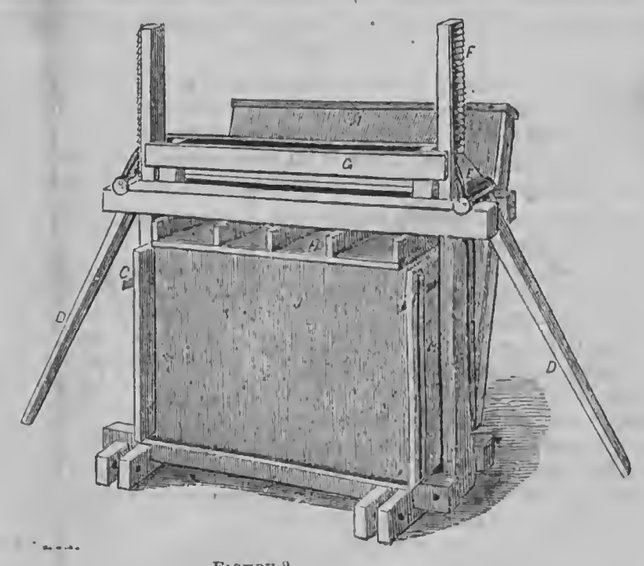

FIGURE 2.

THE HARRIS HOP PRESS.—PATENTED IN AUGUST, 1860.

As the hop-growing business is annually increasing in importance and magnitude, growers and dealers in hops have occasion to adopt new inventions and improvements. Among the most important items to the hop-grower, as well as to dealers who have occasion to re-bale hops, is a good press, and hence we take pleasure in illustrating and describing the celebrated Harris Hop Press, first patented in August, 1860, and since very generally introduced and highly approved in hop-growing sections. The proprietors of the patent—Messrs. BUCKINGHAM, WALSH & Co., of Waterville, Oneida Co., N. Y.—affirm that the Harris "has become practically *the only* hop press in the country"—that "so rapidly has it come into favor that *four-fifths of the hops grown in the United States are baled with this press*"—and that "it is simple, durable, not liable to get out of order, cheap, portable and easily worked." These are strong claims, but the proprietors affirm that they can be fully substantiated. They thus describe the press:

"In the above cuts, Fig. 1 shows the press complete. The press is portable, and may be taken apart so as to pack in quite a small space. It stands upon a strong frame-work of timber, to which all other parts are attached. The sides, A, hook into the bed-frame in such a way as to be readily removed. They are held in place by means of a latch, C, which drops into a catch which is attached to the ends, B, and passes through the frame of the sides. The ends, B, are only about half the height of the sides, and the space above them is filled up by four movable pieces, secured by buttons, and which may be removed one at a time as the pressing proceeds. One of the pieces, I, is shown in place and the others removed. At the top of the press is a strong frame-work, G, upon the projecting ends of which work the levers, D, upon the ends of which is a pair of pawls, E, which work in the teeth, F, which are upon the face of two strong side-posts. The frame, G, presses upon a follower, H, Fig. 1. The action of the two pawls, E, is such that when the lever is worked in the manner of a pump-handle, they force down the frame, G, with great power. When the hops are pressed sufficiently, the sides and ends of the press may be removed by lifting the latches which hold them together, and the bale may be sewed. Fig. 2 shows the press with the front removed, and the rear side inclined backward, exposing the bale. The letters refer to the same parts in both engravings."

For further information relative to this valuable improvement see advertisement.

AGRICULTURAL PROGRESS OF THE SOUTH.

THE planter correspondents of the Southern Cultivator advocate more corn and grass growing, stock raising, and less cotton, at this time of transition from slave to free labor, when it costs so much to grow cotton. One planter says, "we raise taxed cotton to buy untaxed hay, when our lands will make from two to four tons of hay to the acre: that the tax on cotton direct and indirect amounts to about $20 per bale, and as a matter of pecuniary calculation cotton growing to the neglect of general farming is suicidal." Another planter at Cave Spring, Ga., says he made a large fortune by cotton, and lost it by the war; now he is beginning to farm on a valley farm in the mountains, growing grain, grass and stock. By such a system he says, "but a few dollars are necessary, and by rotating, manuring and seeding down land to grass, clover, cow-peas, &c., a farm may be enriched and made more productive yearly." He is fully convinced that at the present cost of labor the taxed cotton crop can no longer be made profitable as a general crop, and that farming and fruit growing must be adopted in its stead. To grow cotton successfully he says, "the land must be enriched and labor economized so as to make one hand do what it takes three to do now; and by labor-saving machinery to make two hands do the work of five." "In Upper Georgia there is a soil of unsurpassed productiveness, adapted to all the grains, cotton, clover, the grasses and tobacco, as well as every variety of fruit."

Although grass will not grow as well in summer as it does in the high, cool, dairy region proper at the North, yet all Middle and Western Georgia has the best of fall and early winter pasture, and after February both the white and yellow clover make good pasturage. It appears that all the Northern grapes which thrive at the South change their habits and become winter grapes, and grow even during the warm days of winter. The yellow clover or Spotted Lucern, (*Medicago Maculator*) a very prolific biennial which freezes out here, grows nearly through the winter in Middle Georgia, and is becoming a favorite forage plant; this with red clover and all the other leguminous plants, being very rich in nitrogen, cannot fail to enrich the soil, either as a green crop plowed in, or when fed to animals, and the manure well saved and applied to the soil. The editor of the Southern Cultivator, who is also a practical farmer, says that all the South wants to make it the most prosperous farming country in the world is more attention to grass growing and stock raising so as to enrich their land and make twice the present growth of cotton to the acre, and even at less expense. He said that their cattle had lived on the white and spotted yellow clover since Feb'y, and then in March red clover was two feet high. In Western New York no village cow was admitted to pasture until after the 20th day of May. But after all, cotton must continue to be the great paying crop of the South, and general farming and stock growing is the cheapest and most certain means of enriching the soil, so that fewer acres will produce more cotton at less expense than under the present system. LXXVI.

PRESERVING MEAT.—The Central Railroad is preparing to carry beef to market in cars lined with cork, a non-conductor of heat. The atmosphere is forced through the car in chambers at both ends, keeping up a constant circulation of cold air. Cattle can thus be slaughtered near their pasture grounds and be brought to market in a fresh and wholesome condition.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

To Correspondents.—Mr. Randall's address is Cortland Village, Cortland Co., N. Y. All communications intended for this Department, and all inquiries relating to sheep, should be addressed to him as above.

THE WOOL CLIP OF 1867—THE TARIFF AND MARKET.

The communication below from Hon. Mr. Grinnell—so well known to our readers as a distinguished champion of the wool growers' interests in former Congresses—to a great extent anticipates and precludes the necessity of publishing our own views on the same subjects, as we designed to do in the present issue of this journal. We will, however, make some additions to his statements—extending them to the wool clip of the East. The past winter was one of unexampled severity and duration. We have recently received upwards of two hundred letters from growers in New York and New England—mostly from the former,—but also from some of the principal wool growing localities of the latter. From nearly all come accounts of an extraordinary mortality among sheep. Up to quite a late period in the winter they did, as we then judged, well—perhaps unusually well. A snug, short winter is rather favorable than otherwise to sheep which enter it in good condition, and have plenty of feed. But if too long continued—if sheep are too long confined to dry feed—they gradually lose strength and become predisposed to disease. And if it becomes necessary to shorten their keep towards the close of a long, exhausting winter, the consequences are extremely disastrous. This was the case in New York. Hay had been a poor crop in 1866, and it rose to twenty dollars a ton in a great many regions, for farm use, i. e., where there were no adjacent cities or large villages to increase the local consumption. In some regions it could scarcely be obtained at any price. Sheep had to be turned out to pick the old winter, killed grass in the fields, receiving but little hay. And the exceedingly poor corn crop of last year rendered the coarse grains too scarce and high to be fed liberally, except by those who owned the best blooded and most valuable flocks.

Tegs—the most difficult of all sheep to winter—accordingly perished in vast numbers. The breeding ewes which lambed very early—in February and the fore part of March—generally, we believe, did well,—but these were mostly confined to choice breeding flocks, on which no expense is spared. Of the later lambs, we are inclined to think that at least one-third perished. In some regions fully one-half perished. Even those which lived from two to four or six weeks, getting an insufficient supply of milk from their enfeebled dams, succumbed to the constant and heavy rain storms of the spring. And all the old and feeble sheep also perished. The late and precise information which we have obtained compels us to adopt the conclusion, contrary to our earlier opinions on the subject, that, taking the whole country together, the *spring* of 1867 has been a particularly fatal one to sheep. We entirely agree with Mr. Grinnell, Gen. Harris of the Ohio Farmer, and other highly intelligent gentlemen who have investigated the subject, that the wool clip of this year will not exceed, if it equals, that of last year.

Were this otherwise—were the increase as large as would be expected from the natural increase of sheep—what then? Would our wool market, if in a healthy condition, and supplied only by the domestic clip, be glutted with our wools? He who arrives at this conclusion must be surprisingly ignorant of the facts. Why, then, the present low prices of wool? Is it because we are not sufficiently protected from foreign competition? Is the present wool and woolen tariff too low? Is it doing no good? It *has* shut off any large importation of wool and woolens. We are suffering from no serious foreign competition, *except where the article* (and this was principally *woolens*) *was introduced before the present tariff went into operation.* The tariff cannot materially benefit the wool market until this enormous stock of foreign goods, which only paid the duties of the former tariff, is drained off. Our woolen mills are running short time and are languishing from this cause. They cannot buy our wools promptly, and at the prices which those wools ought to command, until the products of European cheap labor—cheap, showy, but usually comparatively worthless products—are first used up. No tariff ever exerted its legitimate influence on our markets, while they were filled by competing articles of *prior* introduction. It is not to be expected. It is *not* in the nature of things.

Other circumstances have exercised their depressing influence on wool and woolens. Business has been stagnant. Compare the published incomes of our city merchants with those of previous years! This is not the place to enter upon the physical or political causes which have produced the depression, uncertainty, and feebleness of trade and commerce. Manufacturing industry is always the first to feel such hostile influences, and when that droops, the producing industry which depends upon it for its markets, must droop with it.

Without the wool tariff, wool production in the United States—at the present cost of labor and subsistence—must have gone to swift destruction, and we are strongly inclined to believe that our wool manufacturers themselves could not have weathered the present crisis in their affairs. As it is, both interests are severe sufferers.

When will this end? It will end only when the old stocks of foreign goods are consumed, and when the business affairs of the country resume their healthy tone. If the political and financial condition of the country becomes settled, so that our natural markets and trade open and revive, it will come soon. We are among those who look forward hopefully for a not distant change in this direction.

In the meantime we must expect to hear all sorts of medicines proposed for the existing diseases. One will tell us that the Tariff is not high enough—that we ought absolutely to prohibit foreign wools, and thus compel our people to go naked or take our wools at just such prices as we see fit to ask. Another will launch his thunderbolts against the manufacturers, &c., &c. Short-winded wool growers, with one to five years experience—who went into the business as they would have gone into a petroleum speculation, expecting to secure immediate wealth without any corresponding outlay in industry,—will probably "vamose," if the present prices of wool prevail for three or six months longer. Such men's zeal is seed sown on the rock; and they will probably continue to change their occupations every second year of their lives, if they live to be a hundred.

If the present wool tariff can be maintained, we have no fears for the future. We have made sheep breeding and wool growing our principal agricultural occupation for more than a third of a century—have seen a great many ups and downs—and have lived through them all! We never felt so sanguine of the *future* of the business as we do now!

Grinnell, Iowa, June 22d, 1867.

Hon. H. S. Randall, LL. D.—*Dear Sir:* Allow me to answer many letters by one to the Wool Department in the Rural, which is read by hundreds of thousands. I am told manufacturers and flock owners seek information as to the wool clip of 1867, and after a full survey these are my convictions: 1st. The amount of wool will not exceed that of 1866, and for these reasons: when wool is low there is neglect of the flock, especially of the young, which must have attention; and there was less care than usual last season. And then the June rain storms of 1866 took off tens of thousands which were never reported, and the lambs followed their mothers; hence the usual number of lambs did not begin the winter. In addition, a spring so unfavorable for wool growing is not in memory, nor one so late. In the West, hundreds of thousands of sheep died after the usual time of good grass. Of those that are alive it can be said they felt the effects of the unprecedented high price of corn. Last autumn in Iowa it was held at from 15 to 25 cts. shocked. This spring it sold readily in the good sheep districts at three times these prices, and was too often withheld from the flock. We are just entering upon the warm days, and the fleeces are dry and will fall under the usual weight by near one pound each. I should add that the flocks which have the itch (a modification of the scab) were easily shorn, and these are numerous; yet the disease yields readily to the application of tobacco. The news of the Texas storms has passed around the continent, and the mortality among the flocks in sections of Ohio and Pennsylvania, as well as in the West, has been great.

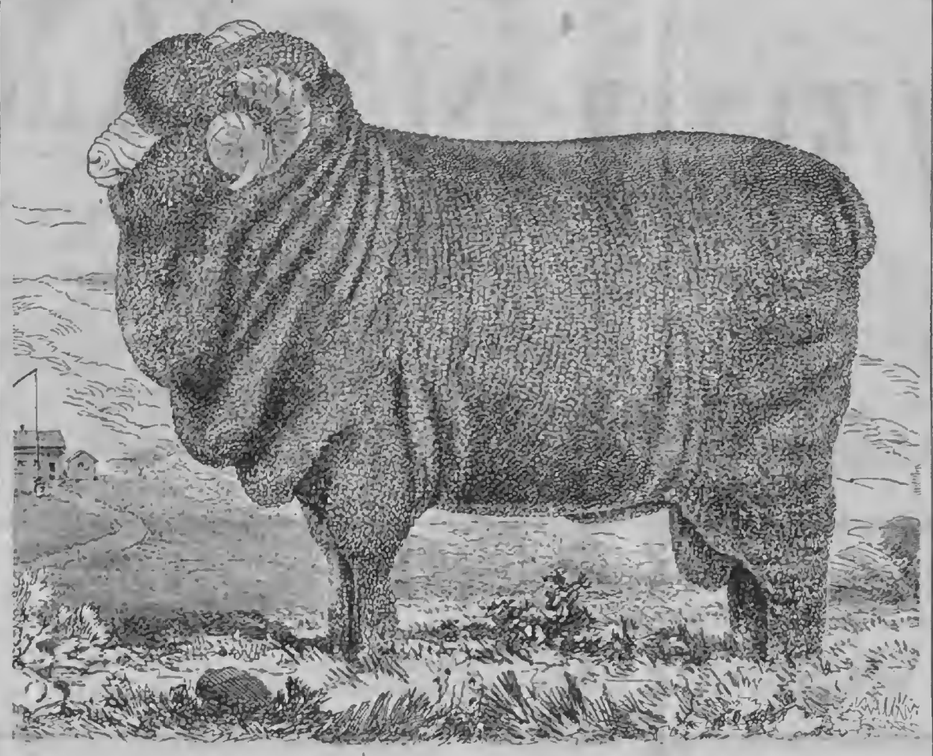
From such facts I make these deductions: 1st, Those who wish for low wool give a wrong estimate of the amount to be marketed; let them cut down their figures millions of pounds. 2d, Wool growers have good grounds for asking higher figures than the quotations. The wool is in better condition and lighter than usual by at least ten per cent. 3d, Prices of fine wool cannot be lower than last year, if the effect of the late tariff in discouraging the importation of fine wools and of shoddy is what its enemies represent and what its friends believe.

To conclude this brief note, let me say the cries of combinations and cloth monopolies have ceased. Good cloth is cheap, and, being within the reach of all, consumption must increase. The multiplication of factories has proven that competition is the surest road to fair prices and small profits. Our enemies abroad are desperate,—but if they do not this year hush the music of our spindles the infant manufacturers have the field and will prove the best friends of the flockmasters. Ever and truly yours,

J. B. Grinnell.

P. S.—It was so cold that our State Shearing Festival was a failure; yet many animals made a good shearing since clipped. Hickok's Gold Drop, weighing less than 90 lbs., sheared over 20 lbs. My ram, Bold Boy, cut 23 lbs., and a two year old, bred from a New York ewe, costing $20, had 23½ lbs.

Good care tells. One of my neighbors claims to have lost, out of a flock of 1,600, only 30 for six months past. The Brown brothers of New York, to whom I sold a farm, drove last year 2,200 from Washington Co., N. Y., to Buffalo; and though unused to our prairie hay and corn, have not lost three per cent. of their flock. J. B. G.



MESSRS. POTTLE & MALTMAN'S RAM "ONTARIO."

The Infantado ram "Ontario," the property of Hon. E. B. Pottle and John Maltman, Esq., of Ontario Co., N. Y., was got by "Seville," he by Sanford's "Comet." His dam was bred by Rollin Jones, and is of full blood Atwood stock. Ontario is remarkable for compactness and symmetry, and his get are giving great satisfaction in the same respects, and also as heavy shearers.

Condensed Correspondence, Items, &c.

Lincolns and Leicesters.—R. Gibson, New York Mills, Oneida Co., N. Y., writes us:—"There is a great difference between the Leicester and Lincoln in their wools. After being sheared a few times, the Leicesters begin to carry light fleeces, and their bellies, hocks and legs get barer every year. The Lincolns carry their wool longer on the offals and it is set much thicker on their bodies."

Photograph of a Lincoln Ewe.—Mr. R. Gibson forwards us a photograph of a drawing of a Lincoln ewe, bred by his old friend and school-fellow, T. Marshall Branston, Lincolnshire, England. It represents as admirable a specimen of form in a mutton sheep as we have ever seen. Mr. G. says:—"She weighed 364 lbs.; girth six feet; dead weight 67 lbs. per quarter; killed at five years old; bred five lambs; averaged 15 lbs. of wool at each shearing.

Sheep Shearing at Rush.—The wool growers of Rush and Mendon held a sheep shearing at P. Martin's, in Rush, Monroe Co., N. Y., on the 8th day of June, 1867, of which the following is a report:

Owner.	Sex.	Age of Sheep. yr.	Age of Sheep. m.	Wt. of carcass. lbs.	Wt. of carcass. oz.	Wt. of fleece. lbs.	Wt. of fleece. oz.	Age of fleece. y.	Age of fleece. m.	Age of fleece. d.
P. Martin,	E	1	1	79	12	12	12	1	1

The premiums were awarded as follows:—Best ewe fleece, E. P. Clapp, Rush; 2d, P. Martin, Rush. Best ewe for style, P. & G. F. Martin, Rush. Best ram, P. & J. J. Martin, Rush; 2d, Wm. Rodgers, Mendon.

Premium on Shearing.—1st, M. Cooley, Henrietta; 2d, J. D. Clickner, Rush.

The above buck fleece that weighed 24 lbs. 1 oz., after being cleansed weighed 6 lbs., 5 oz. The buck fleece that weighed 15 lbs. 9 oz., after cleansing weighed 6 lbs., 10 oz.—as certified by W. R. Hunt, manufacturer, of No. Bloomfield.

J. B. Martin, *Sec'y.*

Communications, Etc.

WESTERN SUCCESS;

OR, NOTES FROM MY JOURNAL.

In 1863 I was in Minnesota. While there I became acquainted with a gentleman who for the past fifteen years had lived in various parts of the West—being a native of Vermont. I will give a brief sketch of his success for the benefit of Rural readers, and any who may be inclined to "move West."

When of age, with no other earthly possessions than a wife and three hundred dollars in money, he left the hills and ledges of his native State, and came to Wisconsin. In this State he lived for a number of years. His location was none of the healthiest. The ague finally mastered him, and he moved to Iowa. Back from market, with no prospect of facilities being better for a long time, he, after a short stay, again changed his location and moved to Minnesota, in the vicinity of St. Paul. At the time of my acquaintance with him, he had been a resident of the State for ten years—was the owner of one-half a section of land—while his cash sales during the year were from four to five thousand dollars. Fifteen years before his only capital was an intelligent and industrious wife and three hundred dollars;—to-day his capital is estimated at twenty thousand dollars, and all made by farming.

But you may ask how he succeeded so well. I will tell you. He commenced at the bottom of the ladder, and went up one step at a time. To be sure he met with discouragements—he was sick—and at times everything looked dark; but both he and his wife were "plucky," and not easily discouraged. They had gone west, resolved, if lives were spared, to win. There was no looking back—no pinings, no complainings, no fault-findings, or sighing for by-gone scenes, but a steady pressing forward. They had the pluck and tenacity of Grant—"resolved to fight it out on that line." This was the *first* element in their success.

Next, he combined good management with untiring industry and economy. His farming operations were conducted with order and regularity. Everything around him moved like clockwork. There was no hurry, no bustle, no confusion, no excitement. When he began a piece of work he finished it. There was no loss of time by running from one job to another. No more work was attempted than could be well done.

One more element. His hired men were treated like men—as though possessed of mind and feeling. They worked regular hours, and knew when their day's work was done. When chore time came, every man knew exactly what he had to do. Everything was properly cared for, because there was no *expecting another* would do this or that thing—a system that works as well in farm management as in any other.

This brief sketch tells you who the people are that *win* on this western soil, as well as anywhere. No one can come west, with limited means, and find roast turkeys on every fence, bread fruit on every tree, nor yet success without perseverance, industry and economy.

Iowa City, May, 1867. E.

ITALIAN vs. NATIVE BEES.

Eds. Rural:—More than a year since, I sent a brief communication for your journal recommending the trial of these two kinds of honey bees, to assist to settle the question satisfactorily, which race should be preferred. For by experiments, I think, in which the conditions shall be made as nearly equal as may be, unsettled questions will be most correctly decided. Theory and reasoning may go far to guide us, but actual, judicious experiment is the safest guide to theory and reason.

With a view to judicious experiment of hives I proposed to a friend who had a large number of swarms of both classes of bees, to make a trial. He did not think it advisable, and I commenced a trial by the purchase of one swarm of Italians that issued June, 1866, with native bees, issuing about ten days later, placed in similarly constructed hives. The Italian bees were not placed in my yard with the native bees until July. There was then this difference to be considered. The Italians had ten days the start. Which had the advantage in the honey field while they occupied different fields I cannot determine. I had three swarms of black bees in the same class of hives, with the Italian. When I weighed them preparatory to winter, one showed a gain of 18 pounds, one of 28 pounds, one of 31 pounds, and the Italian swarm, 41 pounds. I simply give the results, and hope another season will afford opportunity for a more satisfactory trial.

I observed in watching them that the Italians commenced some fifteen to thirty minutes earlier in the morning, continued later in the day, and worked more in weather not fair. In this case it was decidedly so. They were more irritable and cross than the native bees, and from appearance more inclined to rob their neighbors. As near as I could judge, their numbers exceeded the others from fifty to one hundred per cent. at the close of the season. Jasper Hazen.

CAPONIZING FOWLS.

Select a young cock—say from three to six months old—keep him fasting for twenty-four hours; let an assistant hold him on his back, and then make a transverse incision at the posterior end of the sternum, (back-bone,) so as to allow the fore-finger to be introduced freely into the cavity of the abdomen; the finger is to be passed first on one side forward, by the side of the spine, the testicle detached with the nail, (which should be allowed to grow long to facilitate the operation.) Having got out one, the other should be removed in the same manner. The wound should then be closed with a suture, the bird placed in a warm room, and fed on soft food for a few days. Instead of cutting away the testicle with the nail of the finger, it is the practice in some countries to introduce a small tube, or reed, with a double thread, forming a noose, which, being passed over the testicle, is drawn outward through the tube, so as to cut off the connection, and the testicles are thus removed, one after the other. The Chinese adopt this method, and use a reed and a thread of cane fiber—which, by its firmness and, at the same time, elasticity, suits well for getting on the noose.

The operation may may also be performed by making an incision before the thigh, in the side, in the same manner as in spaying pigs; but it is sometimes difficult to get out both testicles in this way, and an incision is, therefore, sometimes required to be made in the other side, and the double operation is more likely to destroy the fowl. Some make capons by passing the fingers along the rectum, and breaking down the testicle by pressure; but it frequently does not succeed, and if they are not removed from the abdomen, after the operation has been performed by incision, it sometimes happens that they adhere again, and resume their functions, and the bird is not castrated. Examine the body of a dead cock before operating. Pullets are made by dividing the oviduct, in consequence of which the abdomen gets filled with eggs.

When we take into consideration the superiority of capons over the ordinary fowls, the exceedingly high value placed upon them in market, and their immense size, (often attaining the weight of 14 or 15 lbs.,) it will be seen that this process is worthy of the attention of poultry breeders. F. L. M.

Parkman, Ohio.

Squirrel Skins.—A friend writes:—"Most American hunters throw away their squirrel skins, but I always keep and tan them. To do this dissolve alum and salt together—one part of the former to two of the latter. Cover the skins with the solution and let them soak three days, when they may be taken out, cleansed and made ready for use."

Rural Notes and Items.

Our New Half Volume—Commences this week under the most favorable auspices. Renewals and new subscriptions, for either six months or a year, are now in order,—and the good crops and high prices enable every farmer to take the Rural. See notice at head of News page. Also please note, on last page, the offer of Rural and an able and popular Southern Journal (The Maryland Farmer) at a greatly reduced price, when ordered together.

Crops, Weather, &c.—Our reports of the crops, by correspondents and exchanges from all parts of the country, continue favorable. At the South,—in the Carolinas, Georgia, Tennessee, &c.,—the weather has generally been favorable for the wheat harvest, and the crop, which is an excellent one, must have been secured in fine condition. Mr. Hugh T. Peters, from Loudoun Co., Va., who has recently visited the Shenandoah Valley and other parts of Virginia, informs us that all crops are very promising, (except corn, which is only fair,) and that the wheat harvest commenced last week.

The Weather has generally been very fine in this region for the past two weeks, and all crops are improving. But Sunday, the last day of June, was signalized by one of the severest summer gales known in this region for many years. It commenced early in the day and continued until sunset. Scarcely a cloud was visible until sunset, yet the trees and vegetation writhed and struggled as if the heavens were shrouded with the blackness of a hurricane. The heat was intense—or would have been but for the wind—the Thermometer indicating for hours about 92° in the shade. We hear of no special damage, though much fruit must have fallen. The wind was succeeded by a rain storm in the evening, though but little water fell in or near Rochester.

The Death of Thomas Brown, the founder and for ten years Editor and Proprietor of the Ohio Farmer, is announced. He died of typhoid fever, at Brooklyn, N. Y., on the 13th ult. For several years Mr. Brown had been connected with the United States Treasury Department—for some time as its Agent on the Pacific coast—and acquitted himself so well that his popularity with the Heads of the Department was firmly established. After paying a feeling tribute to his memory, his successor in the Farmer, (Gen. Harris,) says that but for Mr. B's sudden and untimely death he would have succeeded to a principal place in the Department.

Ground for Turnips.—The sweetest and best turnips for family use are those grown upon new land—if burnt over, like that newly cleared—all the better for the juiciness and flavor of the turnip. If any of our readers have waste places or old and tangled brier patches, neither good for berries nor anything else, mow them down and let the stuff be on the ground and dry. A few days will suffice to prepare it for ignition. Let the fire run over it—the cleaner it burns the better. Plow and harrow it well as the case may require, and sow turnip seed broadcast or in drills as fancy may dictate. Such ground so dealt with will repay the labor many times over in the luscious turnips it will supply for winter use. Sow about the middle of July, or earlier if more convenient or desirable.

Provide Fodder.—Many farmers were short of hay this spring. Such will not soon forget how hard it was to pay $30 or $40 per ton for fodder, and will be likely to look out for future provision. Others may need reminding that corn may yet be sown for fodder and an abundant yield harvested. Buckwheat should not be neglected if you have a suitable spot for it. Hungarian grass sown on mellow soil at the rate of two or three pecks per acre will furnish a large amount of winter food for stock. Pastures on which the growth is heavy may be mown to advantage—especially clover fields. Cut the fence corners, the roadsides, swails, all places where fodder may be gathered for winter consumption.

Reclaiming Swamps, &c.—D. H. B., Akron, Ohio, asks what is the best use that can be made of a swamp which has no outlet but can be easily drained, and in which pure muck varies from three to fifteen feet in depth. Will cranberries pay on such? Drain the swamp thoroughly and it is good land for most farming purposes, especially for meadow. Cranberries will flourish on such soil, and will pay if rightly managed.

D. H. B. also inquires how to steam cut feed without using a fire. Can he tell us how to make steam without heat? Perhaps he means without having the fire in the building where the steaming is done. In that case well protected pipes must be used to convey the steam so that it will not condense.

Reapers and Mowers for Canada.—The St. Lawrence Republican (Ogdensburg, N. Y.,) says:—"Large numbers of the celebrated Dodge's Patent Ohio and Buckeye Reapers and Mowers have recently been brought here by the Rome, Watertown & Ogdensburg R. R., consigned to Messrs. Ashley & Phillips, for shipment to Canada. We are pleased to notice that our Canada neighbors are up with the times in appreciating a first-class agricultural implement, and can assure them that the farmers of the Empire State have given an unqualified indorsement in favor of Col. Dodge's improved Mowing and Reaping Machine."

—The above item reminds us of what we heard some weeks ago, viz., that the demand for the Dodge Machines this season would probably far exceed the supply, though four thousand are being manufactured.

Items from Minnesota.—We make the following extracts from a Minnesota letter sent us by "W. G:" "The truth is, Mr. Editor, we are a little behind the times this spring; we've lost a month somewhere. May played the part of April, and when June was ushered in it had the work of May yet to perform; the trees were yet to be clothed with foliage, and Jack Frost had to be driven from his strong hold. But June performed her work well. * * * But the late spring has not affected the tide of emigration. In place of the few that left on account of the cold for Missouri, and other Southern States, hundreds of industrious and intelligent farmers are coming from Illinois, Indiana and Wisconsin, besides a large emigration from Sweden and Norway, all seeking homes in Minnesota. * * * The crops look well, and we have every reason to expect an abundant and fruitful harvest."

Canada Thistles—Mow Them.—Now is the time to cut down the Canada Thistles, wherever one can be found on the farm or in the highway. It is true, they are not yet fully matured, but if left till the press and hurry of haying and harvesting distracts attention they will most likely be forgotten till too late to prevent them from multiplying indefinitely. They should be removed at once.

HORTICULTURAL.

FRUIT GROWERS' MEETING.

THE Western New York Fruit Growers' Association held its Summer Meeting in this city on Thursday, June 27th. The attendance was not large, nor did the members seem inclined to discuss very thoroughly the topics chosen by the Committee. The show of Strawberries was fair, particularly in the line of new seedlings. No other fruit was exhibited, but some flowers graced the tables.

The Report of the Committee on Strawberries may properly take the place of a more extended description of varieties on exhibition. It is as follows:

STRAWBERRIES.

Ellwanger & Barry, twenty-eight named varieties; nineteen seedlings unnamed.
H. E. Hooker, five named varieties.
H. E. Heath, two named varieties.
J. W. Gray, one variety.
M. Rowley, one variety.
O. Weeks, two varieties.
E. M. Conklin, one variety.
P. C. Reynolds, four varieties.
Frost & Co., one variety.
Worden & Son, one under name of Golden Seeded, which your Committee regard as identical with Triomphe de Gand.
J. Keech, four Seedlings, under name. The Gen. Meade and Gen. Sheridan we would commend as worthy of trial. Gen. Grant is claimed as early and may therefore be deserving of trial, but the specimens here would not justify the Committee in so advising.
A variety under the name of "Seneca Chief," fine appearance—quality second rate.
Jacob Moore exhibits a collection of Seedlings which promise well, but especially Nos. 39 and 73, which are of excellent quality.
Thos. R. Peck of Waterloo, a very superior collection of Seedlings, numbering thirty-six varieties, said to have been grown from Russel, fertilized by Wilson. In this collection the per centage is generally kept in sight, but occasionally there is a touch of Triomphe de Gand in appearance and flavor. The Nos. 3, 5, 8, 27, and perhaps 23 and 16, should have further attention, and as this, with other collections, are from young plants, of this the first year's fruiting, we trust the originators will keep them distinct, and bring them again before the Association next year.
The Seedlings of Messrs. Ellwanger & Barry, nineteen in number, are also some of them deserving further trial, but we prefer to speak more especially of only one, viz., the Seedling from Triomphe de Gand, on one plant of which we have counted 270 berries, well set as all can see, are even and fair in size and form, and of very good quality.
We notice also the Trollope Victoria occasionally under the name of Golden Queen, which is of course erroneous.

F. R. ELLIOTT,
J. J. THOMAS,
CHAS. W. SELYE.

The single variety shown by FROST & Co., was the "Dr. Nicaise," a European variety imported by them from the South of France. It

DR. NICAISE.

promises to become noted, at least for the great size of its fruit. MARK D. WILSON of this city, also exhibited specimens of this variety, one berry measuring six and three-eighths inches in circumference and weighing one and one-eighth ounces. In the large collection shown by ELLWANGER & BARRY, a seedling from the Triomphe de Gand was considered as promising. Mr. ELLWANGER stated that of the thousands of seedlings grown by them during the last ten years, this was the only one deemed particularly promising. Doubtless they have abandoned the culture of hundreds which some might have endeavored to push into notoriety.

THE COMMITTEE ON FLOWERS

Reported that there were only two exhibitors, Messrs. Ellwanger & Barry and Frost & Co., of Rochester, and the display of roses from each was very fine. In Messrs. Ellwanger & Barry's collection there were seventy-five varieties of Hybrid Perpetuals, of which the following were very fine and are recommended for general cultivation, viz: General Washington, General Jacqueminot, Alex. Fontaine, Augusta Mie, Geant des Battailes, Christian Futtner, Cardinal Patrizi, Coupe de Hebe, Penpre de Orleans, Leon des Combats, Jules Margottin, Mad. Boll, Imperatrice Eugenie. Of Moss Roses there were fifteen varieties, among which the following were very good and highly recommended, viz:—Crested Moss, Salet, Mad. Alvoni, White Bath, Captain John Ingraham, Luxembourg.
The display of Herbaceous Peonies was superb, particularly two new seedlings, one called Fulgora—a deep rose pink and very large flower. The other named Mrs. Dagge—a large and beautiful white—attracted a good deal of attention. The following, although older varieties, were magnificient and very conspicuous: Papaveriflora, Delachii, Louis Van Hautte, Piupenca Superb, Chas. Morel, Violacea, Washington.
Messrs. Frost & Co. exhibited a fine and well arranged collection, composed chiefly of Hybrid, Perpetuals and Mosses, but as they were placed on the table without names, the Committee are unable to determine all the varieties. A beautiful design in the form of a star occupied the center of the table, composed of such flowers as Digitalis, Pelongomiums, Carnation, &c., in the center of the design was a new seedling Petunia which in the judgment of the Committee is fully equal if not superior to any they yet seen; also a very fine leaf of Alosassia Metallica.

JOHN CHARLTON,
WM. WEBSTER,
JOHN TURNER,
Committee.

The new Seedling Petunia, *Edward Beech*, in the collection of Messrs. FROST & CO. was originated on the grounds of Mr. E. BEACH, Poughkeepsie, N. Y., by his head gardener by crossing other varieties. It is yet very rare and scarce.

CHANGING THE SOCIETY'S NAME.

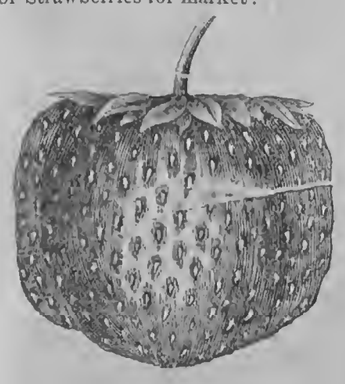
The Committee on changing the name of the Society, and also on increasing the fee of membership, reported in favor of adopting the title of "The Horticultural Society (embracing the Fruit Growers' Society) of Western New York." They reported against raising the fee of membership; after some discussion the report was adopted. Changing the name and in part the objects of the Society was a measure much needed, in order to give a wider scope and range to the discussions. They will hereafter embrace all Horticultural topics, and we may look for exhibitions of Horticultural products, which will be worthy the character and aim of the Society.

AN INVITATION.

A letter was read from H. H. DOOLITTLE, inviting the Examining Committee, and all interested in fruit culture, to visit Oaks Corners, Ontario Co., or Geneva, and inspect his Seedling Raspberries—the Red Flavored and Seneca Black-Cap. The best time will be the last week of the ripening of the common Black cap.

THE DISCUSSIONS.

From the list of subjects presented by the Business Committee the first topic taken up for discussion was—"Which are the best four varieties of Strawberries for market?"



JUCUNDA.

HOAG, Broekport, named Wilson, Triomphe de Gand and Jucunda—named the La Constandt as one of the best to eat. Jucunda was valuable for late ripening—also named Metcalf's Early.

REYNOLDS named Wilson, Triomphe and Jucunda. For an earlier berry than the Wilson named Early Scarlet and Metcalf. Green Prolific next to Wilson for home market; it is a pistilate, but easily fertilized.

HERENDEEN named the same as HOAG.

PECK, Waterloo, did not know of four varieties that he could recommend for that purpose.

ELLWANGER named Wilson, Triomphe de Gand; thought well of the Green Prolific. The Jucunda was not a great bearer, but sold well.

"Which are the six best varieties for amateurs?" was next discussed.

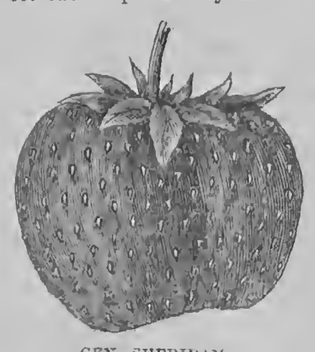
ELLWANGER named Alpine (red and white) and Hooker added to Wilson, Triomphe, Green Prolific and Jucunda.

THOMAS, Union Springs suggested that the members vote on slips of paper which should be collated and read by the Secretary. The result was as follows:

There were in all twenty-eight ballots cast, with six names on each ballot. Triomphe de Gand was on every ballot, 28; Wilson's next, 22; Hooker, 22; Jucunda, 17; Agriculturist, 16; Russell's Prolific, 9; Green Prolific, 4; Trollope's Victoria, 4. The other varieties named were scattered among twenty other kinds, each of which had from one to four votes.

Next was discussed "the best and most economical method of cultivating the Strawberry for market."

WICKS, Monroe Co., was in favor of planting each spring, letting the plants run together, taking one crop, and then renewing the bed. Plants the rows 3½ feet apart and the plants 15 inches apart in the row, keeps them perfectly clean the first year, but does not cultivate at all the second. Sometimes takes the second crop, but it is usually a small one. Had raised at the rate of 300 bushels per acre by this method.



GEN. SHERIDAN.

WORDEN—The Triomphe de Gand will not produce well if the plants run together. Cultivates his berries four years, and if kept in hills the crowns seem to be renewed and the bearing is kept up.

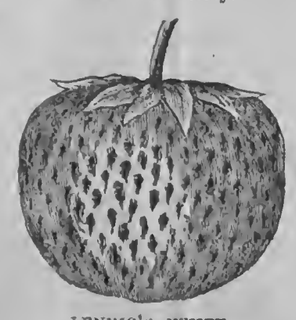
BABCOCK thought the best way was to cultivate in rows 3½ feet apart and keep the runners off. The beds can be kept in bearing three or four years.

HOAG agreed mainly with the last speaker, except it was not so convenient to water the plants, as when in beds of the right width. The beds should be so arranged as to be driven over with a water cart in dry weather. When the vines run together the second crop is nearly worthless. None but first class fruit will sell for paying prices.

LANGWORTHY thought a good way is to cultivate in hills the first year and let them run together the second, and thus get two crops. Mr. L introduced the following resolution:

"In view of the inconvenience of a Strawberry requiring to be fertilized for the purpose of securing productiveness, this Society deems such a plant unprofitable for the use of the million; therefore,

Resolved, That any Strawberry that is not a perfect self-fertilizer shall not meet with any encouragement before this Society."



LENNIG'S WHITE.

The resolution was lost by a decided vote, many members arguing that many of the pistillate varieties were too valuable to be discarded.

MISCELLANEOUS.

Some talk was had about the currant worm, and all agreed that powdered white hellebore was a perfect preventive against its ravages. A slight sprinkling is sufficient, but it should be applied several times. No insect eats it and lives.

Some discussion was also had about the ravages of the flea-beetle on grape vines. THOMAS recommended jarring them into a vessel partly filled with molasses and water.

A gentleman stated that they never troubled more than two years in succession. Mr. ROWLEY inquired if any one knew a remedy for the pith worm, which entered the pith of young currant shoots. Mr. KEECH replied that by cutting off the ends of the shoots affected and burning them the eggs for the next crop of worms would be destroyed.

In some remarks about the best Strawberries to eat out of hand, THOMAS said Burr's New Pine, as grown fifteen years ago, was the best he ever tasted. Now he would begin a repast with the Wilson and end it with La Constant. The Hooker was also highly praised.

Meeting adjourned at an early hour *sine die*.

To accompany our Report of the Fruit Growers' Meeting, we have had a few strawberries, taken from the plates on exhibition, sketched and engraved. The "Dr. Nicaise" was furnished us by FROST & Co., and is represented natural size.

The "Gen. Sheridan" is one of Mr. KEECH'S most promising seedlings. The "Jucunda" is well known as one of Rev. Mr. KNOX'S seedlings. "Lennig's White" was originated by Mr. LENNIG, Germantown, Pa., and is probably the best white variety known in this country; the flesh is pure white, melting, rich and sweet, and the plant vigorous and moderately productive. When grown in the sun the berry shows a delicate bush. The "Dr. Nicaise" has been sufficiently described.

HOW TO RAISE CAULIFLOWER.

"THE best of all flowers," said a famous English writer, "is the cauliflower." That it is a very palatable article of food, none will deny who have eaten it. The question is how to raise fine plants, with plump, tender, crispy heads. For the first cutting of the season, the Early Paris and Demi-dur are probably the best. For late, the Erfurt White, Le Normand and Walcheren. The first crop should be started in a hot-bed or cold frame. If the turnip fly gets among the young plants dust them with plaster and ashes. For fall and winter use, the seed may be sown in the open garden any time in June. Choose a cool spot, say under the shade of a fence, and make the soil light and rich. When the plants are large enough for removal, set them out in rows two feet apart, the ground being well enriched with old manure. The heads will form in September and October, and be fine for fall use. Sink slops make an excellent dressing for this plant, applied once a week. Keep the soil well stirred.—*Rural American.*

Horticultural Notes and Queries.

THE "DR. NICAISE" STRAWBERRY.—Mr. M. D. WILSON of this city laid on our table very fine specimens of this new strawberry. As will be seen by the report, Mr. W. exhibited some large berries at the Fruit Growers' meeting. Of the plant he says it stood the winter entirely unprotected, and pushed its strong foliage far ahead of other varieties beside it—bloomed on the 19th of May, and ripened fruit by the 24th of June.

—We are indebted to Mr. D. S. WHITLOCK of Brighton, for fine samples of Triomphe de Gand and Golden Queen (or Trollope's Victoria) strawberries.

HEDGE PLANTS.—W. H. MANN & BRO. are the most extensive hedge plant growers in the world—having nearly 300 acres in plant this season. They are men who understand their business—having had twenty years experience. See advertisement in another column.

HAND CIDER-MILL WANTED.—M. B., Michigan asks us to tell where the best and cheapest hand cider-mills can be obtained?" We generally advertise several in the course of the season. Read the advertisements of HICKOK'S "Keystone," and also of HUTCHINSON'S mill, in this paper.

LICE ON ROSE BUSHES.—LORA, Mt. Pleasant, Iowa. If you will dust your Prairie Queen with unleached wood ashes, early in the morning for two or three times, you will most likely kill the white lice and save the rose bush.

CELERY.—Clear away early peas and potatoes and plant celery. Plant it in a slight furrow made with the hoe. It may be planted near other crops which will be removed in time to give room for earthing up.

BUDDING.—This operation will be timely as soon as you can procure well formed buds and the bark of the stock parts freely from the wood. Look out for good varieties to select buds from.

MOW THE LAWN frequently, and uproot all weeds as fast as they appear. The lawn cannot be kept green if the grass is allowed to grow high. It will sun-burn when cut.

SEEDS.—Save seeds as fast as they ripen. The earliest are the best, usually.

GRAPES.—Thin the fruit on young vines. Overbearing is ruinous to young plants.

Domestic Economy.

CANNING FRUITS.

As the season of fruits is just commencing, anything that will enable it to be successfully canned at a small expense, will very much prolong the season. Only those who have tried it know the satisfaction derived from eating a dish of strawberries or peaches in mid-winter as fresh as when gathered. The annexed method of canning fruit was furnished at the New York Farmers' Club by Mr. Powers of Oswego Co., New York:

"I will suppose your fruit and glass cans all ready. I prefer cans with glass covers. I scald the fruit in a large tin pan with juice or water to cover it. Put half a teacup of cold water into every can, and fill up with hot water. Put the covers and rubbers also into hot water. Now empty a can and fill up with hot fruit, and then another. Let them stand open till the hand can be held upon them without burning. As soon as filled cut writing paper the size of the can, one for each, and when cool slip one over the fruit entirely, and fill up the can on the top of the paper with boiling juice, and seal at once. Ladies, try this way; the fruit will never mould, and keep any time, if you don't eat it. The papers keep the fruit from rising to the top of the liquid. There is no use of setting cans into water to heat them, or of putting them into quilted bags; it is too troublesome. I let the fruit shrink, and then fill up to the cover as close as possible. Ladies must be governed by their own common sense. Men attempt to give direction, but their wives have to tell them, and they are likely to forget."

VARIOUS ORIGINAL RECIPES, &c.

EDS. RURAL:—As I have learned many excellent things from the Domestic Column, I venture to give a few recipes in return for the benefits I have received:

TO SWEETEN PORK BARRELS, EARTHEN JARS, CHURNS, &c.—Put a quantity of hay into the vessel which you wish to sweeten; pour boiling water upon it, and let it stand for a while. This will make it perfectly sweet.

SOFT GINGERBREAD.—1 cup of molasses; 1 do. water; piece of butter size of butternut; 1 teaspoon of saleratus; flour enough to make it of a medium thickness; ginger to taste.

PLAIN LOAF CAKE.—1 cup white sugar; 1 do. sweet milk; white of 1 egg; a piece of butter size of an egg; 2 cups of flour; 1 teaspoon of cream tartar; 1 do. extract of lemon.

INQUIRY.—Can some one inform me how to crystalize flowers and grasses? also what flowers to crystallze?—MILLIE, *Victor, N. Y.*

TO PRESERVE STRAWBERRIES OR RASPBERRIES FOR CREAMS AND ICES WITHOUT BOILING.—Let the fruit be gathered in the middle of a warm day, in very dry weather; strip it from the stocks directly, weigh it, turn it into a bowl or deep pan, and bruise it gently; mix with an equal weight of fine dry sifted sugar, and put it immediately into small wide-necked bottles; cork these firmly without delay, and tie bladders over the tops. Keep them in a cool place, or the fruit will ferment. The mixture should be stirred softly, and only just sufficiently to blend the sugar and the fruit. The bottles must be perfectly dry, and the bladders, after having been cleaned in the usual way, and allowed to become nearly dry, should be moistened with a little spirit on the side which is to be next to the cork.

TO PRESERVE STRAWBERRIES.—To two pounds of fine, large strawberries, add two pounds of powdered sugar, and put them in a preserving kettle, over a slow fire, till the sugar is melted; then boil them precisely twenty minutes, as fast as possible; have ready a number of small jars, and put the fruit in boiling hot. Cork and seal the jars immediately, and keep them through the summer in a cold, dry cellar. The jars must be heated before the hot fruit is poured in, otherwise they will break.

STRAWBERRY JELLY.—Express the juice from the fruit through a cloth, strain it clear, weigh and stir to it an equal proportion of the finest sugar, dried and reduced to powder; when this is dissolved, place the preserving-pan over a very clear fire, and stir the jelly often until it boils; clear it carefully from scum, and boil it quickly from fifteen to twenty-five minutes. This recipe is for a moderate quantity of the preserve; a very small portion will require much less time.

STRAWBERRIES STEWED FOR TARTS.—Make a sirup of one pound of sugar and a teacup of water; add a little white of eggs; let it boil, and skim it until only a foam rises; then put in a quart of berries free from stems and hulls; let them boil till they look clear and the sirup is quite thick. Finish with fine puff paste.

TO PRESERVE STRAWBERRIES IN WINE.—Put a quantity of the finest large strawberries into a gooseberry bottle, and strew over them three large spoonsful of fine sugar; fill up with Madeira wine or sherry.

A SURE PRIZE.—Whosoever gets a bar of Pyle's O K Soap draws a prize indeed. There is nothing like it, either for the laundry or bath or toilet. Sold by grocers generally.

New Advertisements.

THE ORIGINAL STOCK OF WILSON Early Blackberry may again be seen in fruit at JOHN S. COLLINS' Small Fruit Nursery, one mile south west of Moorestown, New Jersey.

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.
W. H. MANN & BRO., Normal, Ills.
P. S.—Agents Wanted. 911-13t

CELERY PLANTS.—Strong Healthy PLANTS—NOW READY. Turner's Dwarf Improved. Price $1 ₱ 100; $4 ₱ 500; $7.50 ₱ 1,000; $50 ₱ 10,000; $200 ₱ 50,000. Large White Solid, price 50c ₱ 100; $2.25 ₱ 500; $4 ₱ 1,000; $35 ₱ 10,000; $150 ₱ 50,000. Safely packed to any distance not exceeding 8 days in the transit. Plain, printed directions detailing our manner of cultivation, and of preserving in Winter accompanying each package.
HENDERSON & FLEMING,
MARKET GARDENERS AND SEEDSMEN,
No. 67 Nassau Street, New York.

TO FARMERS & FRUIT GROWERS.
HUTCHINSON'S
CIDER AND WINE MILL
Has been recently improved so as to grind nearly one-half easier than ever before and finishes the pumace finer. *It is the mill you want.* Send for Illustrated Catalogue. Address GEO. E. HUTCHINSON,
911-6teo] 83 Merwin Street, Cleveland, Ohio.
Also manufacturer of Cast and Wrought Iron Screws, Presses, Grinders, Bone Scrapers, Feed Cutters, &c., &c.

WANTED—An Agent in Each Town and County in the United States, to introduce
SPEAR'S PRESERVING SOLUTION.
LIBERAL INDUCEMENTS OFFERED!
This solution will preserve all kinds of Fruits, Tomatoes, Jellies, Cider, Milk, etc., without air-tighting and with or without sugar. It admits of keeping fruits, &c., in vessels of any size, and of using therefrom at intervals as wanted.
It will preserve milk sweet from 24 to 36 hours longer than it would naturally keep, causing it to furnish more cream in hot weather.
It is warranted perfectly healthful and effectual, and can be relied upon as being the cheapest and best method in the world for preserving fruits, &c. Full directions for using with each bottle. L. P. WORRALL,
General Agent, No. 91 Hudson St., New York City.

THE
GREAT AMERICAN
TEA COMPANY
HAVE JUST RECEIVED
TWO FULL CARGOES
OF THE
FINEST NEW CROP TEAS.
22,000 HALF CHESTS by ship GOLDEN STATE,
12,000 HALF CHESTS by ship GEORGE SHOTTON
In addition to these large cargoes of Black and Japan Teas, the Company are constantly receiving large invoices of the finest quality of Green Teas from the Moyune districts of China, which are unrivalled for fineness and delicacy of flavor, which they are selling at the following prices:
OOLONG (Black,) 50c., 60., 70c., 80c., 90c., best $1 ₱ lb.
MIXED (Green and Black,) 50c., 60c., 70c., 80c., 90c., best $1 ₱ lb.
ENGLISH BREAKFAST 50c., 60c., 70c., 80c., 90c, $1, $1,10, best $1,30 ₱ lb.
IMPERIAL (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
YOUNG-HYSON (Green,) 50c., 60c., 70c., 80c., 90c., $1, $1,10, best $1,25 ₱ lb.
UNCOLORED JAPAN, 90c., $1, $1,10, best $1,25 ₱ lb.
GUNPOWDER $1.25, best $1,50 ₱ lb.

Coffees Roasted and Ground Daily.
Ground Coffee, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding House Keepers and Families, who use large quantities of Coffee, can economise in that article by using our French Breakfast and Dinner Coffee, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to $1 per pound by purchasing their Teas of the
THE GREAT AMERICAN TEA COMPANY,
Nos. 31 and 33 Vesey St.,
Post-Office Box, 5613 New York City.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

Through our system of supplying CLUBS throughout the country, consumers in all parts of the United States can receive their Teas at the same prices (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Some parties inquire of us how they shall proceed to get up a club. The answer is simply this:—Let each person wishing to join in a club, say how much tea or coffee he wants, and select the Kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds, and amounts plainly on a list, and when the club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders, and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by post-office money orders, or by Express, as may suit the convenience of the Club. Or, if the amount ordered exceed $30, we will, if desired, send the goods by Express to "collect on delivery."

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary package for Clubs of less than $30.

N. B.—All villages and towns where a large number reside, by *clubbing* together, can reduce the cost of their Teas and Coffees about one-third by sending directly to the GREAT AMERICAN TEA COMPANY.

BEWARE of all concerns that advertise themselves as branches of our Establishment, or copy our name either wholly or in part, as they are *bogus* or *imitations*. We have no branches, and do not, in any case, authorize the use of our name.

☞ Post-office orders and drafts make payable to the order of Great American Tea Company. Direct letters and orders to
GREAT AMERICAN TEA COMPANY,
31 and 33 Vesey Street.

Written for Moore's Rural New-Yorker.

OUT IN THE CLOVER.

Summer's smile is on the earth
  Blue skies bending over,
And their hearts are gay with mirth
  Out amid the clover;
Out amid the clover green
  With its blossoms bonnie.
They're a merrie group I ween;
  Nettie, Burt, and Johnnie.

From my window I can see
  All their mirth and pleasure,
They are all the world to me,
  My home's dearest treasure;
Watching thus their merrie play
  My heart has turned a rover,
I'm a child again to-day
  Out amid the clover.

Darling children! soon these hours
  Must vanish, and forever,
But they'll leave unfading flowers
  That shall wither never;
May they be as free from blight
  When youth's morn is over,
As these hours of sweet delight
  'Mid the crimson clover.

A. E. H.

FARMERS' WIVES.

The reading of essays by the ladies is one of the exercises which give life and interest to the meetings of the Springfield (Vt.) Farmers' Club. From one of the essays by Mrs. Daniel Rice, published in the Vermont Farmer, we copy the following paragraph:

"Did you ever think of the amount of thought requisite to plan three meals a day for three hundred and sixty five days in succession? To prepare enough and not too much, and for those living at a distance from the village to remember that the stock of flour, sugar, tea, etc., is replenished in due time? Do you ever think of the multitude of her cares and duties? She must rise early to prepare breakfast or oversee it. Perhaps there are children to wash, dress, and feed, or to get ready for school, with their dinners. There is baking, sweeping, dusting, making beds, lunch for the men, may be—dinner and supper to be made ready at the proper time—the washing, starching, folding and ironing of the clothes—the care of milk, including the making of butter and cheese—and the inevitable washing of dishes. In autumn there is the additional work of picking, preserving, canning of fruit, drying apples, boiling cider, making apple sauce, with the still more unpleasant task which falls to her lot at butchering time. Then there is haying, harvesting, sheep shearing, etc., when more help is needed, bringing an increase of her labors. Twice a year comes house-cleaning. By the way, of all the foes a housekeeper has to contend with, dirt is the greatest. She may gain a complete victory, and think to repose upon her laurels after her semi-annual engagements, but it is only temporary. The enemy soon returns, and even daily skirmishing does not keep it at bay. There is the mending, too. Sewing machines are a great blessing, but they can't set in a patch or darn the stockings. I do not mention these things by way of complaining of woman's lot in general, or asking for her any rights she does not possess. I don't know as there is any remedy in the present state of the world. It seems to be one of the evils of life which must be borne as we bear other ills—but what I do ask, is a due appreciation of the important part that woman acts, and a concession that her labors, mental and physical, are as great, all things considered, as those of the other sex. Women are not so childish that a little sympathy now and then, or acknowledgment of their efforts and sacrifices make them imagine their case worse than it is. I tell you, men and husbands, 'It doeth good like a medicine,' and many a poor, crushed, broken-down wife and mother is dying for the want of it."

HOME TOILETTES.

The sparkling "Jennie June" discourses of these matters as follows:—The visitors to Newport, Saratoga, Niagara and other well known localities, will not be as numerous as usual probably, but the dressing will be very light, very gay and more brilliant than ever, if one may judge from the present indications.

For races, yachting, walking, boating and traveling, the short dress will be found very useful and will be most universal. It is made now almost entirely without plaits, sometimes quite so; so narrow indeed that three months ago, one should have been frightened at it. The short, straight *sac* or paletoy, with loose or hanging sleeves, invariably accompanies the short dresses.

For visiting and ceremonious occasions, the dresses can not be too narrow or too long. Trained, shaped with long gore-cut breadths, generally strictly defined by the trimmings, they form a marvelous contrast to the rotund styles of few years ago. For young ladies a great many little white short suits are made, the trimming of lilac, mauve blue, or violet, and band to the petticoat of the contrasting color, stitched on with white in the embroidery stich. These suits are made of white mohair, *toile de laine*, and other soft, fine materials, and are very stylish for summer season wear.

For traveling dresses, linen laplin is in great demand. It it a light, pretty material made of silk and linen, but not very well adapted for exposure to all kinds of weather.

The fashionable method of wearing the hair now is to mass it high, in a wonderful knot or in clustering curls, with one or two long ones floating down the neck at the sides and at the back. Little girls' hair is combed out *au naturel*, waved by being damped and braided at night or curled up underneath and put in a net.

THE LITTLE QUEEN OF THE WOODS.

As fit for this midsummer season, when we long for shaded forests and babbling brooks, we give a fine engraving of a charming picture by J. G. Brown of New York. The little Queen of the Woods has wandered in this forest fairy-land at her own sweet will, woven her floral crown, and stopped to rest in the welcome shade of the great rock against which she leans.

Knots of ribbon with floating ends are worn by little boys upon the left shoulder. They should be the color of the little neck-tie.

The prettiest dresses for little girls are made in two colors, the upper dress being strapped up at the side over the under-skirt precisely like their mamas. White foulard dotted with blue, with blue side straps and plain blue under-skirt, forms a pretty combination.

THE HOUSEHOLD TYRANT.

But few things have been better said than the following on "the baby," by Ralph Waldo Emerson:

"The small despot asks so little that all nature and reason are on his side. His ignorance is more charming than all knowledge, and his little sins more bewitching than any virtue. All day, between his three or four sleeps, he coos like a pigeon house, sputters and spurns, and puts on his faces of importance; and when he fasts the little Pharisee fails not to sound his trumpet before him. Out of blocks, thread, spools, cards and checkers, he will build his pyramid with the gravity of Palladio. With an accoustic apparatus of whistle and rattle he explores the laws of sound. But chiefly, like his senior countrymen, the young American studies new and speedier modes of transportation. Mistrusting the cunning of his own legs he wishes to ride on the necks and shoulders of all flesh. The small enchanter nothing can withstand—no seniority of age, no gravity of character; uncles, aunts, cousins, grandsires, grandames—all fall an easy prey; he conforms to nobody; all conform to him; all caper and make mouths and babble and chirrup to him. On the strongest shoulders he rides and pulls the hair of laureled heads."

The "Mane" Style.—The attempt to introduce the fashion of wearing the hair unrestrained and flowing is making slow progress. Two ladies recently appeared at an evening party in Paris with their hair simply held by a small gold baudeau of antique form, set with precious stones. Another made her appearance with this difference, it was divided into two portions and fastened together with strings of pearls.

At the Princess Mathilde's usual Sunday evening reception in Paris, recently, the event of the evening was that the first Siamese Embassador was accompanied by his wife, who has never before appeared in a Parisian *salon*. This lady was dressed in the court costume of her own country—a rich silk dress with gold embroidery. She is very little, dark complexioned, of course, and her tiny hands are not bigger than those of a child eleven years old.

Choice Miscellany.

HABIT.

By John Askham.

Habit at first is but a silken tread,
Fine as the light-winged gossamers that sway
In the warm sunbeams of a summer's day;
A shallow streamlet, rippling o'er it's bed;
A tiny sapling, ere its roots are spread;
A yet unhardened thorn upon the spray;
A lion's whelp that hath not scented prey;
A little smiling child obedient led.
Beware! that thread may bind thee as a chain;
That streamlet gather to a fatal sea,
That sapling spread into a gnarled tree;
That thorn, grown hard, may wound and give thee pain;
That playful whelp his murderous fangs reveal;
That child, a giant, crush thee 'neath his heel.

THE ABUNDANCE OF BEAUTY.

One of the most remarkable things in the world is the abundance of beauty; of what not only feeds, clothes, and outwardly serves the material needs of men, but also pleases the senses and the soul, feeding and comforting the finer faculties. God, after setting before us what we turn into bread and raiment, and houses and books, gives us the benediction of beauty, as an unexpected grace after meat.

The grass which springs up in the cracks of city streets, or which the farmer's ox licks up by mouthfuls in the meadows,—what a beautiful thing it is in shape, in color how exceeding fair!

How attractive are the grains to the eye, from the bearded grain for horses, which loves the northern lands, to that queen of cereal plants, southern born, and loving the sun, the Pocahontas of grains, the great Indian Empress of Corn!

The very roots that beast and man feed on have a certain homely comeliness. How handsome are the shapes of apple, pear, peach, quince and plum; of the acorn, the nut, the pine cone, yea of every leaf, from the northern thistle to the proud palm which claps its hands to its Maker's praise beneath the tropics.

How fair are all the seeds,—those which fall into the ground, or tangle themselves in the feathers of birds or the hair of oxen, or those which float off in their gossamer balloons and parachutes, on every breath of wind, scattering the parent beauty to spring up in fragrant loveliness.

The *fuci* which float on the still waters, and fringe the timbers of the wharves are lovely; and yet so little noticed that they have not the welcome of an English name, and I must talk Latin when I praise these humble things.

It is not alone the rich who can own beauty. It is a philanthropic God who made the world,—the world itself a commonwealth, and all its beauty democratic, almsgiving of the Almighty to your heart and mine.—*Selected.*

LAST WORDS.

Head of the army—Napoleon.
I must sleep now—Byron.
Let the light enter—Goethe.
I thank God I have done my duty—Nelson.
It is well—Washington.
Valete et plaudite—Augustus.
Give Dayrolle a chair—Chesterfield.
It matters little how the head lieth—Raleigh.
I'm shot if I don't believe I'm dying—Thurlow.
The artery ceases to beat—Heller.
What, is there no bribing death?—Cardinal Beaumont.
I have loved God, my father and liberty—Madame De Stael.
I pray you to see me safe up, and for my coming down, let me shift for myself—Sir Thomas More.
A dying man can do nothing easy—Franklin.
Let me die to the sound of delicious music—Mirabeau.
Don't give up the ship—Lawrence.
Clasp my hand, my dear friend, I die—Alfieri.
All my possessions for a moment of time!—Queen Elizabeth.
Monks, monks, monks—Henry VIII.
It is small, very small (clasping her neck)—Anne Boleyn.
I resign my soul to God, my daughter to my country—Jefferson.
I feel as if I were myself again—Walter Scott.
Independence forever—Samuel Adams.
It is the last of earth—J. Q. Adams.
Remember (the charge to Archbishop Juxton to bid Charles II. forgive his father's murderers)—Charles I.
I have sent for you (Lord Warwick) to see how a Christian can die—Addison.
O Lord, forgive me, especially my sins of omission—Usher.
Lord, receive my spirit—Cranmer, Hooper, G. Herbert.
In te speravi, ne confundar in eterno—Bishop Abbott.
God will save my soul—Burghely.
And is this death?—George IV.
What! do they run already? Then I die happy—Wolfe.
Then I am safe—Cromwell.
Let me hear once more those notes so long my solace and delight—Mozart.

Sabbath Reading.

THE OLD AND NEW.

By John G. Whittier.

O, sometimes gleams upon our sight,
Through present wrong, the eternal right!
And step by step, since time began,
We see the steady gain of man;

That all of good the past has had
Remains to make our own time glad,
Our common daily life divine,
And every land a Palestine.

We look back upon eye and ear,
To find the Orient's marvels here,
The still small voice in Autumn's hush,
Yon maple wood the burning bush.

For still the new transcends the old,
In signs and tokens manifold;
Slaves rise up men; the Olive waves
With roots deep set in battle graves.

Still through the harsh notes of the day
A low, soft prelude finds its way,
Through clouds of doubt and creeds of fear,
A light is breaking, calm and clear.

Henceforth my heart shall sigh no more
For olden time and holier shore;
God's love and blessing, then and there,
Are now, and here, and everywhere.

THE GOSPEL OF SUMMER BEAUTY

Nineteen hundred years have gone since Jesus, standing beneath the blue Judean sky, with a few disciples and some plain men and women about him, said of the lilies of the field, "Solomon in all his glory was not arrayed like one of these;" and yearly, through all that time has this marvel of summer beauty glorified the earth. It is indeed true that "man liveth not by bread alone," but needs wherewith to feed finer senses, and the soul as well.

Corn, and wheat, and grass, and trees, could grow in plainer style, and flowers need not bloom to support bodily life; but here are the stately beauty of the queen of cereals, the waving banners of the wheat-field, the green carpet whereof the warp and woof of delicate grass is graceful in its every thread, the lilies, rich in their shining raiment as when Christ made the monarch's robe seem poor beside them, and the noble grandeur of great trees. This all tells of spiritual harmony, and fitness, and grace—the beauty of Infinite and Divine Life pulsing through all nature—and the Gospel preached by flower, and grass, and waving harvest is, "Let grace, and harmony, and beauty dwell in every soul and be manifest in every life, and thus shall man approach toward the Great Examplar."

MORAL INFLUENCE OF FARMING.

There is a decided moral tendency in the direct and close dealing, if we may so speak, between the farmer and his God. They work together. God has ground this realm (so geologists tell us) into a somewhat hard and thin soil. "He has sent the springs into the valleys, which run among the hills, and caused the grass to grow for the cattle, and herb for the service of man." These gifts are in the rough. The condition of their true enjoyment is useful and health-giving labor. The gold must be gathered or mined, the diamond polished; so the soil must be patiently wrought and duly enriched; the tree, the clay, the stone converted into dwellings, the air and sunshine into corn and wine. The annual covering of the sheep, and the life garment of the kine, into blankets and sandals. In short, labor and reward are inscribed on every gift of God, and none so generally receive them right from the giver as those who till the ground. There is less intervention of varioloid scrip and poisonous nickels. The vine holds out its clusters, the rich purple all undisturbed. The apple, the pear, the peach, bend their branches to the gathering, as only God can make them. The harvest field nods to the reaper, that it may become sheaves in his bosom and bread to the hungry. The broad bosom of the meadow undulates and throbs with every breeze until shorn of its trophies. Even the forests toss their giant branches for shades. Is there not a sense of great nearness to God amidst these blessings?—a feeling of satisfaction and comfort closely allied to thanksgiving, praise and love?—*Farm and Fireside.*

LITTLE CROSSES.

Christ comes to us morning by morning to present to us for the day that is opening diverse little crosses, thwartings of our own will, interferences with our plans, disappointments of our little pleasure. Do we kiss them and take them up, and follow in his rear, like Simon the Cyrenean? Or do we toss them from us scornfully, because they are so little, and wait for some great affliction to approve our patience and our resignation to his will. Ah, how might we accommodate to the small matters of religion generally those words of the Lord, "Take heed that ye despise not one of these little ones!" Despise not thy little sins; they have ruined many a soul. Despise not little duties; they have been to many an excellent discipline of humanity. Despise not little temptations; rightly met, they have often served the character for some fiery trial. And despise not little crosses; for when taken up, and lovingly accepted at the Lord's hand, they have made men meet for a great crown, even the crown of righteousness and life which the Lord hath promised them that love him?—*Dr. Goulburn.*

The vicious die early. They fall like shadows or tumble wrecks and ruins into the grave—often while quite young, almost always before forty. "The wicked liveth not half his days."

OUR FOURTH OF JULY.

[Concluded from page 220, this number.]

Another pause,—broken this time by the three calves in full and long-continued chorus.

"Let's go," we both exclaimed, starting up at once. And go we did, each with a brimming pail in her hand, through the pasture and the lane to the meadow. The calves—almost grown they looked in the deceptive light—greeted our appearance with an almost deafening series of bleatings—plaintive, impatient, expectant, joyful and suffering by turns. They flirted their tails in the air, shook their heads, pitched forward against the fence, to the great detriment of their budding horns, and reared backward and performed sundry other feats in gymnastics that were certainly astonishing, and would have been alarming to one not acquainted with the nature of calves as we were. There were three of them, and only two pails, so we called a council upon the best method of managing, and concluded to serve them each in turn. DACHE should let one drink, while I kept the other two away. The plan seemed feasible enough, and we opened the gate and went in. I set down my pail and stopped to fasten the gate, while DACHE advanced with hers. But how shall I describe the scene which followed! Those three monsters made a simultaneous rush upon her and her pail. They surrounded her, they plunged at her, they butted her, they pushed her this way and that. I picked up a stick and rushed to the rescue.

"Keep those two away!" she cried, breathlessly.

I tried to keep them away. I shoo-ed them, and brandished my stick at them, and pushed them, and made threatening gestures, and certainly most alarming noises.

"Strike them," she cried.

"I can't," I answered.

"You must—I shall be devoured."

I summoned all my courage and struck one of them what I thought was a smart blow. But the creature might have been a behemoth for all the effect it had.

"Pull them away," poor DACHE again called out.

In desperation I threw both arms around the neck of the nearest one, and tugged with all my might. But the shorn SAMSON was not more powerless in the hands of the Philistines than were we in the clutches of those calves. At last, by a masterly strategetic movement, DACHE effected her escape, leaving the pail behind, and in a moment the three heads were all wedged into the one pail, each one plunging and kicking with all its might. We climbed to the top of the fence and looked down in silence for some time. But as they never once lifted their heads, we at last became thoroughly alarmed.

"I do believe their noses are wedged in so tight they can't get them out."

"We must not leave them so—they'll suffocate."

We got down from our perch, watched our opportunity, and avoiding the heels, we too charged upon the pail, lifted it from the ground, turned it sidewise, and tried to pull it away. But they either could not or would not let go. As fast as we stepped back they stepped forward. As hard as we pulled they pushed. We had possession of the outside of the pail, they of the inside. At last, by a mighty effort, we disengaged it from their noses, and sent it flying over the fence, a white stream marking its passage, and leaving traces all over our muslin skirts and white garabaldies. Then were they not furious? They plunged at us, but educated human muscle was too nimble for brute force, and we gained the topmost rail of the fence in safety. How reproachfully and indignantly they bleated at us. But nothing cared we. Our hearts were hardened; and we were so happy at having escaped with life and limb, that now they might do their worst. So from our elevation we looked serenely down upon their discomfiture—but not for long. They spied the other pail and made for it immediately. In an instant the three heads were wedged in as immovably as at first, and the three tails and six hind legs were again gyrating in the air.

"Let them be—the ungrateful creatures!" said we.

And so we left them. The house was fearfully still when we reached it. The moonlight streamed in through the open doors and windows—no longer looking soft, but weird and ghostly.

"Are you afraid?" asked one of the other.

"N—n—yes, I am! there's the truth for you. If anything should happen, what could we do, with no man anywhere within call? We might all be murdered and couldn't help ourselves."

"But consider how unlikely it is that any body will want to murder us."

"Unlikelier things happen every day," and the two chairs hitched more closely together, and the voices died down to whispers. Thus we sat in the stillness, shivering at every sound, until the clock struck twelve; and when with the last stroke was heard the welcome sound of wheels, were there two more thankful hearts beating in all the world than ours? I trow not.

The next day we asked the master if those calves in the meadow were fed with milk every day.

"Oh no!" was the answer, "they outgrew their milk some time ago, although I don't suppose they have forgotten the taste yet."

"But what do you feed them with?"

"They feed themselves mostly. With a meadow full of grass and a brook full of water they manage to thrive very well. Don't you think so? Of course, upon Fourths of July and such days, they expect to be treated to something extra. Fine calves—aint they?"

We did not like his quizzical look, and so forbore to pursue our inquiries further. Whether they suffocated in the pail that night, or whether they lived until morning and were rescued, we never knew. Indeed, for aught we do know to the contrary, they may be there performing their evolutions to this day. But as for us, we firmly resolved that when another Fourth day of July came around, we would celebrate it in the most approved and patriotic fashion.

THE LIBRARY OF CONGRESS.

This beautiful hall, of which we give an engraving, is in the center of the west front of the Capitol at Washington, and has in front of its windows a recessed portico with twelve Corinthian columns, of finely carved stone. The room is ninety-one feet long, north and south, thirty-four feet wide, and thirty-six feet high. The alcoves and two galleries, are of iron, wrought in most tasteful ornaments, the floor is solid stone, the roof is iron, with broad skylights of stained glass, and the lofty room, with its ample shelves filled with books, has an aspect of noble beauty fitted to the wealth of wisdom in the choice volumes ranged from floor to ceiling. It is for the use of Members of Congress, but any one can sit and read at their pleasure.

There are over 60,000 bound books, beside a great many pamphlets, and some 50,000 public documents on the shelves. From the windows, and still better from the portico, one can look down on the grassy terraces, the broad walks, and flowers, and fountains, and fine trees of the spacious grounds; and beyond to the city, the massive public buildings—Patent and Treasury offices, Washington Monument, the President's house, and others—with the Potomac girdling all with its silvery band, and the Virginia hills in the distance,—one of the finest views to be found. Halls like this, and nearly as large, are now finished connecting with it like an L at either end, and making a continuous room of some two hundred and fifty feet long.

Useful, Scientific, &c.

KEROSENE—MANNER OF USING.

EDS. RURAL NEW-YORKER:—We are seeing, every few days, most disastrous accounts from the bursting of kerosene lamps, which from my experience in their constant use for 11 years, is entirely and in every case but one owing to mismanagement and the want of understanding the philosophy of their construction and operation. Kerosene being in so general use over the whole civilized world, the experience of an old observer may save some valuable lives and fearful devastation by fires:

1st. The draft of the chimney, when burning, causes the cold air to rush in at the bottom of the brass cap, to supply combustion, and keeps it cool and prevents the formation of gas in the globe, which is the only source of explosion.

2d. See that the cone and its resting place are cleaned from the deposit of coaly matter from the wick, which often takes fire and blazes out of the top of the chimney.

3d. When any danger is feared, place your hand on the globe; if uncomfortably hot, instantly turn down the wick, but in no case blow it out, or it may sit the cone a blazing;—when that is the case turn down and place a cover over the chimney.

4th. Never leave the light at night turned quite low, as there is not draft enough created to bring in cool air to keep the cone and apparatus cold. This point is imperative.

5th. Never attempt to fill the lamp while it is burning, nor while a light is near, as there are often large quantities of gas in the can.

6th. Never burn the lamp without a chimney, as it heats so fast there is instant danger of explosion.

Many of the globes are made of such poor glass, or imperfectly annealed, that they break independently of any apparent cause, as do various articles of moulded or blown glass. Some kerosene is so imperfectly rectified that it contains a large quantity of benzole, or naptha, a very volatile and dangerous material. It may be known by its very strong, disagreeable smell.

L. B. L.

HELIOTYPOGRAPHY.

THE following article from the Journal of Commerce, records one of the most remarkable discoveries of modern science—a discovery of more importance even than that of Daguerre, and of which the practical uses are almost limitless:

"Ever since the discovery of the Daguerre process it has been an object of earnest pursuit to find a method of using the photographic art for the production of metallic type by which to print in the ordinary letter-press style, the pictures made by the sun. We are at length able to say that the desideratum has been accomplished, and the Heliotype Company, whose place of business is at No. 90 Fulton street, are prepared to work with the aid of the sun as rapidly as publishers can desire in the production of suntype. It is not claimed as yet that it will do everything that is desired. But it is the beginning of great things, and we confidently look for the day when it will be so perfected that the scenes of daily life, public meetings, and similar events may be photographed, and the type used in the editions of illustrated newspapers without the intervention of engraver or woodcutter.

At present the inventors wisely propose to do no more for the public than they are able to do perfectly. To show what their ability is we may state the results of our own examination. A copper-plate map of France, for example, was handed to them, from which they were to produce a type or plate suited for letter-press work. Within twelve hours they delivered the type, a solid plate, from which we could easily print a hundred thousand copies on the press of the Journal of Commerce. The copy printed from this type was fully equal to the original, and an exact *fac simile* of it. An ordinary wood engraving is reproduced in the same manner. Music is admirably and perfectly copied. One of the merits of the invention consists in the ability to change the size of the picture or page to be reproduced. A map six feet square can be reduced, and the type made to print an illustration for an ordinary volume. There is no reasonable doubt that the process will be so perfected that it would be easy to republish in this country any European illustrated newspaper within twenty-four hours after its receipt by steamer.

PRECIOUS STONE.—The largest topaz known has been deposited in the Bank of France. It is of Brazilian origin, and measures seven and one-quarter inches in length, by four and three-fourths inches in width, and about the same in thickness. It weighs more than three and one-half pounds. However valuable this stone may be from its brilliancy and size, it is still more so from its artistic merit, as on one face is engraven a half-length Christ breaking bread at the Last Supper. This composition was executed with the burin and diamond dust by the owner of the gem, Andre Coriello, formerly director of the Naples mint.

AN ANCIENT CLAPBOARD.—Mr. David Stevens of this city, exhibited to us a white pine clapboard taken from the wall of the house in Stroudwater village, in which Admiral Tate was born. The clapboard was placed on the house in 1754, and is, therefore, 113 years old. It is in a perfectly sound condition. The wrought nail, with which it was fastened, had rusted but very slightly.—*State Press, Portland, Me.*

SOLDERING SOLUTION.—The following recipe is recommended for making a most excellent soldering fluid:—Two ounces muriatic acid, in which as much zinc is dissolved as it will hold, to which add half an ounce sal ammoniac. Clean the metal well and the solder will run and adhere to any part of the metal to which the solution is applied. It will also solder brass and steel together.

Reading for the Young.

THE CHILDREN AND THE SPARROW.

CHILDREN.

"You dear little bird, you brisk little bird,
What charming songs you sing!
Come down from the tree and play with us;
We love you, you pretty thing."

SPARROW.

"Indeed my dear children, it will not do;
You see I must earn my bread:
I've five little hungry birds in my nest,
And all of them must be fed."

BERRYING

WHAT a nice time it will be to go berrying, some of these pleasant summer days. All through the week the boys and girls, *in ever so many* pleasant farm houses, will be up with the sun and the birds, in the sweet, clear mornings, and help take care of the cows, and horses, and pigs, and chickens, and ducks, and do all the little chores mamma wants done in the house.

In good season, with dinner-baskets well-filled, off to school, and some of them will have long walks across the lots and through the woods, and over the brooks, and along the quiet roads, where are grass and wild flowers, and a squirrel sometimes scampers along the fence-rails, whisking his bushy tail, and setting up such an odd chatter, just to say he can't be caught.

When Saturday comes there'll be a holiday, for it's good not to play, or work, or study all the time, but to change from one to the other sometimes. It was wise Dr. FRANKLIN, who lived in Philadelphia a hundred years ago, who said,

"All work and no play
Makes JACK a dull boy,
All play and no work
Makes JACK a mere toy."

If the weather is good, and father and mother think it best, and you've studied and worked well, so as to earn a good play spell,—then for the woods and pastures where the berries grow,—great, juicy, shining, beautiful blackberries! And the delicious strawberries, too, peeping out, so rarely red, from the dewy grass!

Didn't you talk it over, and fix it all up at the school house Friday? Of course you did, all about who should go, and whose wagon, and where it should be, and what time. And didn't you all try to sleep *with one eye open* that night, and, at last all get sound asleep, and wake up and jump out of your beds ever so early? And want you ready when the great farm wagon came along with the old, steady brown horses, and JOHN and SARAH on the front seat and a lot more on the other seats, but room for more yet? JOHN is a tall young man and goes to see that all is right. He's *real good* too and likes it as well as any of you little folks. SARAH is his sister, and she goes to help the little girls if they get sick or have any trouble. She is just as good as need be, and will be *almost* like your mother among you. Away you go, a dozen of as merry folks, big or little, as can be found. Down the road, over the creek, up the hill, away over to that piece of woods and the pasture on the side of it.

Then such a scrambling out, and such climbing of fences and crawling out on great, fallen logs, to sit and pick the berries. And such "hurras!" and "oh, splendid!" and "JOE, look at this spot," and "KITTY, *do* see these great berries." Little hands and tongues busy, and baskets filling up, and a scratch sometimes that draws blood. But it grows hot and you get tired, so all go into the woods, and the girls find such curious flowers and leaves, and the boys peep into the clear brook and wish they had brought along their fish poles. And you eat your dinners in the shade and drink water from the spring in your tin cups, and go to work with a little less noise, for the baskets must be filled, and besides, you've talked so much it's pleasant to be quiet. Home again before dark; with *ever so many* berries, and bowls full for supper, with milk, fresh and healthy, and to bed early, *just as tired as can be*. But the folks will let you sleep a little later next morning, for you don't go berrying every day, and there will be a good many nice stories to tell at play time at the school house next week about that berry party.

Written for Moore's Rural New-Yorker.

JUST RIGHT.

BOYS and girls don't you think it *must be* some trouble to get the RURAL just right. I think so, and indeed it's some trouble to do a great many things that fall to our lot. Perhaps you have thought it a trouble to obey your parents, and wished just for once to do as you pleased, it would be so easy. Yes, so easy to throw down your hat instead of hanging it up, so easy to drop your hoe just where you used it, so easy to loiter by the road and play rather than go to school and learn your lessons, so easy to stay from church and Sabbath school and all that.

It may seem easier now to leave undone these and many more things; but when you are grown to be men and women how glad and thankful you'll be that you learned to do things well. Don't you think it must be a pleasure to the Editors of the RURAL to know they are doing good? This is almost a "long yarn" you see.

H. M. L.

WE expect, and hope, and pray for a crown of glory, but we need not expect it without labor. God has scattered Christian duties, like grains of gold, all through the sands of life, and we must pick from the dust of the earth, one by one, the grains of gold from which to mould our own immortal diadem. The more abundant the grains we gather, the richer will be our crown. He who gathers not these golden grains will never be a king.

The Reviewer.

LECTURES ON NATURAL THEOLOGY—Or Nature and the Bible from the Same Source: given before the Lowell Institute, Boston. P. A. CHADBOURNE, A. M., M. D. of Williams' College. G. P. Putnam & Son, Publishers.

ORIGIN of Life,—The Body,—Instinct,—The Atmosphere,—Geology,—The Metals,—are some of the topics, ably examined and treated of with earnest eloquence. Some forty years ago, JOHN LOWELL of Boston, left as a noble legacy, a fund of some $40 000 to sustain a yearly course of *free lectures* in that city, which are still kept up, and of which this book is a part. They were to be useful and scientific, and, in his own words, "A course of lectures on Natural Religion, showing its conformity to that of our Saviour," should be a part of the plan. For sale at DEWEY'S.

BIBLE TEACHINGS IN NATURE. By Rev. HUGH MACMILLAN. Appleton & Co., Publishers.

THE author, an eminent and able man, says in the preface:—"I endeavor to show that the teachings of Nature and the Bible are directed to the same end, * * that the scenes and objects of Nature are the pictures by which these truths are illustrated. I have only plucked a few stray ears from a rich and golden field:" and through 350 pages, with signal felicity and fine descriptive powers, he moves toward this end in chapters on Ice, Grass, Earths, Teachings, Fading Leaves, Agate Windows, &c., &c. Sold by STEELE & AVERY.

HISTORY OF THE AMERICAN CIVIL WAR. By J. W. DRAPER, M. D., LL. D. New York: Harper & Brothers.

THIS solid book of 570 pages is the first of three volumes to be published. It is more than a mere narrative of facts, and goes back to influences of race, climate, early settlement, and national questions other than slavery, to seek the causes of this great revolution in a philosophical spirit, such as befits the position and ability of its eminent author. This volume brings the matter to the close of BUCHANAN'S administration. For sale by STEELE & AVERY.

OLD ENGLAND, ITS SCENERY, ART AND PEOPLE. By J. M. HOPPIN, Professor in Yale College. New York: Hurd & Houghton.

THE author of this volume of travel says, "There is no country which contains so much of interest to a thoughtful American as England; finding there, as he does, the head-springs of the life and power of his own nation. * * * I have spoken with freedom, but in a spirit of reverence and love for the great land of our fathers." It will well pay for reading. Sold by STEELE & AVERY.

OLD CURIOSITY SHOP AND SKETCHES. By BOZ. Two volumes in one. [pp. 630.] New York: Hurd & Houghton.

THE "Sketches" which gave DICKENS reputation, and that story in which "Little Nell,"—with her gentle purity, once read of never to be forgotten,—is the central character, are here; in the legible type grateful to the eye, and with the fine illustrations of the "Globe Edition" of these able publishers. Sold by E. DARROW & KEMPSHALL.

BEET-ROOT SUGAR, and Cultivation of the Beet. By E. B. GRANT. Boston: Lee & Shepard.—1867.

A COMPREHENSIVE review of the subject of Beet Culture, embodying statistics of value to all who design cultivating the beet for sugar-making purposes. It is valuable also for the minuteness of its instructions in this branch of agricultural pursuits, and cannot fail of proving acceptable to all who take an interest in the subject of which it treats. Sold by E. DARROW & KEMPSHALL.

THACKERAY'S WORKS. Illustrated by the Author. PENDENNIS. New York: Harper & Brothers.

THIS story, by the great English writer, needs no word of introduction. Now that his work on earth is over, his writings are even more appreciated than during his life, and the Harpers are sending out a uniform edition, of which this substantial book with its quaint and thoroughly *English* illustrations is a welcome specimen. Sold by STEELE & AVERY.

ON THE BORDER. By EDMUND KIRKE. Boston: Lee & Shepard.

AN historical story, made up from notes of Gen. GARFIELD'S campaign in Eastern Kentucky. The brilliant descriptive powers of the well-known author are warrant enough for its interest and value, and it has more depth and weight than his former works. Sold by DARROW & KEMPSHALL.

HISTORY OF THE PANAMA RAILROAD, and Pacific Mail Steamship Company, and Traveler's Guide for Steamers to Europe, &c. By F. N. OTIS, M. D. New York: Harper & Brothers.

Two hundred pages of illustration and description of these great enterprises, and half as much of a Traveler's Guide,—facts of value to every traveler,—of interest to all. Sold by STEELE & AVERY.

THE LAND OF THOR. By J. ROSS BROWNE. New York: Harper & Brothers.

A BOOK of travels in Russia, Norway, Sweden, Denmark and Iceland, by a writer full of California sparkle and racy humor, yet instructive withal. It has good illustrations of places and costumes. Sold by STEELE & AVERY.

NEIGHBOR'S WIVES. By J. T. TROWBRIDGE. Boston: Lee & Shepard.

A TALE of domestic trial, temptation, crime, forgiveness and higher life, by a writer who always has a worthy aim, and a forcible and eloquent style that has held many a reader's close attention to his productions. Sold by DARROW & KEMPSHALL.

STEPHEN DANE. By AMANDA DOUGLASS. Boston: Lee & Shepard.

LIFE in a work-shop, affection misplaced, toil, conquest, mistakes corrected, and the meeting, at last, of two loving hearts, tried and true, make up this book, which has much feeling, beauty of description, and insight. Sold by DARROW & KEMPSHALL.

CHRISTIANITY AND ITS CONFLICTS. By E. A. MOREY, A. M. New York: D. Appleton & Co.

A BOOK of 480 pages, ranging over a wide field and written with vigor and courage, taking ground against Puritanism, and for Catholicism as real christianity in its spirit, although liable to abuses. Sold by ADAMS & ELLIS.

HENRY VIII AND HIS COURT. An Historical Novel. By Miss MUHLBACH. New York: Appleton & Co.

ONE of the valuable semi-historic works of this accomplished writer, which clothes the skeleton facts of history in the living habits of the time to which it refers. Sold by ADAMS & ELLIS.

NEW HALF VOLUME!

A GOOD TIME TO SUBSCRIBE!

As the Second Half of Vol. XVIII of the RURAL NEW-YORKER commences THIS WEEK,—July 6th,—*now is a favorable time to subscribe or renew.* Agents, and all earnest friends of the RURAL, will please note this, bearing in mind that every new subscription will tell in enabling us to make the paper more acceptable and valuable. And now that splendid crops are being vouchsafed farmers and planters in almost every section of the Union, we trust they will not forget the RURAL and other journals which seek the best interests of producers.

All subscribers whose terms expired last week will find the number of the paper (910) printed after name on address label. In renewing, as we hope all will,—either by remitting singly, or joining or forming a club,—we hope no one will neglect to invite others to give the paper a trial for six months or a year. Single or club subscriptions will be received for six months at the same proportionable rates as for a year, and free copies, etc., allowed in proportion. Agents are reminded that the Premiums offered for the Spring and Summer Campaign extend to July.

Rural New-Yorker.

NEWS DEPARTMENT.

ROCHESTER, N. Y., JULY 6, 1867.

NEWS OF THE WEEK.

From Washington.

AT the Surratt trial the 27th, W. R. Conger, who kept a saloon at St. Albans, Vt., thought he saw the prisoner at his place the Sunday or Wednesday after the assassination, and noticed him especially, from suspicion. Weichman was examined at length, more particularly than on the trial of the conspirators. He was much moved, and Surratt kept his eyes fixed on him.

The sentiment of Congressmen in Washington is that the session should be short, with provision for another in October. Gov. Boutwell favors an October session, to give time for discussing impeachment.

Secretary Stanton was three days confined to his room, but is again well.

The Department of State has information from Paris that of the 524 exhibitors from the United States, 202 have had prizes. Of these four were grand prizes. Seventeen gold, sixty-two silver, and 103 bronze medals. Seventy-nine were honorably mentioned.

Russian, French and English Ministers were telegraphed to ask the Government to use its influence for Maximilian's safety, and Mr. Seward was duly informed.

The President and suite have returned from Boston, being met and welcomed at several places on their way back to Washington with appropriate ceremonials.

The receipts from customs from June 15th to the 22d at New York, Boston, Philadelphia and Baltimore, were $2,722,882.

There are rumors that Gen. Rousseau is to take Sheridan's place at New Orleans.

The Agricultural Department states the total acres of wheat as 10 to 20 per cent. above that of last year.

Horace Greeley is to appear before the Judiciary Committee.

From Albany.

THE State Workingmen's Assembly met the 25th, with seventy Unions represented. The President urged organizing, deprecated strikes, wished conferences with employees on the eight-hour matter, &c.

The Constitutional Convention has propositions on suffrage as follows: — First — To extend the right of suffrage to all males eighteen years of age and upwards. Second — To extend suffrage to all males twenty-one years of age. Third — To submit to the decision of the "eitizen" females of the State the question of female suffrage. Fourth — To confer the right of women's suffrage by Constitutional enactment.

Numerous motions have been made, among which are the following:

By Mr. Burrill — That accused in Court may testify in their own behalf. Referred.

By Mr. Jarvis — A plan for Court of Appeals. Referred.

By Mr. Devlin — To limit veto power to Constitutional questions exclusively. Referred.

By Mr. Sylvester — That no bill shall be sent from one branch of the Legislature to the other within ten days of adjournment. Referred.

By Mr. Fuller — That the Canal Committee inquire into the propriety of imposing tolls on railroads running parallel with the Erie Canal during the season of navigation.

By Mr. E. Brooks — That the same committee inquire into the expediency of leasing the Champlain or any other lateral canal, provided an increased revenue is secured, the tolls reduced and speedier and cheaper transit obtained. Referred.

By Mr. Lapham — That applications for pardon be made to the State Prison officers, and if recommended by them, the Governor may grant or refuse them. Referred.

From the West.

THE Cincinnati Commercial says its reporter visited Senator Wade at his home, and he denies being in favor of any agrarian division of property, or any "such foolish thing," but that he watches earnestly all efforts for the elevation of labor by co-operation, or in any just and wise way.

Gen. Sherman has issued a general order for keeping the Indians in check, and accepts all volunteers mustered in by United States law, but not as independent and fragmentary forces. In cases where Indians live on reservations he says the treaties with them must be kept sacred.

The grading parties on the Pacific Railroad at Bunker Hill, Kansas, were attacked by the Indians, and three killed. Work is suspended beyond Wilson's Creek, and the road waits for military protection. Life and property need it also on the borders. Gov. Crawford is endeavoring to get arms from the military for the railroad men.

The telegraph line between Fort Cooper and South Pass, 175 miles, has been in the Indians' hands a fortnight. San Francisco dispatches state that the steamer Fideliter was at New Archangel, Sitka, and the passengers were well received by the Russians.

At the Democratic State Convention at San Francisco, the Reconstruction Act and impartial suffrage were opposed, and the eight-hour law and payment of the national debt favored in the resolutions.

A St. Louis dispatch gives the May earnings of the Kansas Branch of the Pacific Railroad at $71,000 nett.

The Michigan Constitutional Convention adjourned the 25th for two weeks.

From the South.

A NEW ORLEANS dispatch to the N. Y. Herald, says there have been three cases of yellow fever. The City Treasurer is accused of over-issue of city notes.

Gen. Swayne in Alabama, has forbidden the levying of a heavy tax on pension and pay documents of Union soldiers, and also the demand of a heavy tax on illustrated papers from outside the State. This was supposed to aim at Harpers' Weekly.

At Richmond, Va., the 27th, the registrations were 316 whites and 512 negroes.

At the decoration of graves of Union soldiers by ladies at Louisville, Ky., 3,000 persons were present. Banished Mexican Imperialists at New Orleans say Santa Anna is a prisoner of war at Campeachy.

From Canada.

TORONTO, June 25.—The Liberal members of the Government have summoned a meeting of the Reform members of both Houses of Parliament who supported the Government at the last session on the want of confidence motion. They are asked to meet Messrs. Howland, McCougall & Blair at Toronto on the 30th inst. The Liberals of the Government from Nova Scotia and New Brunswick will be present. The true state of parties in the Province will be made known and the policy of the future discussed. It is understood that three gunboats, the Cherub, Herod and Britomart, now on the Upper Lakes, will be presented to the new Dominion by the Imperial Government on the 1st of July. The boats with their armament are valued at $100,000 each. Mr. Brydges denies and shows proof that the Grand Trunk Railway has not been inhuman or reckless to emigrants.

Latest European News.

NAPOLEON decides to reduce the French military forces. Prince Napoleon is to preside at a Congress which meets to fix a uniform gold and silver coinage for Europe. The Pole, Beregouskoi, who shot at Czar Alexander, is to be tried the 12th of July.

London advices say that the recent reforms and wise international policy of Austria has inspired fresh confidence in her credit in Europe.

King William has signed the Constitution of the North German Confederation to begin the 1st of July, 1867.

The feeling in Italy against the Catholic clergy is very bitter. At Florence at the Festival of St. John, the people refused to join the priests in the observances.

Five hundred Bishops and Arch-Bishops, and thousands of Priests, are at Rome, for the 1800th anniversary of St. Peter's martyrdom, and thousands more are on the way.

London advices from Turkey say Omar Pasha has gained a victory over the Cretans.

Yeddo and three other Japanese ports are to be open to commerce January 1st.

Surveys are going forward in the bed of the English Channel for the projected tunnel from Dover to Calais. The engineers have a steam tug especially fitted out with scientific apparatus and employed in this survey.

MAXIMILIAN.—The Mexican press is firm and unanimous for the execution of Maximilian. Gen. Escobedo threatens to depose Juarez unless he orders the execution. An Austrian ship-of-war from Vera Cruz left telegraphic dispatches for our Government at South West Pass below New Orleans the 29th. Her officers said nothing of Maximillan, but the ship being draped in mourning was noticed. They said Mexico was taken by the Liberals.

—Just as we go to press, July 1st, 12 M., we learn by telegraph that Maximilian was tried and shot on the 19th ult. Juarez refused to let the body be taken to Austria. The news of the execution is official to our Government.

INCOME RETURNS.—William B. Astor of New York, $681,210; Auguste Belmont, agent of the Rothschilds, $108,091; George Wilkes, editor of the Spirit of the Times, $12,220; Alfred Barnes, book-seller, $85,072; John J. Cisco, ex-sub-treasurer, $51,523; estate of Samuel Colt (revolvers,) Hartford, Ct., $124,203; widow Elizabeth Colt, $78,682; Rev. Dr. Horace Bushnell, $384; Pliny Jewell, $28,746; Pliny Jewell, Jr., $43,373, (leather dealers.) G. W. Julian, M. C., of Wayne Co., Indiana, $6,435. The largest income in Springfield, Ill., is Jacob Bunn's, banker and chief owner of the Chicago Republican, $80,059; Gov. Richard J. Oglesby, $4,237. George H. Pendleton, Cincinnati, O., $7,887. N. Langworthy, the famed grape-grower, $74,859.

"FISHY."—A statement is going the rounds of the newspapers to the effect that a lake larger than Lake Superior exists in British America, the knowledge of which has been carefully kept from the world by the Hudson Bay Company. The lake is called Neepignon, and abounds with fish, and its shores with game and fur animals. It is said to lie north of Lake Superior.

SEA SERPENT SEEN NEAR OSWEGO. — The Oswego Palladium gives the credible report of witnesses, members of a party of eight men and women who, on board a boat two miles from the harbor and near the shore, heard a singular noise and steered toward what they thought a floating log near the bank, when it proved a great serpent and reared its head some fifteen feet above the water, dropping it again to about two feet, and moving swiftly out into the lake with loud bellowing like that of a bull and lashing up of the water in its path. The neck seemed two feet thick, and body larger.

WHERE THE GOLD GOES. — From July 1st, 1866, to June 8th, 1867, $36,641,590 of California gold and silver reached New York, and $36,884,510 went to England and Europe from New York. Large quantities of gold have gone to England by the Isthmus, without reaching our shores, and all this fails to pay the *interest* on our debts for imports and bonds abroad. During these same months the imports of New York were $268,816,535, while the exports were but $165,134,157. We import too much and produce too little.

SENSIBLE.—A correspondent of the Richmond Enquirer writes from the Shenandoah Valley that the farmers have solved the labor problem, as we long ago advised them to do, by going to work themselves, and taking the personal oversight of such hands as they have to hire. He also says that the breadth of ground sown with wheat in the Valley, as well as in Fauquier, Warren, Rappahannock and other neighboring counties, is greater, and that the crops promise to be better than before.

A BUSY SEAPORT.—In proportion to its size, San Francisco, California, is the busiest seaport in the world. The annual exports are about $70,000,000; the imports nearly as much; the manufactures are worth nearly $20,000,000; the real estate amounts to about $12,000,000, and the cash value of the land, buildings and moveable property of the city is about $200,000,000, although assessed for taxation at only $80,000,000.

RATHER LATE.—The Sandwich Islanders are about to erect a monument in honor of Captain Cook, as a slight atonement for the conduct of their forefathers in eating him.

Commercial, Markets, Etc.

RURAL NEW-YORKER OFFICE,
ROCHESTER, July 2, 1867.

THERE is no great call for money now at any commercial point, and generally the supply exceeds the demand. The market was but little disturbed last week by the preparation made by the National Banks for their quarterly returns of July 1st. There was nothing like the disarrangement which occurred at the last quarterly returns. The banks are evidently in better condition than they were on the 1st of April. The fact that the banks have some time to prepare for the public exhibition of their condition, enables some institutions to cover over transactions which would otherwise see the light; all take pains to make a fair showing on the designated day, and sometimes such preparation may greatly damage the current of business. We agree with a commercial writer at the East who says:—"The present system of making quarterly returns of the condition of National Banks at a stated time, known and regularly prepared for, is faulty in the extreme. The only correct plan would be one that would demand of each banking institution statements of position as regards loans, reserve, &c., at some designated day in the past."

WOOL.—Buyers in this vicinity still offer for the new clip 40@45c., but there is very little doing. The sales at the West are thus far not large. There is beginning to be a little activity at some points in Michigan. At Kalamazoo prices range from 37 to 43c. At Marshall, 35 to 41c. At one or two places we notice quotations as high as 45 cts., but the average price seems to be not much above 40 cts.

The Boston market was much more active last week than for some time previous. The transactions foot up some 700,000 lbs., at a range of 33½@70c. for fleece, and 37½@62½c. for the various grades of pulled.

Manufacturers are sending out few agents for the purchase of wool this season. Some in want of very fine clips have sent buyers to Eastern Pennsylvania and West ern Virginia, but there are few manufacturers disposed to purchase largely just yet. It must be recollected there is no old stock of any amount in the country to fall back upon, and when it is found necessary to stock up the mills, it must be from the new clip. The Boston Bulletin says:

The bulk of old wool remaining in the hands of the trade consists of heavy New York, Vermont and New Hampshire fleeces, of the medium and three-quarter blood grades. These are not much wanted for present use, and can only be sold at a liberal concession. Very little low Western or choice Ohio and Pennsylvania is to be had, and these command relatively high rates.

WHEAT AND FLOUR.—Flour from new wheat has appeared in New York from several points South, and small lots of new flour are offered at St. Louis. Prices for the present seem to have nearly touched bottom. There was a moderate advance in the Eastern market last week, and prices will very likely remain about as they are at present until there is a large supply of new flour in market.

Rochester Wholesale Prices Current.

Special Notices.

Only $30 per Acre! for 65 acres good land near Milford, Del. Plenty of fruit.
R. UNDERHILL, Milford, Del.

Tourists.—No one should leave home this season without providing themselves with COES' DYSPEPSIA CURE to guard against sudden attacks of Cholera Morbus. It immediately corrects the stomach in such cases. It is a specific in Summer Complaints.

All About Mowing and Reaping Machines.

FRAUD AND HUMBUG EXPOSED.

THERE has been, and is now, such an amount of misrepresentation in reference to the trial of Mowing and Reaping Machines at Auburn, N. Y., last July by a committee of the N. Y. S. Ag. Society, accompanied with such gross libels upon us and our machines, that "*Forbearance* has ceased to be a virtue" indeed.

Some unscrupulous manufacturers and their agents for their own selfish and greedy purposes have published in newspapers, pamphlets and circulars, what purports to be the Report, or *extracts* from the Report of the Committee. These publications are *false and garbled* and "*made up*" to suit eastern machines and cast odium upon others. They ALL claim having received *the first* premium or medal, leaving it *to be inferred* that there was but *one first premium*; whereas, in truth there were *Eleven Premiums and Medals*, awarded to as many different styles and makers of mowing machines, and would have been more if fair play and honor had been observed. These *garbled and false* publications make certain machines stand higher than others by taking the highest credit marks of *their* machines and the lowest ones of *ours*. Now by this rule we find in the COMMITTEE'S PUBLISHED REPORT, that DODGE'S PATENT MOWER AND REAPER, Ohio and Buckeye Patents combined, made by Dodge, Stevenson & Co., WAS THE LIGHTEST DRAFT MOWER at the trial; that it had THE LEAST SIDE DRAFT; that it was marked for quality of work two higher than Buckeye, and nearly double that of the Walter A. Wood Mowers on the most *difficult* piece of work during the trial, viz., Lodged Clover and Weeds in the Leach lot.

Here are the figures of the principal machines as published by the Committee. The No. 40 represents perfection:

Name of Machine,	Qual. work. Mow'g	Qual. work. Reap'g	Side draft.	Direct draft.
Columbian; Am. Ag. Works,	26	31	8½	270
Walter A. Wood's Mower,	19	32	7½	247
Marsh; Wm. A. Halladay,	28	not giv'n	7½	272
Cayuga Chief,	30	28	6	291
Kirby; D. M. Osborne & Co.,	32	32	3	250
Buckeye; Adriance, Platt & Co	30	31	5	220
Dodge's Patent; Dodge, Stevenson & Co.,	37	37	2½	213

Our machine *was awarded the preference* in Class 5 as a *Mower, Hand or Self-Raker, as preferred*, in the same machine, and the above clearly shows that it was entitled to it. HIRAM CURTIS of Albion, N. Y., who manufactures a machine he calls the Buckeye, did not have any machines at the trial, and for his gross libels upon us and our machines we have appealed to the courts for redress.

We have no objection to *fair competition*, be it ever so spirited, but when downright lying and malicious falsehoods are resorted to we shall defend ourselves in a proper manner against any and all such.

The immense popularity and sale of our machines has caused alarm amongst the *old concerns*, relying on reputations earned years ago; hence the fluttering, which is good evidence that *somebody is hurt*.

FARMERS! READ OUR ADVERTISEMENTS. YOU CAN RELY ON THEIR TRUTHFULNESS.

909-4t DODGE & STEVENSON M'F'G CO.
Auburn, N. Y., June 12, 1867.

DODGE'S PATENT REAPER AND MOWER CAUTION!

THE public are cautioned against confounding this *Valuable Machine* with the "Buckeye" made by Adriance, Platt & Co., and others, under Aultman and Miller's Patents. The Genuine and only DODGE MACHINE is manufactured under J. A. Dodge, Ball's and Aultman and Miller's Patents, and is a GREAT IMPROVEMENT on both the Ball's Ohio, and Buckeye Machines.

It is manufactured solely by the Dodge & Stevenson M'f'g Co., at Auburn, N. Y., and both the *Patentees* and manufacturers' names are plainly stencilled on every machine. Farmers! do not be humbugged by the specious and artful representations of parties that THEIRS is the *only reliable* and genuine machine, &c., &c., &c., and that certain other machines are *mongrel* or worthless imitations. Common sense teaches that this is an age of *improvement*; that the world moves on, and that the attempt of certain parties to keep their machines at the head of the list, by relying on reputations earned years ago must prove futile even where they are bolstered up by well known and *heretofore* honored names, and by certificates procured in too many instances by fraud and bribery.

Farmers, examine carefully for *yourselves*, and you will find that improvements can be made upon Mowing and Reaping Machines; that the DODGE MACHINE is all that is claimed for it; being a HANDSOMER, BETTER MADE, and more reliable MOWER, hand or Self-Raking Reaper, than can be found in the market. *See Advertisement.* 908-tf.

Silver Tips For Children's Shoes,—They protect the toe from wear, and are highly ornamental. Applied to the most genteel shoes made. Buy no others. 900-13t

LADIES AND GENTLEMEN WISHING A thorough English or Classical Education at *one-third less* than the usual price, should address
L. F. BITTLE, Throopsville, N. Y.

READERS OF THE RURAL Send me your address and 10 cents, for a sample of my Golden Pens. Also my Circulars, which are interesting to all.—Address C. W. OSMUN, Lock Box 23, Pontiac, Mich.

WHISKERS.—Dr. Lamontes Corrollin will force Whiskers on the smoothest face, or Hair on Bald Heads. Never known to fail. Sample sent for 10 cts. Address REEVES & CO., 78 Nassau St., New York.

EXCELSIOR FARM GATES—Agents Wanted. Territorial rights for sale in the States of N. Y., Pa., Wis., Minn., Neb. and Kan. Illustrated in this paper June 15, 1867. Send for Circular to H. B. NORTON, No. 10 Baker's Block, Rochester, N. Y.

SORGO HAND BOOK.
Our Eighth Annual Sorgo Hand Book,
Giving the most reliable information on Manufacturing Sorgum Sirup, the result of 10 years personal experience, with full description of the celebrated **Cook Evaporator & Victor Cane Mill**—Also, description of the **Eureka Cider and Grape Mill,** sent free to all applicants. BLYMYER, DAY & CO., Mansfield, O.

MORE MONEY IS MADE BY MALE and Female Agents for Victor's Beautiful and Popular Books;
Incidents and Anecdotes of the War!
History of American Conspiracies!
than by selling any or all other books. Each volume is COMPLETE, and gives unqualified satisfaction.
Clergymen, Teachers, Students, or any intelligent person wanting agreeable and REMUNERATIVE employ, should send for Circular of terms, &c., to WM. H. GIFFING, Gen'l Agent, 18 Spruce St., N. Y.

THE HARRIS HOP PRESS, (ILLUSTRATED and described in the Rural of July 6,) has become practically *the only* hop press in the country. It has nearly run out and superseded all others. So rapidly has it come into favor, that four-fifths of the hops grown in the United States are baled with this press. It is simple, durable, not liable to get out of order, cheap, portable, and easily worked. We have the entire control of the patent. Responsible parties desiring to manufacture, will do well to address us. Manufactured and sold by us at Waterville, Oneida county, N. Y.
MESSRS. RAMSEY & HANSEN of Kilbourn City, Wis., and F. S. WYKOFF of Howell, Mich., are authorized to manufacture and sell our Press in their respective States the present season. Send in your orders early, for although we have, from year to year, greatly enlarged our facilities for manufacturing, we have never yet been able to supply the increasing yearly demand.
BUCKINGHAM, WALSH & CO.,
911-9t Waterville, Oneida Co., N. Y.

IMPORTANT TO OWNERS OF HORSES.
Advice and Prescriptions for Sick or Injured Horses Given Free
The Editor of WILKES' SPIRIT OF THE TIMES desires to inform the owners of horses throughout the United States that he has regularly engaged upon his paper one of the ablest and most experienced professional veterinarians in the United States, whose special duty it shall be to answer, gratis, all questions relative to sick or injured horses which may be addressed to the SPIRIT, *whether by subscribers or not.* These answers will in all cases contain a prescription for the injury described, and will be printed, in connection with the question asked, in the following number of the SPIRIT. No answers, however, will be given by mail, it being a part of the object of the editor to submit the ability of the professor who has assumed this department of the SPIRIT to the keenest criticisms of the general public. By adding this useful department to the SPIRIT, the editor contributes to those of his readers and subscribers who own horses, a horse-doctor free, and not only to his subscribers, *but to every horse-owner in the United States who may choose to direct an inquiry to the* SPIRIT *by mail.* The subscription price of the SPIRIT is $5 a year; but single copies may be bought from news agents from week to week by those who desire to use it temporarily only, for veterinarian questions, at fifteen cents per copy. The SPIRIT OF THE TIMES is a high-toned gentleman's paper which (with the old SPIRIT, whose business and title it inherits) is of forty years' standing, and is devoted to Hunting, Fishing, Racing, Field Sports, Literature and the Stage. GEORGE WILKES,
Editor and Proprietor, 201 William St., New York.
☞ Dealers will continue to procure their supplies as heretofore.

WARNER'S SULKY REVOLVING RAKE.—It is almost universally admitted that for excellence of work the Revolving Rake is unequalled. Its great want has been an efficient sulky attachment. This, however, has been successfully met in the Warner Sulky Revolving Rake, an engraving of which is here presented

WORKING POSITION.

The advantage which the Warner Sulky Revolving Rake possesses over all others will be readily comprehended. It gathers the hay free from dust and sand, carries it clean, and in dumping closes the winrow or rick in good shape for tumbling and pitching. Its working is so simple and effective that a boy of 12 or 14 years of age can manage it with ease. The Warner Sulky Revolving Rake has been thoroughly tested, and won an enviable reputation; those who have used it are unanimous in pronouncing it the best Rake yet introduced. It has received the most flattering notice from the Press and Agricultural Societies. It has taken the First Premium at all State Fairs wherever exhibited.
☞ Send for Circular to
H. BIRDSALL, SON & CO., Penn Yan, N. Y.
☞ AGENTS WANTED—To whom a liberal discount will be made. 911-4t

HONORABLE EMPLOYMENT—CAN BE secured in a business that will pay from $5 to $10 ₩ day, by selling our Aerating Machines. They will sell in every family. For full particulars address

BOOKHOLDER, WRITING DESK & LADIES' WORK-TABLE COMBINED.—Neat, ornamental, portable and easily adjusted. A new thing, just out. Very desirable for aged people, invalids and all who read much. Every Student and Clergyman should have one, and every private library should be supplied with it. Agents wanted everywhere. Sent, express paid, on receipt of $5. JOHN CONNACHER & CO.,
911-4t 208 Broadway, N. Y., General Agents.

WANTED—AGENTS—$75 to $200 per month, everywhere, male and female, to introduce throughout the United States the GENUINE COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, bind, braid and embroider in a most superior manner. Price only $18. Fully warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay agents from $75 to $200 per month and expenses, or a commission from which twice that amount can be made. Address SECOMB & CO., Cleveland, Ohio.
CAUTION.—Do not be imposed upon by other parties palming off worthless cast-iron machines, under the same name or otherwise. Ours is the only genuine and really practical cheap machine manufactured. 911-4t

THE PREMIUM MACHINE!

BUCKEYE MOWER & REAPER

At the Great National Field Trial, held at Auburn, in July last, which was the most thorough and extensive ever held in any country, FIFTY-NINE MACHINES were entered for competition, and nearly three weeks occupied in the numerous severe tests to which they were subjected. The "Buckeye Mower" was awarded

The First Prize Grand Gold Medal

For perfect work, lightness of draft, freedom from side-draft, portability, facility of management, perfection of mechanical construction, strength and durability.
☞ Beware of any machine offered as a *Buckeye combined with anything else*, as they only attempt to steal the reputation of the Buckeye to cover their own defects.
☞ Descriptive Circulars of the Genuine Buckeye and Synopsis of the Official Report of Auburn Trial forwarded by mail.
Manufacturers.—ADRIANCE, PLATT & CO., (M'f'y Poughkeepsie,) 165 Greenwich St., N. Y.; J. CHILDS & SON, 121 Genesee St., Utica, N. Y.; HIRAM CURTIS, Albion, Orleans Co., N. Y.; H. & E. F. COOPER, Watertown, Jefferson Co., N. Y.; G. SWEET & Co., Dansville, Livingston Co., N. Y.; GEO. P. YORK, Westfield, Chautauqua Co., N. Y. 911-1t

SEED BUCKWHEAT.—I HAVE NOW IN store 200 bushels Seed Buckwheat, at the Genesee Seed Store, Rochester, N. Y. ——J. RAPALJE.

FOR SALE—A SPLENDID ESTATE of 1060 acres, rich land; 900 acres open under good fence in Northumberland Co., Va., lying on the Potomac river, in full view of Point Lookout and Chesapeake Bay. The sales of ½ of the corn and oats from 500 acres paid the owner $1,400 rent last year. Also, many desirable Farms on the Northern Neck of Virginia, from $3,500 to $40,000. Apply (with stamp) to W. H. HARDING, No. 4 North Green St., Baltimore, Md., Coal Dealer and Real Estate Agent.

THE WAY TO MAKE MONEY.—And how to keep it,—mailed free on receipt of 25 cents. Address DIXON & CO.,
909-4t No. 58 Vandam St., New York.

WANTED—AGENTS FOR BOSTON, Philadelphia, Cincinnati, Chicago, with $150 to locate. Also, 30 Traveling Agents can make $2,500 per annum, selling Prof. JOHNSON'S Wash Crystals, Prepared Starch, and Improved Indigo Blue, &c. Address, with postage stamp for Circulars, or send 50 cts. for samples, I. T. JOHNSON, 316 Greenwich St., N. Y. 907-tf.

MARYLAND AND SOUTHERN FARMS. Farms and Plantations, Coal, Timber and Oil Lands, Fruit, Dairy, Grain and Grazing Farms in Maryland, Virginia and other Southern States. Also, Country Seats near, and Dwellings and Warehouses in Baltimore, Washington and Richmond, for sale low. Accurate descriptions furnished gratis. JOHN GLENN & CO., 59 Second Street, Baltimore, Md. 907-tf

GENTLEMEN!—IF YOU WANT A LUXU- riant growth of beard in five weeks, use the Italian Compound. *Satisfaction guaranteed or money refunded* Price, by mail, closely sealed, 50 cents.

MOWING MACHINE KNIVES and Sickles complete, or in sections, at wholesale or retail, by
903-7t SWEET, BARNES & CO., Syracuse, N. Y.

PORTABLE STEAM ENGINES— Combining the maximum of efficiency, durability and economy with the minimum of weight and price. They are widely and favorably known, more than 600 being in use. All warranted satisfactory, or no sale. Descriptive circulars sent on application. Address
904-26t J. C. HOADLEY & CO., Lawrence, Mass.

6,000 AGENTS WANTED—TO SELL 6 NEW INVENTIONS, of great value to families; all pay great profits. Send 15 cts. and get 80 pages, or 25 cts. and get 80 pages and a sample gratis.
903-13t EPHRAIM BROWN, Lowell, Mass.

THE McKAY SEWING MACHINE, the only machine in existence by which a sewed boot or shoe can be made. Adapted to all kinds, styles and sizes of boots and shoes. 200 pairs can be made with ease by one man, with one machine, in ten hours. These shoes take precedence of all others in the market, and are made substantially at the cost of pegging. In use by all the leading manufacturers. Machines, with competent men to set them in operation, furnished at one day's notice. For particulars of license apply to GORDON McKAY, Agent, 6 Bath street, Boston, Mass. 901-13t

1867.

The Joseph Hall Agricultural Works,
GLEN & HALL, Proprietors,
ROCHESTER, N. Y.,
MANUFACTURE THE CELEBRATED

HALL THRASHING MACHINES,

With Iron Planet, Cary's Patent Double Pinion and Woodbury Horse-Powers, the Collins and Shattuck Clover Thrasher, Huller and Cleaner, &c., &c.

The Hall Machines of different kinds having been before the public for nearly FORTY years are too well known to require any description. For the season of 1867 we have added some improvements, and as now offered, we have no hesitation in pronouncing our Grain and Clover Thrashing Machines *unequalled* by any others in the market.
We shall, in a few days, issue our Descriptive Catalogues of Machines and Repairs, which will be sent free on all applications, made to our agents or ourselves.
We shall keep a full stock of both Machines and Repairs at our several general agencies from whence our friends may obtain them at manufactory prices, adding transportation only, or they can apply directly to us.
We have a branch Warehouse at 38 West Larned St., Detroit, Mich., represented by WM. SANBORN, and general agencies as follows:—J. D. EASTER, Chicago, Ills., RICHARD CROMWELL, Baltimore, Md., JONES & HEWLETT, Stockton, Cal., and WM. LYNE, San Francisco, Cal.
899-tf GLEN & HALL, Rochester, N. Y.

THE HOWE MACHINE CO.'S

SEWING MACHINES,

699 Broadway, N. Y.

For Families and Manufacturers.

THESE SEWING MACHINES

Were awarded the highest premium at the World's Fair in London—the largest Gold Medal ever given—State and County Fairs all over the Country.

THE HOWE SEWING MACHINES

Do not now require the endorsement of Societies or Fairs—they are

WORLD RENOWNED.

They are celebrated for doing the best work, using a much smaller needle for the same thread than any other machine, and by the introduction of the most approved machinery, we are now able to supply the very best machines in the world

These machines are made at our new and spacious Factory at Bridgeport, Conn., under the immediate supervision of the President of the Company, ELIAS HOWE, Jr., the original inventor of the Sewing Machine.

They are adapted to all kinds of Family Sewing, and to the use of Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Boots, Shoes, Harness, Saddles, Linen Goods, Umbrellas, Parasols, &c. They work equally well upon silk, linen, woolen and cotton woods, with silk, cotton or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every species of sewing, making a beautiful and perfect stitch, alike on both sides of the articles sewed.

The Stitch invented by Mr. HOWE, *and made on this Machine, is the most popular and durable, and all Sewing Machines are subject to the principle invented by him.*

SEND FOR CIRCULAR.

A splendid residence with tenant house, barns, &c., in first rate condition on the premises. A portion of the premises will be sold separately if desired. Terms to suit the purchaser. For particulars, inquire of MILFORD HARMON at Medina, OSCAR FOLSOM at Buffalo, or
895-tf F. A. MACOMBER, Rochester, N. Y.

SHEEP AND WOOL ARE GREAT AND paying institutions. If you wish to know all about the breeding, management and diseases of the former, and how best and cheapest to produce the latter, get and read **Randall's Practical Shepherd**, the best and latest work on American Sheep Husbandry. Large 12mo.—454 pages, illustrated. Price $2—sent post-paid. Address D. D. T. MOORE, Rochester, N. Y.

THE GATE AT LAST—Curtiss' Patent Improved Sliding and Self-Shutting Yard and Farm Gate. Simplest, cheapest, best. Never stands open; shuts by its own weight.
☞ Territory to sell and Agents wanted in every portion of the United States. Address
893-tf GEO. G. CURTISS, Rochester, N. Y.

THE ALBANY COTTON GIN MANUFACTURING CO.,
ALBANY, N. Y. (POST-OFFICE DRAWER 162.)

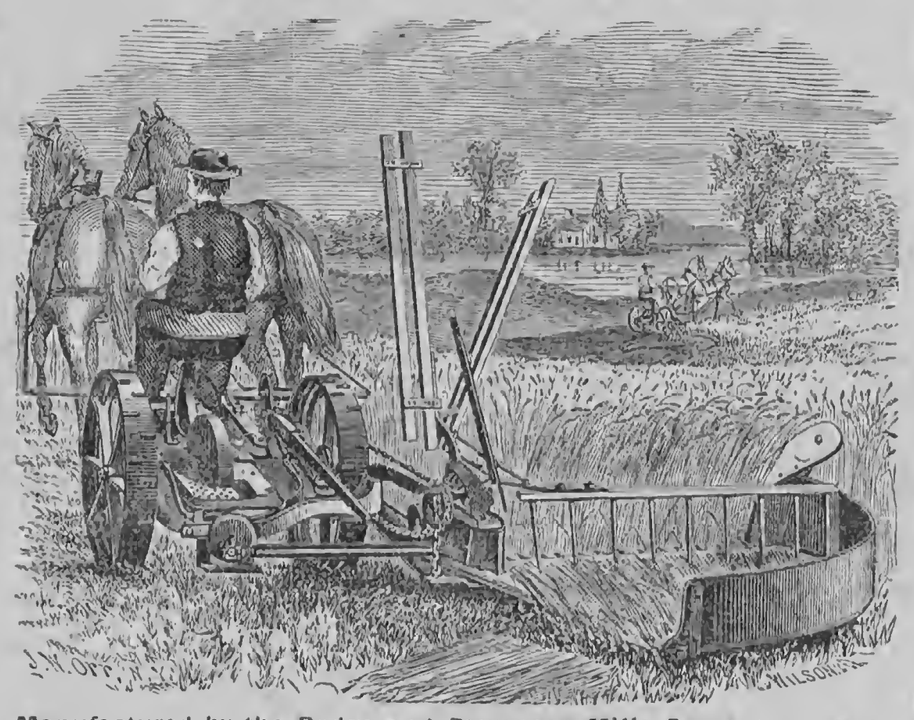
MANUFACTURERS of Agricultural Machines of *the best* and most approved kinds and patterns in use, comprising "STAR" COTTON GINS AND CONDENSERS, **"Star" Railway Powers,** (Emery Patent,) **"Star" Lever Powers, "Star" Thrashers and Cleaners,** Thrashers and Separators, Circular and Dragg Cross-Cut Saw Mills, Vegetable Cutters, Dog Powers, &c. Our "STAR" THRASHER AND CLEANER, as now made by us, unites more valuable features and possesses qualities superior than were ever before combined in such a machine. Comparatively small,—compact and easily portable—it will at all times, *thoroughly separate all the grain from the straw*, so that the cylinder may, at all times, be fed to its *fullest capacity* without danger of wasting grain, or clogging of straw in the Separator, for the reason that the *separating power is more than double* that which has ever before been produced in the same amount of space. The Machine will, therefore, *do more work* with a given size of cylinder than any other Machine of much larger dimensions; because, whatever be the length of our cylinder, we can feed *all it will take* and be sure that the straw and grain will all be *properly taken care of* without clogging or waste, while all other Machines, having less powerful separating apparatus, have to be built *much wider* in proportion to the *quantity of straw* to be thrashed, in order to give the straw the necessary room for separating, which is then often very imperfectly accomplished.
We have made some important improvements in this Machine during the past two years, which enable us to *thoroughly clean the grain* under almost any combination of difficulties. We have also introduced and are now using an entirely new and completely effective device for relieving the feeder of dust. By this arrangement all of the dust from the cylinder is carried through with the straw and discharged at the extreme end of the Separator in a condensed state, so that it cannot cause annoyance to any of the operators about the machine. The Machines are made of suitable sizes for a Two-Horse Railway Power, and also for our Six or Eight-Horse Sweep Power.
With regard to our RAILWAY POWER, we may say that everywhere the "EMERY POWER" has been considered the best Power of its kind in use, but recently we have modified and improved it in some points where changes seemed desirable, and now as the "Star" Railway Power, it surpasses its former self and stands without a rival as regards durability, economical use of the strength of the horse (admitting an easy gait of the animal with a very moderate elevation of the platform,) facility of moving about, setting up, &c., &c. Our "STAR" LEVER POWER, though always a favorite machine, and one of the best of its class, has likewise been much improved this season and cannot fail to give the highest satisfaction in its use for all the purposes to which it is adapted. It combines in its construction great strength, with extreme simplicity and consequent upon its simplicity there is but small loss of power by friction, so that a single horse may be used upon it with great advantage for the lighter work of a farm, while for the heaviest work required of it, it is amply adequate.
All Manufactures of this Company are made under the immediate Superintendence of Mr. WM. B. EMERY, (Survivor of EMERY BROTHERS,) whose long personal experience in the business of Manufacturing Agricultural Machines, with the facilities this Company possesses in the appointments of a Large and Commodious Factory, appropriate Machinery and skillful workmen, and to the determination of the Company to make and sell only such Machines as are known to be best adapted to their particular purposes, using only the best materials in their construction, furnish the strongest guaranties of the superior character, in all respects, of the Machines made by this Company. Confident, therefore, of our ability to give the highest satisfaction in the use of our machines, we solicit the continued patronage of Farmers, Planters, Dealers and others, assuring such that all orders addressed to this Company, will be executed with Promptness and Fidelity. Our complete Illustrated Descriptive Circular and Price List will be furnished gratis on application. ☞ **AGENTS WANTED**—Where none are already established, and also active and energetic men to canvass the country.

DODGE'S

PATENT REAPER AND MOWER,

AND SELF-RAKER,

OHIO AND BUCKEYE PATENTS COMBINED.



Manufactured by the Dodge and Stevenson M'f'g Co., Auburn, N. Y.

PRINCIPAL OFFICES AND DEPOTS FOR MACHINES AND REPAIRS:

L. J. BUSH & CO., No. 13 South Main Street, Saint Louis, Missouri.
GAMMON & PRINDLE, No. 46 West Lake Street, Chicago, Illinois.
L. J. BUSH & CO., Nos. 7 & 9 Clybourne Street, Milwaukee, Wisconsin.
RICHMOND, CHAPIN & CO., 58 Jefferson Avenue, Detroit, Michigan.

THIS MACHINE embraces all those valuable features which have contributed to the great success of the Ohio and Buckeye Machines together with a number of entirely new, novel and valuable improvements. In compactness, lightness of draft, excellence and elegance of workmanship and finish, combined with great strength and adaptation to all kinds of work, it will surpass any machine heretofore offered to the farmer. It has two Independent Driving Wheels, a double-hinged Finger-Bar and folding Cutting Apparatus. The Self-Rake applied to this machine has proved a perfect success. To say that it pleases is a faint expression of the sentiments everywhere expressed. Enthusiastic encomiums pour in upon us from every quarter.

ITS GREAT STRENGTH, ITS SIMPLICITY, ITS RELIABLE WORK,

place it out of reach of competition. It is a REVOLVING RAKE, and does its own reeling, saving the expense and trouble of a Reel. It makes a PERFECT SEPARATION, with the Rake Head, in all kinds of grain, whether tangled or lodged, long or short, by reason of the Rake revolving over forward, and striking into the uncut grain, before the sickle, carrying it along and over the Platform, and delivering it in compact gavels at the rear of the machine, entirely out of the way of the team and machine on its next round, and without any littering whatever.

THIS MACHINE WAS AWARDED

The Special Diploma and Grand Medal of Honor,

AS THE BEST

COMBINED MOWER, HAND RAKING REAPER, AND SELF-RAKING REAPER,

On exhibition at the Great Fair of the SAINT LOUIS AGRICULTURAL AND MECHANICAL ASSOCIATION, Oct. 6th, 1866. At the trial of Reapers and Mowers, at Auburn, N. Y., in July last, by the New York State Ag'l Society, this Machine was awarded the preference over all others in Class 5. This class was the most important of any, as it embraced a Mower and Hand and Self-Raking Reaper in the same machine. It was also

Awarded the Gold Medal as the Best Mowing Machine!

at the Louisiana State Fair Trial of Mowers, after thorough tests in very difficult, fine Bermuda grass, and on very rough ground. Also, a GOLD MEDAL as the best Combined Machine, Hand and Self-Raker.
This Machine has been awarded Gold and Silver Medals, and FIRST PREMIUMS, by the Pennsylvania and Iowa State Agricultural Societies, and by hundreds of County and Local Societies in all parts of the United States. Thousands of testimonials can be shown from farmers who have used these machines, in all portions of the United States, Canadas, and also on the Pacific Coast and in South America. We have made some GREAT IMPROVEMENTS for the season of 1867, the result of our protracted and thorough trials in the field during the harvest of 1866. Pamphlets containing full description will be gladly sent, postage free, to any one requesting it, and also any information as to our Local Agencies, by addressing the

DODGE & STEVENSON MANUFACTURING CO., Auburn, N. Y.

USE PRATT & BUTCHER'S

CELEBRATED MAGIC OIL.

Warranted in cases of Rheumatism, Neuralgia, Bruises or Pains.

The Best and Cheapest Horse and Cattle Medicine in the World!

WALTER B. SLOAN'S IMPROVED CONDITION POWDER
THE GREAT STANDARD MEDICINE
For Horses and Cattle,

Used throughout the United States and Canadas during the last 23 years.

For the cure of the various Diseases to which Horses and Cattle are subject; such as Founder, Distemper, Hide Bound, Loss of Appetite, Inward Strains, Yellow Water, Fistula, Poll Evil, Scratches or Grease, Mange, Inflammation of the Eyes, and Fatigue from Hard Labor; also, Rheumatism, (commonly called Stiff complaint), which proves fatal to so many valuable horses in this country.

SLOAN'S CONDITION POWDER

Has the largest sale of any Horse and Cattle Medicine in this country. It is composed of herbs and roots, and for mildness, safety, certainty and thoroughness, stands pre-eminently at the head of the list of *Horse and Cattle Medicines*.
It carries off all gross humors, prevents horses from becoming stiff or foundering, purifies the blood, loosens the skin, and gives it a smooth and glossy appearance cleanses the water and strengthens every part of the body. It is also a safe and certain remedy for coughs and colds, which generate so many fatal diseases.

The Cow requires to be supplied with an abundance of food—not to make her fat—this is not desirable, but to keep up a regular secretion of milk, and all owners of cows will find by giving them

SLOAN'S CONDITION POWDERS

twice a week, a large increase in quantity and quality of milk and cream. It carries off all fever and impurities of the blood. The effect is seen throughout the season by a rich and abundant flow of milk.
The farmer is beginning to be aware of the valuable properties of **Sloan's Condition Powder**, in promoting the condition of his sheep and preventing many of the diseases of all the domesticated animals.

☞ A fifty cent package of **Sloan's Condition Powder** put into a barrel of swill is better than a bushel of corn to fatten a hog, and is a certain preventive of Hog Cholera, Blind Staggers, and other diseases common among hogs.

CAUTION.—To protect ourselves and the public from being imposed upon by worthless imitations, the genuine will bear the *fac simile* signature of the proprietors on the wrapper.

PRICE 25 & 50 CTS. PER PACKAGE.

For sale by Druggists and Merchants everywhere.

Walker & Taylor.

Sole Proprietors, Chicago, Ill.
P. O. Drawer 5826.

H. P. WESTCOTT'S ADJUSTABLE

DASH CHURN.

First Pat'd Aug. 1863, *Improvements Pat'd April*, 1865 *and Nov.* 1866.

This Churn is now regarded by all the Agriculturists and Dairymen of the country, who have had an opportunity to examine it, as the best churn yet offered to the public—embracing as it does the principle of the old Dash Churn, adding thereto improvements to *secure the very best quality, and the larges quantity of butter with the least labor.* The last improvement is in the shape of the barrel, also the substitution of a *flat* steel Spring, (which is perfectly reliable,) to raise the Dasher; adjusting the *upper dasher outside the Churn*, above the Lever, by means of a malleable slide, or clasp, and thumb screw. We make five sizes of these Churns, (holding from five to thirty gallons,) in the best manner and of the very best quality of White Oak. Retail Price—No. 1, (30 gal.,) $16; No. 2, (¼ bbl.,) $14; No. 3, (½ bbl.,) $12; No. 4, (¾ bbl.,) $10; No. 5, (1-5 bbl.,) $8.
H. P. WESTCOTT, Sup't
Seneca Falls Churn M'f'g Co., Seneca Falls, N. Y.
R. E. LUSK, General Agent.

WESTCOTT'S ADJUSTABLE DASH CHURN

Has received the highest approval of Practical and Scientific Men and the Press.

"The Adjustable Dash Churn has not its equal on this continent."—D. D. T. MOORE, *Editor Rural New-Yorker.*
"The best form of Churn ever invented."—SOLON ROBINSON, *Ag'l Ed. N. Y. Tribune.*
Mr. Robinson also named it FIRST and commended it HIGHEST of all the Churns on exhibition at the New York State Fair.
"The greatest improvement on the old Dash Churn ever invented; all admitting that a Dash Churn makes better butter than a rotary one."—*Farmers' Club, American Institute, New York City.*
"The most important improvement recently brought out."—S. EDWARDS TODD, *Ag't Ed. N. Y. Times.*
"The very best Churn extant."—*Prairie Farmer.*
"It is perfectly common sense in its structure."—*Ohio Farmer.*
"A Churn that every butter-maker will be pleased to view and contemplate."—*Boston Cultivator.*
☞ The SENECA FALLS CHURN MANUFACTURING CO. is organized under the General Manufacturing Law of the State of New York, with a Capital of $100,000, and have extensive facilities for manufacturing Churns and the PATENTED FIXTURES. Can supply those purchasing Town, County and State Rights, with the Dashers, Springs, &c., at a moderate price, where the parties desire to manufacture their own Churns. 893-tf

AGENTS WANTED.—A few Agents wanted to sell territorial rights of the above Churn. Competent, reliable and experienced men will find the business profitable. For particulars address the Company at Seneca Falls, or parties in or near Rochester are referred to D. D. T. MOORE, Editor Rural New-Yorker.
☞ THE MICHIGAN CHURN MAN'F'G CO., at Parma, Mich., will supply the Adjustable Dash Churn throughout that State—or will sell Town and County Rights, and furnish the Churn.

AGENTS AND ALL WHO WANT A good paying business.—Secure at once the agency of THE LOST CAUSE, a complete Southern History of the War; patronized by tens of thousands eager to hear the other side. One agent sold 220 in one week. Address E. B. TREAT & CO., Publishers, No. 654 Broadway, N. Y.

TO-DAY AND TO-MORROW.

BY GERALD MASSEY.

High hopes that burn like stars sublime
Go down the skies of freedom;
And true hearts perish in the time
We blitterliest need 'em;
But never sit we down and say,
"There's nothing left but sorrow."
We walk the wilderness to-day—
The promised land to-morrow.

Through all the long, drear night of years
The people's cry ascended,
And earth is wet with blood and tears
E'er our meek suffering ended,
The few shall not forever sway,
The many toil in sorrow:
The bars of hell are strong to-day,
But Christ shall rise to-morrow!

Tho' hearts brood o'er the past, our eyes
With smiling futures glisten;
Lo! now the day bursts up the skies—
Lean out your souls and listen.
The world rolls Freedom's radiant way,
And ripens with our sorrow;
Keep heart! who bear the cross to-day
Shall wear the crown to-morrow.

Oh, youth, flame-earnest, still aspire
With energies immortal;
To many a haven of desire
Our yearnings ope a portal;
And though age wearies by the way,
And hearts break in the furrow,
We'll sow the golden grain to-day—
The harvest comes to-morrow!

Build up heroic lives, and all
Be like the sheathen sabre—
Ready to flash out at God's command,
Oh, Chivalry of Labor!
Triumph and toil are twins—and aye
Joy suns the clouds of sorrow;
And 'tis the martyrdom of to-day
Brings victory on to-morrow!

The Story Teller.

Written for Moore's Rural New-Yorker.

OUR FOURTH OF JULY.

BY DATE THORNE.

It was the morning of the Fourth day of July, 1866, and the patriotic family with whom DACHE and I were temporarily sojourning, were going to celebrate it. Half a dozen miles away there was to be a dinner, and music, and speeches, and the ringing of bells, and firing of cannon, and the spatter of fire-crackers, and crowds of uncomfortable-looking men, and women, and crying children, in gala-day attire, and all the other concomitants of a real, rousing, old-fashioned, patriotic celebration.

The household was early astir. The children were half crazy with excitement. The faces of the elders beamed complacently, and maintained an unruffled calmness, even when fire-crackers crackled under their feet, and torpedoes exploded over their heads.

"Who is going to-day?" asked the master of the house, drawing his gleaming razor back and forth over the strop he was holding.

"I," "and I," "and I," shouted a chorus of young voices.

"And you?" he asked, turning to DACHE and me.

"No! we are to stay home, and keep the house, and take care of the babies."

"For shame, girls! Every loyal person should be out to-day. Where is your patriotism?"

Now, our common sense might be assailed with impunity, but never our patriotism; so we answered indignantly, "Indeed, sir, as some one must stay, we show just as much patriotism in volunteering to do that, as in going, and letting some one else do it."

"Oh, of course!" he answered savagely, at the same time applying the foamy lather to his auburn whiskers, "and so the heat, and the crowd and the trifle of discomfort have nothing to do with it. You stay out of pure patriotism, I don't doubt. But I do hope you will have the grace to read the Declaration of Independence while we are gone."

"Oh! we learned that by heart long ago," was the saucy rejoinder. "But leave us a flag, and we'll promise to wave it and shout 'Hail Columbia,' which is surely as much as the nation can expect of us this warm day."

And so, amid bustle and hurry, they were made ready and started.

"JOHN will be home at six to do the chores," was the parting salutation, as they drove away, and we were left sole monarchs of the realm. It *was* a warm day, but out under the black-walnut trees there was shade, and a slight stir among the leaves betokened that a zephyr might be at play there, so thither we took our way; and with books and work at our side, and with four-years-old MADGE, and little TINY, who had just arrived at the dignity of her second birthday, knotting ribbon grass at our feet, there was the prospect of a long, and bright, and happy day before us. We read, and worked, and talked, and watched the sunlight flickering through the leaves, and making mosaic upon the sward below, until, upon suddenly looking up, the children were nowhere visible.

"Where are those children? MADGE, TINY, where are you?" we screamed.

"Here we be," called out a little voice, and following it we found the truants tucked under a blackberry bush, devouring the green Lawtons with what seemed an infinite relish.

"Children, they'll kill you—you'll die!" we shrieked, and each of us catching up one, we rushed into the house.

"What shall we do? I've heard of children's dying from eating green fruit."

"So have I. "Don't they give salt and vinegar for it?"

"Yes, that's the very thing; I remember now. Get some, do."

The salt and vinegar was brought for the children to drink, but after the first swallow TINY shut her little mouse teeth firmly together, and could not be persuaded to open them except occasionally to give vent to prolonged screams, accompanied by vigorous kicks and strikes; while the more pliable MADGE choked and strangled, and grew so black in the face that we were fain to set the cup one side.

"It's no use," was the next doleful remark. "I don't know what else to do, and it's four miles to the nearest doctor."

"And all the neighbors have gone to the Fourth," was the doleful reply.

As we knew of nothing else to do, we did nothing, but contented ourselves with watching every look and motion of the children, and conjuring up frightful visions of the mother coming home to find her darlings cold and dead in our arms. But, as they played around as usual, and no alarming symptoms appeared, we gradually relaxed our vigilance, and took up again the broken thread of HERBERT SPENCER'S Philosophy. "Homogenous" and "heterogeneous developments" were beginning to assume shape and plausibility to the mind, when the children were again missed, and again the frantic call, "MADGE, TINY, where are you?" and again the little piping voice, "Here we be."

The "here" this time was the pantry floor, upon which they both sat, with a huge cherry pie between them, while faces, hands and frocks were an undistinguishable mass of pulp and pastry.

"Oh, children! you are determined to kill yourselves, and your mother is gone, too!"

A tub of water, a bath, a fresh suit of raiment apiece, and tranquility was once more restored. But now it was time for their daily nap.

"Come TINY," I said, sitting down in the rocking chair, and speaking as coaxingly as my somewhat ruffled temper would allow, "come, and let's by-by to sleep."

"No, I do' want go s'eep,"

"But you must. Come."

"No, I won't go s'eep," and the midget ensconced herself in the farthest corner of the room, and with arms folded resolutely behind her, looked defiance out of her big blue eyes. Here was a situation! I, who had prided myself upon my successful management of a hundred young ladies, found myself defied, and my authority set at naught, by a two-years-old baby. The thought was not to be borne. Remembering that violent measures were not particularly soothing in their effects, I restrained with an effort my inclination to "coerce" her into obedience, and changing the tactics, began to tell the wonderful adventures of the little blue kitten. The magnet drew. She edged nearer and nearer, and before she knew it she was rocking in my arms. But the moment I tried to lay her head back in a comfortable posture for going to sleep she comprehended the ruse, and started up kicking and struggling, and screaming "I do' wont go s'eep—I won't go s'eep." And so, for three-quarters of an hour I rocked, and told stories, and sung songs, while that child, as sleepy as she could be, still obstinately refused to go to sleep. Sometimes, for an instant, the lids would droop, and I would think that I had conquered, but the next moment they would start open, wide and bright as ever.

"Was there ever such perversity, DACHE?" I exclaimed, in despair. "Why is it, do you suppose, that children will never go to sleep when they are sleepy? They contrive so many ways and study as hard to keep awake, as bilious people do at church of a Sunday. If you or I were in this baby's place, sleepy as she is, we should consider it a privilege to be allowed to close our eyes quietly. But do look at her now."

"It must be an evidence of innate and total depravity—nothing short," answered DACHE.

But with all her efforts to keep them open the lids would droop over the fast-dimming eyes, and gradually I stopped rocking. She was a pretty picture as she lay then in my arms, the tangled hair pushed back from the sweet, open brow, the long lashes resting on her cheeks, and the little red lips just parted with a smile. Very lovely and innocent she looked, spite of her dreadful depravity, and I forgot that I had ever been vexed with her.

"She's fast asleep, DACHE;—come and see what a little beauty she is." But just then the perverse lids flew open again, and the little voice lisped out. "I do' want to go s'eep," but the last word was spoken half in dreamland, and she was asleep, and for good. MADGE was already cuddled up on the lounge, and so for two golden hours we read and sewed and talked in peace. Then the little restless limbs were again in motion, and unceasing watchfulness was again the order. Time and space would fail to tell of all the mishaps and misadventures of that day. Some malicious sprite surely possessed those children. They went from one piece of mischief or danger to another as fast as feet and hands could carry them.

"Dear, dear!" said DACHE, after we had rescued MADGE from an attack of the cross turkey, whose little ones she had tried to catch, "I should think mothers would die of anxiety. I don't see how they manage to exist at all, unless they literally tie each child to their apron-strings, and keep them there all the day long. I am sure if we are able to present these children alive to their mother upon her return it will be a blessing for which to be grateful all our lives."

"And then, only think, if we multiply this day by three-hundred-and-sixty-five, and that by all the years of a child's life,—what a prospect!"

The hours drew on apace. Six o'clock came and went, but no JOHN to do the chores came with it. Another hour passed. By dint of unceasing care the children had been prevented from headlong destruction, and were asleep for the night. But now other voices began to be heard. The three pet lambs were making known their wants in strains more plaintive than melodious. The impatient squeals of half a dozen hungry pigs came down to us, softened by distance. The calves were putting their noses through the rails of the fence and proclaiming that it was supper-time in no very gentle accents. The cows were in the barnyard, lowing and waiting to be milked.

"What shall we do?" was the exclamation, as we contemplated all these things in dismay.

"We can feed the lambs, at least." So we warmed some milk and carried out to them. But their dainty palates had been accustomed to new milk, and they only sniffed at this, and threw up their noses in disgust. In vain we coaxed and threatened, and plunged their heads into the pail. They were not to be persuaded, and we gave up the attempt in despair.

"We can feed the pigs, at any rate. They will die of thirst this hot day." There were six of them. Three times we each carried out and emptied into their troughs a pail of sour milk. The fourth time we stood and looked at the greedy creatures, who were still squealing for more.

"Physiologically speaking, how large do you suppose the stomach of a hog may be?"

"What a question!"

"But, nevertheless, how large?"

"Not larger than a man's, certainly."

"But what man could consume a pail full of food and then clamor for more?"

"To be sure! What if we have killed them? What if they die of surfeit?"

We looked at each other a moment in alarm, and then threw our remaining pailsful upon the ground, while the disappointed creatures set up such a series of indignant squeals that we were fain to stop our ears and run out of hearing with all speed. As we neared the house the lambs saluted us again with their dismal cries.

"It is too bad," said DACHE, "and I can't stand it. I was brought up on a farm, and I could milk once, and believe I can do it again. At least, I know I can milk enough for the lambs' supper. Come, you go with me and I'll try."

Taking each a pail, we proceeded to the barnyard, where were congregated about twenty cattle of all sizes, and among them the six cows to be milked. We opened the gate and went in.

"Are you afraid?"

"N-n-o. Are you? But I *have* heard the children say that one of the cows is very cross."

"Well, I guess we shall know her by her looks. Now, where's the milking-stool?"

Where? to be sure. We at once instituted a search for it in all the fence-corners, around the pile of boards, under the loose rubbish, and in every other likely and unlikely place, and were at last rewarded by finding a square piece of plank with a stick thrust through the center for a leg.

"I'll try it," said DACHE, brightening up as she always did in emergencies. We next reconnoitered the cows, and selected one as the most promising looking of the lot. She was a beautiful creature, pure white, with sleek, shining hair, and she turned upon us a pair of eyes as full and soft and intelligent as some human ones are.

"Now you must get a big stick and stand at her head while I milk," said DACHE. I at once armed myself with the big stick and took my position as directed, with the weapon brandished threateningly before the creature's face.

"Her eye looks gentle."

"Yes; but see how her horns bend forward and down, as if they were intended on purpose for hooking."

The milking commenced, slowly and laboriously at first, but more easily afterward. Suddenly DACHE looked up.

"Why, that's a corn-stalk you've got in your hand."

"I know. But she thinks it is a club, and so it answers every purpose."

"But suppose she should be ugly?"

"I shouldn't dare strike her, any way.

The cow stood still, chewing her cud of grass, or of sweet and bitter fancies—I don't know which—and occasionally glancing at my formidable corn-stalk. As I had predicted, she thought it was a stick, and was evidently afraid to do otherwise than keep quiet. Things proceeded beautifully for some minutes, when suddenly she utterly refused to give another drop of milk. In vain DACHE labored and I gesticulated. She was incorrigible.

"We have enough for the lambs, at least. Let's go in."

"But we can't drink our coffee in the morning without cream. I'll try another."

So we sat the partly-filled pail through the gate, and rousing up another grave, matronly-looking creature, commenced the same process again. But this was a very different cow—restless and uneasy. She kept lifting up her foot and setting it down, stepping along and driving me ingloriously before her—caring no more for the weapon that I brandished in her face than as if I had not held it. Indeed, I believe that she suspected the sham, and was thereby emboldened to show out more ugliness than she would otherwise have dared. She shook her head, lowered her horns, and altogether behaved in such a way as no gentle-tempered cow would. Still we persevered. DACHE patted her glossy sides, and spoke soothingly to her;—I called to mind the stories I had read of ferocious beasts being subdued by the power of the human eye, and tried to fix the eye of this ferocious beast and subdue her in like manner. But she was neither to be coaxed nor intimidated into good behavior. As we grew frightened and anxious, she waxed bolder in her wickedness, until, giving a simultaneous kick backward, and lunge forward, she overturned the pail, sent the milk flying in all directions, and as for us I fear our exit from the yard was more hasty than dignified, for the pail, and stool, and corn-stalk were found the next morning—sad witnesses against us—in the very places where they had fallen. But the other pail was safe, and in it there was enough to give the lambs a bountiful supper, and if we did have to drink our coffee the next morning with new milk instead of yellow cream, we bore the affliction like martyrs, and said never a word. We watched the lambs eat their supper, after which they gave one or two grateful and satisfied m-a-a-s, and then cuddled their ungainly bodies and scrawny legs all into a heap, and, I suppose, slept soundly until morning.

But now that the pigs and lambs were quiet, the calves were making the air resonant with their bleatings. They were in the meadow, at some distance from the house. It was already nine o'clock. There was a full moon to be sure, but we were tired. Every limb and joint was aching. It seemed an utter impossibility to go a step further. We sat down upon the piazza.

"Well, let us take a philosophical view of the subject—which do you suppose will be the greater sufferers, we in carrying them their suppers, or they in going without?"

"If it comes to that, my present feeling is that we shall be the greater sufferers.

"Then don't let's go." There was a pause, broken by three distinct bleatings, following each other in quick succession.

"But thirst is a terrible thing to endure."

"And I suppose they have had no drink since morning." [Continued on page 217, this No.

A SPICY STORY.

THERE was a knot of sea captains in a store at Honolulu, the keeper of which had just bought a barrel of black pepper. Old Capt. ——, of Salem, came in, and seeing the pepper, took a handful of it.

"What do you buy such stuff as that for?" said he to the storekeeper, "it's half peas."

"Peas!" replied the storekeeper, "there isn't a pea in it."

Taking up a handful as he spoke, he appealed to the company. They all looked at it, and plunged their hands into the barrel, and bit a kernel or so, and then gave it as their universal opinion that there wasn't a pea in it.

"I tell you there is," said the old captain, again scooping up a handful, "and I'll bet a dollar on it."

The old Boston argument all over the world. They took him up.

"Well," said he, "spell that," pointing to the word "p-e-p-p-e-r," painted on the side of the barrel; "if that isn't half p's, then I'm no judge, that's all."

The bet was paid.

THE Rev. Mr. Barnham (author of the famous "Ingoldsby Legends") used to tell a story of the complete discomfiture of a wit of no inferior order, by a message politely delivered at a supper party by a little girl:—"If you please, Mr. Jones, mamma sends her compliments, and would be much obliged if you would begin to be funny."

AN exchange, in speaking of the magical strains of a hand organ, says:—"When he played 'Old Dog Tray,' we noticed eleven purps in front of the machine on their haunches, brushing the tears from their eyes with their fore paws."

IT is exceedingly bad husbandry to harrow up the feelings of your wife.

"THE light of other days"—pitch-pine torches and dipped candles.

ANSWERS TO ENIGMAS, &c., IN No. 909.

Answer to Historical Enigma:—He that tilleth his land shall have plenty of bread.

Answer to Anagram:

Float on! float on! through the azure tide,
Oh! beautiful moon, that seem'st to glide
Like fairy boat, with thy silver sail,
Wooing the breath of the rising gale;
Float on! float on! in thy graceful state,
And bear to its haven thy mystic freight.

Answer to Question:—4128.

MOORE'S RURAL NEW-YORKER,
THE LARGEST-CIRCULATING
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER,
IS PUBLISHED EVERY SATURDAY
BY D. D. T. MOORE, ROCHESTER, N. Y.

Terms, in Advance:

Three Dollars a Year—To Clubs and Agents as follows:—Five copies one year, for $14; Seven, and one free to Club Agent, for $19; Ten, and one free, for $25, and any greater number at the same rate—only $2,50 per copy. Club papers directed to individuals and sent to as many different Post-Offices as desired. As we pre-pay American postage on copies sent abroad, $2,70 is the lowest Club rate for Canada, and $3,50 to Europe. The best way to remit is by Draft on New York, (less cost of exchange,)—and all drafts made payable to the order of the Publisher, MAY BE MAILED AT HIS RISK.

☞ The above Terms and Rates must be strictly adhered to so long as published. Those who remit less than specified price for a club or single copy, will be credited only as per rates.

Two First-Class Journals for $3.50!

MOORE'S RURAL NEW-YORKER,
(*The Leading Weekly of its Class—Price* $3.00 *a Year,*)
AND
THE MARYLAND FARMER,
(*A Standard Agricultural Monthly—Price* $1.50,)
BOTH SENT ONE YEAR FOR ONLY $3.50!

THE Publishers of the above-named popular Journals have made an arrangement by which both can be furnished at about the price of one. Farmers, Planters, Stock Growers, Horticulturists, &c., in the North and South, East and West, will please note the offer,—remembering that NOW is a favorable time to subscribe, as a new Half Volume begins with July. The RURAL is a National Journal, adapted to the whole country, and the FARMER, though mainly devoted to Southern Agriculture and Interests, may be read with profit in all parts of the Union. No better investment can be made in Rural and Family Reading than by subscribing for these Journals.

The FARMER is ably conducted—published in superior style—magazine form, with colored cover,—and is justly attaining wide circulation and influence. Like the RURAL it seeks to promote the best interests of the Producing Classes of the whole country, leaving political and sectional discussions and disputes for party organs.

THE INDELIBLE PENCIL COMPANY,
(*Northampton, Mass.,*)
MANUFACTURERS OF THE IMPROVED
Patent Indelible Pencil,
For *Marking Clothing, &c.*, have ready for sale the new
HORTICULTURAL PENCIL,
for INDELIBLE WRITING ON WOOD.
Invaluable for making DURABLE Tree and Garden **Tags** or **Labels**, marking **Tools**, &c., &c.
PRICES.—*Horticultural*, 75 cents, single; two for $1; $5 per doz. *Clothing Pencil*, 50 cents, single; three for $1; $3 per doz. Sent prepaid by mail or express, on receipt of price. A Liberal Discount made to Dealers.
☞ EVERY PENCIL WARRANTED.

GOOD AND CHEAP BOOKS FOR
Ruralists and Others!

THE following works on AGRICULTURE, HORTICULTURE, FLORICULTURE, &c., may be obtained at the Office of the **RURAL NEW-YORKER.** We can also furnish other Books on *RURAL AFFAIRS*, issued by American publishers, at the usual retail prices—and shall add new works as published.

Allen's American Farm Book	$1,50
Allen's Diseases of Domestic Animals	1,00
American Pomology (200 Illustrations)	3,00
American Sharp Shooter (Telescopic Rifle)	50
American Bird Fancier	30
American Fruit Grower's Guide (Elliott)	1,50
American Rose Culturist	30
American Horticultural Annual	50
American Agricultural Annual	50
American Weeds and Useful Plants	1,75
Annual Register of Rural Affairs (120 Engravings)	30
Architecture (Cummings & Miller,) 332 designs and 714 illustrations	10,00
Barry's Fruit Garden	1,50
Beautiful Leaved Plants (London Edition) 60 colored illustrations	9,00
Bement's Poulterer's Companion (120) illustrations	2,00
Bommer's Method of Making Manure	25
Browne's Field Book of Manures	1,50
Breck's Book on Flowers	1,75
Buist's Flower Garden	1,50
Carpenters' Hand-Book (new edition)	75
Chemical Field Lectures	1,50
Complete Manual on the Cultivation of Tobacco	30
Cole's American Fruit Book	75
Cole's American Veterinarian	75
Cultivation of Native Grapes and Manufacture of American Wine	1,50
Dana's Muck Manual	1,50
Dadd's Modern Horse Doctor	1,50
Dadd's American Cattle Doctor	1,50
Darlington's Weeds and Useful Plants	1,75
Directions for Preserving Natural Flowers	1,50
Domestic Poultry Book, with over 100 Illustrations	50
Downing's Cottage Residences	2,50
Eastwood's Cranberry Culture	75
Everybody his own Lawyer	1,25
Farm Drainage, by R. F. French	1,50
Field's Pear Culture	1,25
Flint on Grasses	2,00
Flowers for the Parlor or Garden	3,00
Fruit Trees of America	1,50
Fuller's Illustrated Strawberry Culturist	30
Fuller's Forest Tree Culturist	1,50
Fuller's Small Fruits (beautifully illustrated,)	1,50
Gardening for a Profit	1,50
Grape Culturist, by Andrew S. Fuller	1,50
Guenon on Milch Cows	75
Herbert's Hints to Horse-Keepers	1,75
Holley's Art of Saw Filing	75
Hop Culture	40
Hooper's Dog and Gun	30
Horse Training Made Easy, Jennings'	1,25
Indian Corn; Its Value, Culture and Uses	1,75
Jaques on Fruit and Fruit Trees	60
Jennings' Sheep, Swine and Poultry	1,50
Johnston's Agricultural Chemistry	1,75
Johnson's Elements Agricultural Chemistry	1,25
Kemps' Landscape Gardening	2,00
Kings' Text-Book, for Bee-Keepers, paper	40
Langstroth on the Hive and Honey Bee	2,00
Leiters on Modern Agriculture	1,00
Liebig's great work on Agriculture	1,50
Liebig's Familiar Letters on Chemistry	30
Liebig's Agricultural Chemistry	1,00
Manual of Agriculture, by Emerson and Flint	1,25
Miles on Horse's Foot (cloth)	75
Miss Beecher's Receipt Book	1,50
Manual on Flax and Hemp Culture	25
Mayhew's Practical Book-Keeping (Single and Double Entry,)	90
Mayhew's Account Books (to go with the above.)	1,20
Mayhew's Key (to go with above.)	90
Modern Cookery, by Miss Acton and Mrs S J Hale	1,50
Monumental Designs, 159 plates and designs	10,00
Nature's Bee Book	25
Norton's Elements Scientific Agriculture	75
Onion Culture	30
Our Farm of Four Acres	20
Parsons on the Rose	1,25
Pedder's Land Measure	60
Phantom Flowers	1,50
Practical and Scientific Fruit Culture (Baker)	4,00
Practical Shepherd, Randall	2,00
Quinby's Mysteries of Bee-Keeping	1,50
Quincy on Soiling Cattle	1,25
Rabbit Fancier	30
Randall's Fine Wool Husbandry	1,00
Randall's Sheep Husbandry in the South	1,50
Richardson on the Dog	30
Rivers' Orchard Houses	50
Rivers' Miniature Fruit Garden	1,00
Rogers' Scientific Agriculture	1,00
Rural Homes (Wheeler)	1,50
Saunders on Poultry (Illustrated)	40
Schenck's Gardeners Text-Book	75
Scribner's Produce Tables	30
Scribner's Ready Reckner and Log Book	30
Silver's new Poultry Book (70 Illustrations)	50
Stewart's (John) Stable Book	1,50
The American House Carpenter (Hatfield's)	3,50
The Barn Yard, a Manual	1,00
The Boston Machinist (Fitzgerald)	75
The Farm, with Illustrations	1,00
The Fruits and Fruit Trees of America (Downing)	3,00
The Garden, a Manual	1,00
The House with Original Plans	1,50
The Farmer's Journal and Account Book	3,50
Thomas' Am. Fruit Culturist, (450 Illustrations,)	3,00
Thomas' Farm Implements	1,50
Ten Acres Enough	1,50
Todd's Young Farmers Manual and Work Shop	1,50
Ventilation in American Dwellings	1,50
Warder's Hedges and Evergreens	1,50
Wax Flowers, how to make them	1,50
Woodward's Graperies and Horticultural Buildings	1,50
Woodward's Country Homes	1,50
Woodward's Rural Architecture	1,00
Wool Grower & Stock Register, Vols. 1, 2, 5, 8, each	38
Young Housekeeper's and Dairy Maid's Directory	30
Youman's Hand Book Household Science	2,00
Youman's New Chemistry	2,00

☞ Any of the above named works will be forwarded by mail, post-paid, on receipt of the price specified.

$18,00 A DAY.—Agents Wanted, Male and female, to introduce a new article of household utility. Only Five Dollars Capital required. Particulars free. Address W. A. HENDERSON & CO., Cleveland, Ohio. 905-13t

$20,00 AGENTS WANTED—$100. Male and female, to introduce our New Patent, Star Shuttle Sewing Machine. It is adapted for family use, and Tailoring. It makes a stitch alike on both sides. Price only Twenty Dollars. Extraordinary inducements to Agents. For full particulars, address 905-13t W. G. WILSON & CO., Cleveland, Ohio.

MOORE'S RURAL NEW-YORKER

AGRICULTURE · HORTICULTURE · RURAL LIFE · EXCELSIOR · LITERATURE · SCIENCE · ARTS · NEWS

TERMS, $3.00 PER YEAR.] "PROGRESS AND IMPROVEMENT." [SINGLE NO. TEN CENTS

VOL. XVIII. NO. 28.] ROCHESTER, N. Y.—FOR THE WEEK ENDING SATURDAY, JULY 13, 1867. [WHOLE NO. 912.

ESTABLISHED IN 1850.

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,

With an Able Corps of Assistants and Contributors.

HON. HENRY S. RANDALL, LL. D., Editor of the Department of Sheep Husbandry.

HON. T. C. PETERS, late President N. Y. State Ag'l Society, Southern Corresponding Editor.

GLEZEN F. WILCOX, Associate Editor.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, and Variety of Contents. Its Conductor earnestly labors to render the RURAL a Reliable Guide on all the important Practical, Scientific and other Subjects connected with the business of those whose interests it zealously advocates. As a FAMILY JOURNAL it is eminently Instructive and Entertaining—being so conducted that it can be safely taken to the Homes of people of intelligence, taste and discrimination. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate engravings, than any other journal,—rendering it by far the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

☞ FOR TERMS and other particulars see last page.

AGRICULTURAL.

WHEN SHALL GRASS BE CUT?

THIS question is of the highest importance. It has been discussed at State Fairs and Clubs, but with little agreement in the answer. One point, however, must be conceded, that it should be cut when it contains the greatest amount of nutriment. But opinions of practical farmers seem to differ widely as to when this point in its growth is reached. Some say the seed should be ripe enough to grow, but not to shell; others that the seed should merely form, but not ripen; others that it should not form at all, but only reach the blossom; still others say that when the seed is fully ripe the stalk is more valuable, per weight, for such maturity.

Let us see if chemistry furnishes any solution of this question. EMIL WOLFF, analytical and agricultural chemist in the Agricultural Academy of Hohenheim, has published a great number of analyses, among them the following:

	Red clover in flower.	Red clover for seed.
Flesh formers	18.4	9.4
Heat and fat producers	28.3	20.3
Woody fiber	30.4	48.
Ash	6.2	5.6
Water	16.7	16.7
Total	100	100

	Swedish clover in flower.	Swedish clover for seed.
Flesh formers	15.8	10.2
Heat and fat producers	29.2	23.1
Woody fiber	30.5	45.
Ash	8.3	5.
Water	16.7	16.7
Total	100	100

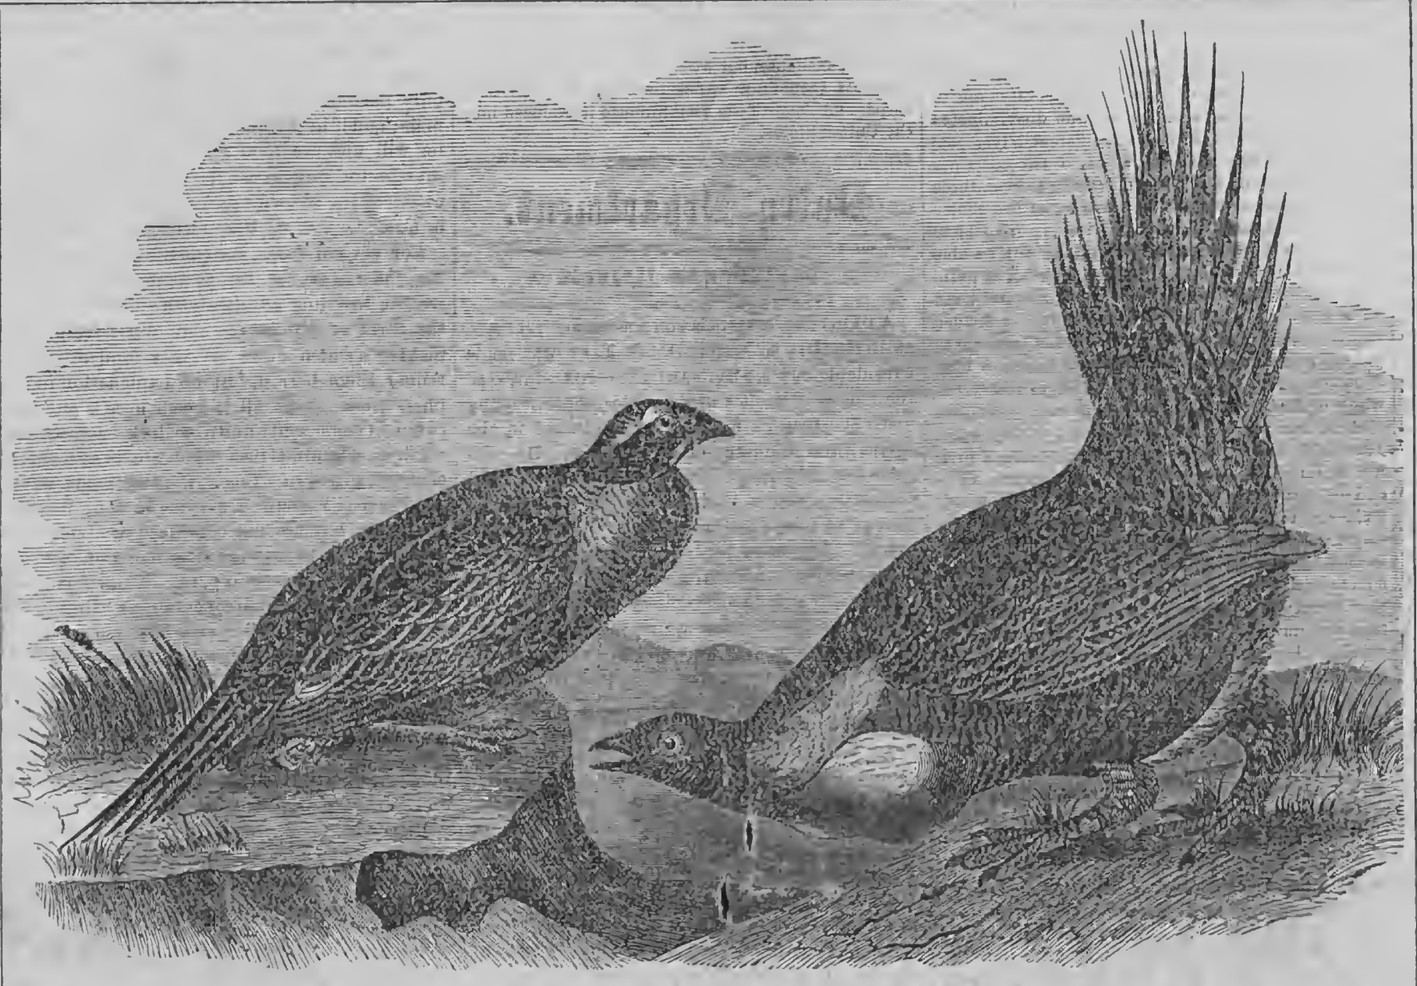
	Meadow hay.	Aftermath.
Flesh formers	8.2	9.5
Heat and fat producers	41.3	45.7
Woody fiber	30.	24.
Ash	6.2	6.5
Water	14.3	14.3
Total	100	100

In an analysis of grass before blooming and another at the end of blooming, it was found to contain about two per cent. more nutriment at the latter period. These are analyses of grasses grown in Europe, but it is difficult to see how this question could be affected by that fact. There might be more or less nutriment in the same grass grown in Europe than in America, but it would not affect the law of its development, it would not change the period of its greatest nutriment. And it is quite evident, from the above analyses, that the ripening of the seed decreases the amount of food in the stalk. When the leaves of trees have attained their full formation the bark receives a copious supply of starch, which substance disappears from the cells of the leaf and leaf stalk, (LIEBIG;) and by analysis of the leaves, they are found, before their fall, to have lost most of their organic and inorganic constituents. These have passed down into the tree for future use. And the same reflux of the food constituents of the grasses seems to take place. On the ripening of the stalk they pass back to the root and remain as a store for future growth. After the seed ripens in the grasses, the stalk gradually withers, and nothing is left but woody fiber. The ripening of the seed is effected by absorption of the food constituents of the stalks. And at the end of blooming, or perhaps at the beginning, the stalk, probably, contains all the nutriment of stalk and seed at maturity. The juice in the sugar maple is said to have lost its sweetness when the flowers are matured; and in the sugar cane and beet root, the sugar becomes less as the plant begins to blossom. It is well known that sugar can be made from the juice of the corn stalk just before blooming, but not after the formation of the seed. After ripening, the stalk is, principally, woody fiber, but is more valuable than grass at the same period, as corn is an annual plant, and its nutriment does not return to the root, as is the case with the perennial grasses.

The grasses are grown and preserved for their stalks and leaves, and should be cut and cured when in greatest perfection. It will be seen, by the analysis, that aftermath has several per cent. more of nutriment than meadow hay, and this corresponds with experiment. Farmers have found that young animals thrive better on the aftermath secured in good condition, than on the regular crop. This result has, no doubt, been occasioned by the too prevalent custom of cutting grass when nearly ripe. Vegetable physiology, chemical analysis and all the most careful experiments, point to the period of blooming as the true time for cutting grass. The cutting should begin with this period and end before the flowering is past. Then the juices in the stalk and leaves are in highest perfection, containing all the nutriment for developing the seed, and in just that succulent condition which renders it most easily assimilated by the animal.

To demonstrate this matter to the satisfaction of American farmers, thorough analyses should be made of all our principal grasses at the several stages of growth, and when fully ripe. This most important matter should engage the attention of our State Society, and especially of the Department of Agriculture at Washington. Careful data and authoritative opinions generally diffused on this subject, would save millions of dollars annually to the farmers of this State alone.—S.

IN France cows are estimated to yield only about an average of 550 quarts of milk a year, or about one-half as much as in England.



COCK OF THE PLAINS—(Centrocercus Urophasianus.)

IN the preceding illustration is presented a spirited picture of a male and female of the grouse family, peculiar to the plains of the West. They occupy a leading position in D. G. ELLIOT'S description of the "game birds of the United States." In its manner of flying it resembles closely the common partridge of the Eastern and Central States as it does also in its selection of the trunk of some prostrate tree whereon to perform its amatory perambulations when engaged in what is familiarly known as drumming. The principal food of these birds in the summer season consists of the leaves of the artemesia, whose bitterness is such as to render their flesh strong and unpalatable, but in autumn their diet is changed to the pulpy-leaved thorn when their flesh becomes delicately flavored and desirable. This bird courts the solitude of the plains or groves where the female constructs her rude nest and performs the patient labors of incubation. The hens lay about sixteen eggs of a dark brown color, spotted on the layer-end with chocolate. The time of incubation is about the same as the common barn yard fowl. The chicks pass at once from the shell and nest and never return to it—as a home.

UNDERDRAINING LAND—EFFECTS.

IT is an opinion fast gaining ground among farmers, that underdraining their land, though costly, is one of the most profitable investments they can make. Experiments in drainage have abundantly tested and proved its utility both as a promoter of vegetable growth and a protection against the influence of drouth. On this point Mr. WARING, an engineer of much experience in the business of land drainage, remarks:—"During the hottest weather there is a great amount of water in the atmosphere, which has been evaporated from the earth by heat, and which is held by heat in the form of vapor. When this vapor comes in contact with bodies sufficiently cooler than itself, they take away its heat and the vapor contracts to the liquid form (condenses) and is at once deposited as dew on the surface of cooler substances. The familiar example of a cold pitcher, which seems to *sweat* in hot weather, while it is only absorbing heat from the air, and causing the vapor of the air to be deposited in a liquid form, is an illustration of this law of condensation.

So when water is removed from the soil the spaces between its particles (which before drainage has been filled with water,) are occupied by air, and to a greater or less extent, owing to the motion of the air above the surface caused by winds, and to the effect of changes of temperature below the surface; this air is constantly changing, and that which enters from above charged with vapor gives up its heat, and therefore its moisture, both of which are absorbed by the lower and cooler soil. In consequence of this action, especially when the surface of the soil is kept in a loose condition, so as to admit the air freely, drained lands withstand drouth better than undrained lands.

To a certain extent the same effect, although in a less degree, results from thorough cultivation. If any one doubts this, let him make an experiment of stirring the soil in one field and not doing so in another adjoining. He will find the unstirred ground baked hard, so that frequently there is scarcely any moisture discernable down eight or ten inches, while the ground which has been stirred or cultivated, frequently is moist almost to the surface."

ROCKS OF OFFENSE—STUMBLING.

A RAMBLE among the farms of almost any section will disclose the fact that but a small portion of their owners secure all the advantages which the soil they cultivate is susceptible of conferring. This is especially noticeable in districts where the surface of the land is dotted over with rocks or stone too ponderous to be removed bodily with unaided hands. These are, emphatically, "rocks of offense and stones of stumbling," whether found in the grain field or in the meadow, yet there they are allowed to remain year in and year out, accumulating around them aggressive clumps of thistles and briars, from the seed and roots of which other portions of the farm are infested and rendered less productive. These annoyances might be readily and profitably abated if the farmer would only "find time" to pay his respects to them in a suitable manner. The rocks will readily yield to an application of drill and powder and furnish excellent material for fences, which, rightly constructed, will last till "the crack of doom." These, once removed, the plow and cultivator will make short work with the parasitical briars and thistles which found shelter and immunity from harm under their protection. The labor necessary to accomplish this work of improvement will find ample remuneration in the increased yield of grain and other products and the augmented value imparted to farms thus relieved of impediments to clean cultivation.

RURAL FARMERS' CLUB.

Prolific Grain—A California Yield.

"RURAL READER" writing from Vacaville, Solano Co., Cal., says:—"I have seen a statement that some farmer has raised from three grains of barley some 500 in return. As our barley harvest is just commencing, I have concluded to head the Eastern farmer. I have counted the returns from five grains. From one grain, nine stalks, yield 413 returns—where our friend's nine stalks yielded 185. Eighteen stalks, from one grain, yield 1,243; 12 stalks from one grain, yield 590; 20 stalks from one grain, yield 1,398; 20 stalks from another grain, yield 1,411. I will do as our friend undoubtedly did, take the three best from three grains. We get 58 stalks and 4,052 returns from the three.

As to the crops in California they are generally good as far as I know, although I do not think the two counties set down as second and third for wheat raising, will yield this year over one-half the amount they did in 1866."

White Farming at the South.

OUR * correspondent writes:—"The West Georgia Gazette scouts as ridiculous twaddle, that the white man at the South cannot stand the continuous labor necessary to make cotton! It says:—'The best crop of corn, and cotton, we saw last year—and conceded by all who saw it to be the best in Middle Georgia—was grown on the plantation of LEWIS BEACHAM of Laurens Co., by his four sons, assisted three months of the time by one negro man. The product of this farm of half hummock land was 10 bales of cotton, 1,500 bushels of corn, and 16 stacks of fodder, besides a large crop of cane and potatoes.'

"What an improvement on the days of Slavery, when the farmer's son, cigar in mouth, rode ahead in his buggy, while a negro followed with a little cotton in a rickety mule cart, on the way to the village store to make a trade. Verily, the day is approaching when the South will be blessed by the labor of its own white hands."

Veterinary—Horn Distemper—Ringbone.

E. H. writes:—"I take the position that horn distemper is a disease, and not lack of food, shelter, &c., in consequence of which the animal under its influence becomes lean, dispirited, and death subsequently ensues from its effects unless proper remedies are used. My remedy for a full grown animal is one teacupful of soft soap, one of salt, and one of strong vinegar mixed together. With this I bathe the horns and spine to the roots of the tail. In very bad cases repeat in the course of five or six days. I disapprove boring the horn in any case."

"A FARMER" writes for the RURAL—"I think ringbone in horses can be cured even in its advanced stages. I have seen my father cure a horse of ringbone that had walked on three legs, on account of it, more than twelve months. He became perfectly sound. The following is the recipe:—Half an ounce of red precipitate; half do. blue stone; half a pint of turpentine. Mix together and apply once a day. Keep the hoof greased."

Floors for Hog Pens.

"A FARMER" writes from Cortland Co., N. Y., as follows:—"Say to 'A,' of Grattan, Mich., that I built a new hog pen two years since, and that I made inquiry of several farmers about concrete or grout floors, and learned that in every instance they had failed. It was claimed that the liquid from the hogs killed the life of the lime (water lime, which is the best for such purpose,) and it became soft and would tread up. I paved mine with cobble stone, like a street pavement, and the hogs rooted it up, and I am thankful they did, for it was a hard task to clean it (quite an important item in a stable floor.) I then put a plank floor on top of the pavement, which I think is best, all things considered."

Wheat for Seeding.

A CORRESPONDENT of the Canada Farmer, in discussing the subject of wheat growing, makes several points which may prove valuable to some of our readers. It is assumed that the best soil for wheat is that in which clay predominates, but to ensure a crop the land must be naturally or artificially drained. Arable land requires for a full development of its resources a crop of fall wheat in the system of rotation. The selecting and preparation of seed wheat is of great importance, yet rarely receives any attention. Seed wheat should be tested by immersion in water, as the imperfect grain will float on the surface, and is thus severed from that suitable for sowing. These floating grains are those infested with fungi or parasites, and though light enough to float, have still sufficient vitality to germinate and reproduce the pests which diminish the quantity and vitiate the quality of the wheat crop. After the floating grains are removed turn the water off and give the seed a good coating of lime, which will render innoxious any smut which may adhere to the wheat. These precautions taken, it is assumed that a crop of clean wheat may be safely relied upon. The suggestion is worthy of trial.

Sheep Husbandry.

EDITED BY HENRY S. RANDALL, LL. D.

REPORTS OF GREAT FLEECES.

In our articles on Weights of Fleeces and on Samples of Wool, in this number, will be found some remarkable statements,—for example, that a three-year old ram has produced three fleeces, weighing respectively 21 lbs., 27 lbs., and 30 lbs.—in the aggregate 78 lbs! In another case, ewes, the immediate descendants of a lot of "old culls," have yielded fleeces of 14, 15, and 16 lbs. —one two-year old ewe reaching 16 lbs. 14 oz! The statement of the owner is the only proof offered in either case.

We have on a former occasion expressed the decided opinion that all accounts of extraordinary fleeces, come from whom they may, should not be sent for publication without being accompanied by *proof*—such proof as the statements of respectable and disinterested men that they were present at the shearing and saw the wool taken off, done up and weighed by tested and accurate steelyards or scales. They should also state whether the wool appeared to contain any unusual amount of dirt or other extraneous substances besides the natural yolk. If the fleeces are those of tegs, their ages at shearing should be stated,—if of older sheep, the date of the previous shearing should be given. It is far better to give *proofs* on both these points also, if it is practicable.

No man, in our judgment, is above taking these precautions to support his own assertions, when he voluntarily uses a public journal to proclaim very unusual facts—facts which he expects to inure to his pecuniary benefit and reputation as a breeder—to thousands of persons who are wholly unacquainted with him. Wool Growers' Associations generally require that sheep, when premiums are awarded on fleeces, be sheared publicly on their Fair grounds, and they usually require all persons indiscriminately to furnish *affidavits* of the age of each fleece. Why should he who seeks the same object by a different road, not be required to submit to equivalent conditions? They are no more derogatory—and certainly are quite as necessary to guard against unfairness and falsehood—in the latter case as in the former. They present the only mode in which the respectable and successful breeder can obtain the proper credit of his own improvements and the benefits accruing from that credit. Of what use is it to him to declare to the public that he has secured such and such results, when a lying braggart can immediately publish a claim to greater results, and when both statements go alike unsupported—as the mere declarations of *owners*—to readers, ninety-nine out of every hundred of whom have no means of knowing anything about the veracity of either?

Is it said that the editor who publishes the statements should make the proper discrimination, and publish only those of veracious men? How is the editor of a journal which has, say, seventy thousand subscribers and four times as many readers, scattered through the whole United States, to know every one of these who chooses to address him? Shall he, then, arrogate to decide, merely from what *he* considers the probabilities of the case, whether the assertions are true or false? Who can determine the precise boundaries where probability ceases, and improbability commences? And who has constituted editors the arbiters on such questions —questions which involve the interests, rights and character of persons whom they know nothing about?

Every sheep breeder can easily have witnesses of his shearings at his own barn, without derogating any more from his dignity or self-respect than he would do in shearing them at a State or County Fair. He can invite in his respectable neighbors,—and, better still, he can give public neighborhood notice of his time of shearing, allowing all who choose to be present. We confess we esteem such a course vastly more dignified, and more *modest*—after he has declined or omitted to meet his rivals on a public Fair ground—than it is for him to shear his sheep in private, and then come before the public with his own unsupported individual statements of his monster fleeces. We do not insist that this is absolutely necessary when only ordinary results are claimed. But when strangers are treated with marvels, let them have the *proofs!*

We do not say that we will not hereafter publish the unsupported statements of owners in regard to the weight of fleeces,—but we do say that if we publish any such, where the weights given are extraordinary, or wear any appearance of improbability, we wish it distinctly understood that their appearance in our columns is not to be received as any proof that we believe them, or expect others to believe them.

These remarks are intended to be general in their application and not leveled at particular individuals,—though, in the beginning of this article, we cited two cases as illustrations of the style of statements on which we have commented. The persons referred to may have failed to furnish the testimony herein called for, merely from the impression that it was unusual and unnecessary. We shall be happy to allow them to supply the omission, or to explain their inability to do so, if such is their wish.

WOOL SHRINKAGE, MANUFACTURE, &c.

AUBURN, N. Y., June 25, 1867.

Hon. H. S. RANDALL—*Dear Sir:* Having received numerous letters of inquiry in regard to wool and the manufacture of wool, caused by a few remarks made by me at the Wool Growers' Meeting held in this city in May, and which were reported in the RURAL of May 25th, I would ask a small space for explanations and answers. Although willing to answer all reasonable inquiries, I find it encroaches too much on my time to answer each individual, and will therefore consolidate my replies and ask you to publish them in the RURAL. Wool buyers are asking me why I do not endorse the resolutions adopted at their Convention held in Rochester April 19th, 1867. To them I would say that I consider some of their suggestions good, while others are entirely superfluous and such as no buyer or seller will adhere to longer than for his interest. If Mr. A. or B, although a good judge of wool and careful buyer, can make more money by the purchase of a lot of wool with strings forty times around each fleece, than he can by the purchase of another lot with strings only twice around, he will prefer to take the lot with the excess of twine, all resolutions to the contrary notwithstanding. On the other hand, if Mr. Farmer thinks that his wool will bring him more without strings, he will so put it in the market.

In regard to unwashed wool, one-third deduction is as near what it should be on the average as any figure; but I hold that no fixed rule can be made that will do justice to all parties,—for while A. may have wool that should have a deduction of at least one-half made on it, owing to an excess of yolk and dirt, his neighbor B. may have so kept his sheep that a deduction of one-fourth might be more than should be made. Every buyer should be a good judge enough of wool to make his own rules to govern his purchases. Many, in allusion to a statement made by me at the Auburn meeting, have asked why is wool from sections where the water is soft cleaner, than that from limestone or hard water sections? This question I might answer by asking another, (as I only referred to washed wool.) Why is soft water better than hard for any washing purpose? In answer to inquiries why wool can, as I stated, be purchased in Michigan to better advantage to the manufacturer than here and in some other sections, I wish only to be understood as referring to buyers who are well posted and who discriminate between a good and bad conditioned article. Wool there is all taken to market before being sold, and he who discriminates most gets the best, while an indifferent buyer gets what the first does not want, at one or two cents per pound less, while the actual difference is from three to eight cents per pound. In speaking of the choice wool of Michigan, I would not advise any uninitiated buyer to go there with the idea that he will be able to make a fortune in the purchase of wool of uninformed growers,—for I consider a man who has lived a few years in the Badger State, as a farmer, a decided improvement upon the trading Yankee, and sharp enough to match any one who may go to buy of him. Wool raised on sandy soils, like those of nearly the whole of Michigan, is generally more free from animal oil than that which is grown on heavy or clay lands. I have also found that wool raised on the large prairies of Illinois has less strength than Michigan, Ohio and Eastern State wools. I will not now try to explain why this is so, but leave the question for some future occasion, or to some one more able than myself to offer the correct solution. I will only say that it is a fact which I have noticed in an experience of more than twenty-five years in manufacturing. Why should tags and unwashed, dead wool not be put inside of fleeces? For several reasons, among which is the one that the purchaser can form but a poor idea of what he is buying, as all is hid from view and he is obliged to depend entirely upon information obtained from the seller as to the amount thus put in. I find such information is not at all times to be depended upon; and when detected, he claims that he knows nothing about it and charges all upon the shearer, the boys, or the hired man.

Old wool is worth more than new for some reasons, among which are the following:—It takes color much better, especially where bright and fancy dyes are required: it works better and wastes less in carding; and it makes firmer cloth than can be made from the same quality of new wool. If two or three years old it is all the better.

Several have made inquiries about the use of Shoddy, of what and into what it is manufactured. Although I never owned or used a pound of it, I have seen much of it made and used. Shoddy is made from old rags which are torn by machinery for that purpose, (not as some suppose of Yankee origin,) and are thus brought back to wool much reduced in length and strength. It is mixed with wool before carding, and thus becomes thoroughly incorporated with the fabric, and must of course lessen the value of cloth for service in proportion to the amount used. Another article much used in the adulteration of cloth, and the use of which I consider worse on the part of the manufacturer than the stuffing of fleeces with dead wool by the farmer, is termed shearings. It is made in all factories, and is largely imported from Germany and France. It is felted into cloth while being fulled, and is merely an outside covering which is soon found at the lower part of the garment, between the outside and the lining. This is supposed by many to be shoddy, but is much worse and can be detected by rubbing the cloth over white paper.

I have thus endeavored to point out a few of those wrongs, on all sides, which cause the habitual cry, "Cheats in all trades but ours."

Yours truly, WILLIAM HAYDEN.

[Without endorsing all of Mr. HAYDEN'S views, we publish with pleasure the opinions of a manufacturer of experience and conceded integrity on the important topics referred to in the above letter. We should be glad to hear from other manufacturers on the same class of subjects. If, for example, there is a single intelligent man among them who claims that a uniform and arbitrary rate of shrinkage (one-third) on unwashed wool is just to the producer, we invite him to give his reasons in these columns.—ED.]

Condensed Correspondence, Items, &c.

WOOL SAMPLES.—T. A. BEMUS, North East, Pa., 11 samples. Five from ewes, ranging from good to excellent in quality—length varying from 1⅞ in. to 3 in. Three from tegs, quality good, length from 2¾ to a trifle over 3 in. Ram No. 1, quality good, length 2¾ in., fleece 20 lbs. Ram No. 2, quality good, length 2⅞ in., fleece 19¼ lbs. Ram teg, quality very fine and style considerably superior to preceding rams; length 2¾ in., fleece 13¾ lbs.

J. L. HOLDEN, New Hudson, Allegany Co., N. Y., Infantado ram "Holden's Dew Drop," got by Dew Drop owned by JOHN SHELDON & SONS, Moscow, N. Y., out of ewe bred by NATHAN CUSHING of Vermont. Received first prize at Allegany Co. Fair last fall. Three years old. Fleece 20 lbs. Carcass 93 lbs.; wool 2½ in. long; of good quality and style; yolk very abundant and yellow.

Dr. THEODORE N. DAVISSON, Jeffersonton, Culpepper Co., Va. Sample from his pure-blood Silesian ewe "Elderdown," 1¾ in. long; yolk moderate in amount and of a pale gold tint; fineness and style exquisite, and equal to that of picklock German wool. Dr. D. offers, in the Warrenton Index, $10 for a fleece exceeding it in fineness and style, grown in Eastern Virginia. It may be equaled among the old "Washington Co." wools, so-called, but probably not elsewhere in the United States.

JOHN BARKER & SON, North Granville, N. Y. Three samples from "Barker's Profit." The owners write us that "the weight of his first fleece was 21 lbs., the second 27 lbs., and the third 30 lbs.—one year and four days' growth." Mr. B. adds:—"I think his stock can't be beat for quantity and quality.' If he can, who owns the buck?" One of the samples is a trifle over 2 in. long, the others from 2 3-16 to 2¼ in. long; quality and style fair for so heavy fleeced an animal; yolk yellow, abundant, but not extraordinarily so. We cannot reply to Mr. BARKER'S question, without first knowing something about the stock of his ram.

WEIGHTS OF FLEECES.—JOHN S. GOE, Brownsville, Pa., gives us the following as the products of his Merino flock: Eight ewes produced each 6 lbs. 8 oz. wool; eight from 6 lbs. 1 oz. to 6 lbs. 14 oz.; forty-five from 5 lbs. to 5 lbs. 15 oz.; one 7 lbs.; one 7 lbs. 11 oz.; one 8 lbs.; one 9 lbs; one teg 7 lbs. 3 oz. (carcass 35 lbs. Ram tegs 9 lbs. 10 oz.; 10 lbs. 2 oz.; 10 lbs. 8 oz.; 10 lbs. 14 oz.; 11 lbs.

WM. F. BARBER, Castleton, Vt., gives the following as the clip of ten ewes, consisting of "old culls from his brother's flock" and their progeny: Tegs,—13 lbs., 13 lbs. 7 ozs., 11 lbs., 11 lbs., 10 lbs. 4 ozs. Two year olds,—14 lbs., 14 lbs. 4 ozs., 16 lbs. 14 ozs., 13 lbs. 13 ozs., 15 lbs 12 ozs. Three year olds,—9 lbs. 10 ozs., 10 lbs. Five year old —10 lbs. Twelve year old,—9 lbs. 6 ozs. All have lambs but the yearlings.

NEW IMPORTATION OF SILESIAN MERINOS.—We stated some weeks since that WILLIAM CHAMBERLAIN, Esq., of Red Hook, N. Y., had sent out to Germany for a number of fine wooled Merinos to add to his present choice flock. Twenty have now arrived, and eighteen more are expected soon. That they were selected by CARL HEYNE would be a sufficient warrant of their excellence, but we learn from a reliable judge, who has seen those which have arrived, that they surpass all sheep of the kind hitherto introduced into the United States.

Dairy Department.

DAIRYING IN ILLINOIS.

A DAIRYMEN'S Association was recently formed at Elgin, Ill., of which Dr. J. TAFT was made President. Judge SYLVANUS WILCOX addressed the Convention at Considerable length, setting forth the reasons for making a change in the agricultural industry of that region. He said grain growing was getting to be an uncertain and non-remunerative business, and it was time a change of products was made to a considerable extent. The dairy business seemed to promise the surest and most munificent returns; hence the formation of the Association he was addressing. About twelve years ago attention was turned to stock raising in that vicinity, and the result had been much more auspicious than could have been expected by the pioneers of the movement. It was assumed that within a radius of five miles, Elgin being the central point, two million of gallons of milk were now produced annually, and twice that amount within a radius of ten miles. This milk represented a cash value of fully $500,000.

It was asserted that, by the factory system of disposing of the milk, farmers saved fully four cents on a gallon compared with what they would get were they to continue the old plan of shipping to Chicago. Winter dairying was regarded with favor; for, though the milk cost more, it brought a correspondingly higher price. The discussions took a wide range, embracing the best quality of dairy stock, the manner of feeding and housing the cows, care of dairy implements and the like. Cleanliness, in all pertaining to the business was deemed an essential element of success. Proper care of stock, supplying comfortable shelter in winter, plenty of good feed and pure water were conditions of success. If any of these were wanting or but partially supplied, there would be a corresponding diminution in the products of the dairy, and by consequence, of the profits also. Dairying in the West is assuming the position formerly monopolized by corn and wheat.

RAISING HEIFERS FOR THE DAIRY.

THIS subject has been discussed at the meetings of farmers, at State Fairs and Clubs, and generally determined to be of such paramount importance to the dairyman that he could not afford to depend upon purchasing his young cows in the market. As it costs no more to keep a good than a poor cow, and the product is usually double, too careful attention cannot be given to this matter. And in reference to economy, it may confidently be said, that if a farmer cannot afford to raise heifers, which become cows at two years old, then he cannot afford to raise any ordinary farm stock whatever; for a young two-years-old cow is worth more than a steer of the same age, and worth more than any animal or animals that can be raised for the same money. The real question is not whether you can buy a young cow for less money than you can raise her, but whether you can buy a *first-rate animal* cheaper than you can raise her. As heifers are ordinarily raised, they have not vitality and maturity enough to become cows when two years old. But under the hand of an intelligent and careful farmer she is rounded out into full and beautiful proportions, and becomes a profitable milker, even the first season. When only the best milkers are bred from, with a bull also from the best milking family, the result is very certain to be satisfactory. And a heifer calf from a poor or ordinary milker should not be raised, unless the bull has a remarkable milking pedigree. These things can all be cared for when the dairyman raises his own cows. But our chief object was to call attention of farmers to the

PHILOSOPHY OF FEEDING.

The exact effect produced by the various kinds of food used in growing the young and sustaining the mature animal, has not been so minutely determined, practically, by scientific men, as it deserves to have been. Yet there is much more known upon this subject than has ever been practically applied by the general stock raiser, and which when understood and applied will enable him to accomplish a higher result. The animal system is made up principally of muscles, bones and fat. Now, if we know what food will build up each of these parts of the system, we can feed intelligently. We must bear in mind, that "like produces like." That constituent of food which produces fat will not produce muscle, and *vice versa*. We must seek a food containing chemically the same constituents as the parts of the animal we wish to build up. In short, the intelligent feeder must know just what effect he wishes to produce by feeding, and what food will most economically accomplish his object. Animal muscle, lean meat, (fibrin,) has the same chemical composition as the *gluten* of our grains, or the *casein* in beans, peas and flax seed. The bones contain, besides gelatin (which is similar to gluten) phosphate of lime, some carbonate of lime, magnesia, soda, potash and common salt. The fat of animals is chemically identical with the oil or fat of our grains and grasses, and differs but little also from the starch, gum and sugar contained in them; but contains no nitrogen, only carbon and water. Thus we see that the animal economy produces very few chemical changes in its food, but simply appropriates what is found ready formed to its use. The vegetable elaborates and prepares and the animal appropriates.

When this is fully understood by the feeder, he will not expect by feeding sugar or starch to produce muscle, and consequently, will avoid feeding whey, or any other refuse containing only partial nourishment, alone to young animals; and if he wishes to produce fat principally he will not use food rich only in nitrogen or muscle forming principles. A practical application of the knowledge we now possess is what is needed. Let us illustrate by a case in point.

For several years, statements have been going the rounds of the agricultural press, that feeding breeding animals with sugar or sweet in the form of skimmings and refuse from sirup making (which cows are very fond of) would render them barren, but no explanation of the phenomena. Still, all it needs here is an application of facts, well known, to draw a correct conclusion. All animal tissues contain, as an essential element, nitrogen. Sugar, fat, starch and water, are "non-nitrogenized components of the animal body, but are not organized or living substances." It is only the muscular and nervous systems that have sensation. The semen and ova of animals are nitrogenous or albuminous fluids, containing also soda and phosphate of lime, the essential elements of the young animal. It is held by some of the greatest animal chemists that "nitrogenized foods alone nourish the tissues." It is not difficult then, from these facts, to infer the reason that the carbonaceous food, such as sugar, should, when fed largely, render the female animal barren and the male impotent. This food, although it produces fat, produces no living muscle, nothing on which to build up the young animal. It is readily seen to what an important account this may be turned by the breeder of animals. In raising heifers, how important it is to produce a large and well formed muscular development, and to this end glutinous or albuminous food should be given.

FIRST CALF AT TWO YEARS OLD.

There is no doubt of the propriety of developing the milk secretions at as early a period as the maturity and strength of the heifer will permit, and it has been found by many of the best breeders that a better milker will be produced at four or five years old, when the first calf is borne at two than at three years. This point is maintained in an able paper by the Hon. L. F. ALLEN, published in the Transactions of the N. Y. Ag. Society for 1864, and this is emphatically our experience.

The great objection to making cows of heifers at two years has been that they usually make small cows, as they do not grow much afterwards. This objection will be obviated by following the hints given above, as the heifer will be as large at two years as is usual at three. Besides, as the effort has been principally to develop her frame and muscular system, she will have abundant strength and vitality for maternity. It is not even desirable to develop fat only moderately in heifers, and therefore food, containing much oil or a very large proportion of starch, should not be fed except in combination with more glutinous food. The calf should have mixed with its whey or refuse milk, cooked pea or bean meal, oil meal, oats or bran, all rich in gluten and phospate of lime—flesh and bone-forming nutriment. And afterwards, when extra food is given beyond grass or hay, the same materials should be used, taking care when practicable to mix oil and pea meal or bran to make it less fattening. Five dollars' worth of these foods given extra to each heifer will add more than double the amount to her value as a young cow. We believe that the future improvement of the dairy interest will principally depend upon the wise determination of the dairyman to breed and intelligently rear his own herd.—E. W. S.

MILK SICKNESS.—The Med. and Surg. Reporter says the cause of milk sickness is the white snake root on which cattle often feed. This discovery seems to have been made by three separate observers, at about the same time. One of them, Mr. William Jerry of Edwardsville, Ill., in 1860, gathered this plant by mistake for the nettle, and ate it as boiled greens. On the day following he was suddenly seized with violent trembling, prostration and faintness, and on the next day with vomiting and violent retching. He did not fully recover in five years, and in the mean time tried the plant on domestic animals, with similar results.

THE whole number of cattle in England, Wales, the Islands, Scotland and Ireland is 8,316,690; of sheep, 25,794,708; pigs, 3,800,399. Ireland has more cattle than England proper.

Rural Notes and Items.

CROP PROSPECTS—THE HARVEST.—In this region the corn crop has improved greatly within the last three weeks, indicating that, with a favorable autumn, the yield will be fully up to that of seasons commencing more auspiciously. The same is true of the potato, and should the rot not interfere the yield will be ample for the wants of the market. Haying has commenced with a burthen of grass, especially clover, rarely equalled. With good weather for gathering there will be little complaint of empty barns or starving stock the coming winter. The wheat fields are rapidly assuming the golden tint, and in some localities in this section the reaper is already in the field for action. The yield per acre generally will be largely in excess of that of the last year—the winter and the other enemies of this plant having done much less injury than is common from those sources of annoyance. In the Southern States the wheat crop has already been harvested—the acreage being largely in excess of that of last year, and the yield nearly double. The States of Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota and Missouri, show an increased acreage of wheat, over last year, of fully one-third and a prospective increase in yield of about eighty per cent. These flattering aspects may be modified somewhat by an unfavorable harvesting season, though there is nothing now apparent indicating such a contingency. With propitious weather for saving the crop, the granaries of the country will be filled to repletion at the close of the harvesting season.

MENDENHALL'S IMPROVED HAND LOOM.—Farmers and others interested in reducing the cost of clothing to their families are referred to the advertisement of this loom, which we have heretofore commended to RURAL readers. The Farm and Fireside of Philadelphia, thus speaks of MENDENHALL'S valuable improvement:—"As a practical mechanic and mechanical expert, we have given close and continuous critical attention, for more than a year, to the practical performance of the 'Improved Mendenhall,' and freely confess we have found no feature to find fault with—everything to commend. So entirely simple, disorder of parts is nearly impossible. With so little friction, but trifling power is required to operate it. It weaves by simply turning a crank—a perfect automaton—swings the lathe, springs the treddle, flings the shuttle, unwinds the warp, winds up the woven cloth, and maintains the tension, never making a mismove; but making cloth of very superior quality, and of eight or nine different styles all on the same warp, at the rate of from 20 to 35 yards per day. The farmers mechanics, and all others wearing 'store clothes,' actually pay on the material of which they are made *six profits*, and the U. S. tax of six per cent., all of which accrue on the raw material between the time of its going out of the farmers' hands and returning to them in the form of cloth. The *Mendenhall Loom* saves to its proprietors all this, giving them a better quality of cloth at an average of less than two-thirds the cost of store material."

A GOOD STUMP MACHINE.—Since our last issue we have received two inquiries about stump machines—one from Columbia, S. C., and another from Jefferson county, N. Y. There are several stump machines in use in Western New York, and only a few weeks ago a trial of four different patents was had in Steuben county. The trial was witnessed by one of our associates, and noticed in the RURAL of May 18—the result being a victory for the Willis Machine, made by W. W. WILLIS of this city. Last week we attended a trial of the same machine in Greece, this county, and from what we then saw of its operation are satisfied that it is a superior machine, if not indeed the very best obtainable. We therefore refer all wanting a good stump machine to Mr. WILLIS.

HANGING GATES.—An engineer in India, where grate-posts find proverbially insecure bearings in the deep black soil, suggests a mode of hanging by which the strain of the gate's weight would be transferred from the top to the bottom of the post. The shank of the top hinge passes loosely through the gate post and fastens in an upright lever behind it, which hinges to the bottom of the post beneath the ground, and has its fulcrum against the post near the ground. The weight of the gate thus pulls on the upper end of the lever and pushes against its fulcrum near the ground, shortening the leverage of the strain by the whole distance between the two hinges of the gate. The whole pressure against the post is exerted close to the ground.

WISCONSIN CROPS—SCAB IN SHEEP.—W. J. B., Roaring Creek, writes:—"The crops in this section of the country look remarkably well, especially wheat, oats and grass, as the weather has been warm and wet since the first of June. Potatoes I think will be a failure on account of the potato bug. Many fields are completely covered already. Very little of the corn is large enough to hoe, on account of the lateness of the spring. Can any of the readers of the RURAL tell me a cure for scab on sheep, as there are many in the neighborhood that have it; and will sheep catch it by running together in summer?"

Dipping sheep in a decoction of tobacco is a sure cure for scab. Sound sheep running with infected ones in the summer will catch the disease.

AGRICULTURAL ADDRESS.—We understand that Mr. GEORGE W. BUNGAY, editor and lyceum lecturer, has prepared an elaborate address on Agriculture, suitable for delivery at Agricultural Fairs. As speakers for Fairs are usually in demand at this season, we mention this for the information of officers of Agricultural Societies. Mr. B's address is 15 Laight street, New York.

WESTERN VIRGINIA ITEMS.—W. R. G., Creek's Mills, Va., writes in a business letter:—"The weather has been fine and the growing crop promises to be a good one. There has never been a finer prospect for all kinds of fruit. Live Stock is high and very little money to buy with. Our farmers and stock raisers are showing more energy than they used to. So much for the result of emancipation."

FLIES KILLING CATTLE.—Accounts from Austria are to the effect that swarms of poisonous flies have appeared in Transylvania, by which large numbers of cattle have been killed. Farmers are compelled to house their stock closely, while large fires are kept burning night and day around barns and sheds to ward off this new and unwelcome pest. The guards have great trouble in avoiding their venom.

IOWA STATE FAIR.—Several copies of the "Rules and Regulations and Premium List" of the 14th annual exhibition of the Iowa State Agricultural Society, have been received. The Fair opens on the first day of October, at Clinton, and continues four days.

HORTICULTURAL.

CUCUMBER BEETLE, (Galleruca Americana.)

The striped, lemon-colored cucumber bug, or more properly beetle, is familiar to gardeners, and is one of the most troublesome and destructive insects they have to contend with. Comparatively few, perhaps, are aware of the great amount of mischief caused by this beetle in its larva state, or know accurately the various changes it undergoes. We believe its history was first correctly traced by Dr. Asa Fitch, and his observations were published in the Transactions of the N. Y. State Ag'l Society for 1864. Having seen recently extensive depredations, not only by the beetle but also by its larva, we have drawn upon the article by Dr. Fitch for illustrations and matter, which will be useful to the cultivator of squash, melon and cucumber vines.

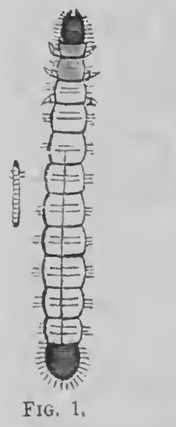


Fig. 1.

Fig. 2.

The larva of the beetle is represented in the above cut (Fig. 1,) as greatly magnified—the small figure on the left side showing its natural size. It is a soft, slender, cylindrical worm, slightly tapered towards its forward end. Its color is dull white, with head and last segment on its body black. When it is done feeding the worm forsakes the root, and forms a little cavity under ground by turning itself round and round in the same place and crowding the dirt outward until it becomes compacted on every side of it, forming a little lump of such firmness that it will not crumble or break asunder from any motion given to the earth around it by the hoe or plow. Inside of this cell the worm throws off its larva skin and becomes a pupa. In the above cut (Fig. 2,) the pupa is represented natural size and also magnified. Dr. F. remarks that he has no criterion to judge the time required for the larva to get its growth, but that they remain in their pupa form about a fortnight. It then appears a perfect beetle, as seen feeding on the vines.

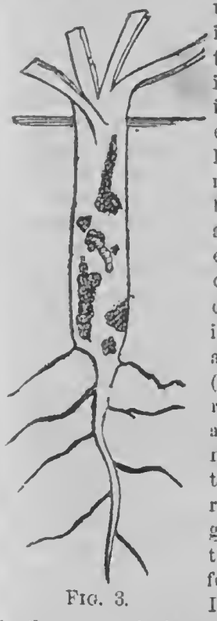

Fig. 3.

Fig. 3 represents a root of cucumber or melon, of the natural size and structure, infested with the worm or larva of the beetle. Fig. 4 represents the beetle itself.

Fig. 4.

The larva or worm works, as the engraving shows, just below the surface of the earth, in the thick fleshy root which extends an inch or two downward before branching into the numerous lateral rootlets, boring into and eating the substance until the juices of the plant are sapped and it suddenly withers and dies. The worm also frequently consumes the sprouts of the seed, underground, so that the plants never appear, and the seedsman is usually blamed for having sold poor seed, when the real cause is the worm. But the most vexatious injury is done when the plants have attained considerable growth, when they have extended themselves several feet along the earth and have blossomed and set fruit. Suddenly the vines wither and die. On pulling them the worms are readily seen in the root, which appears withered and dead.

It will be seen that the cucumber beetle is a formidable enemy to the garden in all its forms—full as much, perhaps, in its larva state as in that of the beetle. The beetles come forth early in May, in this latitude, and subsist on other food until their favorite vines make their appearance. Then they attack these, depositing their eggs around them, which soon bring forth the larva to prey on the roots while the beetle eats the leaves. Our remedies against their depredations are few,—the best, probably, being a box having a cover of mosquito netting, to be set over the hill of vines. This will keep off the beetles, and doubtless the larva also, as the eggs cannot be deposited near the vines.

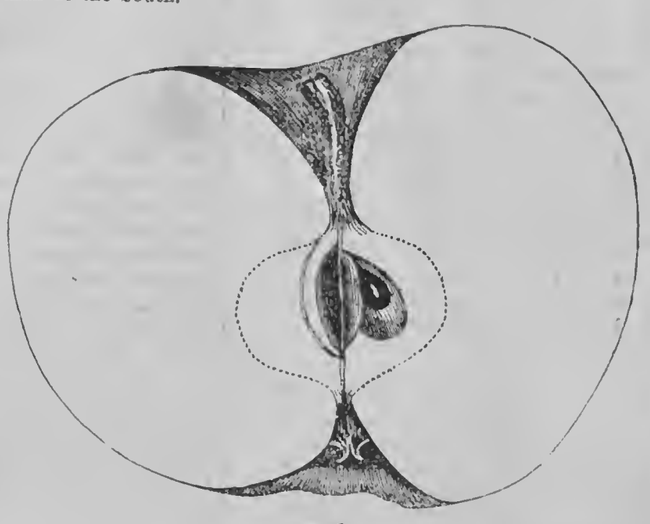
THINNING GRAPE VINES.

A recent article in the Rural described the mode of thinning the grapes in the clusters, all of which is well to be done by amateurs and persons of leisure, but for the practical cultivator of grapes the careful and judicious summer trimming of vines is of much more importance. With our soil and climate there is a constant tendency to an overgrowth of wood. It is our practice to remove all superfluous and unbearing new wood before the grapes are in blossom, and if necessary do it again, but not until after the grapes are well set. This method, with some shortening in of the longer shoots, with a view to give the grapes all the benefits of sun and air, adds materially to both quality and quantity, and aids earlier maturity.

Syracuse, N. Y. S. N. Holmes.

NEW APPLE FROM THE SOUTH.

We extract from Warder's American Pomology the following engraving and description of a new apple originating in North Carolina. It is placed in Class 1st, of flat apples, order second and irregular in form. The reader will notice that its season for ripening is several months later at the North than at the South.



Harris.

Harris.—This variety was received from North Carolina, and fruited for the first time in the North during 1866. In the South it is considered a summer and fall variety, being in season from August, and continuing for a long time. For specimens I am indebted to Doctor E. Taylor, of Cleveland, Ohio.

Fruit, medium to large, oblate, angular; surface, smooth, yellow, faintly blushed; dots, scattered, minute, with rosy spots; basin, deep, abrupt, folded; eye, medium, rather open; cavity, deep, wavy, clear yellow; stem, medium to long; core, small, open, meeting the eye; axis, very short; seeds, numerous, angular; flesh, yellow, breaking, fine-grained, juicy; flavor, acid to sub-acid, spicy, agreeable. Use, table and kitchen. Season, October. Quality, good to very good.

ORCHARD CULTURE.

We are indebted to the Secretary of the Alton (Ill.) Horticultural Society for reports of its proceedings. We extract therefrom the following on orchard culture:

Orchards in this climate until some years old are generally cultivated by the best orchardists. The apple orchard can be generally plowed annually, without danger. I have found the Fall Wine, Hubbardston Nonsuch, and perhaps one or two other varieties to injure by the bark bursting, when highly cultivated, but most varieties endure high culture well. In northern latitudes, however, even apple trees will winter kill under such treatment. Pear orchards are more subject to blight, when overgrown as young trees, and hence there is a tendency not to cultivate them annually. Cherry trees on account of overgrowth, are sometimes neglected. Peach orchards on account of their uncertainty as annual bearers are more capriciously treated.

A few rules, however, we think it will be admitted, should be followed in the care of nearly all orchards in this latitude and on this soil.

1. An orchard must be kept in a state of healthful growth to ensure good fruit.

2. Healthful growth is best insured by at least one plowing each year. Manure or mulch will produce the same result, but not so well.

3. The plowing should be done in April or May, and for the best results; when the orchard is fruiting, the surface should be kept stirred with the cultivator or harrows, as late as is safe.

4. There should be no plowing after the first of July; and except around the base of the trees (where a circle of two feet in diameter should be kept bare of all weeds or other shelter of borers,) it is better that a late growth of grass, &c., should be be permitted to grow up in fruiting orchards, to prevent the too rapid radiation of heat, which, when the surface of the ground is bare, is dangerous to fruit buds and blossoms.

5. Corn is the best crop to cultivate in a young orchard, unless it may be white beans. Potatoes are objectionable, because the digging of them stirs the ground and incites growth in the fall of the year. Small fruits may be grown in a young orchard before the time of its bearing with good results.

6. Red clover is probably the least injurious of crops not cultivated, especially if not removed from the orchard. On hilly ground where the surface washes, as in lower Egypt, it seems a necessary evil.

STRAWBERRY PLANTING.

The best season for planting, we think, is in the spring, the next best, the Farm and Fireside says, is the latter part of summer, in a favorable spell of weather. Some cultivators recommend to plant in the very driest time; this may be practicable, as they affirm it is; but the uninitiated are not willing to believe it. By planting in summer, the plants will bear a fair crop the ensuing season. Plants put in in the spring, may bear some fruit the same season; but not as a general rule. Select strong runners, never old plants. The runners should be prepared the summer previous by being layered, or stopped, as it is termed, by breaking off the extremity of the runner, after the first joint, and lay a stone on it, or drawing the soil up to the young plant. Strawberries are now generally planted in rows, varying from two to three feet wide, according to the ideas of the cultivator. If wide rows are adopted, the plantation may be kept longer in good bearing condition, by keeping the soil clean and well worked, removing the superfluous runners, and keeping the plants more in hills. Some extensive cultivators do not allow a plantation to remain more than three years until renewed; this is a wise method, as the soil is thereby renewed and a new rotation of crops carried out. Fabulous accounts daily meet the eye of the product per acre of a strawberry plantation; none of these are worth repeating, as the product will depend mainly on the treatment.

Wine Making and Temperance.—At a late meeting of the Lake Shore Grape Growers Association, a committee was appointed to gather facts and statistics upon the physical and moral influences of wine making in the United States. This committee is to report at the next annual meeting of the society. If the report is to the effect that grape growing and wine making are adverse to temperance and good morals, then the business ought to be abandoned.

HORTICULTURAL GLEANINGS.

Insects on Rose Bushes.—Whale oil soap and rain water, in the proportions of one to seven, sprinkled on rose and other bushes infested with the aphis, rose-bugs, slugs, &c., will prove effective in dispersing these pests. The mixture should be made with water at or near the boiling point.

California Oranges.—The California Farmer says that oranges, much superior in flavor to those grown upon the islands, are being plentifully produced in many sections of that State. The business promises to be a highly remunerative one.

The Silver Maple for Shade.—The Practical Farmer says that the silver or soft maple can be made to assume a close and compact form by being cut back two or three times while the top is being formed. It bears pruning well, grows rapidly, and is generally free from worms and parasitic nuisances.

The Currant Worm—Remedy.—A writer in the Cultivator tells how he disposed of currant worms on his bushes—currant and gooseberry. He says:—"Having a mixture already prepared for top-dressing corn, of one-third each of plaster, wood ashes and slaked lime, I covered my bushes with it shaking over and under them from my hand, and in one day's time every worm had fallen off upon the ground, dead or dying."

Transplanting Evergreens.—The Cultivator has a timely suggestion with reference to transplanting evergreens when young. In the early stages of their growth the limbs are low down, rendering it difficult to dig them up and plant them out again. To obviate this, it is proposed to raise the branches upward and fasten them to the trunk by means of a strap and buckle. This permits ready access to the roots—greatly facilitating the labor of raising the trees and replanting them.

Small Fruits.—It is a general subject of remark, in the public journals, Horticultural or otherwise, that the crop of small fruit in New York is quite limited. Occasionally a cherry tree is seen well loaded down, but, as a general rule, the amount of fruit is small and of an inferior quality. The promise of the plum crop is even less cheering. The currant—the red variety—is pretty generally a failure compared with the affluence of former years. Strawberries have proved an exception—the yield having been in excess of that of any year for a long time past.

Raspberries and Blackberries—Transplanting.—The Horticulturist says:—For the past two years we have annually planted out raspberry and blackberry plants in this month, July. We prepare our ground and then go to the rows from which to remove the plants, having a tub or pail with a little muddy water in it, dig the plants—half grown ones of this year—pinch off the ends about two inches, set the roots into the pail of muddy water, and from that to their permanent position. They rarely die, and generally produce a fair crop the next season.

Thinning Fruit.—The Germantown Telegraph closes an article on the subject of thinning out fruit as follows:—"It goes hard with some people to diminish the quantity of fruit upon their trees. Sometimes they plead want of time; but this is not admissible, for if they have not time to attend to the proper cultivation of fruit they should abandon it altogether. The real cause is their greediness. You can't make them believe that they are the gainers by destroying a portion of the crop, saying that Nature is the best judge as to the quantity of fruit. Such persons have no practical knowledge of fruit-raising, and the sooner they give it up the better it will be for them, their pockets and reputation."

Bugs on Vegetation.—J. F. C., —— sends us a vial with half a score of beetles or bugs which are operating extensively on his corn. Also a leaf of corn on which depredations have been committed. It is perforated as though riddled with small shot. The beetles belong, according to Dr. Fitch, to the Family *Melolonthidæ* and the Order *Coleoptera*—commonly known as the rose-bug. They are noticed as appearing occasionally in countless numbers on rose bushes, beans, peas and vines, and finally they assail the growing corn with great voracity. When the vegetation attacked occupies but a small space, patience and nimble hands may soon dispose of them, but when a large field is embraced in the scope of their operations to attempt their expulsion or destruction seems a hopeless task.

Domestic Economy.

VARIOUS ORIGINAL RECIPES, &c.

Eds. Rural:—There is such a call for recipes I will send those I use and know to be good. Every one don't live on a farm, where cream and buttermilk "grow," so these are for such as do not possess these luxuries:

Graham Bread.—For a loaf in a two quart pan—1⅞ qts. of Graham flour; ½ teacup of molasses; salt, and yeast to raise it; mix with sweet milk quite soft; do not knead at all; put it in the pan; wet a spoon with water and smooth it over. Let it rise, but not quite as much as if it were to be baked; put in a steamer and place over boiling water and steam 2½ hours, then bake half an hour. Those who have once eaten steamed bread will never bake it.

Old-fashioned New England Bannock.—Sift 2 teacups of rye meal with the same of corn meal; 3 tablespoons of molasses; salt; 1 teacup of cold water; the remainder of the wetting boiling water; mix quite stiff and spread in thin sheets upon buttered tins; mark in squares and bake. This is a good breakfast cake for those who like rye bread.

Pancakes.—1½ cups of milk; 1½ do. of sugar; 3 eggs; 1 nutmeg; 1 teaspoon salt; 1 do. of soda; flour enough to make very stiff. Drop from a spoon into hot lard and fry. Won't soak fat. Very nice for tea, eaten hot.

Pop Overs.—2 cups of milk; 2 eggs beaten light; 2½ cups of flour; piece of butter size of a nutmeg; butter 8 teacups for this quantity of batter, and bake 20 minutes. Must be eaten as soon as drawn from the oven. Serve with sweet sauce.

Aunt Sarah's Cake.—2 eggs; ½ cup of butter; 1 do. of molasses; 1 teaspoon soda; 1 cup of raisins; 1 teaspoon each of cloves, cinnamon and nutmeg; citron; 2 tablespoons milk. Mix a little harder than for plain cake.

Molasses Cake.—1 teaspoon of cinnamon; 1 do. of cloves; 1 cup of molasses; 1 do. of hot water; 1 tablespoon of saleratus; 2 do. of butter. Mix not very hard. Bake slowly.

Cream Pie.—1 egg, beaten with 1 tablespoon of flour, 1½ cups of milk; sweeten to taste; a pinch of salt. Put this into a tin pail; set into a kettle of boiling water and stir till well cooked; when cool flavor with lemon. Line your pie plates with a very nice crust; sprinkle flour upon it and lay on another crust; bake, and then split and fill with the cream. This is for one pie.

Lemon Custard.—1 cup of sugar; yolks of 3 eggs; 2½ cups of sweet milk; 1 tablespoon of flour; grated rind, the juice and pulp of 1 lemon; a little salt. Bake with one crust. For the frosting, whites of 3 eggs beaten to a stiff froth, and 5 tablespoons white sugar. Put on the pie when hot, and return to the oven five minutes.—E. F. Twichell, *So. Dedham, Mass.*

Barley Pudding—Excellent.—Soak pearl barley 24 hours or more; then boil it for two hours; during the last half hour or more, the raisins, having been added, should be cooking. Then treat it with eggs, milk, sugar and spice; as is done for rice pudding. This recipe has never before been published. The eggs may be omitted, if abundance of rich milk be added. Bake till moderately brown, and serve with sauce.—H. G.

Strawberry Pie.—Take your strawberries, after being hulled, place them in a deep dish—2 quarts of berries will make 3 pies—add to the berries 1½ teacups of maple-flavored sugar; with a desert spoon mash the berries and sugar together; make your crust as for other pies; fill your pie-plates with the berries as mixed; when full cover with braided crust, or in strips as for tarts. Bake in a quick oven, and you will have a delicious pie—far surpassing strawberry shortcake.—E. B. L., *Rochester, N. Y.*

Papering White-washed Walls.—J. E. R. P., Hornellsville.—You can make the paper stick on white-washed walls by dissolving glue in good strong vinegar and washing them with the solution. Heat till the glue is dissolved and then apply with a brush.

Green Corn—Curing.—A subscriber wants to know how to can green corn so that it will keep good. Who will respond?

CANNING FRUIT.

First—Can the fruit the same day it is gathered. More than half the secret of having fine preserved fruit lies in this simple direction.

Second—Never can fruit without adding as much sugar to it as you would to prepare it for the table. This is imperative, else your fruit will inevitably be leathery; cook it in, I should say, at the rate of one-quarter of a pound to every pound of fruit, at least; but taste and try, as I did, and when it suits your palate cease from all saccharine matter.

And now for the *modus operandi*:—Pare and extract the pit; cut into halves and plunge into cold water until ready to cook, else your peaches will be black; this, of course, does not apply to other kinds of fruit. Place your cans in any vessel where they can stand at least half way up in boiling hot water, which keep so until sealed. I usually take a large dripping-pan and put it on the top of the stove at one side, while my preserving kettle is on the other. Make your syrup and when it comes to a boil, put in your peaches and let them cook (if clings) until you can pierce with a piece of broom corn; if freestones, when the sirup boils up over them the first time, skim out and put into the cans. When the latter are full of the peaches, fill up with boiling hot sirup, wipe off the tops with a rag wet with cold water, being careful that no juice remains on them, then put on the covers, remove from the water to the stove hearth, and seal.

Everything must be hot from the beginning to the end—hot sirup, hot cans, hot fruit, hot sealing wax, and harder than all, hot and blowzy hands and faces just when the thermometer is at blood heat in the shade!

All small fruits are subjected to the same process, except that the rule for them is simply to allow them to come to a boil, and not remain longer in the sirup. Strawberries, to retain their color and flavor, require more sugar, and to be put into glass, stone, earthen, or anything but tin. The same is true of blackberries. Tomatoes I scald, peel, and then bring to a boil again, with a little salt added, when I put them in new tin, and seal. I have never been fortunate with glass or earthen. If stone jars are used be sure that you buy dark colored, well baked and glazed ones, not the yellow.—*Farmers' Advertiser.*

HEDGE PLANTS—FORTY TO FIFTY Millions first class Osage plants for sale. Send 10 cents for Essay on Hedging.
W. H. MANN & BRO., Normal, Ills.
P. S.—Agents Wanted. 911-13t

WANTED—An Agent in Each Town and County in the United States, to introduce
SPEAR'S PRESERVING SOLUTION.
LIBERAL INDUCEMENTS OFFERED!
This solution will preserve all kinds of Fruits, Tomatoes, Jellies, Cider, Milk, etc., without air-tighting and with or without sugar. It admits of keeping fruits, &c., in vessels of any size, and of using therefrom at intervals as wanted.
It will preserve milk sweet from 24 to 36 hours longer than it would naturally keep, causing it to furnish more cream in hot weather.
